

6 December 2016

To Ms. Pam Monroe and the Site Evaluation Committee:

The Antrim Wind Project provides enormous benefits to New Hampshire, and as a resident, I would very much like to see the project implemented. The contributions to the town of Antrim and the surrounding area are advantageous to supporting our local economies. Furthermore, the project will increase the energy independence of the Granite State by reducing the dependence on imported, volatile fuels. By reducing our reliance on imported fossil fuels, the project will also offset huge carbon emissions and help our state meet its clean energy goals. I do not mind seeing wind turbines along the landscape and do not feel the turbines at Antrim Wind would negatively affect scenic views. I urge the Site Evaluation Committee to approve the project.

Please contact me if you have any questions.

Best,
