June 10, 2010

To the NH Site Evaluation Committee:

In addition to being supportive of the effort of Iberdrola to provide an renewable source of power to the state of New Hampshire I would like to know that the SEC will investigate the following two areas of concern fully before the project is allowed to go forward.

1. Does Iberdrola in fact have a plan which will provide adequate funds for FULL removal of the 24 proposed turbines as needed when they break partially or totally or when the land lease has expired?
2. Iberdrola tells us that there are not problems from the sound of the turbines yet there are numerous studies and first-hand reports by individuals that disagree with this stand.
 - a. The Groton site puts turbines less than a mile from several residences and sound is amplified by the combination of mountains and valleys.
 - b. Five campgrounds with tent sites will be seriously impacted if the sound can be heard from those sites even if it is just steady and not particularly loud.

Thank you for addressing this facts seriously,

Kathy Wallace
