Dear New Hampshire Site Evaluation Committee:

I am writing to urge you to approve the application for the construction of the Antrim Wind project. I firmly believe that as a state, we must embrace alternative energy, and Antrim Wind is one of the few large-scale opportunities we have that would effect real change in the way our energy is produced. It represents shifting priorities and reaffirms New Hampshire's commitment to being progressive and environmentally responsible. In addition, the project will provide useful income to the town through tax revenue, create jobs, and support the growing alternative energy industry. To let it pass by would be a shame.

While some opponents believe that the project will have a negative environmental impact on Tuttle Hill (which studies conducted by Eolian Wind have proven is not the case), in my opinion a wind farm is far less detrimental than a housing development, which has the potential for 500+ homes. Other opponents cite that the project will affect their view, but beauty is in the eye of the beholder, and to be swayed by something so subjective is impractical. It is important to keep in mind that there are positives and negatives to every situation, but in this instance, the positives far outweigh any possible disadvantages.

I am very excited about the Antrim Wind Project – as are the majority of Antrim residents. I genuinely hope that the SEC does not allow the opinions of a few short-sighted opponents derail what could be a wonderful project for the state, as well as the town of Antrim.

Sincerely,

Rebecca Enman
