Dear Ms. Murray,

During the SEC Deliberative Session on April 16, 2015 the topics of turbine noise and shadow flicker were discussed.

Since some participants in the session were evidently not fully familiar yet with turbine noise and/or turbine shadow flicker.....these two two minute videos will serve as a very good way to hear and see the noise and shadow flicker impacts of turbines

[https://www.youtube.com/watch?v=78QwBM\\_AD3s](https://www.youtube.com/watch?v=78QwBM_AD3s)

---

The Brown County Board of Health in Wisconsin has declared wind turbines to be "human health hazards." {link below}

Both of the video links above were filmed in Wisconsin.

The issue of noise/shadow flicker is a problem, as I see and read it, across the country and across the world. I have simply chosen Wisconsin to stay consistent and because these videos are relatively brief. There are no shortage of them though. The volume of lawsuits, post turbine installation, around the country and around the world attests to the magnitude of the problem in my estimation.

Please take less than four minutes to see/hear these videos if you're unfamiliar with the noise and shadow flicker of turbines.

Thanks for the SEC member's time and consideration.

Sincerely,

Larry Goodman  
Hebron
