Subject: SEC Docket # 2015-02 Antrim Wind Plant

Dear Ms. Monroe, Subcommittee Chairman Scott & Antrim Wind Committee Members,

As I understand it, many people in NH believe that what is contained in an application reflects an applicant's obvious preference to find "experts" and "research" that give them the best likelihood of having a large scale energy project approved. The public's ability to level the playing field is clearly constrained by not having the financial and legal resources available to large utilities and their subsidiaries.

The article below, from neighboring Vermont, where wind turbines are evidently now a big enough issue to be a focal point in the Governor's race, raises an interesting question.

<http://bigstory.ap.org/article/2827437f49bd43b196bc07f4917a97bd/vermont-cabin-becomes-lab-study-wind-turbine-noise>

As the article points out.....renewable energy supporters say the sound monitoring won't be objective.

Are you at all concerned that the process in place in NH may allow for subjective and biased input as well given who funds and monitors sound { and other } studies that we apparently accept with no independent corroboration?

Thanks for your time.

Larry Goodman
