Thursday, October 30, 2008

Dear Mr. Burak,

This letter is to offer support for the *Granite Reliable Power Windpark* proposed by *Noble Environmental Power* here in Coos County.

Wind is an excellent renewable resource. Left unused, the energy from wind is wasted. Harvesting this energy just makes good sense. I support harvesting wind 100%!

Traveling throughout the US, I have seen many windparks. The thought that always comes to mind is "It's about time!" and I am in awe of how spectacular the windmills look. Never have I thought they were out of place on the landscape.

As wind harvesting technology has evolved, we have learned much about how to address even the small environmental impact this industry creates. Most significantly, new turbine design and location strategies have addressed the bird mortality issue that was once a concern.

As someone who lives in Coos County, NH, I look forward to the day when we will see windmills on our landscape, knowing that this cutting edge technology is helping to increase our energy independence!

Thank you assisting *Noble Environmental Power* in this endeavor and for considering my comments!

With best regards,

Brendan Prusik
