Dear Vice Chair Ignatius & Commissioner Burack,

Thank you for your ongoing time and focus on energy related issues.

Please read this article from yesterday's New York Times. In ccing Administrator Drew and Ms. Murray

I am asking that this article be filed with the SEC for all future industrial wind projects that submit an application.

Germany and Denmark are both widely acknowledged to be leaders in renewable energy, particularly industrial scale wind.

Emissions have gone up year over year as progressively more renewable power has been added to the grid.

Costs have skyrocketed hitting lower income folks and retirees particularly hard.

Wind energy does not **ever** replace baseload high capacity energy sources as you know.

The facts in the article are clear and explicit. Wind energy cannot be "renewable" if it is redundant and increases emissions as this article factually documents.

The bills that were written in 2007 and 2002 are based more on emerging theory than facts.

After reading this article, the facts as we now know them in 2013 are absolutely clear.

Please consider encouraging our legislators to update our now dated legislation to reflect accurate and verifiable cost/benefit facts.

Higher cost and higher emissions seems like a losing proposition for all of us.

Thanks again for your time. Enjoy the weekend.

Sincerely,

Larry Goodman
