Subject: AWE Wind Turbine Project

We're writing to you today to express our concern with the effects of the AWE Wind Project on our beautiful lake and the view we enjoy which would be forever changed with the installation of the 9 Wind Turbines in Antrim. We recently moved to our new home on White Birch Point Road in Antrim. It is our retirement home and we are now the second full-time year-round residents on this road. We enjoy the solitude from October - May and have experienced the beauty of the lake and the scenery in this, our first summer. We love the history of the lake and the town and can't imagine the effects the Wind Turbines will have on this. Having grown up in California, we are very well versed on Wind Turbines and their effects on landscapes and we've seen the failures of the wind farms as well the successes. We also are very disappointed to learn the AWE Project team NEVER reached out to a single White Birch Point resident with regards to this project and, yet, the reports published state the biggest impact is to the residents on White Birch Point. The letter at the end of this email was sent to the SEC regarding the AWE project and was written by our HOA Board to the SEC. We humbly request you read this letter as it gives the history and the believed impact to those of us with homes on White Birch Point. As constituents in your district(s), we respectfully request you reconsider your support of this project. In addition, to put the height of these proposed Wind Turbines in perspective, here are some visual images:

The Statue of Liberty is 305', these wind turbines are 190' taller than the Statue of Liberty!
The Washington Monument in DC is 555', just 60' taller than these wind turbines
[City Hall Plaza in Manchester, NH](#) is 275', these wind turbines are, each, 220' taller
The Gateway Arch in St. Louis is 630', just 135' taller than these wind turbines
The Zakim Bridge in Boston is 269', these wind turbines are 226' taller, each!
These wind turbines are 1/3 the size of the Empire State Building!

Again, we request you to reach out to those of us on Gregg Lake and, especially, those of us on White Birch Point who will be most affected by the AWE proposed wind turbine project and humbly ask you to reconsider your support of this project.

Respectfully,

Charlene and Paul Stephens
44 White Birch Point
