Concord, NH 03302-0095

September 8, 2008

Dear Mr. Burack,

I am writing to express support of Noble Environmental Power's wind park development on GMO land in Millsfield, NH. I also hope to address particular issues that have risen during discussions of the wind park development.

GMO Renewable Resources currently manages the "Phillips Brook" tract for timber production. We have traditionally made the land available for various recreational uses, including hunting, fishing, and snowmobiling. The development of the wind park will not impact the level of current activity on the land, and we have no intention of limiting future recreational activities.

GMO Renewable Resources has given Noble the right to develop windpower on land they have leased on the Phillips Brook tract. This agreement does not give Noble the right to make decisions related to other GMO properties.

The generation of income from the turbines will augment the value of the land. The environmental integrity of the land will also be enhanced, since Noble of upgrading and improving drainage on the access roads.

It is an exciting time for wind power development in the United States, and we are pleased to contribute to the development of clean energy for our country.

Regards,
