Hello Mr. Drew,

I would like to suggest another component for the SEC rules and regulations which pertain to gas pipelines and compressor stations, etc.

In Canada noise reduction silencers are required, and we should certainly learn and improve upon what others have experienced.

I'm including two links showing that noise reduction technology exists, and every effort should be taken to require and enforce mitigation of invasive infrastructure.

NH has not experienced nor have we anticipated a project as large and invasive as NED, and we must do due diligence to ensure that we have appropriate regulations in place to properly and effectively site and monitor a gas infrastructure project of this size and scope.

Again, thank you for your time.

Marilyn Learner
