Dear Tim,

In their investor release on "Wild Meadows" Iberdrola states that it will save 17,000 tons per year of CO2 emissions.

Once/if Iberdrola files, we hope that the SEC will request very specific and well sourced documentation of this claim to include a full accounting of fossil fuel redundancy and related emissions associated with this number.

Please file this request in the SEC file for the "Wild Meadows" industrial turbine plant.

Thanks for all your time and help.

Larry
