Dear Members:

I have recently been looking at buying a house and I have been surprised to see the large number of homes that are heated using propane. That has motivated me to write to encourage you to vote in favor the Sea 3 issue.

Propane isn't cheap, although I haven't found any energy source in this state that is inexpensive. I have heard a lot about the price difference between domestic and foreign propane. If the Sea 3 operation can import more domestic supply, the economic benefit to the state could be huge. Current homeowners, and future homeowners like me, could save thousands of dollars by having greater access to domestic propane.

Please do whatever you can to help New Hampshire get access to cheaper propane.

Very truly yours,  
Nikole Light
