Dear Administrator Drew,

Please enter this four minute video and accompanying note into the file for the "Wild Meadows" Wind Turbine installation proposed for Newfound Lake.

I hope you had a good weekend.

Sincerely,

Larry Goodman

Dear Governor Hassan, Chairman Borden & Members of the STE,

We, [www.nhwindwatch.org](http://www.nhwindwatch.org), agree with you, Governor Hassan, when you wrote to CT stating "the impact on some of our state's most important natural resources" needs to be considered for large scale industrial energy projects like the hydro power Northern Pass transmission towers or, we would hope, forty and fifty story

---

wind turbines in some of our states most pristine and scenic tourist destinations.

Please take four minutes and watch this video. It will show you the before and after look of a proposed Newfound Lake wind installation. Talk about "impact on some of our state's most important natural resources," it is very clear here.

<http://www.youtube.com/watch?v=wtqVpPQG8uI&feature=youtu.be>

The Appalachian Mountain Club summed it all up very nicely when they said:

"Scenic impacts can have a direct and indirect impact on the quality of life of residents in the local towns as well as affecting

property values. Large infrastructure projects that compromise scenic integrity values can erode the very

essence of why people live in and choose to visit this region."

We were glad to see the SEC clearly support this thinking on aesthetics and natural resources in the Antrim wind decision.

There are higher capacity/lower cost renewables than wind, renewables that don't disfigure our state, harm our tourism

and destroy beautiful natural resources. There are other far more effective renewables than wind as five

leading US newspapers, including the progressive LA Times, have now clearly pointed out.

Thanks for watching.

Sincerely,

Larry Goodman

This simulated aerial tour around Newfound Lake, Mt. Cardigan & vicinity should give you a whole new appreciation of the problem.
