1 (Hearing resumed from lunch recess at 1:45 p.m.)

CHAIRMAN BURACK: Okay. We're going to resume. Our order of proceeding this afternoon, we'll start with cross-examination of this panel by counsel for the public, followed by questions from the Committee, and we'll see where we are at that point. Attorney Brooks.

MR. BROOKS: Thank you very much. Allen Brooks, counsel for the public.

CROSS-EXAMINATION

12 BY MR. BROOKS:

- Q. The broad topics that I want to cover -- I don't know that I have too many questions on this, because we have gone through them in the technical session. But one thing -- I'm going to start with air. And one thing on the air is that I think you mentioned that you're going from an EPC to a baghouse?
- A. (Bravakis) Yes.
- 21 0. When was that decision made?
- 22 A. (Bravakis) I can't recall.
- A. (Frecker) I'm not exactly sure when the decision was made, Mr. Brooks. It was

```
addressed in the prefiled air permit

application that was submitted, and that

application was revised May 18th.
```

- Q. That anticipates my next question, which is that the air permit application was submitted and reviewed with the understanding that there would be a baghouse, not an CPE?
- A. (Frecker) In the revised filing, that is correct. It addressed a fabric-filter baghouse for particulate control rather than an CPE.
- Q. And the recommendation back from DES Air
 Division related to a baghouse and not an
 CPE?
- 16 A. (Frecker) They accepted that because it also came with a lower particulate emission rate.
- Q. Okay. How did you achieve -- and if you
 can't answer this, that's fine, 'cause this
 is... my understanding was an CPE was a more
 significant control device than a baghouse.
 How are you able to achieve a lower emission
 rate with a baghouse than an CPE?
 - A. (Frecker) I actually think that in some

1 applications a fabric filter can be more efficient than an electrostatic 2 precipitator. One of the things that was 3 also proposed, committed to in the amended 4 air permit application, was the use of 5 sorbent injection to achieve a lower SO2 6 7 emission rate. And sorbent can build up on 8 the bags to provide an even higher filtration efficiency and particulate 9 10 control efficiency.

Q. Okay. So the sorbent basically makes the holes in the bag smaller, in other words?

11

12

13

14

15

16

17

20

21

22

23

- A. (Frecker) That's correct. But the baghouse, in and of itself, was able to achieve the lower particulate emission rate. The sorbent injection just provides an added level of abatement.
- 18 Q. I think the existing facility, was there
 19 already an CPE in place or room for an CPE?
 - A. (Frecker) There is an electrostatic precipitator that exists there now that operated on the former recovery boiler.
 - Q. And why was a decision made to go to a baghouse instead?

- A. (Strickler) Well, I think the key is, as we talk about the SO2 control, you need to have a baghouse in order to get the level of SO2 control with a dry sorbent injection. They have to go together. When you add the SO2 control, we need to also have a baghouse for that to perform. So that was the principal decision to go that way.
 - Q. But in general, you are -- and I remember this from the permitting -- you're meeting all of the essentially most stringent requirements for BACT LAER, whatever they are, for emissions for the facility.
 - A. (Frecker) That is correct.

Q. Right now, you're not under, as far as I know, any CO2 control, including the RGGI program, because you're not a fossil fuel-fired unit.

Any prediction of, given that EPA is looking at CO2 right now and that there are many people in Congress looking at CO2, about what might happen and how you might respond if there are CO2 regulations in the near future, let's say within next decade?

A. (Frecker) I think with regard to what we know about the regulations right now, we can say that with EPA's tailoring rule, which requires permitting in 2011 for very large sources of CO2, that that will not impact the project, because the project will have completed its air permitting by that time.

With regard to EPA's greenhouse gas
emissions reporting rule, the project will
likely be subject to reporting. EPA is in
the process of refining their position with
regard to sources of biogenic CO2, such as
biomass facilities. We're not sure what EPA
may do, but we don't see -- or we at least
see, based upon their positions in the past,
that they have a favorable perspective with
regard to biogenic emissions of CO2 from
biomass plants compared to fossil fuel
sources.

Q. Do you believe that, given whatever your predictions are about the possibility of CO2 regulation or legislation, that the plant will remain economically viable, based on what you now know might happen over the

next, let's say decade?

A. (Bravakis) Yes.

Q. Okay. That's all the questions I have about air.

Moving on to water, and specifically groundwater, there are obviously contaminants at the site right now in the groundwater. Can you tell me -- maybe just review quickly before my question.

You don't plan on doing anything significant at this point in terms of disturbing any of the contaminants in the groundwater? In other words, when we did the plant walk, you discussed the fact that, because there's an existing structure, you won't have to do as much drilling to get to bedrock, that kind of thing. So my understanding is that, even with the drainage swales and retention basins and things like that, that you're not going to really puncture into contaminants that much. Is that correct?

A. (Frecker) That is correct. The data that we have shows the groundwater levels at the

site exist 10 feet or more below the surface. And the deepest foundations that are contemplated at this point are about 8 feet. Even if there was some encountering of groundwater, the levels of organics that are found are not particularly difficult to handle. They're relatively low-part-per-million type levels of very readily treatable organics that can be well managed.

Q. For the purposes of the record, we just haven't had much time to look over the agreements that you've had with the town, and probably members from the public, to the extent that they've even gotten them, haven't either.

Can you tell us kind of what the -what you're envisioning doing, what your
agreement is with respect to, let's say
monitoring and testing of groundwater,
including the geographic scope? Is it
limited to just the Laidlaw site? Does it
go beyond that? Does it encompass what we
would usually refer to as maybe a Phase 1 or

a Phase 2 environmental assessment? Can you just talk about that?

3

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

(Frecker) Yeah, I think I can answer it in Α. two ways. One is, independent from what the City may do, and Laidlaw may assist the City in doing -- and I'll touch upon that in a moment -- we have committed to, in the application, conducting the necessary studies, subsurface studies in the areas where there would be intrusive activities, excavations of any size, and properly characterizing the soils, sampling the soils and materials in those areas to make sure that all those materials are properly handled. So there will be a subsurface investigation to some degree to assure that all of the construction activity occurs properly, without causing any harm to public safety.

With regard to the stipulations that have been negotiated with the City, the City has talked to at least one consultant about a preliminary scope of work which would occur in multiple phases, which would

include soil and groundwater sampling, both in the location of the project, focused in the area where the project would be built initially, and expanding to other portions of the site itself. I believe that that scope, as I characterized it, is a draft scope of work. But at least it sets forth the structure for how those investigations may be conducted. And I should say, part of the stipulation is for Laidlaw to provide a significant level of monetary support and cooperation in having that study conducted.

Q. A member of the public recently sent me an e-mail I'd like to go over with you regarding groundwater contamination.

You mentioned some of the, I think, organic compounds that are there. This e-mail mentions significant mercury pollution -- this is what he's saying -- at the chloro-alkali plant. Can you tell us about the relationship, if any, between your Laidlaw project and the previous chloro-alkali plant?

A. (Frecker) Yeah. The chloro-alkali plant is

actually on the northern parcel of what was
the former pulp mill facility. So if you
went about a quarter of a mile or so up
here, along the river bank, is where the
chloro-alkali plant is. And that's where
EPA has been doing investigations with
regard to mercury contamination.

- Q. Okay. And you're aware of those studies?
- 9 A. (Frecker) Yes, we are.

- 10 Q. Having been familiar with those studies, do
 11 you have any concern about the Laidlaw
 12 project and impacts to the Laidlaw area from
 13 that site?
 - A. (Frecker) No, we don't, for a couple of reasons. First of all, as I indicated, we anticipate doing relatively shallow excavations for footings and foundations of the few structures that need to be constructed for the project itself. Our evaluations of depth to bedrock, based upon prior studies done at the facility, do not indicate that any blasting will be required. And if there should be some nominal encountering of bedrock, it can likely be

done through mechanical means of removing that without going into blasting activities. So we certainly don't anticipate a level of disturbance that would propagate vibrations and things all the way up the river to cause any harm or impact on the existing chloro-alkali site.

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

With regard to the site itself, the investigation done by GZA back in 2003 installed a number of groundwater monitoring wells and conducted a number of soil samples. And out of the 13 groundwater monitoring wells that GZA had installed, 7 of those did not show levels of any metals or organics above the groundwater quality concentrations codified in the New Hampshire regulations. As a matter of fact, one of the recommendations that GZA made in their report was that additional sampling of groundwater and soils should be conducted to determine if the levels of mercury which were detected were, in fact, not just associated with natural background, because they were only a couple of part per billion

above the regulatory standards in the state
of New Hampshire. So, very, very different
levels and minimal levels down in the site

4 where the project will be constructed, as

5 compared to the chloro-alkali site.

6

7

8

9

10

11

12

13

14

15

16

17

- Q. And you answered another one of the member's concerns, which was -- his statement is the proposed turbine building will require substantial foundation work which will easily reach into bedrock. It sounds like you do not believe that to be true, or that that won't require significant blasting or
- A. (Frecker) We don't believe that the installation of the footings and foundation for the turbine buildings will encounter a need to remove existing bedrock.
- 18 Q. Okay. Thank you. The correspondence that I
 19 have is from a person named Alex Driessen.
 20 Did Mr. Driessen ever contact you with these
 21 concerns previously?
- 22 A. (Bravakis) No, sir.

other activities.

- 23 A. (Strickler) Not me.
- 24 Q. So you never turned him away and said we

don't want to hear about these --

- 2 A. (Bravakis) No.
- 3 Q. Okay. Do you know who Mr. Driessen is?
- 4 A. (Bravakis) Yes.
- 5 A. (Strickler) Yes.
- 6 Q. Who is he?
- 7 A. (Bravakis) I know Mr. Driessen as a
 8 environmental consultant in the state of New
 9 Hampshire and a member of the Clean Power
- 10 Development project team.
- 11 Q. Had he come to you with these concerns, 12 would you have addressed them with him?
- 13 A. (Bravakis) I think we would have been glad
 14 to discuss the issues with him.
- 15 BY MR. ROTH:
- 16 Q. I have a few questions. One of them is a
 17 follow-up to an answer that you gave
 18 concerning the groundwater monitoring wells
 19 on the site that GZA installed.
- 20 Are all of those wells still intact and operable?
- A. (Bravakis) I don't know the answer to that,

 Mr. Roth. I have not -- we have not

 actively pursued looking into those wells.

1 Q. So you don't know whether any of them are,
2 in fact, still usable?

- 3 A. (Bravakis) I do not know.
- Q. Okay. And you haven't conducted your own groundwater survey to date?
- 6 A. (Bravakis) Not to date, no.
- 7 Okay. I have three documents. These are Q. Public Counsel 1, 2 and 3. These are the 8 covenant not to sue, the T1 transformer and 9 10 the Dummer Yard leachate agreement. 11 going to give these to you. I just 12 introduced them today, so hopefully you're 13 already familiar with them. But I just 14 wanted to ask you a few questions.

Are you familiar with these three documents?

- 17 A. (Frecker) Only on a very superficial level.
- Q. Now, starting with Public Counsel No. 1, the
 covenant not to sue, what's your at least
 superficial understanding about what this
 is?
- 22 A. (Frecker) And I'll give you an answer as an engineer and not an attorney --
- 24 Q. That's fine.

15

```
A. (Frecker) -- and that is that owners of the site going forward will not be held -- and, again, please don't parse legal terms on me -- but will not be held financially or otherwise responsible for existing conditions at the site that may have been caused by prior owners.
```

- Q. Very good. That's my understanding of it as an attorney as well.
- 10 Mr. Frecker, if you wouldn't mind 11 turning to Page 6 of Public Counsel No. 1?
- 12 A. (Frecker) That's the CNTS?

8

- Q. Yes. And in particular, if you wouldn't
 mind focusing your attention on Paragraph 4.

 Are you familiar with Brownfields covenants
 not to sue and covenants not to sue in
 general?
- 18 A. (Frecker) Only from a very superficial level.
- Q. Okay. Well, perhaps this paragraph will be
 familiar to you. As you stated, there's a
 protection for the owner for existing
 contamination. And is it your understanding
 that this covenant would run in favor of the

- 1 Applicant here?
- 2 A. (Frecker) That is my personal understanding,
- yes.
- Q. Okay. And you may not be aware of this, but -- and perhaps you are. I'll ask you.
- Are you aware that the Department of

 Environmental Services, a year or so ago,

 issued a letter to the Applicant, informing

 t that the covenant was generally still
- 10 applicable to it?
- 11 A. (Frecker) Yes, I'm aware of that.
- MR. ROTH: Okay. And I
- 13 haven't introduced that letter, but I guess I'd
- 14 like to hold a place for it as an exhibit, with
- 15 your agreement, Barry?
- MR. NEEDLEMAN: We agree.
- 17 CHAIRMAN BURACK: We'll
- 18 tentatively identify that as Public Counsel
- 19 Exhibit 4.
- MR. ROTH: Thank you.
- 21 BY MR. ROTH:
- 22 Q. So, on Paragraph 4 on Page 6 here, would you
- just read the Roman numerals one and two.
- 24 A. (Frecker) Sure.

Q. And if I can interrupt you already? In looking at that, would you agree with me that this is sort of the carve-outs from the covenant itself? Perhaps take a moment to...

(Witness reviews document.)

- A. (Frecker) Yes, I would agree with your characterization of that as a "carve-out," if you will.
- Q. And would you look at or tell the Committee what Roman I and II say.
 - A. (Frecker) Roman I says that claims based upon the release of additional pollutants, contaminants, hazardous substances, other than existing contamination that occurs at the acquired property after the date of closing; and Roman II covers claims based on negligent or reckless aggravation of the existing contamination by a purchasing entity or its assigned.

So it's my understanding that these are essentially saying that if a subsequent owner were to do something that contributed additional pollutants, or through negligent

or reckless aggravation of existing
contamination, that they may be held
responsible for that.

- Q. So I would assume that, now that you're familiar with those two carve-outs, that when you go about this project, you're going to avoid being negligent or reckless in aggravating existing contamination?
- 9 A. (Frecker) Above and beyond whether this
 10 legal document existed, we would do that
 11 because it's the right way to do a project,
 12 and we don't want to cause any harm to
 13 public safety or anybody who works on the
 14 project.
 - Q. Okay. And is that a little bit tricky to do when you perhaps aren't fully familiar with what existing contaminants are located on the site?
 - A. (Frecker) All the more reason that we said the first thing that we would do is additional investigation to get better familiarity with the contaminants that are on the site.
 - Q. Okay. Thank you.

```
1
               Turning your attention now to Roman --
         I'm sorry -- Public Counsel 2. And this is
2
         identified as "Agreement for Addressing PCB
3
         Contamination at the T1 Transformer Area."
4
         Are you familiar with the T1 transformer
5
         area?
6
7
         (Frecker) Generally.
    Α.
8
    Q.
         Can you point on the chart where that is in
         relation to your project?
9
10
         (Frecker) I can. It's this shaded area
    Α.
11
         located right essentially along the river
         bank here, between where the proposed
12
         roadway would pass to the north of the
13
14
         building that would house the
15
         emission-control systems for the project.
16
         Okay.
    Q.
                                          Sorry, Mr.
17
                        CHAIRMAN BURACK:
    Frecker. It's just hard for some of us to see --
18
19
                        MR. FRECKER:
                                      I'm sorry.
20
                        CHAIRMAN BURACK: -- with you
21
    standing on that side. Can you perhaps point
22
    again so --
```

shaded area right here. It's currently enclosed

MR. FRECKER:

Sure.

It's this

23

1 by a chain-link fence and asphalt-paved. You may

2 recall having seen it when we were doing the site

3 walk.

6

7

8

17

18

4 CHAIRMAN BURACK: Thank you.

5 BY MR. ROTH:

- Q. And can you tell the Committee what the T1 transformer site is, to the best of your knowledge?
- 9 (Frecker) Essentially as simple as its name: Α. 10 That there was a transformer there that had 11 leakage or issues that created PCB --12 subsurface PCB contamination, and that there 13 was a remediation project to largely address that issue and to cap and cover that to make 14 15 sure that there weren't ongoing issues or 16 exposure.
 - Q. Okay. And is there a cap and cover now on the T1 site? Has that been completed?
- 19 A. (Frecker) As I indicated, there is an 20 asphalt cover. The area is paved with 21 asphalt.
- Q. Okay. And do you expect any project
 activities to occur on the T1 transformer
 site?

- 1 A. (Frecker) No.
- 2 Q. Now turning your attention in the document
- 3 to Page 6, Paragraph 26. Can you read
- 4 Paragraph 26 to the -- out loud for
- 5 everybody.
- 6 CHAIRMAN BURACK: Sorry. Just
- 7 to be clear, you're in Exhibit 2, Public Counsel
- 8 Exhibit 2?
- 9 MR. ROTH: That's correct.
- 10 CHAIRMAN BURACK: Thank you.
- 11 BY MR. ROTH:
- 12 Q. Can you read Paragraph 26?
- 13 A. (Frecker) Sure.
- 14 Q. Thank you.
- 15 A. (Frecker) "Fraser agrees to bear the cost of
- 16 all long-term cap maintenance following the
- 17 submission and final evaluation of the final
- 18 revised post-clean-up report described in
- 19 Paragraph 21. Fraser will also abide by any
- 20 use restrictions, institutional controls and
- 21 deed restrictions."
- 22 Q. Okay. And you're familiar with
- 23 institutional controls and use restrictions
- 24 in general as a --

- 1 A. (Frecker) Generally, yes.
- Q. Okay. And now can you now turn to Page 8,
- 3 Paragraph 39, and can you read the first
- 4 sentence there.
- 5 A. (Frecker) Yes. "The provisions of this
- 6 agreement shall apply to and be binding on
- 7 the parties and Fraser's successive assigns
- from time to time, and any and all officers,
- 9 directors, employees and agents of Fraser
- and its successive assigns from time to
- 11 time."
- 12 Q. Okay. Now, as an engineer, in your
- 13 understanding with respect to an assign of
- 14 Fraser, would your understanding be that
- that assign would be required to maintain
- 16 the cap and do monitoring in accordance with
- 17 Paragraph 26?
- 18 A. (Frecker) With the qualification that I'm an
- engineer, not an attorney, that's my
- 20 understanding.
- 21 Q. Okay. Do you know whether, in fact, this
- agreement was -- well, strike that. I'll
- just leave it at that. Thank you.
- Now, the last one, this is Public

Counsel No. 3, captioned "Agreement for the

- 2 Treatment of Dummer Yard Leachate." Are you
- 3 familiar Dummer Yard?
- 4 A. (Frecker) Generally, yes.
- 5 Q. Can you show us on your plan where Dummer
- 6 Yard is in relation to the project?
- 7 A. (Frecker) I believe that the Dummer Yard is
- 8 the landfill that was located -- is
- 9 located -- is that Dummer Yard that's
- 10 located across the street? Or is that --
- 11 A. (Strickler) Yes.
- 12 A. (Frecker) No, I'm not entirely familiar with
- Dummer Yard, I guess.
- 14 Q. Okay. Are you familiar with the Dummer Yard
- 15 leachate?
- 16 A. (Frecker) Only that I have heard of it.
- 17 Q. Okay. All right. I will stop there. Thank
- 18 you. That's all I have on this particular
- 19 subject. I will ask you more questions on
- other things, though. Thank you.
- 21 BY MR. BROOKS:
- 22 Q. Okay. The next questions are about
- sustainability. And if you want to turn to
- your Exhibit 60 --

- 1 A. (Frecker) Did you say 16?
- 2 Q. Six zero.

- 3 A. (Bravakis) Sustainability condition.
 - Q. Okay. And without revealing what may be confidential discussions, I just want to ask some questions about what counsel for the public might be looking for and your responses to those topics.

The one, if you look at Paragraph 4, it talks about an incentive program that will financially reward landowners. We appreciate this offer. We think it's a good thing. We are looking to see if you'd be willing to put an actual dollar amount on that fund so that we can -- you know, for a couple reasons: One, we want to know how valuable it's going to be; and two, we want to make sure that both of us can figure out whether you've actually met your obligations. So, is there a willingness to do that or to look at that possibility?

- 22 A. (Strickler) Yeah.
- 23 A. (Bravakis) Yes, sir.
- 24 Q. With respect to Paragraph No. 6, we would

1 prefer that preference actually be given to In other words, we'd like to 2 these people. change it to say whenever possible, you will 3 use these -- you know, someone certified or 4 operating under one of those programs. 5 I don't know -- again, we're in discussions 6 7 about this. I don't know if you can make But I'd like to know about 8 the commitment. your willingness to explore how to make that 9 have some teeth to it and actually use those 10 individuals. 11

- A. (Bravakis) We would be willing to explore that.
- The end of Paragraph 6 had a similar 14 Q. provision regarding an annual fund 15 16 designated to help support suppliers. 17 this paragraph and with the next paragraph, Paragraph 7, we would be looking again to 18 have some specific amount in the funds so 19 20 that we can both, you know, know its value 21 and to monitor that. Would you be willing 22 to explore that as well?
- 23 A. (Bravakis) Yes, we would.

12

13

24

Q. I think that's all I have on the actual

sustainability agreement, other than some things we may discuss.

But actually, I do have a question about the LandVest item we spent a lot of time on before. We tried together to do some math. That didn't work out so well, so I won't ask you any more questions about adding things up.

But in general, the LandVest study, the numbers we were talking about came out to something like 6 million plus 750,000, somewhere in that range. Remind me, though. The actual use for the pulp mills that have now shut down and the other kind of users, wasn't that a much higher number than that previously? Wasn't it like 1.2 million or something like that --

- 18 A. (Bravakis) Yes, it was.
- 19 Q. -- in that range?

- 20 A. (Frecker) Exactly right.
- Q. So why didn't the LandVest study come out
 with a number that reflected something akin
 to what the actual use had been before? One
 would expect that people who actually did

that previously, that there would be that availability. Do you know why there's a discrepancy between those?

A. (Bravakis) My sense is that some of that

wood -- LandVest looked at this -
understand, LandVest's study was a

high-level first filter for us, and it

looked at a defined area. So my sense is

that some of that wood came from outside of

that defined area.

As I have mentioned in my supplemental testimony, that as we -- excuse me -- as we learned more about how the wood, the movements in the markets work, we understand that some wood can come as close as 10, 15, 20 miles from a facility, some wood can come as far as 200 miles from a facility, based on truck traffic patterns and the efficient use of trucks in relationship to where the different markets are.

So the reason, my sense, is that

LandVest didn't come back with that number

exactly -- it would make sense that they

would -- is because some of that wood

actually came from outside of that region.

- Q. So you put an artificial bound on a hundred-mile radius, or whatever it was that you did.
- 5 A. (Bravakis) Yeah.

2

3

4

6

7

8

- Q. In reality, you think the economics of the operating pulp mills may have been such that they were able to get greater transport range outside a hundred miles?
- 10 Α. (Bravakis) Yeah. What we've learned is that 11 the realities of the market create 12 amoeba-shaped wood sheds. It's nice and 13 neat to think of them all in circles, but that's not practical and that's not real. 14 That some wood sheds -- I always think of it 15 16 like pushing on a balloon or something, 17 where you push one end in and it comes out the other, and you push that in and it comes 18 out the other. So, some facilities in 19 20 Maine, for example, would probably come in 21 and consume some of that wood that went to 22 the Burgess Mill site. When we come back, 23 those mills, those facilities in Maine would probably realign with their existing wood 24

sheds before the departure of the Burgess

Mill. So, although we'd like to think of it

in circles, it's really more of

amoeba-shaped in its dynamic. It's changing

all the time.

6 BY MR. ROTH:

Q. I just have a couple follow-on questions to what Attorney Brooks was asking you.

Now, the 1.3 million tons that was consumed by the previous players is an interesting number, and I'm curious if you know where that number came from.

- A. (Bravakis) It came from some interviews
 we've had and discussions with people in the
 area that are familiar with that, including
 some folks that actually procured fuel there
 and some people that are very familiar with
 the wood market in the area.
- Q. So you don't have any documentation or sort of formal studies showing where that figure -- how that figure was derived?
- 22 A. (Bravakis) No.
- Q. And do you know what period of time that that that figure applied to?

1 A. (Bravakis) I believe it's the recent past,
2 right before they shut down.

- Q. And is it your understanding, in the recent past, right before they shut down, that wood use by the pulp facilities players in the North Country was -- would you describe it as an all-time high or an all-time low?
- A. (Bravakis) I think it was -- and I'm trying to recall. I did get some information from UNH on this. I think it was neither of the two. I think it was somewhere in the middle.
- 13 Q. Okay.

3

4

5

6

7

8

9

10

11

- 14 A. (Bravakis) I could probably follow up with
 15 more information on that if you like.
- 16 There was a comment that you made when you Q. were being questioned by Attorney Rodier 17 earlier that was interesting to me, and it 18 was with respect to the 50-percent, 19 20 70-percent issue. And what you said was 21 that the wood cutters want to utilize 22 everything they can to create more revenue 23 for themselves. And as the markets show up, people come and supply them, no barriers to 24

entry. Would you -- and my understanding of what you were saying is that that pushes sort of the top -- or the collectors of the low-grade wood to collect more of it in more localized areas. Is that a fair characterization of what you said?

1

18

19

20

21

22

23

- (Bravakis) I'm not sure that's -- maybe I'm Α. not sure it would have to be necessarily localized. It would just be if there was a market, then they'd be able to utilize those tops and branches that they've been leaving in the woods. If they were closer, obviously, they have a competitive advantage because of less trucking costs. But it's a byproduct. It's a waste product of the logging operation that typically goes to biomass plants. Nobody goes into a timber harvest to cut the tops, nor do they take good-quality timber wood and make it into wood chips.
 - Q. But based on what you said, isn't it true that a person motivated by profit isn't going to leave half of the tops laying around on the forest floor? They're going

- to scoop them all up and bring them to your mill.
- (Bravakis) One would think so. But there 3 Α. are two things that also enter into play. 4 When a timber sale is conducted, and 5 especially with respect to what we're trying 6 7 to propose in our sustainability provision, it's done under the guidance of a timber --8 of a forest -- a registered forester. 9 it's also done under the -- many times under 10 a management plan or under some type of 11 certification program that the land is 12 involved in. So the timber -- the landowner 13 is -- his motivation is to grow high-grade 14 timber. His motivation is to grow veneer 15 logs and not to grow tops and branches to 16 17 sell to biomass plants. So it's counterintuitive for him to just 18 over-harvest his land to sell to the lowest 19 20 market. So that's -- there's more to it 21 than the logger making those judgment calls 22 on the land.
 - Q. But wouldn't you agree that there is an incentive for perhaps an unscrupulous logger

23

to buy land cheap, cut it all down, remove
every stick, sell it and move on? Correct?

- A. (Bravakis) I believe that some people would operate in that fashion.
- 5 Q. Okay.

3

- (Bravakis) I would like to point out, if I 6 Α. 7 may, that in our sustainability condition, we will not buy wood from suppliers who are 8 found to be repeat offenders of state or 9 10 federal laws governing timber harvesting. 11 And if a logging contractor were in violation on numbers of occasions, he would 12 13 not be or she would not be able to supply to our facility. 14
- 15 Q. Are you aware of any law that would prohibit

 16 a landowner from cutting every stick of wood

 17 off of his land --
- 18 A. (Bravakis) No.
- Q. -- and bringing it to your mill and sellingit to you?
- 21 A. (Bravakis) No.
- Q. When you were talking about the amoeba and how the -- you were trying to explain to
 Attorney Rodier how it is that what looks

like sort of a minimally adequate amount of wood becomes bigger because of this market shift from the users in Maine who had kind of come in to take some of the market that used to belong to the Burgess Mill, if I'm characterizing this correctly. I'm curious as to what portion of this sort of market realignment you might attribute to a timber company moving from sort of 50-percent leave-behind, you know, increasing its share of wood that they deliver to you by leaving less on the ground. Do you have some sense for how much of your -- this improvement in the basket is going to come by more efficient delivery?

- A. (Bravakis) Yeah. It was actually in the addendum. That was what explained, I think, between the 6.7 and the 7.2 or 3 million tons a year.
- Q. Correct.

A. (Bravakis) So, whatever that difference
would have been. So, 600,000, 700,000
additional tons might come in by better
utilization, according to the LandVest

1 study.

4

- Q. So, in fact, almost all of your timber needcould come through better utilization.
 - A. (Bravakis) Conceivably it could by that analysis, yes.
- Q. And how does that interplay with sort of
 this idea that the market shifts, because
 now you're using more of it locally, so the
 mill in Maine now has to go somewhere else?
 How that does that work?
- 11 (Bravakis) Well, it could also be that some Α. low-grade material that's not going into 12 13 pulping operations that are 50 miles away, for example, or on the other side of Berlin, 14 it might make more sense for a forester or a 15 logger, even though that stem is worth more 16 17 in stumpage value, it might make sense because of the savings in trucking to chip 18 that up and send that to our facility. 19 20 there are -- you know, one could say that a 21 portion of the round wood pulp that 22 currently goes to the pulp markets might get redirected to go to a biomass plant if there 23 are efficiencies gained on the trucking. 24

- Q. Okay. I'm going to ask you about the trucking efficiencies in a minute.
- MR. ROTH: Do you want to move
- 4 on to the contract, or should I continue?
- 5 MR. BROOKS: Yeah, if you
- 6 think that's best.
- 7 BY MR. BROOKS:
- 8 Q. Yeah, I'll ask you a question about the
- 9 Cousineau -- I don't know if you have a
- 10 contract in place. I think you said that
- 11 you don't yet, but you're working on it. Is
- that the -- how do you say that name and how
- do you -- spell it for me.
- 14 A. (Bravakis) Cousineau?
- 15 Q. Cousineau, yeah.
- 16 A. (Bravakis) C-O-U-S-I-N-E-A-U.
- 17 Q. You mentioned that this -- I believe that it
- 18 was the intention to have that be your sole
- 19 source contract for the next 20 years?
- 20 A. (Bravakis) Yes.
- 21 Q. And that Cousineau was probably the biggest
- 22 wood supplier in New Hampshire, it sounded
- 23 like.
- 24 A. (Bravakis) Not only -- yeah, in New

Hampshire. And they sell to other plants as well, but mostly -- they're located in New Hampshire.

- Q. Do you know what percentage of the market share they have in New Hampshire, in terms of --
- 7 A. (Bravakis) I do not.
- 8 Q. -- wood share?

Do you think there's any kind of danger to the regional economy for an already big wood supplier to get a very large wood supply contract, in terms of competition or other kind of economic market reasons that might be detrimental?

A. (Bravakis) Yeah. I understand. That's a really good question. Cousineau doesn't produce wood chips. What they do is they contract -- they basically connect the dots between the myriad of suppliers and the markets that exist. So it's in their best benefit and our best benefit for them to contract with the area producers to supply the facility. That would be the first place they might want to look, and then, in

1 addition to that, take advantage of truck inefficiencies through backhaul for 2 suppliers that are further away. So they 3 don't -- there's no intent, and I don't 4 think it's realistic to think that they 5 would exclude any local contractor. 6 7 the contrary. We have maintained a position early on that the local contractor 8 harvesting wood in a sustainable manner under management programs, et cetera, has a 10 distinct competitive advantage over 11 contractors that are further away, just by 12 the location of our facility. 13

9

14

15

16

17

18

19

20

21

22

23

- Do you think that there is any risk to you, Q. in terms of price, by locking into a long-term contract with one vendor instead of kind of spreading it out between a few vendors?
- Α. (Bravakis) The details on the pricing haven't been worked out. I think there could be a risk if that's not done properly. So we have not worked out all those terms yet, so I really can't answer that. think, done improperly, there could be a

1 risk.

- 2 Q. I think --
- 3 A. (Bravakis) I think -- if I may just add a
 4 little bit more?
- 5 Q. Sure.

20

21

22

23

24

- (Bravakis) What the Cousineau commitment to 6 Α. 7 this project means, it gives us some 8 assurance that they, who are much more familiar with this market than we are, are 9 10 convinced that there's enough wood out there 11 so that they can supply the facility. think that's an important aspect of this 12 13 arrangement: It creates certainty of 14 supply. And they wouldn't do that unless they were convinced that the supply could be 15 16 generated, that wood was available under the 17 purviews of our sustainability, the direction we're going in sustainability, 18 which they have reviewed and agreed to. 19
 - Q. Okay. And I would think that Cousineau would be able to manage their prices pretty well by using all the different resources

get that on the record.

think that's important. I wanted to just

1 for the timber harvesting. It was more a question for the Applicant, in terms of -- I 2 think you answered this -- which is, 3 basically, if I don't know the contract 4 payment terms, then I can't know what kind 5 of security you have hedges against high 6 7 prices. So without that, I guess we'll have to wait. 8

- 9 A. (Bravakis) That's right.
- 10 BY MR. ROTH:

17

18

19

20

21

22

23

- 11 Q. Does Cousineau manage the logistics of 12 delivery and trucking?
- 13 A. (Bravakis) Yes.
- 14 Q. How much wood would a -- no. How much wood

 15 would the project have on hand on any given

 16 day?
 - A. (Bravakis) We have designed the plant to have a 30-day supply of wood on hand in our two storage areas. And that would be a combination of chipped wood and round wood. There could potentially be some off-site storage on yards, as I explained before.

 Logging contractors might not have chippers, so they would log and harvest round wood and

stockpile the tops and branches. And that could be sold or destined to come to our facility. So that could act as almost satellite storage areas in the forest to be utilized maybe during times of year when it's more difficult to get into the forest because of weather conditions.

- Q. If Cousineau were to fail as a business enterprise and essentially go belly up -- we've seen that happen -- where would that leave you?
- A. (Bravakis) Well, we would -- what we would have to do is we would have to assume the contracts and the management roles that they have assumed -- as far as the supply I'm talking about. I'm not talking about the business aspects of it. I'll leave that to my business partners to talk about.

But with respect to the supply, we would assume and go in and connect with the contracts that they have made with their suppliers. We would look at the personnel that they have and either hire them or replace them, and take that over if we

couldn't find a suitable alternative to
Cousineau.

3

4

19

20

21

22

23

- Q. That would be a pretty significant disruption, though, wouldn't it, if they --
- (Bravakis) It might, it might not. 5 Α. You know, I think once -- after all, remember, 6 7 Cousineau does not cut the wood. manage the process. So if we can assume 8 that management and reconnect with all the 9 10 existing suppliers -- who need that cash 11 flow. They need that wood to go. So they 12 need that market. Presumably, if Cousineau 13 were to have financial difficulties, it wouldn't cascade down to the people who are 14 supplying our facility through a Cousineau 15 16 arrangement. So we would want to keep that 17 going as -- keep that moving forward as seamlessly as we possibly could. 18
 - Q. Are you structuring your agreement with Cousineau to provide for that kind of a reach-through?
 - A. (Bravakis) I haven't. I can't speak to that because I haven't in detail reviewed the agreement. But as soon as we have it in a

form to share with you, we will. So...

2 BY MR. BROOKS:

Q. Just to clarify, previously you talked about Cousineau with respect to also providing wood to the Schiller plant. And I think we may have gotten a misunderstanding about that.

Cousineau isn't the only supplier of wood to Schiller; right? I mean, it sounded like at one point you were saying they were the sole supplier of --

- A. (Bravakis) No, no. I believe they're -from what I understand, sometimes they
 supply 5 percent, sometimes 12 percent. But
 it's typically 10 percent or less of the
 supply to Schiller is supplied by Cousineau.
- 17 BY MR. ROTH:
- Q. Wouldn't it be more prudent to have a
 variety of different procurers? I know, for
 example, there's one called North Country
 Procurement. Split it up, have your eggs in
 more than one basket, so to speak.
 - A. (Bravakis) Obviously, we've done our homework. We've looked and talked to

others. We felt this was the best pathway forward for the project. Unlike other providers of fuel, Cousineau actually takes title to the facility. They don't just take a margin or price of a delivery. actually -- so they have more control over the supply. And what they do is they have numerous suppliers all over the place that they can direct to their clients, rather than arranging with one supplier to go to one client and they just take a piece of it. So if there's an over-supply here and an under-supply there, they're better equipped, from what I understand of their business model, to make those adjustments. And I think that, plus my personal knowledge of their ability to source and their relationships to get out there and find the wood, that was the reason for our selection with Cousineau.

1

2

3

14

15

16

17

18

19

20

21

22

23

24

(Bravakis) I really can't answer exactly how Α. I do know this, though: From what I much. understand of the way the markets work nowadays, as opposed to when the markets worked when biomass plants were first built, that the trucks are under extreme pressure to maintain or keep margins. And to do that, they need to be -- they need to carry fuel. We've all seen trucks going to They're taking logs to Canada. Canada. we don't know what they take going down. Ιt could be finished lumber. So, trucks act as -- in this day and age, within the wood market in the northeast, trucks, and the efficient use of trucks, act as a vital link in making the connections.

And if I could point out, in my supplemental testimony I describe a situation where it was a hypothetical situation based on reality, as I understand it from talking to different folks in the industry, where trucks will bring finished

lumber, for example, or products from Canada down to the Metropolitan New York area, for example. They will then go to, on their way back, maybe go to the Catskills or some forests down in that area and bring logs back to the mills in Canada, because there aren't any mills down in that area. So now we've created a timber harvesting opportunity for that area which might not have had one before.

Now, Maine takes -- a lot of times they take bark from Canada. And there's no bark markets in Maine, which come in different types of trucks for bulk delivery. They'll take that down to that same area and satisfy the market there, looking for a backhaul to go back. So, because there's a timber harvesting operation there, now the contractor can say, instead of leaving that low-grade either in stumpage form or in the woods, I can chip that up, load this truck up and sell it to a biomass plant in Maine. As ridiculous as it sounds, that's the way things move. So the truckers are a key

component in how wood moves throughout the
northeast. And it's just one brief example
of how dynamic the market is, from my
understanding.

5

6

7

8

- Q. I understand the concept. I'm trying to get at some of the specifics and what product from Berlin would be backhauled to other places that have forestry that would supply low-grade wood to your plant.
- (Bravakis) Could be bark from mills that 10 Α. 11 get -- that come in to Berlin or come off of debarking operations, let's say like a 12 pellet operation, and we weren't burning it. 13 14 Bark has a high-value use as landscape, not in the northeast, but around Metropolitan 15 16 New York. It has a huge demand. Or around 17 southeastern Massachusetts or the Boston A truck, a closed truck with a 18 self-unloading floor could take bark down 19 20 there, and then they're looking for a 21 backhaul. So they want to bring something 22 So they could contract with a local back. land-clearing operation, or the local 23 utility who clears trees and rights-of-way, 24

and backhaul chips to the biomass plants.

- 2 And that's typically the way it happens.
- Q. But you don't have any -- there's no study or specifics that you have about how --

5 (Court Reporter interjects.)

- Q. You don't have any studies or specifics about how that would actually work in practice for your facility?
- 9 A. (Bravakis) Not specifically. No studies,
 10 no. It's just discussions we've had.
- 11 Q. Now, you had named in your testimony four
 12 entities that were -- I think it was your
 13 assertion they were receiving wood by
 14 backhauls. Do you know how much wood
 15 they're receiving by backhaul?
- 16 A. (Bravakis) This is in my first testimony?
- 17 Q. I believe so.

6

7

- 18 A. (Bravakis) I believe there was, at that

 19 time -- I stand corrected. I thought it was

 20 somewhere around 50,000 tons or so.
- 21 Q. So, do you know what percentage of --
- A. (Bravakis) That percentage of 750 would be, you know, less than 10 percent.
- 24 Q. So you think something like 10 or 15 percent

of your supply would come through backhaul?

- A. (Bravakis) I'd like to answer that, but I think I really can't answer that until we understand and get a little closer to the time when actual contracts are going to be written with the suppliers and the plant will get fuel. It most likely won't be less than that. It could be more than that.
- Q. Changing subjects somewhat now. Before lunch, Attorney Rodier was trying to get you to explain 6.1.2 of the PPA, and he stopped, to my surprise. I thought he was just about ready to get you to tell us what it means.

 And I guess I'd ask you if perhaps during lunch you thought about it and consulted with your team and maybe you could tell us now what that means, how that's supposed to work.
- A. (Bravakis) Well, I can tell you this: The reimbursement he was referring to is not a reimbursement for the price we pay for fuel. The wood price adjustment has a connection with the amount of money we receive for electricity.

Q. And how does it work? Because there seems to be some relation to the price of fuel at Schiller.

- 4 A. (Bravakis) That's correct.
- Q. Can you just sort of walk us through what -how that works?
- 7 A. (Bravakis) Well, you know, I would like to
 8 do that. I think what I would prefer to do,
 9 though, if it's -- in all due respect, is
 10 defer this question to my colleague, Michael
 11 Bartoszek, who was deposed on the PPA and
 12 the business matters, if I may.
- 13 Q. That's fine.
- 14 A. (Bravakis) Okay. Thank you.
- 15 Q. Now, this is a question for -- I guess the
 16 next line is for both you, Mr. Bravakis, and
 17 Mr. Frecker.

As I understand it, there's a

19 significant amount of ashes that will be
20 produced by the plant on a regular basis.
21 Is that fair to say?

- 22 A. (Bravakis) Yes.
- 23 A. (Strickler) Yes.
- Q. And how much will there be? How much ashes

will be produced on a daily basis or a
weekly, or whatever metric you want to do?

- A. (Frecker) That issue was addressed a little
 bit more in the responses to one of the data
 requests from the technical session. I
 don't recall, right off the top of my head.
 But in that response, it indicated that the
 quantity of fly ash -- that is the ash taken
 out of the combustion area exhaust from the
 boiler, controlled by the electrostatic
 precipitator -- would be on the order of
 100 --
- Q. You mean by that, the electrostatic precipitator that you're not using?

 MR. BROOKS: You mean the
- 16 baghouse.

- 17 A. (Frecker) I'm sorry. Thank you. The
 18 fabric-filter baghouse would be on the order
 19 of about 120 tons per week.
 - Q. And what are you going to do with that?
- 21 A. (Frecker) It was further indicated in one of
 22 those responses that there were discussions
 23 with the Androscoggin Valley Regional Refuse
 24 Disposal District, and their confirmation

that they had the capacity to accept that material at the Mount Carberry landfill.

3

4

14

15

22

23

- Q. Okay. So you've already started contact with Mount Carberry to bury it up there.
- (Frecker) That's correct. And furthermore, 5 Α. as I think was discussed at the technical 6 7 session, a more favorable potential outcome for that material would be an alternative 8 beneficial use for land supplement, land 9 10 application material, as is often done with 11 fly ash from biomass facilities from many generating facilities throughout the 12 13 northeast.
 - Q. How much ash will you store on the project site?
- A. (Frecker) I believe that the ash storage

 system, at least at the time the application

 materials were filed, hadn't been fully -
 it's designed and not been fully finalized.

 But I believe the number talked about was

 about a week's worth of ash generation.
 - Q. And that will all be inside a structure, a building somewhere?
 - A. (Frecker) That's correct. It will be

- 1 contained within a silo.
- Q. And where is that silo going to be located
- with respect to, for example, the
- 4 Androscoggin River?
- 5 A. (Frecker) I don't believe the exact
- 6 placement of that device has been finalized
- 7 at this time; although, I think it could be
- 8 reasonably expected to be located close to
- 9 where the electrostatic precipitator
- 10 building would be located.
- 11 Q. You mean baghouse?
- 12 A. (Frecker) This is the fuel oil tank --
- excuse me?
- 14 Q. The baghouse?
- 15 A. (Frecker) And initially it was talked about
- having that ash silo located between the
- 17 boiler and the turbine building and the
- 18 stack. Again, that location may alter some
- 19 degree.
- 20 Q. And you said there would be, I think -- did
- you say there was going to be a week's worth
- in there at a time?
- 23 A. (Frecker) I believe that's the number that's
- 24 been talked about.

- 1 Q. And would you -- and maybe this is for Mr.
- 2 Bravakis or... would you agree to a
- 3 condition that no ashes could be stored
- 4 outside and that no more than a week's worth
- 5 would be kept in the silo?
- 6 A. (Bravakis) I believe we can do that.
- 7 0. That's all I have on this subject.
- 8 BY MR. BROOKS:
- 9 Q. I had a couple more questions on the PPA,
- 10 but we'll defer them to Mr. Bartoszek.
- 11 A. (Bravakis) Thank you.
- MR. IACOPINO: Before you do
- 13 that, if I can just interrupt?
- 14 Am I to understand, though,
- 15 that Mr. Bartoszek is the person who explanation
- 16 of the PPA should be directed to?
- 17 MR. BRAVAKIS: Yes.
- 18 A. (Frecker) And if I may, Mr. Roth. If you'd
- 19 like to go back to the Dummer Yard, I think
- I could probably answer your questions on
- 21 that.
- 22 Q. (Roth) Oh, okay. The question I would ask
- is, does the project have any continuing
- responsibility with respect to the Dummer

Yard?

1

2

A. (Frecker) I don't believe that to be the case. I initially didn't recall the Dummer Yard because it's not a property that's really part of the project in any way.

As I understand the Dummer Yard, it's a closed portion -- it's a closed landfill located on or about the area of the Mount Carberry landfill. And the leachate from that Dummer Yard closed landfill is conveyed down to the wastewater treatment plant that formerly serviced the Fraser pulp mill. that, I believe, is the subject of the document that you had provided. Inasmuch as the project has not acquired that wastewater treatment facility for any purpose, I wouldn't believe that the requirements of this document would extend to Laidlaw. Ιt seems to address primarily the ongoing treatment of the Dummer Yard's leachate, in that wastewater treatment facility, which, to my understanding, is currently owned and operated by the same party that has responsibility for the Dummer Yard leachate,

the Androscoggin River Valley Regional
Refuse Disposal District, if I'm not

- Q. I'm not sure about that, actually. But your testimony is that it's not going to be
 Laidlaw, the applicant's, responsibility.
- 7 A. (Frecker) That's correct.

mistaken.

3

- 8 Q. Where is the wastewater stream from the 9 facility going to go?
- 10 A. (Frecker) To the City of Berlin municipal
 11 wastewater treatment plant.
- 12 Okay. Now, Mr. Strickler, I've been trying Q. 13 to figure out what's going on with the reorganization and the new chart and how you 14 fit in anymore. And it looks as though, 15 16 from the new chart that was suggested, that Fibrowatt and Fibrominn are now more like, 17 you know, ex-in-laws; whereas, before it 18 19 appeared to be an equity interest in the 20 project, now there's a dotted line 21 connecting Homeland to the Applicant. 22 you describe what happened there and what's 23 supposed to happen?
 - A. (Strickler) What is supposed to happen --

```
MR. RODIER: Excuse me.

Excuse me, Mr. Chairman. Could we have a
```

3 reference to an exhibit on that question so we

4 can follow it?

5 CHAIRMAN BURACK: Thank you

6 for that suggestion.

7 It would be helpful if you

8 could provide a reference, Attorney Roth.

9 MR. ROTH: It's the new

10 organizational chart that came, I think it was

11 the August 16th --

MR. NEEDLEMAN: Exhibit 8.

MR. ROTH: Sorry?

MR. NEEDLEMAN: Exhibit 8.

MR. ROTH: Exhibit 8? Thank

16 you.

17 CHAIRMAN BURACK: Exhibit 8

18 you say, Attorney Needleman?

19 MR. NEEDLEMAN: I believe so.

20 BY MR. ROTH:

21 Q. And I guess at the same time I'd like to

look at the original org chart which was

attached to the initial testimony of Mr.

24 Bartoszek.

1 MR. IACOPINO: The initial

- 2 testimony of Mr. Bartoszek is Exhibit 33, and
- 3 that chart is there.
- 4 BY MR. ROTH:

7

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

- 5 Q. Do you have these in front of you?
- 6 A. (Strickler) I do.
 - Q. Now, it looks -- it's the last page of -- it would be Page 9 of Mr. Bartoszek's original testimony, and it stands by itself on the

In the original organizational chart, we see on the right there Fibrowatt, and Fibrowatt operations owning 100 percent of Homeland Renewable. Homeland Renewable and Laidlaw BioPower owning together all of Homeland and Laidlaw Energy, which had 50 percent of the Applicant; correct?

A. (Strickler) That's correct.

other one. Okay.

- Q. Now, if you look at the new chart, the only connection between Homeland Renewable is a dotted line between Laidlaw Berlin BioPower, LLC. What does that dotted line represent?
 - A. (Strickler) That represents an agreement with NewCo to provide services to the

Applicant, 0 & M -- operations and maintenance services -- construction management and development services.

- Q. Okay. And is that alongside of or on top of the Babcock & Wilcox agreement?
- A. (Strickler) With respect to construction, it
 would be -- we'd be overseeing the
 construction and the contract with B & W.
- 9 Q. And now, initially you had -- I say you. I
 10 mean, you know, Fibrowatt and Homeland had
 11 an ownership interest. And that's been
 12 bought out?
- 13 A. (Strickler) No, I wouldn't say it was bought
 14 out. But it has been severed. There is
 15 no -- we no longer will have an equity
 16 interest in the Applicant.
 - Q. Okay. And will -- if Laidlaw decides they don't want to listen to you anymore, could they fire you? Could the Applicant fire Homeland?

17

18

19

20

21 A. (Strickler) Under a contractual arrangement
22 that we would have with NewCo providing
23 those services, I suppose that relationship
24 could be such that we could be terminated.

1 Q. So is the contract going to be with NewCo,
2 or is it going to be with --

- A. (Strickler) It's a contract with NewCo, but we're providing services to the Applicant.
- So this org chart is not -- the second one, 5 Q. the new one, is not really complete, because 6 7 to me it raises the implication or implies that the relationship between Homeland 8 Renewable is just with Laidlaw Berlin 9 BioPower. For example: If you look at PJPD 10 11 Holdings and the lease to Laidlaw, there's a nice dotted line across there showing the 12 13 contract. But there's no line like that between Homeland and NewCo. Do you have any 14 ownership interest in NewCo? 15
- 16 A. (Strickler) No, we do not.
- 17 Q. Or PJPD?
- 18 A. (Strickler) No.
- 19 Q. Okay.

24

20 MR. RODIER: Mr. Chairman,
21 excuse me. I hate to do this. I didn't
22 understand. I think it's important to understand
23 what the pronoun "we" refers to there. Could we

just get a clarification on that? Is it do you

1 have any ownership interest, or we don't? And

- 2 there's so many entities here. I may be out of
- 3 line, but I would suggest we get that clarified
- 4 so the record's clear.
- 5 CHAIRMAN BURACK: Thank you,
- 6 Attorney Rodier.
- 7 Attorney Roth, do you wish to
- 8 try to get clarification here?
- 9 BY MR. ROTH:
- 10 Q. If you'd like to -- if there's any way you
- can shed any light on that, I'd appreciate
- 12 that.
- 13 A. (Strickler) Well, I'm not a hundred-percent
- sure exactly the question. But if I may,
- 15 I'll try. We do not -- Homeland Renewable
- 16 Energy or Fibrowatt operations do not have
- ownership interest in NewCo.
- 18 Q. Or you personally?
- 19 A. (Strickler) No, I do not.
- 20 Q. Okay. And are you an officer or director of
- any of those other entities?
- 22 A. (Strickler) Of Homeland Renewable Energy and
- 23 Fibrowatt Operations, I am.
- 24 Q. But not of NewCo or --

- 1 A. (Strickler) No, I'm not.
- 2 Q. Now, I understand that the ownership-change
- 3 arrangement has not yet occurred. Is that
- 4 your -- is that correct?
- 5 A. (Strickler) That is correct.
- 6 Q. Okay. And when do you expect that to
- 7 happen?
- 8 A. (Strickler) I'm not a hundred-percent sure.
- 9 But tomorrow, Mike Bartoszek, I think
- 10 will -- could be questioned more on the
- details of that transaction.
- 12 Q. Okay. Now, do you expect -- going more now
- towards operational and management. Do you
- 14 live in New Hampshire now?
- 15 A. (Strickler) No, I do not.
- 16 Q. Are you going to move here?
- 17 A. (Strickler) No, I'm not.
- 18 Q. How about --
- 19 A. (Strickler) If I might clarify that?
- 20 Q. Sure.
- 21 A. (Strickler) Okay. What we typically would
- 22 have is a plant manager who would be
- responsible for the day-to-day operations of
- the facility. He would report to our VP of

```
operations that works for me. But the plant
```

- 2 manager who has the responsibility for the
- day-to-day operations of the plant will be
- 4 based in New Hampshire.
- 5 Q. Is that going to be Mr. Fervee or
- 6 Mr. Loulakis?
- 7 A. (Strickler) No.
- 8 Q. No?
- 9 A. They are -- they'll provide assistance, you
- 10 know, to us in any matter related to the
- 11 project. But they would not -- I would not
- 12 expect them to be the plant manager.
- 13 Q. And they're not -- are they going to live in
- New Hampshire or move to -- do they live
- 15 here now? Are they going to move here?
- 16 A. (Strickler) I don't know.
- 17 Q. Now, with respect to operations at
- 18 Fibrominn -- and, you know, please don't
- 19 take this the wrong way -- but are there --
- 20 have there been any deaths or serious
- injuries in the operation of the Fibrominn
- 22 facility in Minnesota?
- 23 A. (Strickler) No.
- 24 Q. How long has that been in operation?

```
A. (Strickler) We took over control from the contractor in October of 2007. Since that time, we've had no lost-workday cases. So it's over a thousand days that we've had no lost-workday cases.
```

- Q. Has there been any downtime in the plant itself -- that is, out of operation because of management or technical difficulties, please stand by?
- 10 A. (Strickler) Well, these plants are very
 11 complex. They do go down for maintenance.
 12 Equipment does break down, has to be -- they
 13 go down for servicing of the facility. That
 14 does happen.
 - Q. And do you know what percentage of the time has been in downtime or out of operation, I suppose off-line?
- 18 A. (Strickler) The facility in Benson,19 Minnesota you're referring to?
- 20 Q. Correct.

6

7

8

9

15

16

17

21 A. (Strickler) We have projected a capacity
22 factor this year of around 85 percent. So
23 that would give you an indication of its
24 production.

Q. And that capacity factor -- I always get confused on this -- does that include planned outages?

- A. (Strickler) Yes, it does. That's including planned and unplanned, yes.
- Q. So the 15 percent of theoreticalnon-operation includes the planned outages?

- A. (Strickler) It's probably about 50/50 for that facility. I might add, the Fibrominn facility burns primarily poultry litter, which is a much more difficult fuel to manage than wood chips. And I would expect the Berlin facility to be a much, you know, higher capacity factor.
- Q. Okay. Now, in Mr. Bartoszek's -- I'm sorry if I'm mispronouncing his name -- testimony, he said that the development and construction is the Applicant and Homeland.

 I guess I'd ask you. Who does what?
- 20 A. (Strickler) Refer me to the words he used.
 21 Do you have a page that... I probably should
 22 let you ask him that question.
 - Q. Well, if you can just answer the question.

 Is it your -- here, I'll ask it this way:

Is it your understanding that the
development and the construction of the
plant is sort of a shared enterprise or a
shared activity between you and the

4 shared activity between you and the

5 Applicant, between Homeland and the

6 Applicant?

7

8

9

10

17

18

- A. (Strickler) The development was shared. The role for Homeland would be to oversee the construction of the project, irrespective of the ownership change that's been discussed.
- 11 Q. So you're going to --
- 12 A. (Strickler) Either way, we were going to be
 13 involved under the construction, for
 14 overseeing the construction, reporting to
 15 previously -- or under the current
 16 situation, to the Applicant.
 - Q. So you're sort of operating as general contractor for the owner of the construction?
- 20 A. (Strickler) Wouldn't call it a general
 21 contractor arrangement. It's really an
 22 oversight role, overseeing the construction
 23 of the project, you know, managing the EPC
 24 contract with B & W, as well as any other

construction-related activities that
might -- that aren't within the B & W scope,
peripheral to the site.

- Q. And after construction, during operational, is that going to be Homeland again, or is that --
- 7 A. (Strickler) Be a Fibrowatt operation, which is Homeland.
- 9 Q. Okay. Unless, of course, as we discussed a
 10 minute ago, they terminate the contract
 11 according to its terms.
- 12 A. (Strickler) Yeah.

4

5

- Q. Okay. And who's going to have sort of the contracting power, the signing authority for different things? For example: The Babcock & Wilcox contracts. Is that going to be something Fibrowatt signs or Homeland or --
- 18 A. (Strickler) Probably be the Applicant.
- 19 Q. The Applicant? What's your time line for
 20 sort of completing construction and placing
 21 in service?
- 22 A. (Strickler) Right now, we're looking at
 23 between a 26- and 32-month construction
 24 period. That includes all the way to what

```
1 I'll call commercial operations. It
2 includes the testing and commissioning of
3 the facility as well.
```

- Q. Do you have sort of a place-in-service date picked or envisioned?
- A. (Strickler) Well, it would be -- not yet. I
 mean, it would be somewhere in that range.

 Once we complete the work that B & W is
 undertaking now under the pre-EPC contract,
 we plan to formulate that with very specific
- 12 Q. And are there any sort of hazards, if you
 13 will, that could cause significant delays in
 14 the place-in-service?
- 15 A. (Strickler) Not -- only something that would
 16 be unforeseen. You know, some odd weather
 17 event or something like that.
- 18 Q. Okay.

dates.

- 19 A. (Strickler) I mean, it would be unforeseen 20 circumstances that possibly could come up.
- Q. And are you familiar with the ARRA
 guidelines for the investment tax credit?
- 23 A. (Strickler) I'm not sure that I know that
 24 term. If you describe the guidelines, maybe

1 I can --

- Q. It's the program where once a property is placed in service, the owner is entitled to a tax credit payment.
- 5 A. (Strickler) Oh, okay. Yeah. Sure. The
 6 ARRA was the word that I was wasn't familiar
 7 with.

8 CHAIRMAN BURACK: Could you,

- 9 just for the record, describe what ARRA is,
- 10 Counsel? Could you spell it?
- MR. ROTH: A-R-R-A.
- 12 A. (Bravakis) Yeah, it's the American
 13 Recovery --
- 14 A. (Frecker) Reinvestment and Recovery Act.
- 15 A. (Strickler) Yes, I am familiar with that.
- Now I got it.
- 17 Q. Have you looked at the guidelines that --
- 18 A. (Strickler) I have, and several other people
- on this project team have looked at it.
- 20 Yes.
- Q. And do you know what you have to do to be able to participate in that program?
- 23 A. (Strickler) There's a number of different
 24 ways to participate in that program, various

1 ways to comply with the requirements.

- Q. And do you have a vision for how you're going to do that?
- A. (Strickler) Ideally, we'd start

 construction. That would be the first, you

 know, before the end of this year. That's

 our plan.
- 8 Q. Yeah, that's a milestone; right?
- 9 A. (Strickler) That's our plan. But there are
 10 other ways to still comply. If you look
 11 through those requirements, there's other
 12 ways to comply still, even if you don't
 13 start construction. So we're looking at
 14 these alternatives as well, just as a
 15 Plan B.
- Okay. All right. There was one more 16 Q. 17 question I wanted to ask Mr. Bravakis. As sort of kind of a follow-up to our 18 discussion a minute ago about the 19 20 sustainability. And our sense, I think 21 we -- you agreed that there is some 22 incentive for an unscrupulous, you know, 23 timber owner to kind of work the property as hard as he can in order to get as much wood 24

```
to the facility as possible; correct? I
```

- mean, I think that was pretty clear. And
- 3 the sustainability rules or the
- 4 sustainability condition, would you agree
- 5 that that's kind of an important modifier of
- 6 that market tendency?
- 7 A. (Bravakis) Hmm-hmm.
- 8 Q. And so that as a condition to this, it's an
- 9 important thing to do, to have a
- 10 sustainability condition.
- 11 A. (Bravakis) Hmm-hmm. Yes.
- 12 CHAIRMAN BURACK: I'm sorry.
- 13 The answer is yes?
- MR. BRAVAKIS: Yes.
- MR. ROTH: I'm all set.
- 16 Do you have anything else?
- 17 MR. BROOKS: I don't believe
- 18 we have any further questions for this panel.
- 19 CHAIRMAN BURACK: Okay. Thank
- 20 you.
- We're going to take a
- 22 10-minute recess here. And when we return, we
- 23 will commence questioning by the members of the
- 24 Subcommittee of the panel.

```
1
                        MR. RODIER: Mr. Chairman, may
2
    I ask one question? Do you anticipate any
    offering of an opportunity for redirect or any
3
4
    recross?
                        CHAIRMAN BURACK: I think
5
    we'll see what folks are asking to be able to do,
6
7
    and we'll see if we can accommodate that or not,
8
    okay.
                        We'll take a 10-minute recess.
9
               (Whereupon a recess was taken at 3:05
10
11
              p.m., and hearing resumed at 3:25 p.m.)
12
                        CHAIRMAN BURACK:
                                         Ladies and
13
    gentlemen of the jury, we will resume here. And
    before we turn to some questions from members of
14
    the Subcommittee, I have a question for Attorney
15
16
    Needleman.
17
                        Do you have a motion or
    motions that you wish to make at this time
18
    relating to the Babcock & Wilcox agreement and
19
20
    the Cousineau agreement? Do you wish to address
21
    those at this time?
22
                        MR. NEEDLEMAN:
                                        Yes, I do.
23
    Thank you.
24
                        Those are documents, as I
```

- 1 indicated, that we expect to be providing.
- 2 Portions of those agreements do contain
- 3 confidential terms, and we would ask that the
- 4 Committee agree, consistent with how it's treated
- 5 our confidential documents in this matter, to
- 6 also treat those documents confidentially in the
- 7 same way.
- 8 CHAIRMAN BURACK: Do you
- 9 intend to make a written motion to this effect,
- 10 or do you want to put on the record now the
- 11 rationale that you would have for treating those
- 12 documents confidentially, understanding that we
- 13 have to meet a balancing test, as I think you
- 14 know, in order to be able to treat a document as
- 15 confidential?
- 16 MR. NEEDLEMAN: I think for
- 17 purposes of expediting this proceeding, what I'd
- 18 rather do now is make the oral motion and put
- 19 that on the record, if I may.
- 20 CHAIRMAN BURACK: Okay. And
- 21 you will Subcommittee written motion setting
- 22 forth, in particular, your detailed reasoning why
- 23 these documents contain confidential information?
- MR. NEEDLEMAN: Yes.

```
1
                        CHAIRMAN BURACK: Okay. And
2
    we'll --
3
                        MR. BROOKS: Mr. Chairman --
4
    I'm sorry.
                        CHAIRMAN BURACK: We will
5
    receive that from you tonight or by tomorrow
6
7
    morning?
8
                        MR. NEEDLEMAN: I would expect
    by tomorrow morning.
9
10
                        CHAIRMAN BURACK: Okay.
                                                  Thank
11
    you.
12
                        MR. ROTH: I just wanted to
13
    confer with Attorney Needleman for a moment about
    another document.
14
15
                        CHAIRMAN BURACK: We'll just
16
    take a pause for a moment.
               (Discussion off the record between
17
              counsel.)
18
19
                        CHAIRMAN BURACK:
                                          Okay.
20
    Attorney Needleman, do you have something
21
    further?
22
                        MR. NEEDLEMAN: Yes.
                                              I just
23
    want to clarify. There are two documents we're
    talking about. With respect to the pre-EPC
```

```
contract, we will be asking that that be treated
confidentially by the Committee, but we will --
we'll be comfortable with certainly all members
of the Committee and any parties to this
proceeding -- any parties, I think, except CPD --
having access to that. And we have discussed
that, I understand, with CPD's counsel, and I
```

believe they agreed to that.

With respect to the Cousineau wood supply agreement, we will be seeking confidential treatment for portions of that document, primarily related to confidential commercial business information. And we will submit that in redacted form. And subject to those redactions, I think we would be comfortable with any parties to the proceeding having access to that document.

And, as indicated, we will be submitting a written document. But the basis for us seeking confidentiality will be similar, if not identical, to the basis we have articulated with other documents in this proceeding: Relying on the exclusions in the New Hampshire Right To Know Law that protect from public disclosure

```
1 documents containing sensitive commercial and
```

- 2 financial business information.
- 3 CHAIRMAN BURACK: Okay. Thank
- 4 you. Just to clarify, you're anticipating, then,
- 5 your written motion would, under the terms that
- 6 you've described, provide access to these
- 7 documents to various parties to this proceeding,
- 8 but not to members of the public; is that
- 9 correct?
- 10 MR. NEEDLEMAN: That's
- 11 correct.
- 12 CHAIRMAN BURACK: Okay. Thank
- 13 you. We will take your motion, your oral motion
- 14 under advisement, and we will rule upon it once
- 15 we've received your written motion tomorrow
- 16 morning.
- 17 MR. NEEDLEMAN: Thank you.
- 18 CHAIRMAN BURACK: I might say
- 19 that my anticipation is that the Subcommittee
- 20 will schedule a portion of this hearing to be a
- 21 closed session solely to the parties entitled to
- 22 see and review these various confidential
- 23 documents. At this point, my sense is that this
- 24 could possibly occur as early as tomorrow

```
1 afternoon. More realistically, it's probably
```

- 2 going to be Wednesday or Thursday. And so I
- 3 would simply ask, Attorney Needleman, that you
- 4 ensure the availability of any of the parties or
- 5 any of your client's principals to be here during
- 6 those periods of questioning as well.
- 7 MR. NEEDLEMAN: Understood.
- 8 CHAIRMAN BURACK: Okay.
- 9 Attorney Needleman, I'm also going to make the
- 10 request -- and Mr. Bravakis made reference to the
- 11 availability earlier of one or more of the
- 12 LandVest study authors. I'm going to request
- 13 that you make that individual or individuals
- 14 available to the Subcommittee for direct
- 15 questioning.
- MR. NEEDLEMAN: We have been
- in contact with somebody from LandVest and expect
- 18 to have them here tomorrow for questioning.
- 19 CHAIRMAN BURACK: Okay. If
- 20 you would kindly let Attorney Iacopino know who
- 21 that individual or individuals would be and when
- 22 you would expect them to be available, that would
- 23 be helpful.
- 24 I'm going to start with an

```
1
    additional set of requests here of the Applicant
    that I think would be most helpful for us to
2
    receive prior to our taking Mr. Bartoszek's
3
    testimony and having him cross-examined by the
4
5
    parties and questioned by the Subcommittee.
                                                   And
    this is my list of requests at this moment.
6
                                                   \mathbf{If}
7
    you see any aspects of this to be problematic,
8
    please let me know. But there have been, as you
    know, some not insignificant changes to the
9
10
    corporate structure and ownership relationships
    here and responsibilities of the entities as
11
    compared with what was originally submitted to
12
    the Committee. So I'm going to ask you to
13
    provide the following: First, the names and
14
    titles of all of the officers or directors or
15
16
    other principal employees of each of the entities
17
    listed on the organizational chart that appears
    at Exhibit 8, your Exhibit 8, Attorney Needleman.
18
    So I see a total of six different entities listed
19
20
    there.
21
                        Second, would you please
22
    provide us with the names and titles of all of
23
    the -- I believe these are all LLCs, with one
    exception, one being a corporation -- so with
24
```

1 respect to all the LLCs, the names of the members

2 and the managing members; and with respect to the

3 corporation, which is Homeland Renewable Energy,

4 Inc., all the members of their board of

5 directors.

entities.

Would you also please provide us with a written description of each entity's role with respect to this project, as well as a written description of the lines of authority and reporting among and between these various

Next, I would ask you to provide us with a written description of the experience and qualifications of each entity as they would relate to this proposed project. I recognize that for some of these entities you may have already provided this, but for others you have not. It'd be most helpful to the Committee if you could put this all together for us in one package.

Next, could you please identify for us whether any of these entities are publicly traded, Attorney Needleman. I don't know if you know the answer to that question,

```
1 right offhand.
```

MR. NEEDLEMAN: Somebody will
quickly correct if I'm wrong from the back, but I
don't believe any of the entities listed on the

organizational chart on Exhibit 8 are publicly

6 traded companies.

13

14

15

16

17

18

19

20

7 CHAIRMAN BURACK: Okay. That
8 being said, are the owners or shareholders of any
9 of these entities publicly traded companies?

MR. NEEDLEMAN: I'm not

11 certain. But I can get you that answer pretty

12 quickly, I think.

would appreciate it if you would. My understanding, but perhaps this is not accurate, is that NewCo Energy, LLC is owned in whole or in part by a publicly traded company, which I believe has been identified in some of the documents as LLEG? But I may be mistaken about that.

21 MR. NEEDLEMAN: That is not 22 correct, no.

23 CHAIRMAN BURACK: Okay. Now,
24 I know that my understanding is that, prior to

```
just within the past couple of weeks or so, you
have been in touch with counsel for the
```

- 3 Committee -- for the Subcommittee, informing them
- 4 of this -- informing us of this change in the
- 5 ownership structure. My understanding is that
- 6 there were some issues relating to being able to
- 7 disclose information prior to some kind of a
- 8 public filing. Am I misunderstanding things?
- 9 Can you clarify for us what the ownership
- 10 relationship is between NewCo Energy and an
- 11 entity that would require some kind of a public
- 12 filing?
- 13 MR. NEEDLEMAN: Yes. If you
- 14 look at Exhibit 33, the last page, No. 9.
- 15 CHAIRMAN BURACK: This is
- 16 Exhibit 1 to the testimony of Michael Bartoszek?
- 17 MR. NEEDLEMAN: Correct.
- 18 CHAIRMAN BURACK: Yes.
- 19 MR. NEEDLEMAN: The publicly
- 20 traded entity is at the top of that chart,
- 21 Laidlaw Energy Group, Inc., which at this moment
- 22 continues to have an ownership interest in the
- 23 Applicant. It is contemplated that once this
- 24 transaction goes forward, it will no longer have

```
1 that ownership interest, and so the publicly
```

- 2 traded company has no connection to the proposed
- 3 new owner of the facility. And so at the time
- 4 that we were sharing this information, the
- 5 sensitivity with respect to making that
- 6 information public pertained to that publicly
- 7 traded company. It had nothing to do with the
- 8 new owner.
- 9 CHAIRMAN BURACK: Okay. And
- 10 so that the new owner is NewCo Energy, LLC.
- 11 That's the proposed new owner; correct?
- MR. NEEDLEMAN: Correct.
- 13 CHAIRMAN BURACK: All right.
- 14 Can you, or is Mr. Bartoszek going to be in a
- 15 better position to answer this question as to
- 16 what the timing of that transaction is
- 17 anticipated to be?
- 18 MR. NEEDLEMAN: I can give you
- 19 the general contours right now.
- 20 CHAIRMAN BURACK: If you
- 21 would, please.
- 22 MR. NEEDLEMAN: It was our
- 23 desire to do everything we could to try to
- 24 consummate that transaction before this hearing

```
1
   began, and we have been working aggressively to
   do that. We have not succeeded.
2
   continuing to work aggressively on that
3
   transaction in hopes of finishing it as soon as
4
5
   possible. But I can say, with a high degree of
   comfort, that it is the intent of both parties
6
7
   and the goal of both parties to have that
8
   transaction consummated on or before August 31st.
```

CHAIRMAN BURACK: Thank you.

Having said that, it would still be very helpful to us to have information relating to Laidlaw Energy Group, the same basic information that we requested of these other entities, and to have information -- if this is a publicly traded company, if you have copies of their annual reports for the past several years, if you're able to provide those to us, say for the past four to five years; as well as if there have been any filings with the Securities and Exchange Commission by Laidlaw Energy Group within the past year, if you can provide us with copies of those as well, please.

MR. NEEDLEMAN: I will look into that. I don't know, as I sit here, what, if

SEC 2009-02 [DAY 1 - AFTERNOON SESSION] $\{8/23/10\}$

1 anything, is available pertaining to those. But

- 2 we will look into that. I will also note that
- 3 they were contained in that original
- 4 organizational chart. And I don't recall, off
- 5 the top of my head, but I believe some
- 6 information was provided in the original
- 7 application pertaining to that.
- 8 CHAIRMAN BURACK: Thank you.
- 9 Okay. Going to now open this
- 10 up to members of the Subcommittee to ask
- 11 questions of this panel. As you will understand,
- 12 I'm going to ask the Subcommittee members to hold
- any questions they might have at this time
- 14 relating to any of the confidential documents or
- 15 confidential aspects of documents which we have
- 16 public, redacted versions. But otherwise, we
- 17 | will, as I said, now take questions from members
- 18 of the Subcommittee of these panelists. And who
- 19 would like to start? You want to start, Mr.
- 20 Harrington?
- 21 EXAMINATION
- 22 BY MR. HARRINGTON:
- Q. I'm just going to address my questions to
- the group, and whoever's the most

appropriate person can answer.

1

20

21

22

23

24

You included in one of your filings some information on a study that was done by Massachusetts on whether or not biomass is to be considered a renewable power supply -my understanding is there was some misstatements taken out from that report, taken out of context -- but that Massachusetts is in the process of drawing up new, more restrictive rules on whether they -- what types of biomass plants they would honor as part of their REC system for the renewable power. And maybe this gets into the Purchase Power Agreement. I'm just not sure. So if it does, we can leave it go until then.

But if Massachusetts were to put out rules that would not qualify your plant for renewable certificates issued in Massachusetts, and since they have 48 percent of the New England market, what would be the effect economically on the Laidlaw project?

A. (Bravakis) I can answer this one. I don't

believe it will affect our project, because my understanding is that PSNH is going to be using the RECs from our facility to satisfy their obligation under the New Hampshire RPS, which is not subject to any rules or regulations promulgated in the Commonwealth of Massachusetts.

Q. And maybe I'll leave questions on pricing on that to go to later then.

We kind of mentioned this idea of the ownership structure, but we need a little bit more information.

One of the things that kept coming up in the earlier testimony is the 6 tons of -- or 6 million tons of biomass and then the addition of 750,000 or more to feed the Laidlaw facility. When was that six -- I couldn't get this straight. The 6 million tons, was that with the three or four mills up and running, or was that after they closed?

- A. (Bravakis) After they closed.
- 23 Q. So it was after they closed.

Okay. And you had stated in a few

places whole tree chips and that most of this was coming out of what would otherwise be waste wood. So the way this would work is, an assumption on my part, people cutting down trees, if there's any value to the trees for lumber or pulp, I guess, they would sell them there because they'd get a higher price than they would for just burning them?

10 A. (Bravakis) Correct.

Q. So they go for that for that reason. Okay.

Another question here. And I know the interconnection agreement is confidential, but I don't think this part of it is.

Throughout the document you talk about -- it mentions a 70-megawatt facility. Looking at that, the gross turbine output is 65.9. And then you take off the service load, 7.2 megawatts. And so your net output is somewhere in the high 50s? Is that the correct numbers?

A. (Strickler) The gross is a little over 70.

And after you use the parasitic loads, we bring it down to 63 net.

Q. Well, maybe when we get into the interconnection agreement, then we get into the specifics, because that doesn't seem to match with what's there. So...

There's going to be some further testimony given on this, I believe, the whole idea of how much can Coos Loop hold. And I know you connected under the minimum interconnection standard; is that correct?

A. (Strickler) Yes.

1

2

3

4

5

6

7

8

9

10

22

23

- So there's no assurance that your power can 11 Q. or will be delivered. There's -- put it 12 this way: If the Noble Wind project is up 13 and running, if the other proposed plant, 14 biomass plants are built, the existing 15 plants are running, would there be times, to 16 17 the best of your knowledge, when Laidlaw cannot be dispatched at a hundred percent 18 simply due to the line being full, the 19 20 transmission line being full, if in fact you 21 weren't the lower-priced one.
 - A. (Bravakis) You know, I would like to answer that, but I'm afraid that I'm not the key person. I want to defer to my colleague,

Ray Kusche, when he testifies. He's been responsible for all our interconnection, ISO relations, et cetera, if that's acceptable to you.

1

2

3

4

20

21

22

23

24

Sure. And maybe this -- I'm not sure. 5 Q. One of these gentlemen was talking on 6 7 environmental things. Now, I know you had the best available technologies specified in 8 your air permit. But there's also been some 9 proposed new regulations that I believe 10 11 would affect biomass plants, proposed by the EPA, and with statements from -- and this is 12 not going to be an exact title, but someone 13 like the president of the American Biomass 14 Power Association or something to that 15 effect, saying that these new RECs could 16 17 raise havoc on biomass generating facilities, and, in fact, could shut some of 18 them down. 19

Is your plant going to be able to comply, or is it being built to comply with those new regulations? Or are you just going to wait and see until they become final?

```
A. (Frecker) I believe the regulations that
you're referring to are the maximum
achievement control technology standards for
biomass generating facilities, of which EPA
has a proposed rule out and is still in the
process of working towards finalizing that
rule.
```

Q. That's correct.

8

18

19

20

21

22

23

24

- (Frecker) What it will look like in its 9 Α. 10 final form we're not yet sure. And, given 11 that this project is still finalizing its 12 design and development, there are 13 opportunities to further enhance the emission controls, if that would be 14 necessary. But we don't know the answer to 15 that yet. But we suspect that we could deal 16 17 with it.
 - Q. So you would see the resulting outcome, and then if you have to make changes, you'd make them at the time, assuming that you hadn't put any --

(Court Reporter interjects.)

Q. You would just wait to see what happened and then change as necessary when the new rules

1 came out.

A. (Frecker) We definitely need more clarity on exactly how the rule will look and how it will apply to the project before we're able to deal with that.

- Q. Assuming you're going to be in the forward-capacity market, what's the approved capacity supply or obligation? Do you have one; and if so, what's the first effective year --
- 11 A. (Bravakis) If I may, I'd like to again defer 12 that to Mr. Kusche.
 - Q. Okay. And this other question, I guess, will probably be deferred as well. This was on the -- it was -- and I don't even -- I'm not sure -- see if I can find it. Someone made the -- and that was deferred, that question as well.

And there was some talk earlier on the capacity factor of the proposed facility.

What do you estimate? What are you using, at least for economic planning purposes, for your capacity factor?

A. (Strickler) Eighty-seven and a half.

Q. On the wood supply, there was a lot of talk of sustainability and what all that meant and everything. And you had mentioned that some states have existing requirements that have certain rules associated with how you can harvest lumber and so forth; and New Hampshire didn't have those, so that's why you were going forward with this sustainability proposal that was attached, I think, as 60.

So are you going to impose those requirements on wood coming in from other states? And what if it's for something, you know, that's being clear-cut on purpose because they're going to put a factory there or roads or whatever like that?

- A. (Bravakis) I think that our sustainability condition isn't specific just to New Hampshire. Our sustainability condition is to the sources of supply of the fuel. So, yes, we would apply it to all suppliers that come in that fall under this -- these conditions.
- Q. Would you have an exemption for people who

- were doing it because they were going to put in a new factory or something like that --
- (Bravakis) Well, obviously we have no Α. control if there's going to be a change of use, if there's land development going on somewhere where they cut all the trees. That happens. We know that happens. the choice of burning that wood or not using it is less, in our view, than converting it to energy.
 - Q. So you have an exception to that --

- A. (Bravakis) Yes, obviously. This applies to pretty much the highest level of, in everybody's mind, how to protect the natural resources and preserve the working, sustainable forest.
- Q. And since the amount of wood seems to be a big point of contention here -- how much is available and how far you can go to get it -- having this sustainability agreement, how much of a negative effect of that will have on your wood supply -- i.e., there's going to be some people that might say we're not going to comply with this, which would

- reduce it -- and was that taken into account
 when the studies were done?
- (Bravakis) I mean, that's a great question. 3 Α. And that's one we struggle with all the time 4 because, as I think we've mentioned before, 5 other plants don't impose these conditions 6 7 on themselves. So we're taking this 8 pre-emptively to try to demonstrate a willingness of our commitment of good 9 stewardship of the forest. However, having 10 said that, it has to be done in a manner 11 that doesn't hamstring the project in its 12 ability or put it at a competitive 13 disadvantage. And at the time we are now in 14 the regulations and procurement of fuel, we 15 16 have to be sensitive that we don't paint ourselves in a corner, if you will, by 17 imposing limits on us that would disallow 18 otherwise good suppliers from supplying to 19 20 the facility. So we struggled with that 21 when we developed this. We met with a 22 number of organizations that were very familiar with this. Some of us wanted more 23 limitations, some of us suggested to have 24

```
1 less. So we're constantly balancing that.
```

- 2 And this is not done. But we are confident
- that, once done, it will be a good blend of
- 4 both of those aspects.
- 5 Q. But you didn't do any analysis where you
- felt as though it would limit, you know,
- 7 95 percent of the prospective suppliers --
- 8 A. (Bravakis) No, we did not.
- 9 Q. That's all the conditions I have for right
- 10 now -- all the questions.
- 11 CHAIRMAN BURACK: Thank you,
- 12 Mr. Harrington. Mr. Jannelle.
- 13 EXAMINATION
- 14 BY MR. JANNELLE:
- 15 Q. Part of the LandVest study on Table 6
- 16 lists --
- 17 CHAIRMAN BURACK: Could you
- 18 say what exhibit you're on, please?
- MR. JANNELLE: Actually, I'm
- 20 on Appendix P in the application, the biomass
- 21 study.
- MR. IACOPINO: And the
- 23 application is Exhibit 1, for the record.
- 24 BY MR. JANNELLE:

Q. There's multiple facilities, some pulp facilities, some power facilities. The power facilities use a 75-mile radius or less, and it shows that it seems like there's significantly less consumption.

Public Service has got the highest consumption of 450 tons. But many of the others are around 200 tons, 250 tons. You mentioned that the Burgess Mill used 1.3 million tons of pulp. I assume that's -- the majority is round wood and not what you would consider tops and branches and things like that.

Is your facility a large facility, or is it -- it seems to be, looking at that chart. Or is it typical?

And given that you're going to need 750 [sic] tons in order to run it, would you be using more round wood instead of pulp?

It just looks, looking at some of the other power plants, if they're using tops and branches, there's a lot less volume within a 75-mile radius. And you're going out another 25 miles, granted. But it's not

three times more.

A. (Bravakis) Okay. To answer your first question, our facility would be a large user as a biomass facility, but not a large user of low-grade material. NewPage in Rumford uses a total of 2.2 million tons a year, of which I believe 1.8 goes into paper-making, and the balance goes into their boiler system.

To answer your second question, please keep in mind that this study and the following addendum was, I would characterize as our first 50,000-foot view of is there enough wood. There were a number of assumptions made in this analysis, which as we start drilling further and further down it gets refined more.

So the methodology that they use was to say a plant that would use X-amount of tons would go out X-amount of miles to get their wood. The practical reality is that they might at some point go -- as I was explaining before, the wood sheds get defined more by market conditions than they

do by availability.

1

14

15

16

17

18

19

20

21

22

23

24

What we were simply trying to do is saying a plant of our facility, if one makes the assumption that a three-hour drive -and we got this from not only LandVest, but talking to suppliers and contractors -would go out a three-hour drive, or 100 miles, is there enough wood that could be sustainably provided to supply this plant? We then took it -- and what we learned at that, in tops and branches alone there was, I believe, if my memory serves me right, there's like 2.6 million tons just in tops and branches. But we then took it one step further and said, well, how does that affect other existing facilities? We weren't really concerned with projects that were -being developers, we know that most projects are underdeveloped and never get built. we didn't want to put a hypothetical in there, but we wanted to say, let's see what exists now. So we kind of overlaid that on top, and what we learned is that we kind of clumped it all together as low-grade

biomass, a combination of tops and branches and round wood. Some of that round wood will always go to higher-use markets -- pulp markets, tie logs, et cetera. Some of it that's going to pulp markets now would get redirected into a biomass plant, along with some tops and branches that were left in the woods.

So I guess it's a long way of saying there's no simple answer to your question. But we are confident that the work that LandVest did on this initial filter for us is very true and accurate, and then we're redefining it more.

- Q. There's also rail access to this site?
- 16 A. (Bravakis) Yes.

- 17 Q. Is there future thought of using that, or
 18 would that open up another wood shed
 19 someplace if that were to become available?
 - A. (Bravakis) Yeah, the thought of the rail -I was the one who kept pushing that. I
 wanted to make sure we had easements in
 place to bring rail in at some point in the
 future. I would characterize that as

leaving an option on the table now, when we can do that, rather than not having that option. And my thinking, and our then --collectively, our thinking was this might open up markets for wood that are not served now where we could access additional wood.

It also might play very well into, as regulations move forward on trucking and carbon emissions related to trucking and moving biomass, this might serve a function, and especially going east-west, which is most difficult in the northeast, as we all know. So we left that option on the table, and I fully suspect that at some point in the future that will play a role in this facility. But later, not further -- not sooner.

Q. Okay. Thank you.

MS. IGNAGTIUS: Thank you. I do have questions. I don't have a microphone.

If people can't hear me, wave and I will speak up.

EXAMINATION

24 BY MS. IGNATIUS:

Q. Mr. Bravakis, let's work on some of the wood issues a little further since we're there right now.

1

11

12

13

14

15

16

17

18

19

20

21

22

23

24

The company you're using is out of
Henniker, New Hampshire. Is there any way
that using a Henniker-based company changes
the location for the source of wood; and is
that a concern, given the discussion about
the help needed to Coos County area loggers?

(Bravakis) Okay. That's a great question. Α. And let me say this: As I was explaining before, Cousineau is an aggregator of supply. They're not the ones who have the logging crews, own the trucks, own -- you know, go out and harvest the wood themselves and bring it in. What their role is, is to put boots on the ground and to execute contracts, supply contracts to come to the facility. They will install personnel at the site that will go to work every day. And remember that the fuel is going to be consumed in Berlin, not in Southern New Hampshire. So, think of the logistics. It's a distinct competitive advantage for

somebody close to Berlin, who has less
trucking burden, to deliver fuel to that
facility than somebody further away. So the
answer is, no, they will not preclude the
opportunity for local suppliers to supply
the mill.

Q. There's agreement with the City that I know the Berlin witness will address. But as I looked at it, there is a specific requirement that there be an effort to obtain wood from local vendors at Section 8 -- Paragraph 8. This is in the City of Berlin exhibit list, if you want to turn to it. Tab 1, Paragraph No. 8. No, that didn't work. Paragraph number...

All right. Page 8, No. 8, under community benefits it says, to the extent feasible and economically reasonable,
Laidlaw shall use its best efforts to prioritize the purchase of wood fuel from local owners and operators that meet with the sustainability terms. I'm paraphrasing the end of that.

How does Cousineau know that that's the

- 1 requirement with the City?
 - A. (Bravakis) That will be a condition of our permit, and that will be a component of our supply agreement with Cousineau.
- Mr. Bravakis, you also were asked by Mr. 5 Q. Rodier if you agreed with his conclusion 6 7 that whatever wood supply is there, it pretty much uses it up and there will be 8 nothing left for a Clean Power Development 9 10 project or a new wood pellet entity, or if 11 there would be a new pulp mill come in. you said you disagreed with that conclusion. 12 13 Can you explain to me why you disagree with that conclusion? 14
 - A. (Bravakis) I disagree with the conclusion because, as stated in the addendum of the LandVest study, and if I can -- if I could read the conclusion.
- 19 Q. Okay.

2

3

4

15

16

17

18

20 A. (Bravakis) In bold on Page 4 it says,
21 "Therefore, because this study is to
22 estimate the sustainable availability of
23 low-grade fiber to the proposed Laidlaw
24 BioPower plant, it is our best estimate that

producers will supply over one million tons per year in excess of current consumption."

Our plant is going to be using 350,000 tons -- I mean 750,000 tons. I apologize. Therefore, there is excess available. And that's not taking into account the fact that we know, once we are there, opportunities will arise for backhauls even further beyond us that don't currently exist. Some of the suppliers that have come in to fill the vacuum when the mills left will realign to positions where they were in the past. So that 6 million tons, if you were to somehow be able to see that in the future, overlaid with our plant on there, would probably be less.

So, I firmly believe -- and most of the experts that I've spoken to who have practical knowledge out in the field also agree that there's room for us and others.

- Q. Are you making an assumption of the price of wood when you calculate the economic viability of the company, of the project?
- A. (Bravakis) We have -- obviously, we have --

in our financial performance, we have basic assumptions on wood pricing.

- Q. And is there a range that you're assuming in your assumptions?
- 5 A. (Bravakis) It depends on the time of year,
 6 but -- or the year that we start. But I
 7 recall that our range is in the low to mid
 8 30s. That's our speculative guess right
 9 now.
- 10 Q. That's per ton of wood?
- 11 A. (Bravakis) per ton of wood delivered to the
 12 plant at roughly 45-percent moisture, fuel
 13 content -- moisture content.

MR. NEEDLEMAN: And I'm sorry.

If I could just interrupt for one minute? I just wanted to remind the Committee that we provided a document which is subject to confidential treatment. It's a one-page pro forma that

20 CHAIRMAN BURACK: Okay.

contains some of this information.

21 BY MS. IGNATIUS:

14

15

16

17

18

19

Q. And what happens if that assumption turns out to be too low, in terms of price of wood?

A. (Bravakis) There's a rippling effect
throughout our pro formas. But one thing
I'd like to point out -- and, you know, I
think my colleague, Mr. Bartoszek, could
elaborate on the business end more.

1

Part of our business model is to keep the capital costs of a new biomass plant lower than a greenfield project. And that's no secret why we purchased the facility. mentioned this in the past. To build a brand new biomass plant today is in the \$4to \$5,000 per kilowatt installed. plant, our estimate is going to be roughly half of that. That's significant and gives us an advantage when it comes to absorbing fluctuations in the market. Having said that, we have been told by our consultants and experts that there currently is a glut of wood on the market, and it's expected to remain for the foreseeable future. So we do not anticipate a wild swing in wood pricing.

MR. IACOPINO: And just for the Committee members, the pro forma that Mr. Needleman referenced is Exhibit 43. It's

1 contained in the confidential binder that we

- 2 received this morning.
- 3 BY MS. IGNATIUS:
- 4 Q. One other question on wood, I think. The
- 5 City agreement -- and this is on Page 7 of
- the city's Exhibit 1, I think. I'm sorry.
- 7 It's Paragraph 5 on Page 3 of the city's
- 8 Exhibit 1. It says that there's a
- 9 requirement that the facility burn biomass
- and exclude any materials derived in whole
- or in part from construction and demolition
- debris; is that correct?
- 13 A. (Bravakis) Yes.
- 14 Q. And if that, for some reason, should no
- longer be a condition of the City, would the
- 16 project burn construction and demolition
- 17 debris?
- 18 A. (Bravakis) We have no plans to burn
- 19 construction and demolition debris. The
- 20 plant is not being designed to burn it.
- This is a clean biomass combustion system.
- 22 Q. And so your procurement requirements with
- your vendors would include that as well?
- 24 A. (Bravakis) Yes.

```
    Q. Mr. Bravakis, tell me about safety
    precautions. I assume that the chips and
```

4 A. (Bravakis) Yes, of course.

ash can be flammable?

- 5 A. (Strickler) The ash doesn't burn.
- 6 A. (Bravakis) The ash doesn't burn, but the chips --
- 8 Q. That was a trick question.

But the storage of wood and storage of ash after combustion, are those safety concerns?

A. (Bravakis) Certainly that's something that you have to plan for. And we'll start with the wood chips first.

There has to be, and we will institute, a regimented plan of first-in/first-out delivery systems. So, in other words, the first load that comes in is the first one to get burned. You know, so you're constantly recycling so you don't have stagnant piles. The piles will be constructed in a manner to shed water and movement. Let's remember that we benefit from 25 years of biomass plants using the same material in the

northeast. And my colleague, Ray Kusche,
operated one for 15, 20 years up in
Greenfield, Maine. So there's a lot of

experience with respect to that.

In regards to the ash, I believe -- and correct me if I'm wrong -- there's a water-quenching system that gets applied to the ash before it gets stored and moved off site.

- A. (Strickler) It's primarily for dust control.

 It's not a -- ash isn't generally flammable,

 really, as a problem to the plant. So the

 ash is conditioned, as Lou said, for dust

 control.
- Q. Is there any additional training that local fire departments will need to have to respond adequately to a problem on site?
- 18 A. (Strickler) If I can answer that question,
 19 please?
- 20 A. (Bravakis) Yeah.

21 A. (Strickler) Obviously, there's been some
22 time since, you know, there's been any large
23 industrial facility there. We would
24 normally go in and work with the fire

department and explain to them every aspect
of the project that, you know, might have an
issue with respect to any fire protection.
So we work very closely, you know, with the
fire department in Berlin to make sure
they're aware of chemicals, you know, and
the safety aspects of the project.

- (Frecker) And if I could just offer, Mr. Α. Bravakis and I met with the fire chief for the City of Berlin early on in the design phase of the project, reviewed our site plans with him, showed him the utility drawings that we have that show the location of hydrants, access roads, perimeter roads around the facility. He provided some very good constructive comments to us on those that led to some modifications in the design to assure that they could have suitable access. And he seemed pretty pleased with what he saw and indicated that he looked forward to continuing to work with the project as it was going to construction.
- Q. Also among the City's concerns are noise levels. And since you're on the stand now,

and we can talk to the City witness later -the noise provisions are on Page 2 of
Exhibit 1, the City's proposed conditions.

You have set a level for noise at 70 dB at the facility's property line at certain times and below 60 dB at that same property line during the evening and early morning hours; is that correct?

A. (Frecker) That's correct.

- Q. Noise is a hard one to understand with these numbers. But can you give any example of what 60 dB and 70 dB might be? Anything comparable to those sounds that we can understand?
- A. (Frecker) Well, it's generally accepted,
 without the benefit of these amplifying
 microphones, that a normal conversation
 between you and I would be on the order of a
 65-decibel sound power level, sound-pressure
 level that your ears would experience, as
 one basis.

You can look at the background
measurements that were conducted in
locations in the city as part of our noise

study and see that in the downtown area, right now there are existing sound levels during the daytime hours that are in that 65- to sometimes 70-decibel range. So it's not inconsistent with what you'd see in a downtown, semi-urban environment with traffic and people moving along in a busy area.

- Q. When the site was last used as a mill, do you know anything about the sound levels that people would have experienced on the perimeter of the property?
- A. (Frecker) We do not. We did not take
 measurements, nor did we look for
 measurements of when the site was operating
 before, because we wanted to have the
 project evaluated in its own right with
 consideration of existing conditions and
 with consideration for what the City might
 otherwise impose upon a similar type of
 project. So we didn't seek to try to say
 this would be better than the old mill or
 similar to the old mill. We said it won't
 cause a problem because we don't believe the

levels will increase significantly beyond existing conditions without a mill there.

And it's consistent with the sound levels that the city's own planning boards and government have determined are suitable for industrial development.

21

22

23

- Q. The noisy components, if you'll take a highly technical term, the noisy things on the site would be the chipping, combustion?
- Α. (Frecker) There is a chipping building, which would be a sound, a source of sound. The cooling tower itself is actually a significant source of sound on energy The building that houses the projects. steam turbine, because the steam turbine can be a rather loud device, is a source of sound. We modeled extensively looking at trucks moving through the site, looking at equipment handling wood chips around the We even looked at the sounds created site. by the conveyors that would move the wood chips up through the site. We looked at the sounds that would be radiated from the boiler building, from the emission-control

1 system, from the steam-turbine building.

- The model was very comprehensive in
- 3 considering all those source of sounds.
- Q. And your measurements of sound that are
 agreed to in the city's terms are not at the
 actual location of the sound being emitted,
- but at the perimeter of the facility, of the
- 8 property itself?
- 9 A. (Frecker) At the property line. That's correct.
- 11 Q. How are you going to measure those sounds?
- 12 A. (Frecker) With the same type of
- instrumentation that we used to measure the
- background sound levels in the community;
- 15 essentially, meters designed to accurately
- measure sound levels and collect and average
- 17 that data over that period of time.
- 18 Q. So the amount -- the levels that you're
- 19 establishing are average numbers over a set
- 20 number of hours?
- 21 A. (Frecker) We've presented there's a number
- of ways to average sound-level data, and
- we've presented it in what's referred to as
- Leq, or equivalent sound levels. They're

1 basically one-hour blocks in most of our analysis. The reason for using that Leg, or 2 equivalent sound level, is it takes into 3 consideration -- it's the equivalent 4 continuous sound level that would be 5 generated. It takes into consideration 6 7 varying spikes in noise, rather than using a sound level that has just exceeded 8 50 percent of the time, which doesn't really 10 take into account these higher pressure 11 spikes. The Leq takes care of that and helps include those in the analysis. 12

9

13

19

20

21

22

23

- Is the Applicant hiring any additional sound Q. expert for this testing, or did they already have within their control meters for that kind of work and the expertise to evaluate --
- (Frecker) My firm conducted all of the Α. background sound-level measurements, and we did all of the modeling for the project. have sounds experts on our staff that have 20-plus years of doing this. And we as a company have done sound-level analyses for dozens of energy projects.

Q. Will you remain involved in it at the actual construction and operational point, so that once the plant is operating, will you still be available for that testing?

- A. (Frecker) We will be available and we hope to be involved. But even if the developers chose to seek service from somebody else, there are a number of qualified firms that are capable of doing that type of work.
- Q. Mr. Bravakis, the agreement with the City also references sale of thermal energy; correct?
- 13 A. (Bravakis) Hmm-hmm.

Q. And I'm looking for the right page for that to point people to. Page 7, Paragraph

No. 6. This is, again, Exhibit 1 of the

City's list. And the City can testify to this when they're on the stand.

But while you're here, what is your expectation of the availability of thermal energy that would be available to businesses that might co-locate on the site?

A. (Bravakis) I'm glad you brought that up. We have not discussed today -- and it's a

significant component of that project -- our agreement with the Gorham paper mill to provide them hot water from all the waste heat that we can capture off of the facility. What that means, for those of you who are unfamiliar with the site, or perhaps didn't recall, the Gorham paper mill and the Burgess Mill were the combined paper mill, with the pulp being made up in Berlin and the paper being made in Gorham, and then connected with a bunch of pipes. Water from the Androscoggin River is taken in north of us on the adjoining property through an underground system, comes into a filter house and travels down to the Gorham mill. It's the lifeblood of that facility.

1

2

3

12

13

14

15

16

17

18

19

20

21

22

23

24

We have an agreement in place with Fraser Paper, who operates and owns the Gorham mill, to allow them to manage the filter house, which we own, which is on our property, maintain the piping system and the water that goes down there. We also have an agreement with them whereby we will work with them to put in the system that will

capture the heat that is normally wasted in a stand-alone power plant like this -essentially, the heat that gets dissipated to the atmosphere through the cooling towers -- and we'll convert that to hot water through a heating exchange system. So, instead of them taking 33-degree hot water from the river, they will be able to get 90, 100, 110 degrees. We have to work out the details. That will be a significant savings for them, for their thermal energy. In exchange for that, they have provided us right-of-way, an easement down the strip of land where all the pipes are connected, of which we will use to connect to the E Street substation. So that's our agreement with them.

1

2

3

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

Now, I bring that up because, once the final engineering is done on that, there is a possibility that there will be excess heat that they won't need, which we have said on numerous occasions we would make available to any businesses that will co-locate on our site. The project will consume this area

and this area (indicating). This is the filter house -- where is it? This is the existing filter house.

What we have done, when we evolved and developed this concept, we wanted to keep everything along one side, the periphery on the property, to allow for business development on the rest of the property. It could have been very easy for us, instead of making a round-wood storage area here, we could have taken advantage of the old chip pad that's there now. But we thought that would then be difficult to develop an industrial component to the property, if you will.

So we've also kept two existing buildings -- a 40,000-square-foot building and a 10,000-square-foot building. And we've talked to the economic development folks, and they know that we're interested in encouraging businesses to co-locate who would benefit from being next to a power house. And part of that benefit is that any excess hot water that doesn't go to the

Gorham mill we'd be able to work out to

provide some heat. So that's -- and we've

enumerated that in the stipulation with the

City, which would be a condition of the

5

6

7

8

9

24

permit.

- Q. And are you saying you don't know the -- how much excess will be available, or are you saying you don't know whether any excess will be available?
- (Bravakis) I don't know how much excess. 10 Α. 11 And the reason I don't is, our engineers 12 could figure out how much we could produce, 13 but the paper mill doesn't know yet. 14 paper mill, as you know, is going through transition. And they're probably going to 15 16 transition more into a tissue mill. that affects their low profile, we just 17 don't know yet. We're first obligated to 18 them, under agreement, to provide as much as 19 But we would like to use it all. 20 we can. 21 It makes the plant more efficient, and it's 22 a benefit to the economic well-being of the 23 community.
 - Q. Mr. Strickler, I want to ask you a couple

questions about the change in the ownership structure that has recently been discussed.

1

2

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

Why, to your knowledge, did that change occur?

(Strickler) Well, we had been brought in and Α. got involved in this project, back almost a year ago now, working with the Laidlaw And they had an agreement, a relationship with a company, PJPD, and in fact, brought together by them. And so we were sort of working together closely with all the parties. But there are three parties. And it was a challenge to say that -- you know, three parties trying to develop a project and agreeing to every decision, it was a challenge. We worked he very hard to overcome those challenges. fact, you know, the project has gotten, you know, pretty far. But I think at the end that the ownership change is actually going to provide a single person, a single entity, if you will, even through the Applicant that will provide a more cohesive and more streamlined decision-making process. Our

involvement will remain the same, as the company that provides the construction

oversight and the operations and services to the Applicant.

- 5 Q. Is it a change that your company sought?
- 6 A. (Strickler) I think it was -- I would say it
- 7 was mutually agreed that this was something
- 8 that would be beneficial to the overall
- project, and we agreed with that change and
- 10 supported the change.
- 11 Q. And when did this reorganization firm up as
- 12 a plan?
- 13 A. (Strickler) Relatively recently.
- 14 Probably -- I don't have the dates. But
- certainly in the last month or so.
- 16 Q. Was there any event that triggered that
- 17 change to go from a challenge, as you say,
- over the past year to a much more
- 19 concrete --
- 20 A. (Strickler) No, there wasn't a specific
- 21 event. No, not in my opinion.
- 22 Q. And is your expectation that, once the
- 23 development and construction phase is
- complete and we're into the operational

phase -- well, tell me what is then the role of your company?

- A. (Strickler) We would provide operational and maintenance services to the Applicant going forward through an agreement with NewCo.
- Q. And going forward for a set period of time,
 or, as far as you know, going forward for
 the full operation of the plant?
- 9 A. (Strickler) Exactly. Yeah, for a long term.

 10 It would be a long-term arrangement.
- 11 Q. You were asked a few questions about the
 12 plant manager and whether that was someone
 13 who would be local, and you said yes.
- 14 A. (Strickler) Yes.

3

4

5

23

- 15 Q. Has there been a plant manager identified?
- A. (Strickler) No, not yet. We typically would start looking for that after construction started, you know, to identify and recruit the plant manager. We have -- actually, we have quite a few people on our list of potential candidates going forward that we just sort of have for all our projects.
 - Q. I think that completes my questions. Thank you.

1 CHAIRMAN BURACK: Thank you

2 very much. Mr. Northrop?

MR. NORTHROP: Yes, I just

4 have a couple questions.

EXAMINATION

BY MR. NORTHROP:

Q. One is going back to kind of a follow-up to Mr. Harrington's, some of his questions about the sustainability condition.

Your proposed wood supplier, kind of broker, would be Cousineau. Who is responsible for enforcing that sustainability condition? Would that be Cousineau, the wood supplier, or Laidlaw? Or how would that enforcement actually take place? Or how would you know that the wood was actually being -- the wood being received was actually complying with the conditions of that sustainability document?

A. (Bravakis) The enforcement -- I'm not sure how to answer that. The enforcement that Cousineau is complying with, the terms and conditions of the supply agreement, would be subject to the same type of contractual

obligations any contract would. And the sustainability component would be a part of that. How we -- so Cousineau will be contractually obligated to adhere to the sustainability conditions.

I don't know -- I can't speak about the remedies. Once we have the contract finalized, we'll be able to see that and share that with you.

With respect to how do we know whether it's done, if that's part of your question? If you've seen the sustainability piece, there's a metrics in the end, a reporting and verification section which talks about the number of wood supplied, the breakdown of biomass, the volume supplied by various groups, et cetera, et cetera, number of acres participating. So there will be an accounting process, if you will, that will measure whether or not we're meeting the goals of our sustainability and procurement policy.

MR. IACOPINO: Mr. Bravakis, were you just referring to Exhibit 60?

MR. BRAVAKIS: Yes.

1 MR. IACOPINO: Thank you.

BY MR. NORTHROP:

20

21

22

23

24

Q. Just one other question. And I apologize.

This may be something we've asked, several

of us, over and over again, sort of keep

asking it in a different way.

But going back to this 6 million tons of wood in the region, if I could understand it, would it be a fair characterization to say that that represents the wood that's harvested within this region, some area, and that the wood could be used locally if there are lots of users, if there are lots of biomass plants or pulp mills or furniture makers or whomever was consuming wood? then, on the flipside, if there weren't a lot of consumers, users of the wood locally -- meaning there were no biomass plants or pellet manufacturers or no users -- would this wood still be consumed, but by entities further away, meaning the wood would still be produced in the region, but it would be used further in Maine or in New York or Pennsylvania or something like

that, so that this 6 million tons of wood -I guess the crux of my question is, how much
would that fluctuate? Would that number go
down drastically if there were fewer local
users? And conversely, would that number go
up a lot if there were more users? Or is
that a number that would stay relatively
constant, but the users would just either be
closer or further away?

A. (Bravakis) Yeah, I think I understand the question. It's a very difficult one to answer, and I'll tell you why.

Consider NewPage, the paper mill in Rumford, Maine. They alone use 2.2 million tons a year of low-grade material. If they were to go out of business, that would be -- that would blow that -- that would strike a significant blow to the infrastructure in the area to obtain that wood. I think in my experience and my knowledge, the further away you go, it's not practical to take wood in northeastern United States, in northern New Hampshire, and ship it to Pennsylvania, for example. Maybe with rail, maybe with a

lot of ingenuity and very high energy costs or something you could do that. So I would -- and this is an opinion, because I don't have a crystal ball any more than anybody else does. But my guess is that if you took out the largest consumers of that material in that area, that 6 million consumption would go down drastically.

1

2

3

4

11

12

13

14

15

16

17

18

19

20

21

22

23

24

On another score, having been involved in this project and biomass energy for 30 years, I see this as a paradigm, shifting event, if you will, where for years and years and years the fiber in Berlin, the city the trees built, was used and converted to paper. I think that business model is not viable in the future because it's difficult for a paper mill in the northeast to compete on a worldwide scale. But the fiber's still there. That low-grade material is still there. And every and any forester that I've ever spoken to wants biomass plants because they want to weed They want to grow the that garden. straighter, stronger trees. And if you

1 can't get that low grade out of there for 2 markets, you can't do that. So now the opportunity is to construct, build renewable 3 generating facilities -- ours being one, 4 5 others that have been proposed, pellet manufacturers, as you suggested. And so 6 it's really a question of timing: Can these 8 new projects be phased in if the writing's on the wall and the long-term future of the pulp and paper industry in the northeast is 10 11 going to be challenging, to say the least.

> So it's a long-winded answer to say that I think that if the market, the consumers left now, that 6 million would go way down.

Thanks. That helps. No further questions.

17 CHAIRMAN BURACK: Thank you.

18 Mr. Stewart.

19 EXAMINATION

BY MR. STEWART: 20

> 0. My questions are on Exhibit 60, the sustainability condition. As one of the regulators on the Committee --

> > (Court Reporter interjects.)

Q. You've indicated that Laidlaw will not buy wood from suppliers who have been found to be repeat offenders of environmental laws and regulations. How will you do that? How frequently will you check on your suppliers?

And how will we know that that's occurring?

A. (Bravakis) Good question. This is an interesting -- when we first put this out, we said we don't want anybody who violates the laws. But we were quickly told we needed to be careful, because sometimes a very reputable, good logger will inadvertently cross a brook or do something that will give him a violation, and do it once and maybe never to do it again. So we didn't want to say anybody who had a violation.

We consulted with different organizations throughout the state as we were developing this to get their guidance. And what we learned was that there are -- I'm trying to remember. I think it's under 10. I think it's like five or seven identified repeat offenders in the state of

New Hampshire of logging practices who have -- of the thousand or so contractors. So it's a pretty small universe that we can work with, these groups that helped advise us, to keep us updated on.

And we will make it a condition of the agreement with Cousineau that they will not purchase wood or use wood from these known offenders. And I believe there's a tracking and a registry -- and please correct me if I'm wrong on this because I'm not that familiar. But I believe that after you have so many offenses, you get into the select few. And we will identify them and not purchase wood from them.

Q. Do you agree that it would be reasonable for you to report that as part of your reporting and verification, which I see as described in Exhibit 60? I mean, it would seem to me that we would want to have that report on an annual basis, along with the volumes of various -- you know, where the biomass is coming from and so forth, that this has been checked and there's been enforcement against

- certain loggers or what have you.
- 2 A. (Bravakis) Could be a slippery slope. I
- don't think we'd have a problem saying who
- we're not buying from. But I think there
- 5 might be confidentiality issues or issues
- 6 with how Cousineau procures to say who we do
- 7 provide from and what they're supplying.
- You know, it's business relationships. But
- I don't believe we would have a problem
- 10 reporting that these contractors we have not
- 11 purchased from for these reasons, if
- 12 that's --
- 13 Q. Yeah, I think that's kind of where I was
- 14 going.
- 15 A. (Bravakis) Okay.
- 16 Q. This 700- to 750,000 tons annually, more or
- 17 less, going into this plant if it were
- 18 built, what percentage do you think at the
- 19 beginning are going to be from sustainable
- 20 profits -- well, logging operations? Do you
- 21 think it's going to 20 percent or
- 22 50 percent? Or what do you think? I'm just
- 23 trying to get a handle on this.
- 24 A. (Bravakis) I guess it's how you define

"sustainability." If you're saying from
third-party certified lands --

Q. Yeah, I'm referring to Condition 6.

3

(Bravakis) -- from tree farm systems, from 4 Α. SFI or SFC, conservation lands, I can't 5 answer that. What I can say is that the 6 7 wood that will come to the plant in the beginning and during will -- our supplier 8 will adhere to this. So they will have some 9 period of time before the plant starts 10 11 operation to start making those relationships and start bringing wood into 12 the facility. And from what I understand, a 13 14 lot of the forest land, a lot of the timber land that will be supplying the facility 15 have already set up management programs, 16 17 conservation programs, or they're under SFI or SFC -- which are third-party verification 18 19 systems -- or a tree farm system, or under 20 management of a forester, or even the 21 smaller properties in current-use programs 22 or being harvested by licensed foresters. 23 What we didn't want to do, we didn't want to come and try to present the fact that we 24

were going to somehow be this overarching agency to rule how the wood comes. We understand the realities. And we understand that landowners -- and I own 80 acres of land in Vermont. I was a tree farm member and part of the current-use system. We understand that there are a lot of programs in effect now. We just want to dovetail with those.

So I can't give you a specific answer, but I will tell you that the wood that will come in will adhere to this policy.

- Q. So how will you give preference to lands
 that are third-party certified versus lands
 that are not, in terms of receipt of wood?
- A. (Bravakis) We haven't developed the details of exactly how we do that yet. But we will be doing that. And as soon as we do, we'll share that with the Committee. We fully intend to put together with Cousineau a procurement plan that will spell that out.
- Q. Do you think it would be reasonable for us, within the certificate, if we were to certify the project to have goals for

ramping up the whole sustainability over some time period?

- A. (Bravakis) We could certainly consider it.

 But as we said before, we need to be careful
 that we don't put ourselves in an economic
 disadvantageous place with respect to the
 other biomass plants, paper mills that don't
 need this or don't do this on their own.

 This is voluntary on our part. But we
 certainly would -- could consider some
 reasonable expectations or goals.
- 12 Q. Thank you.

13 CHAIRMAN BURACK: You're all

14 set now?

3

4

5

6

7

8

9

10

11

24

MR. STEWART: All set.

16 CHAIRMAN BURACK: Before I

17 continue here, Attorney Needleman, I just want to

18 draw your attention to R.S.A. 162-H:8. And I'd

19 just ask you with respect to the list of items

20 that I requested of you earlier, that you confirm

21 that the information you're providing will fully

22 satisfy that standard with respect to all the

23 entities and the individuals that you're

reporting on. I note, for example, that the

1 statute specifically requests that we be provided

- 2 not just with names of members and association,
- 3 but also with the residences. So I'd just ask
- 4 you to pay close to the attention to the
- 5 requirements of that section of the statute and
- 6 confirm that the materials you're preparing will
- 7 fully satisfy that set of statutory requirements.
- 8 Okay? Thank you.
- 9 Go ahead, Ms. Muzzy.
- 10 EXAMINATION
- 11 BY MS. MUZZEY:
- 12 Q. I had a few questions, and the first is
- about the transformer area that is mentioned
- in Public Counsel Exhibit 2. Are you still
- 15 considering a recreational trail along the
- river that would pass by that area?
- 17 A. (Bravakis) Yes.
- 18 Q. Could you describe how close that trail
- 19 would be to the transformer area?
- 20 A. (Bravakis) Right next to it. Is that close
- 21 enough?
- 22 Q. That's pretty clear, yeah.
- Do you know whether that area has been
- 24 studied to a sufficient degree that you have

- 1 confidence in building that trail?
- 2 A. (Bravakis) I'm sorry. I didn't hear that.
- Q. Do you know whether that site has been studied to a sufficient degree that you would have confidence to build that trail
- 6 without causing additional environmental
- 7 problems?

17

18

19

20

21

22

23

- 8 A. (Bravakis) We haven't gotten to that level of detail yet.
- 10 Q. So that's still needed?
- 11 A. (Bravakis) Yes. That's our intention to do that.
- Q. You also talked about a silo that would be used to store the fly ash. Do you have any sense about how large that would be, how tall that would be?
 - A. (Frecker) Let me just -- let me just clarify one point. When Attorney Roth had asked me about that silo, I had said that the design was contemplating a silo that could hold up to one week's of fly ash generation from the fabric-filter baghouse. And looking back at the supplement to the application that was filed in May, it in fact said that the

capacity will be sufficient to accept a
minimum of 24 hours. It doesn't state what
the maximum would be. So I just want to

But given that it talked about 120 tons per week of ash generation, ostensibly about 20 tons a day, I think that's the size of a reasonable tractor-trailer truck, if I'm not mistaken. We probably need to get back to you on that.

make sure that that was factually clarified.

- A. (Strickler) We'd be guessing on that right now.
- 13 Q. All right. That's fine. Thanks.

In discussing the noise and the use of
the Leq measurement, that's averaged over an
hour's worth of time?

A. (Frecker) Yes.

4

5

6

7

8

9

10

11

12

17

23

- Q. And you talked about spikes. So if the
 average over an hour was at 60, is it
 possible that the spikes would be far louder
 than that, followed by a quieter time? Is
 that how that works?
 - A. (Frecker) That's possible. And we need to be careful when we say "average," because it

1 is an equivalent sound level that takes into consideration the additional energy created 2 by those spikes. So it assumes a continuous 3 sound power level that would be addressing 4 5 those spikes over that period. But absent that technical issue, our background 6 7 measurements which we took in the project area over a 24-hour period at several 8 locations really showed relatively constant sound levels, without large spikes 10 occurring. 11

Okay. Thank you. And then finally, just to Q. ask a couple questions about the LandVest study.

Now, their calculations were based on users currently -- at the time of the study, the users with the 6-million-ton measurement. In their research, was there any type of discussion about longevity of those users or the stability of those businesses, as to whether they're likely to change in the future, that type of thing?

- (Bravakis) No, there wasn't. Α.
- So that wasn't considered. Q.

9

12

13

14

15

16

17

18

19

20

21

22

23

And you've described that as a 50,000-foot look at the wood basket. And then you also talked about drilling down to get a better understanding of how things work. Do you have any written materials that the Committee could look at for further deliberation on that?

A. (Bravakis) No more than the LandVest study, the addendum that they did. We did look for similarities in the other studies that I believe the Committee has access to that were mentioned in the LandVest study. If they don't, I can get those.

There was an INRS study and another
LandVest study, a Caldwell study. But a lot
of it came from interviews with folks that
actually procured fuel for the Burgess Mill,
interviews with business owners in the area
that procure and have procured logs and wood
forest products for years, interviews and
discussions with logging contractors and
with operators associated with a large paper
mill -- I mean large saw mills and the
adjoining paper mills. So we've been

looking at this for a number of years, and the LandVest study frames it for us. But it also verifies what we've been hearing on the

street, that there's plenty of wood.

- 5 Q. Thank you.
- 6 A. (Bravakis) Welcome.

7 MS. MUZZEY: No further

8 questions.

4

13

14

15

16

17

18

19

20

21

22

23

24

9 CHAIRMAN BURACK: Okay. Thank

10 you. Mr. Wright.

11 EXAMINATION

12 BY MR. WRIGHT:

Q. Also coming from the regulatory side of the shop here. Obviously you mentioned one of the advantages to this site is the fact that you're starting with the existing facility and you're going to make some very significant modifications to the facility, including significant upgrades to the air-pollution control equipment. I believe it was also mentioned that Babcock & Wilcox, the designer, has done this elsewhere. Do you know where else they've done this type of work?

- 1 A. (Bravakis) Yes. They have two
- 2 recovery-boiler conversions. If John is
- 3 still here -- one is in Bowater, Kentucky.
- 4 A. (Strickler) Yeah, Kentucky.
- 5 A. (Bravakis) Kentucky.
- 6 MEMBER FROM AUDIENCE: No.
- 7 Tennessee.
- 8 A. (Strickler) Yeah, Tennessee.
- 9 A. (Bravakis) Bowater, Tennessee. And in
- 10 Florida? One in Florida?
- 11 MEMBER FROM AUDIENCE: No.
- 12 Tennessee. And the other one's in Georgia.
- 13 A. (Bravakis) In Georgia.
- 14 I think Mr. Strickler can talk about
- it, because a team of his engineers went
- down to view --
- 17 A. (Strickler) Yeah, we sent a group down to
- 18 visit the facility in Kentucky, I believe it
- 19 was.
- 20 Q. Has that facility been converted at this
- 21 point --
- 22 A. (Strickler) Oh, yes.
- 23 Q. -- and is it operational?
- 24 A. (Strickler) It's been operational. And the

1 report said the owners were very pleased

with the work that was done.

- 3 Q. Okay.
- 4 A. (Bravakis) If I may?
- 5 Q. Yeah.
- 6 A. (Bravakis) Excuse me for interrupting.

B & W, Babcock & Wilcox, has done many, many

biomass, many, many systems, as you know.

9 These were specifically black liquor boilers

converted to fluidized bubbling bed. So

11 they --

10

- 12 Q. And this is what the case is here?
- 13 A. (Strikler) Exactly.
- 14 A. (Bravakis) Yeah. So they had specific

15 experience to our project. And the one in

16 Kentucky is relative, size-wise, within the

17 same range.

18 Q. And the final air permit that was issued by

19 the Department of Environmental Services, I

would describe the emission limits in there

21 as being fairly stringent emission

22 limitations. Do you know how those

facilities -- or how that facility has

24 performed?

1 A. (Strickler) With respect to the facility?

- Q. Yeah. Basically, how is the facility performing? Is it meeting its emission quaranties? Is it --
- A. (Strickler) I don't recall that we -- I would have to check with our group to see if they asked that question. I just don't recall.
- A. (Frecker) But I can tell you, Mr. Wright,
 that B & W is actively involved in reviewing
 the emissions limitations that were part of
 the permitting process and concurring that
 they felt that they could meet those
 limitations.
- Q. I think I just had one other simple question.

Obviously, using a cooling power, there will be a period of time of the year where there will be visible pooling from the cooling tower. Have you done any studies as to what percent of time that would occur and under what conditions?

A. (Frecker) Yeah, we did do modeling of the cooling tower plume primarily to evaluate

1 the potential for icing and fogging on area roadways. And that modeling demonstrated 2 there would not be any occurrences of icing 3 and fogging due to the design of the cooling 4 5 tower, in large part associated with very high-efficiency drift eliminators that would 6 7 control and prevent water droplets 8 discharged from the tower. That modeling, conducted using what's called the seasonal 9 annual cooling tower impact, or SACTI model, 10 also predicts visible plumes. And it shows 11 that during daylight hours the plume height 12 13 would be lower than the boiler building about 50 percent of the time and lower than 14 the stack itself, I think on the order of 15 16 about 95 percent of the time.

MR. WRIGHT: Okay. Thank you

MR. KENT:

18 very much.

CHAIRMAN BURACK:

Thank you.

Mr. Kent?

EXAMINATION

22 BY MR. KENT:

17

19

20

21

23

24

This morning, Mr. Bravakis, you took exception to the idea of the wood supply

being additive. You could just take the 6 million and the 750, and it didn't shake out. So obviously, that's what your consultant did to give you an idea.

If we don't use that additive approach, what do we do to estimate the wood supply?

- A. (Bravakis) Wood supply, wood consumption from the supply area.
- Q. Yes.

1

2

3

4

5

6

7

8

9

(Bravakis) I don't know. What I'm saying --10 Α. 11 what I was trying to say is that it's just 12 not simply a function of adding the two 13 together and saying that would be the 14 consumption once the plant is operating. What would happen is the areas now that are 15 16 taking advantage of the fact that Burgess Mill has a competitor for that wood is no 17 longer in existence. They have come in and 18 taken wood that would have gone to that 19 20 Burgess Mill, even though they might be 21 further away. So that wood could be 22 traveling out of state to other locations. 23 Once that plant's going in, they will reassess whether or not they want to compete 24

with a local user again. Our sense is that they probably will not. And some of those facilities that are now -- where the wood is now being taken out of the Berlin area and going away will start coming into our facility. And they will be purchasing wood perhaps in areas around them that might be a little bit more competitive, but not as economically advantageous as coming into an area that just lost a hundred or a million tons a year.

So I can't tell you how that realignment, what that will look like. But the point I was trying to make is that I was trying to describe -- see if we can do it again.

The movement of the wood market is very dynamic and fluid. And it really depends. It's all connected. So if a plant in New York, in Fort Ticonderoga, New York, has a problem, it can affect facilities in Jay, Maine by where wood moves via the trucking network. And once the mills went out in Gorham -- I mean Berlin and Groveton and

1 Gilman, it didn't necessarily mean less wood was harvested. It meant that that same 2 wood, maybe less, was. But predominantly 3 the same wood might have been harvested but 4 transported out. And once they come in, 5 there will be a more competitive 6 7 environment. And those that are accepting 8 it will perhaps choose not to be part of that 6 million that we've identified and 9 10 purchase their wood up in Maine or out in 11 New York State or elsewhere, because the 12 opportunity won't be there once we're in 13 there to fill that void, so to speak.

Q. Did the LandVest study show the 1.2 million tons a year that was not now being consumed by local mills went out of state?

14

15

16

17

18

19

20

21

22

23

24

A. (Bravakis) No. I think I alluded to the fact that 1.2 had been used by mills, and then they went in and did an analysis of what the current consumption is. There's no way to really know where that wood is going. They did not look at the consumption when the mills were operating, other than saying

```
1
        what we know now is there's roughly
        6 million, if you will, and the pulp mills
2
        used 1.2 or 1.3 million when they were
3
        operating. That was a premise that
4
        essentially gave us confidence that there's
5
        enough wood in the area for our plant, which
6
7
        is roughly -- would consume roughly half of
        that, a little bit more than half. But they
8
```

10 Q. So your working assumption is that 1.2

11 million is going to be redistributed or

12 sitting in the woods?

did not do that.

9

- 13 A. (Bravakis) I think a combination of the
 14 both. But my guess is redistributed. But
 15 I'm sure that some logging contractors went
 16 out of business, and so, you know, it's in
 17 the woods in that case.
- 18 Q. Okay. Thank you.

So there is -- you acknowledge there is a competitive aspect to this?

- 21 A. (Bravakis) Absolutely.
- Q. So we'll save pricing questions for the closed session.
- 24 A. (Bravakis) Yes.

Q. Now, the sustainability -- first, let me ask a very general question. When you talk about sustainability, are you talking about sustainability of timber available to flow as biomass, or are we talking about sustainable forest in a broader sense?

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

(Bravakis) We were talking about biomass. Α. But if I recall in the -- I have to look at the study. I have to refresh myself. our approach was to identify if the wood could be sustainably harvested for our plant for biomass. And so they looked at the -basically, they looked at growth and removals, net growth compared to removals. That included round wood, which is saw timber and pulp wood and tops and branches. And they looked at the FIA data, which is more conservative data, and they looked at growth and removal and said that it's growing faster than being removed. And then they also compared that to state reported data, of which New Hampshire has -- it's more rigorous reporting than some of the other states. So they understood that, and

they tried to interpolate between the two sets of data to come up with their conclusions.

- Q. Does your concept of sustainability include leaving 50 percent of the tops as waste wood, as you referred to it, in the woods?

 Or is this assuming everything's coming out to meet market demands?
- 9 (Bravakis) No, it's not everything coming Α. 10 out. I think when we looked at it, it was 11 assuming they looked at current conditions, which, because it's a pulp and paper market, 12 a lot of it, the limbs and tops are left in 13 the woods and not brought out. So, yeah, 14 left in the woods. 15
- Q. Now I'm asking specifically about yoursustainability practices.
- 18 A. (Bravakis) Oh, okay.

4

5

6

7

8

19 Q. You don't address that issue of whether
20 you're leaving a certain percentage of tops,
21 your waste wood, so to speak, in the woods
22 in your sustainability practices. You also
23 don't mention what low-grade wood is. You
24 don't define the product. Are those things

you're willing to entertain, or was it already discussed and didn't make it into the practices?

1

2

3

(Bravakis) I mean, that's a great question. 4 Α. We certainly thought about how much we want 5 to weigh in on being the forest cops. 6 we felt that, as I was trying to explain 7 before, there's a lot of, between 8 regulations, between voluntary programs, a 9 lot in place that the timber -- timber land 10 11 owners want to maximize the return on their land over the long haul, for the most part, 12 13 the ones that I know. And that doesn't necessarily mean liquidation clear-cuts, as 14 somebody suggested before. What it means is 15 growing high-grade timber products. 16 17 do that, there needs to be markets for low grade. And for landowners to engage in that 18 practice of owning and maintaining and 19 20 managing lands, they hire foresters; they 21 enter into management programs on their own; 22 some of them will join and be subject to third-party verification. But for the most 23 part, people who own and hold timber land 24

1 want to grow the highest quality log, because it takes their resource, which is 2 the land and the sun, and turns it into the 3 best return of fiber that you can have. 4 They don't want to grow it into wood that 5 goes into a biomass plant, although parts of 6 7 that eventual tree will go there. reality is that most of the forests in the 8 northeast are pretty much overstocked and 9 underutilized. And separate from some areas 10 that have had good low-grade markets, high 11 grading has been the predominant forestry 12 practice: Taking the best, leaving the 13 14 That's why most foresters we talked rest. to are delighted that a biomass plant will 15 go in to help the -- it gives them another 16 tool that they can offer their landowner to 17 do good management practice, good management 18 of timber harvesting practices. 19

Q. Have you determined -- and we don't have to get into details today. But have you determined at what minimum capacity your facility can operate -- for example: If for some reason down the road you can't obtain

20

21

22

23

24

1 750,000 tons per year and you bag it down to 500,000?

3

4

5

6

7

8

15

16

17

- A. (Bravakis) We haven't looked at that. We're confident we can get that wood. We're confident we can get it for the life of the plant.
- Q. Thank you. I'll save my questions for LandVest and closed sessions.

9 CHAIRMAN BURACK: Okay. Thank
10 you. And in light of the hour, I am going to
11 hold my questions until tomorrow, and Attorney
12 Tacopino will do the same.

Mr. Harrington, did you have a question?

MR. HARRINGTON: I have one follow-up question for them. I can wait until tomorrow if they're going to be back.

CHAIRMAN BURACK: Well, we
will start I think tomorrow morning with the same
panel. Why don't we hold the question until
tomorrow, okay.

To help speed us along
tomorrow, I will, Mr. Frecker, let you know one
question I will ask you to address; and that is,

1 I'll ask you to be prepared to walk us through

- 2 the list of all of the permit applications that
- 3 have been filed associated with this application
- 4 and give us the status of each of those. If you
- 5 can be prepared to do that, that would be very
- 6 helpful.
- 7 A. (Frecker) No problem.
- 8 Q. If you could do that in very, in kind of a
- 9 succinct and direct fashion, that will help.
- MR. IACOPINO: The other thing
- 11 is really for the Committee members: Hearing
- 12 Room B tomorrow is going to -- there's a meeting
- 13 in there from 10 to 12 that's going to have a
- 14 bunch of people in it, just so you're aware.
- 15 When you come in, you might want to take your
- 16 stuff out here. They're going to need to get
- 17 into that room.
- 18 CHAIRMAN BURACK: Unless
- 19 there's objections from the parties, I would
- 20 propose we convene at 9:00 tomorrow morning here
- 21 in this room. So we will stand adjourned until
- 22 9:00 tomorrow morning. Thank you.
- 23 (Whereupon the Day 1 Afternoon Session
- was adjourned at 5:05 p.m.)

1 CERTIFICATE

I, Susan J. Robidas, a Licensed
Shorthand Court Reporter and Notary Public
of the State of New Hampshire, do hereby
certify that the foregoing is a true and
accurate transcript of my stenographic
notes of these proceedings taken at the
place and on the date hereinbefore set
forth, to the best of my skill and ability
under the conditions present at the time.

I further certify that I am neither attorney or counsel for, nor related to or employed by any of the parties to the action; and further, that I am not a relative or employee of any attorney or counsel employed in this case, nor am I financially interested in this action.

Susan J. Robidas, LCR/RPR Licensed Shorthand Court Reporter Registered Professional Reporter N.H. LCR No. 44 (RSA 310-A:173)
