Re: Docket No. 2015-02  
Antrim Wind Energy, LLC

**What is your name and occupation?**

My name is Stephen Berwick and I am a Process Engineer with a degree in Metallurgical Engineering.

**Where do you live?**

I live at 72 Reed Carr Rd, Antrim, NH and have lived here since I was 3 years old.

**How will this project affect you?**

I have assisted with many of the upgrades that have been done in the house. I have expressed interest in inheriting this property when the time comes and many projects have been done with my preferences in mind. All the flicker, noise and vision issues will affect me directly as well as any tax increases that happen after these turbines are decommissioned. Also, I enjoy hiking in our peaceful woods, this would no longer be possible if the wind towers are installed as there will be a constant noise generated by the towers.

**Did you study anything about windmills in your college engineering program?**

Yes, During college one of my professors gave a research project on wind power. As a whole each person in the class was required to select a topic of interest and perform a presentation on their selected topic. Overall the entire class through their research found that wind turbines are not the "green" energy source they claim themselves to be through many factors that included, reduction of greenhouse gas emissions, reduction or removal of fossil fuel, manufacturing processes and many others.

**Do you feel that the people of Antrim want this windmill project?**

The citizens of Antrim rejected zoning changes not once but three times. So I would say No.

**Does this conclude your pre-filed testimony?**

Yes.
