

Please note there is a factual error on page three of Mr. D'Elia's supplemental testimony. He states:

“What effect will the Laidlaw project have on the NewPage facility?”

A. We currently serve as a supplier for the NewPage facility. The NewPage facility uses round wood and not whole tree wood chips. Therefore, it will not be in competition with Laidlaw for whole tree wood chips. In fact, I believe the Laidlaw project will complement the NewPage facility and the suppliers who provide it with round wood by creating demand for a complementary wood product in the region.

While Mr. D'Elia may have been referring to the NewPage Facility in Shelburne, NH in fact the NewPage facility in Rumford, Maine does use whole tree chips and bark for energy production at their mill and is well within the planned procurement radius of the proposed Laidlaw facility.

Regards,

Tom Colgan
