"The health impact of the noise created by wind turbines has been studied and debated for decades with no definitive evidence supporting harm to the human ear." *Source: Chatham-Kent Public Health Unit*
<http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf>

"The electromagnetic fields produced by the generation and export of electricity from a wind farm do not pose a threat to public health..." *Source: NHMRC*

2010

http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf

“... no consistent associations were found between wind turbine noise exposure and symptom reporting, e.g. chronic disease, headaches, tinnitus and undue tiredness.” *Source: Bolin et al 2011 Review* http://iopscience.iop.org/1748-9326/6/3/035103/pdf/1748-9326_6_3_035103.pdf

“... low level frequency noise or infrasound emitted by wind turbines is minimal and of no consequence... Further, numerous reports have concluded that there is no evidence of health effects arising from infrasound or low frequency noise generated by wind turbines.” *Source: NHMRC 2010*
http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf

“... renewable energy generation is associated with few adverse health effects compared with the well documented health burdens of polluting forms of electricity generation...” *Source: NHMRC 2010*
http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf

“Although opposition to wind farms on aesthetic grounds is a legitimate point of view, opposition to wind farms on the basis of potential adverse health consequences is not justified by the evidence.” *Source: Chatham-Kent Public Health Unit* <http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf>

“What is apparent is that numerous websites have been constructed by individuals or groups to support or oppose the development of wind turbine projects, or media sites reporting on the debate. Often these websites state the perceived impacts on, or benefits to, human health to support the position of the individual or group hosting the website. The majority of information posted on these websites cannot be traced back to a scientific, peer-reviewed source and is typically anecdotal in nature. In some cases, the information contained on and propagated by internet websites and the media is not supported, or is even refuted, by scientific research. This serves to spread misconceptions about the potential impacts of wind energy on human health...” *Source: Knopper&Ollson review* <http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf>

Afset was mandated by the Ministries responsible for health and the environment to conduct a critical analysis of a report issued by the *Académie nationale de médecine* that advocated the use of a minimum 1,500 metre setback distance for 2.5 MW wind turbines or more. The Afset report concluded that “It appears that the noise emitted by wind turbines is not sufficient to result in direct health consequences as far as auditory effects are concerned. [...] A review of the data on

noise measured in proximity to wind turbines, sound propagation simulations and field surveys demonstrates that a permanent definition of a minimum 1,500 m setback distance from homes, even when limited to windmills of more than 2.5 MW, does not reflect the reality of exposure to noise and does not seem relevant.”

Annoyance

“... wind turbine noise is comparatively lower than road traffic, trains, construction activities, and industrial noise.” *Source: Chatham-Kent Public Health Unit*
<http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf>

“The perception of noise depends in part on the individual - on a person’s hearing acuity and upon his or her subjective tolerance for or dislike of a particular type of noise. For example, a persistent “whoosh” might be a soothing sound to some people even as it annoys others.” *Source: NRC 2007*
http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

“... some people might find [wind turbine noise annoying. It has been suggested that annoyance may be a reaction to the characteristic “swishing” or fluctuating nature of wind turbine sound rather than to the intensity of sound.” *Source: Ontario CMOH Report*
http://www.health.gov.on.ca/en/public/publications/ministry_reports/wind_turbine/wind_turbine.pdf

“... being annoyed can lead to increasing feelings of powerlessness and frustration, which is widely believed to be at least potentially associated with adverse health effects over the longer term.” *Source: Ad Hoc Expert Group on Noise and Health*
http://www.hpa.org.uk/webc/HPAwebFile/HPAweb_C/1279888026747

“Wind turbine annoyance has been statistically associated with wind turbine noise, but found to be more strongly related to visual impact, attitude to wind turbines and sensitivity to noise.” *Source: Knopper&Ollson review*
<http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf>

“... self reported health effects like feeling tense, stressed, and irritable, were associated with noise annoyance and not to noise itself...” *Source: Knopper&Ollson review*
<http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf>

“... many of the self reported health effects are associated with numerous issues, many of which can be attributed to anxiety and annoyance.” *Source: Knopper&Ollson review*
<http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf>

“To date, no peer reviewed articles demonstrate a direct causal link between people living in proximity to modern wind turbines, the noise they emit and resulting physiological health effects. If anything, reported health effects are likely attributed to a number of environmental stressors that result in an annoyed/stressed state in a segment of the population.” *Source: Knopper&Ollson review*
<http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf>

“... some community studies are biased towards over-reporting of symptoms because of an explicit link between...noise and symptoms in the questions inviting people to remember and report more symptoms because of concern about noise.”
Source: Ad Hoc Expert Group on Noise and Health
http://www.hpa.org.uk/webc/HPAwebFile/HPAweb_C/1279888026747

“... it is probable that some persons will inevitably exhibit negative responses to turbine noise wherever and whenever it is audible, no matter what the noise level.”
Source: Fiumicelli review Fiumicelli article abstract

“The major source of uncertainty in our assessment is related to the subjective nature of response to sound, and variability in how people perceive, respond to, and cope with sound.” *Source: Oregon review*
<http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

“... sleep difficulties, as well as feelings of uneasiness, associated with noise annoyance could be an effect of the exposure to noise, although it could just as well be that respondents with sleeping difficulties more easily appraised the noise as annoying.” *Source: NHMRC 2010*
http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf

“Even noise that falls within known safety limits is subjective to the recipient and will be received and subsequently perceived positively or negatively.” *Source: Chatham-Kent Public Health Unit*
<http://www.harvestingwindsupport.com/blog/wp-content/uploads/2011/03/Chatham-KentHealth-and-Wind-.pdf>

“... annoyance was strongly correlated with a negative attitude toward the visual impact of wind turbines on the landscape...” *Source: NHMRC 2010*
http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf

“Respondents tended to report more annoyance when they also noted a negative effect on landscape, and ability to see the turbines was strongly related to the probability of annoyance.” *Source: Minnesota Health Dept 2009*
<http://www.health.state.mn.us/divs/eh/hazardous/topics/windturbines.pdf>

“[It is proposed that annoyance is not a direct health effect but an indication that a person’s capacity to cope is under threat. The person has to resolve the threat or their coping capacity is undermined, leading to stress related health effects... Some people are very annoyed at quite low levels of noise, whilst other are not annoyed by high levels.” *Source: NHMRC 2010*

http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf

“Further, sounds, such as repetitive but low intensity noise, can evoke different responses from individuals... Some people can dismiss and ignore the signal, while for others, the signal will grow and become more apparent and unpleasant over time... These reactions may have little relationship to will or intent, and more to do with previous exposure history and personality.” *Source: Minnesota Health Dept 2009*

<http://www.health.state.mn.us/divs/eh/hazardous/topics/windturbines.pdf>

“Stress and annoyance from noise often do not correlate with loudness. This may suggest [that other factors impact an individual’s reaction to noise... individuals with an interest in a project and individuals who have some control over an environmental noise are less likely to find a noise annoying or stressful.” *Source: Minnesota Health Dept 2009*

<http://www.health.state.mn.us/divs/eh/hazardous/topics/windturbines.pdf>

“There is a possibility of learned aversion to low frequency noise, leading to annoyance and stress...” *Source: Leventhall 2005 review*

<http://www.noiseandhealth.org/article.asp?issn=1463-1741;year=2004;volume=6;issue=23;spage=59;epage=72;aulast=Leventhall>

“Noise produced by wind turbines generally is not a major concern for humans beyond a half mile or so because various measures to reduce noise have been implemented in the design of modern turbines.” *Source: NRC 2007*

http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

“Noise... levels from an onshore wind project are typically in the 35-45 dB(A) range at a distance of about 300 meters... These are relatively low noise or sound-pressure levels compared with other common sources such as a busy office (~60 dB(A)), and with nighttime ambient noise levels in the countryside (~20-40 dB(A)).” *Source: NRC 2007*

http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

“Complaints about low frequency noise come from a small number of people but the degree of distress can be quite high. There is no firm evidence that exposure to this type of sound causes damage to health, in the physical sense, but some people are certainly very sensitive to it.” *Source: Ad Hoc Expert Group on Noise and Health*

http://www.hpa.org.uk/webc/HPAwebFile/HPAweb_C/1279888026747

“... there is the theoretical possibility that annoyance may lead to stress responses and then to illness. If there is no annoyance then there can be no mechanism for any increase in stress hormones by this pathway... if stress-related adverse health effects are mediated solely through annoyance then any mitigation plan which reduces annoyance would be equally effective in reducing any consequent adverse health effects. It would make no difference whether annoyance reduction was achieved through actual reductions in sound levels, or by changes in attitude brought about by some other means.” *Source: Ad Hoc Expert Group on Noise and Health*
http://www.hpa.org.uk/webc/HPAwebFile/HPAweb_C/1279888026747

Infrasound

“Infrasound is audible when the sound levels are high enough. The hearing threshold for infrasound is much higher than other frequencies. Infrasound from wind farms is at levels well below the hearing threshold and is therefore inaudible to neighbouring residents. There is no evidence that sound which is at inaudible levels can have a physiological effect on the human body. This is the case for sound at any frequency, including infrasound.”

[http://docs.health.vic.gov.au/docs/doc/5593AE74A5B486F2CA257B5E0014E33C/\\$FILE/Wind%20farms,%20sound%20and%20%20health%20-%20Technical%20information%20WEB.pdf](http://docs.health.vic.gov.au/docs/doc/5593AE74A5B486F2CA257B5E0014E33C/$FILE/Wind%20farms,%20sound%20and%20%20health%20-%20Technical%20information%20WEB.pdf)

"Claims that infrasound from wind turbines directly impacts the vestibular system have not been demonstrated scientifically... evidence shows that the infrasound levels near wind turbines cannot impact the vestibular system." <http://www.mass.gov/dep/public/press/0112wind.htm>

“There is no evidence that infrasound ... [from wind turbines ... contributes to perceived annoyance or other health effects.” *Source: Bolin et al 2011 Review*
http://iopscience.iop.org/1748-9326/6/3/035103/pdf/1748-9326_6_3_035103.pdf

“There is no consistent evidence of any physiological or behavioural effect of acute exposure to infrasound in humans.” *Source: UK HPA Report*
http://www.hpa.org.uk/webc/HPAwebFile/HPAweb_C/1265028759369

“... self reported health effects of people living near wind turbines are more likely attributed to physical manifestation from an annoyed state than from infrasound.” *Source: Knopper&Ollson review*
<http://www.ehjournal.net/content/pdf/1476-069X-10-78.pdf>

“... infrasound from current generation upwind model turbines [is well below the pressure sound levels at which known health effects occur. Further, there is no scientific evidence to date that vibration from low frequency wind turbine noise causes adverse health effects.” *Source: Ontario CMOH Report*
http://www.health.gov.on.ca/en/public/publications/ministry_reports/wind_turbine/wind_turbine.pdf

“It would appear... that infrasound alone is hardly responsible for the complaints... from people living up to two km from the large downwind turbines.”
Source: Jakobsen 2005 review <http://multi-science.metapress.com/content/w6r4226247q6p416/>

“From a critical survey of all known published measurement results of infrasound from wind turbines it is found that wind turbines of contemporary design with the rotor placed upwind produce very low levels of infrasound. Even quite close to these turbines the infrasound level is far below relevant assessment criteria, including the limit of perception.” *Source: Jakobsen 2005 review* <http://multi-science.metapress.com/content/w6r4226247q6p416/>

“With older downwind turbines, some infrasound also is emitted each time a rotor blade interacts with the disturbed wind behind the tower, but it is believed that the energy at these low frequencies is insufficient to pose a health hazard.” *Source: NRC 2007* http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

Shadow flicker

“Scientific evidence suggests that shadow flicker [from the rotating blades of wind turbines does not pose a risk for eliciting seizures as a result of photic stimulation.” *Source: Massachusetts review* http://www.mass.gov/dep/energy/wind/turbine_impact_study.pdf

Shadow flicker from wind turbines... is unlikely to cause adverse health impacts in the general population. The low flicker rate from wind turbines is unlikely to trigger seizures in people with photosensitive epilepsy. Further, the available scientific evidence suggests that very few individuals will be annoyed by the low flicker frequencies expected from most modern wind turbines.” *Source: Oregon review* <http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

“Flicker frequency due to a turbine is on the order of the rotor frequency (i.e., 0.6-1.0 Hz), which is harmless to humans. According to the Epilepsy Foundation, only frequencies above 10 Hz are likely to cause epileptic seizures.” *Source: NRC 2007* http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

Community & social response to wind turbines

The perception of sound as noise is a subjective response that is influenced by factors related to the sound, the person, and the social/environmental setting. These factors result in considerable variability in how people perceive and respond to sound... Factors that are consistently associated with negative community response are fear of a noise source... [and noise sensitivity...” *Source: Oregon review* <http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

<http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

“Wind energy developments could indirectly result in positive health impacts... if they increase local employment, personal income, and community-wide income and revenue. However, these positive effects may be diminished if there are real or perceived increases in income inequality within a community.” *Source: Oregon review*

<http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

“Effective public participation in and direct benefits from wind energy projects (such as receiving electricity from the neighboring wind turbines) have been shown to result in less annoyance in general and better public acceptance overall.” *Source: Massachusetts review*

http://www.mass.gov/dep/energy/wind/turbine_impact_study.pdf

“... people who benefit economically from wind turbines [are less likely to report noise annoyance, despite exposure to similar sound levels as those people who [are not economically benefiting.” *Source: NHMRC 2010*

http://www.nhmrc.gov.au/files_nhmrc/publications/attachments/new0048_evidence_review_wind_turbines_and_health.pdf

“Landowners... may perceive and respond differently (potentially more favorably) to increased sound levels from a wind turbine facility, particularly if they benefit from the facility or have good relations with the developer...” *Source: Oregon review*

<http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

“The level of annoyance or disturbance experienced by those hearing wind turbine sound is influenced by individuals' perceptions of other aspects of wind energy facilities, such as turbine visibility, visual impacts, trust, fairness and equity, and the level of community engagement during the planning process.” *Source: Oregon review*

<http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

“Wind energy facilities... can indirectly result in positive health impacts by reducing emissions of [green house gases and harmful air pollutants, and... Communities near fossil-fuel based power plants that are displaced by wind energy could experience reduced risks for respiratory illness, cardiovascular diseases, cancer,

and premature death.” *Source: Oregon review*

<http://public.health.oregon.gov/HealthyEnvironments/TrackingAssessment/HealthImpactAssessment/Documents/Oregon%20Wind%20Energy%20HIA%20Public%20comment.pdf>

“The environmental and human-health risk reduction benefits of wind-powered electricity generation accrue through its displacement of electricity generation using other energy sources (e.g., fossil fuels), thus displacing the adverse effects of those other generators.” *Source: NRC 2007*

http://www.vawind.org/assets/nrc/nrc_wind_report_050307.pdf

“Community engagement at the outset of planning for wind turbines is important and may alleviate health concerns about wind farms. Concerns about fairness and equity may also influence attitudes towards wind farms and allegations about effects on health. These factors deserve greater attention in future developments.”

Summary of 2013 VTA Finnish report

VTT Technical Research Centre of Finland has published a new study with a conclusion that wind turbines do not cause any adverse health effects. The study consisted of a review of nearly 50 scientific research articles conducted in Europe, USA, Australia and New Zealand over the past 10 years.

Due to the increased number of wind power projects in Finland, a growing concern has arisen among the public regarding the possible negative impacts wind energy production may have on human health. VTT Technical Research Centre of Finland conducted a comprehensive literature review covering nearly 50 scientific research articles. The review concluded that in the light of current scientific research, there is no evidence to show that the infrasound produced by modern wind turbines is anything but harmless.

The sound of a nearby wind farm does not possess such qualities or volume that it would cause physical symptoms to humans. The study also concluded that the infrasounds below the auditory threshold does not constitute a health hazard. Additionally, most of the infrasound caused by a wind farm is mixed with other infrasound from the environment and does therefore not cause any additional exposure. According to the research articles reviewed, the low frequency sound with potential hazardous health impacts would have to be of a higher volume than that caused by wind farms, in order to have an impact on our health. Also, concern that shadow flicker may cause epileptic seizures are overruled in the research material. Such seizures cannot be caused by the type of flicker the slow rotation speed of the wind turbine blades produce.
