Subject: Town Ordinances

In regard to the effort to ignore town ordinances for the proposed NED pipeline project, I wish to register my opposition!

From the PUC's own website: The PUC's mission is to "To provide necessary customer protection" and "To provide a thorough but efficient regulatory process that is fair, open and innovative."

RSA 363:17-a," the Commission is the arbiter between the interests of the customers and the interests of the regulated utilities and, therefore, is charged with maintaining the public trust. Accordingly, no employee of the Commission should knowingly act in any way that might reasonably be expected to create an impression or suspicion among the public that an employee may be engaging in conduct that violates that trust."

RSA 363:12 "sets forth a code of ethics which, among other things, requires the Commissioners to perform their duties impartially and diligently and in doing so to avoid even the appearance of impropriety."

These town ordinances are designed to protect New Hampshire communities from corporate pillaging. By eliminating the public's input from consideration, particularly for a project with the potential scope and devastation of the proposed NED pipeline, you are TOTALLY failing in your stated mission and violating all the public's trust.

The P in PUC stands for public NOT private !
