To whom it may concern,

I oppose this project, due to the environmental costs and damage. This will cause permanent damage to all of the surrounding areas, not only to the land but the sky above, seeing these towering trubines, scar all of the mountainous surroundings.

Projects like this only benefit the project owners, little to no savings ever come to the residents in the surrounding areas affected by this project. It only costs more money to complete these projects, and then when done it's the towns people who end up with all the bills, with little to no proceed. This is a typical contractor who promises lots and delivers nothing except more bills.

I strongly appose this project, if you want it so much, put it in your front yard!

Thank you

Jeffrey Linton
