**Subject:** More power headaches

Hello. I'm looking out my front window where half of the view is littered with Groton Windmills. Now I see the next mountain top to the north being stripped of more trees. This is deeply saddening me. I have been upset since these windmills appeared and I had no idea they were going up.

The majority of focus in the north country has been on the Northern Pass Project. As a result the town of Groton essentially "snuck" this initiative in under the radar. There is no difference between power lines and windmills. They litter/spoil the one thing NH could have been proud of - it's beauty.

Gee, I hope they reduce my taxes by a thousand dollars as a result of your ill placed energy conservation measures.
