Site Evaluation Committee - We are strongly opposed to the construction of the proposed Iberdrola wind farm in the narrow Baker River Valley for several reasons. The site would be accessed by Groton Hollow Road, a narrow dirt road that runs through a wooded area, close to a brook, and passes very near to several private homes. The people who live in that area will be greatly inconvenienced and more than likely suffer damage to their property and peace-of-mind from such things as huge trucks passing through and blasting. We feel that they should be compensated by Iberdrola for these negative aspects and the drop in the value of their property. We also worry about the safety of the wildlife in the area, especially the Peregrine Falcons who nest near-by. We retired to Rumney Village ten years ago because of its beauty and peacefulness, and both of us have involved ourselves in town activities that we thought would preserve those qualities. We believe that many of Rumney's positive qualities would be damaged by the presence of the wind farm. However, if the project can't be stopped, at the very least the agreement should include a Property Value Guaranty to protect equity in our homes and particularly those of the people on Groton Hollow Road, School Street and NH Route 25 which would be affected by the construction of the farm.

Sincerely,  
John F. Bagley - Rumney Planning Board
