

Site Evaluation Committee
Att: Ms. Jane Murray
Department of Environmental Services
29 Hazen Drive, PO Box 95
Concord, NH 03302-0095

September 30, 2015

Dear Site Evaluation Committee Members:

I am writing to ask for your support of the SEA-3 upgrade plan that you will be voting on in the near future. People all across New Hampshire will benefit from this proposal. Using the existing SEA-3 facility in Newington for the shipment of lower cost domestic propane makes far more sense than the alternative of transloading propane at remote locations because the facility is equipped with the latest safety features that won't exist if propane is unloaded at rail car locations.

Having a more abundant supply of propane is one positive aspect, getting cheaper domestic propane to NH residents and businesses is another, and using the already existing propane storage facility in Newington with its safety features just makes sense. This all adds up to a smart plan for New Hampshire. Please act before another expensive winter arrives.
