Danbury and Alexandria DO NOT want this "windfarm" to move forward, also the surrounding towns do not want this! I wish everyone on the SEC committee had to live next door and see what a direct impact to their lives this will have if this is ever approved.

We produce our share of power, we should not have to be railroaded into having these literally in our backyard, especially if the power is being used elsewhere. In addition to that, the issues with Iberdrola have not been resolved in other areas, why would NH even consider allowing a corporation to force their way into our lives. A small building in the area for a corporation is fine, but this huge project affects so many rights we are entitled to as homeowners, taxpayers, NH citizens it is unfathomable.

One more comment - I reviewed your website as I mentioned in my letter below, I read your guidelines for siting any wind projects. Item 1 - Substantial support for the project - both towns voted, both towns affected by this application said NO, however I am told you do not even follow your own guidelines....

Pretty sad day in NH when We the People cannot be heard.

Thank you!
