Subject: Clean energy for the North East

Three nuclear plants here in the NE are nearing end of life creating a shortfall of electrical energy.

Kinder Morgan is easily getting approval from FERC government agency to ship methane via a big new high pressure pipeline to be buried through New Hampshire right near us. This natural gas is to be used for electrical generation, creating more CO2 from fossil fuels.

President Obama is advocating clean energy while FERC is doing the opposite.

Northern Pass is clean energy. We need clean energy to fight global warming.

If the Forest Society is successful in stopping Northern Pass we will get more and more fossil fuel consumption.

Please consider all aspects of your actions.

Physical appearance of clean energy? We have stood under the huge windmill in Hull, MA. Birds flying around, nothing under the windmill, people having a good beach day right under the windmill. Loudest sound was cars driving by. When I see big clean energy generation, I know I'm not getting fossil fuel burning gasses to breathe and to warm the climate.

No, the windmill isn't buried. Are there good reliable wind sites in NH?
