Subject: Wind Farm Projects

Dear Amy Ignatius

The Newfound Lake area seems to be targeted by wind power projects. It seems like companies like Iberdrola Renewables target small towns that have no zoning requirements and have small governing staff that are not capable of dealing with all the issues associated with wind power projects.

*I had thought that NH RSA 162-H:1 II, would protect area residents and property holders, as it seems to require that the sighting of electric generating plants be treated as a significant aspect of land-use planning in which all environmental, and **economic** issues are resolved in an integrated fashion. The Groton NH wind power project is complete where the towers now dot the ridges of mountains surrounding Newfound Lake. Iberdrola Renewables has now started the process for a new wind power project located on the ridges of mountains surrounding Newfound Lake in Alexandria, Danbury & Grafton.*

While the official application to the State of NH has not been made please help block this project when it is presented to you.

The economic issue of the impairment to the natural view surrounding the most pristine small lake in the country could not have been taken into consideration for the Groton project. Please help stop the construction of these 454 foot bright white monsters. We already have to suffer with 24 towers and will have to consider selling our house at a very large loss and then moving out of state if another 34 towers are built in our view.

NOW EDP Renewals also wants to build wind power projects in Groton, Alexandria & Hebron.

Thank you in advance for anything you do to stop both projects.

Sincerely,

Linda L.Lavoie

Bristol, NH 03222
