Dear Ms. Murray,

I urge your to consider supporting HB-580 so that NH can get our state energy policies corrected before we allow further construction of energy facilities and transmission projects in our state. There are several reasons to support HB-580 including:

1 - Recent SB-99 workshops have shown that improvements are needed in the SEC process prior to reviewing applications. The workshops have also determined that current SEC guidelines are very ambiguous. No project should be reviewed in such a manner.

2 - NH should look at a state energy strategy. Wind companies are making these decisions on their own!

3 - NH DOES NOT NEED the wind projects to meet it's RPS goals and NH DOES NOT NEED the power. **In fact: NH has already met our RPS goal of 25% by 2025...**but these credits are being sold to southern states like MASS and CT.

4 - We SHOULD NOT be destroying NH's scenic landscapes and jeopardizing our watersheds to meet the energy goals of other states!!!

Thank you for your consideration...
