In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,042s.f. Ranch on 2.70 acres. As indicated in the body of the report the town of Woodstock does not have a zoning ordinance or zoning requirements. As such the existing use of the subject property as a single family residence is legally permitted. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Client	Devine, Millimet & Branch, P.A				
Property Address	321 Lost River Rd				
City	Woodstock	County Grafton	State NH	Zip Code 03262	
Owner	Barton J. & Paula E. King				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

The covenants and restrictions referenced in the attached deed prevent any other use of the subject property other than its current use as a single family residence. Therefore there is no other legal use of the subject property other than single family residential. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

I, DAVID H. RAYMOND, unmarried, of 4084 Kingsley Street, Clermont, FL 34711, for consideration received, grant to BARTON J. KING and PAULA E. KING, husband and wife, both with a mailing address of PO Box 197, North Woodstock, NH 03262, as joint tenants with rights of survivorship, with WARRANTY covenants,

A certain tract of land together with the buildings and improvements thereon situated on Lost River Road in the Town of Woodstock, County of Grafton and State of New Hampshire, more particularly bounded and described as follows:

Beginning on the south side of Lost River Road at the center of the pole line of the Public Service Company of New Hampshire power line which crosses said road; thence

Easterly along the south side of said road 1,272 feet, more or less, to the northwest corner of land now or formerly of Cyril Theriault; thence

South 11° East 159' along land of said Theriault to an iron pipe set in the ground on the North side of Lost River; thence

South 11° East to the said Lost River; thence

Westerly along the North side of the said Lost River to the center of the pole line of the said power line; thence

North 20° East 24', more or less, to the south side of the said Lost River Road and the point of beginning.

Containing 2.7 acres, more or less.

Being the unnumbered lot in Lost Valley Subdivision as shown on a plan entitled "Subdivision Plan of Lost Valley, North Woodstock, N.H., Peter Hodges Surveyors, Inc.

Unofficial Document

Holderness, N.H.", said plan dated November, 1970 and recorded in the Grafton County Registry of Deeds, Pocket 2, Folder 5, Plan 7, and being all remaining land of Lost Valley Corporation between Lost River Road and Lost River, Brenda J. Kneeland and Thomas E. Kneeland, Jr. conveyed the said lot to Lost Valley Corporation by Trustees' Deed dated November 30, 1976 and recorded at Book 1356, Page 862.

ALSO CONVEYING as an appurtenance to the premises conveyed hereby a right of way for vehicular traffic, in common with others, over the private way, 50' in width, shown as Snow King Drive, and also on Sun Dance Drive, as shown on said plan.

ALSO CONVEYING as an appurtenance to the premises conveyed hereby an easement to use and enjoy, in common with others, the swimming pool and tennis courts located on other land of said Lost Valley Corporation on the south side of Snow King Drive shown as "Common Land for Swimming Pool and Tennis Courts" on the aforementioned plan, TOGETHER WITH a like easement to use and enjoy such additional common recreational facilities as may be provided by said corporation, its successors and assigns, in the future.

The premises heretofore described are conveyed SUBJECT TO and with the benefit of all the reservations, covenants and restrictions set forth in Covenants and Restrictions for Lost Valley, North Woodstock, NH recorded at Book 1174, Page 180 (incorrectly referred to as Book 1131, Page 539 in prior deed) and amendment at Book 1195, Page 159.

There is hereby reserved to Lost Valley Corporation, its successors and assigns, and to all owners of the common lands known as Lot A, the right to cross and re-cross a portion of the premises located 435' west of the easterly boundary of the granted lot and following the present footpath from the highway to the river, by foot to obtain access to the river shoreline for recreation, fishing and swimming purposes, at all reasonable times and seasons of the year, and for the unrestricted use and enjoyment of the water, river, and the adjoining shoreline which the Grantees, their heirs and assigns, will own. This agreement and right of way will run with the land and be binding as a covenant to run with the land.

MEANING AND INTENDING to describe and convey all and the same premises conveyed to the within grantor by Warranty Deed of Alden Brown dated September 15, 2004 and recorded in the Grafton County Registry of Deeds at Book 3052, Page 42.

This is not homestead property.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 1710 Route 175
Thornton, NH 03285

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** September 30, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Thornton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Market area description and characteristics: Thornton is a small residential community of 2,500 residents. I-93 which travels through Thornton provides connectivity to the White Mountain National Forest, Loon Mountain, and Waterville Valley. The relatively close proximity to both summer and winter recreational resorts has enhanced the marketability of Thornton as a vacation destination for second home buyers. I-93 provides connectivity to essential services for year round residents to Lincoln to the north and Plymouth to the south.

In 2013 the median sales price of a single family residence in Thornton was $206,900. This is an improvement from 2012 which had a median sales price of $170,707 and $155,250 in 2011. Days on market improved in 2013 with 163 days on market from 2012 which saw an average of 226 days on market.

The improving market conditions in Thornton in the third quarter of 2013 paralleled the larger market trend that the state and nation were also seeing in the single family housing market. According to the Federal Housing Finance Authority, residential values in New Hampshire as of the third quarter of 2013 had increased 5.95% from the year prior. The improving market conditions can be attributed to a diminished inventory of distressed sales as well as historically low interest rates and an improving employment market which enhances the second/vacation home market.

Site description and characteristics: Subject site is located on route 175. At 1.25 acres in size it is smaller than typical, however is considered a legal and conforming lot of record. Located in the General Residence zoning district a buildable lot is required to have a minimum of 1 acre and 100' of road frontage.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				2	1			768
Level 2							2	1			384

Finished area above grade contains: Bedroom(s): 4 Bath(s): 2 GLA: 1,152

Summarize Above Grade Improvements: Per MLS records the above grade living area contains 2 bedrooms and full baths on each floor. First floor has a kitchen, living, and dining room. Mason fireplace in first floor living room, large wrap around deck.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade	1	1	1				1	1		100	768
Other Area											

Summarize below grade and/or other area improvements: Per MLS records basement level is finished with a kitchen, living, dining, and bedroom as well as a full bath. The property was marketed as having a basement level that can be used as an an-law apt or an accessory unit.

Discuss physical depreciation and functional or external obsolescence: Tax assessment notes from an October 3, 2013 site visit indicated that paint on the exterior was starting to curl. Finished basement adds to value and marketability either as an accessory unit or ancillary living space to the above grade living area. Listing agent reported that the septic system had failed and had an estimated $10,000 repair cost. Buyer opted to purchase property as is and discounted $10,000 from full asking price. Listing agent reported that the dwelling had been vacant for a year prior to the sale. As an estate sale the family member that was entrusted to dispose of the real estate had little interest or financial means to address any deferred maintenance.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Interior photos from MLS show a relatively dated interior with basic construction materials such as wall paneling and electric baseboard heat. Appliances appear to be original as well as bath fixtures. Although the above grade residence has four functional bedrooms at less than 1,200 s.f. of living area the dwelling is considered smaller than typical and space challenged to support the use of four bedrooms.

Comments and reconciliation of the sales comparison approach: Sales of residences similar in age and appeal were considered in the sales comparison approach. Condition of comparables were reported as being market ready and in relatively average condition. All are adjusted for superior condition when compared to the subject which required a new septic system and cosmetic updating on the exterior at the time of the sale. 10% location adjustment are made for comps 1 and 3 which are on less busier roads than the subject.
Of the three sales considered most weight is applied to comp 1 as it is similar to the subject with an accessory unit and was the most recent sale to the subject's contract date.

Indication of Value by Sales Comparison Approach	$ 140,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,152 s.f. Cape on 1.25 acres. As indicated in the body of the report the site is located in the General Residence district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-054

Client	Devine, Millimet & Branch, P.A				
Property Address	1710 Route 175				
City	Thornton	County Grafton	State NH	Zip Code 03285	
Owner	Orion Acquisitions of RI				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the General Residence district zoning requirements of 100' road frontage and a 1 acre lot for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

I, AMELIA BORTOLOTTI, single, of 800 Worcester Street, Wellesley, MA 02482, for consideration paid, grant to ORION, LLC, a Rhode Island limited liability company registered to do business in New Hampshire as ORION ACQUISITIONS OF RHODE ISLAND with a place of business and mailing address of 4428 Windom Place, NW, Washington, DC 20016, with WARRANTY covenants,

A certain tract of land with the buildings thereon situated in Thornton, Grafton County, New Hampshire, bounded and described as follows:

Beginning at a stake and stones on the east side of Route 175; it being the southwest corner of the lot hereby conveyed; thence east on land formerly of David P. Foss 9 rods and 6 feet; thence north on line of land formerly of Sumner W. Constantine 20 rods and 10 feet; thence westerly 9 rods and 6 feet to main road; thence southerly on road to point of beginning, estimated to contain 1 ¼ acres, more or less. Together with spring on the northeast corner of land formerly of Constantine.

Subject to easement of Public Service Company of New Hampshire.

Excepting spring conveyed by Albee to O'Shea in Book 1246, Page 265.

MEANING AND INTENDING to describe and convey all and the same premises conveyed to Lorenzo Bortolotti and Annie Bortolotti by Warranty Deed of King Realty, Inc. dated April 29, 1985 and recorded in the Grafton County Registry of Deeds at Book 1541, Page 689. Lorenzo Bortolotti's death certificate is recorded at Book 3772, Page 57. For title of Grantor, see Authenticated Copy of Will and Probate of Annie Bortolotti, in the Grafton County Probate Court.

 BK 4016 PG 0547

Not homestead property.

IN WITNESS WHEREOF, I hereunto set my hand this 30Th day of September, 2013.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 173 Sunrise Hill Rd
Thornton, NH 03285

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Legal Description: See attached legal description
Tax Parcel #: Map 11, Lot 5-3 **RE Taxes:** 3,338 **Tax Year:** 2009
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Bruce Koble

Description and analysis of sales within 3 years (minimum) prior to effective date of value: Prior to the effective date of this assignment the subject property had transferred twice; both of which were related to a mortgage foreclosure transaction. The subject property transferred via a foreclosure deed on August 30, 2007 in the amount of the outstanding mortgage of $165,203. On February 20, 2008 the subject property sold as a bank REO in an arms length after 83 days of exposure through the MLS for $144,000.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on May 19, 2009 for $164,500, reduced in price to $158,750 on September 14, 2009, was under agreement on January 29, 2010, and closed for $148,500 on February 16, 2010 with conventional financing. There were no reported seller concessions.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 168,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: February 10, 2010	**$ 168,000**

Exposure Time: 6 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** February 10, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property abuts a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Thornton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: Thornton is a small residential community of 2,500 residents. I-93 which travels through Thornton provides connectivity to the White Mountain National Forest, Loon Mountain, and Waterville Valley. The relatively close proximity to both summer and winter recreational resorts has enhanced the marketability of Thornton as a vacation destination for second home buyers. I-93 provides connectivity to essential services for year round residents to Lincoln to the north and Plymouth to the south.
In 2010 market conditions in Thornton, much like the broader region, were declining due to sustained foreclosure and short sale activity brought on by a softening employment market and the well documented implosion of exotic mortgage lending from years prior.
In the year prior to the effective date of this assignment (Feb 2009-Feb 2010) the median sales price for a single family residence in Thornton was $180,000 with 149 days on market. This is a 5.26% decline from the year prior (Feb 2008-Feb 2009) which had a median sales price of $190,000 and 112 days on market.
The declining market conditions in Thornton in the first quarter of 2010 paralleled the larger market trend that the state and nation were also seeing in the single family housing market. According to the Federal Housing Finance Authority, residential values in New Hampshire as of the first quarter of 2010 had decreased 6.68% from the year prior.

Site description and characteristics: Sunrise Hill Rd is located off of route 175 in Thornton. The subject site is located at the very end of Sunrise Hill Rd and is accessed via a 75' right of way. At 1.44 acres in size it is smaller than typical, however is considered a legal and conforming lot of record. Located in the General Residence zoning district a buildable lot is required to have a minimum of one acre.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1		1		1	1			768
Level 2							1				288

Finished area above grade contains:	Bedroom(s): 2	Bath(s): 1	GLA: 1,056

Summarize Above Grade Improvements: Per MLS and assessment records the subject dwelling has two bedroom and one full bath. Half of the second floor is open to below as a cathedral ceiling the with the remaining half as a second bedroom.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											768
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject basement is unfinished with a 10' x 24' built in garage.

Discuss physical depreciation and functional or external obsolescence: Typical for log built dwellings the majority of the second floor as a cathedral ceiling adds character at the expense of living area. As a two bedroom, single bath residence the subject property is limited to a select sub-market that can accommodate a two bedroom residence. Originally built in 1994 it appears from interior photos that the dwelling features first generation building materials and components.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: At approximately 1,000 s.f. and with two bedrooms the size of the residence is slightly smaller than typical. However, being located in a market that appeals to second/vacation home buyers functional utility is less of a concern to most buyer as location to amenities plays more of a purchase decision.

Comments and reconciliation of the sales comparison approach: Three sales in Thornton are considered in the sales comparison approach. Adjustments are made for surplus land and differences in living area where applicable. Differences in bedroom count are incorporated in the GLA adjustment. After adjustments for differences a relatively narrow range of value is evident. Within the range of value most weight is placed on comp 1 as it is located in the subject's immediate neighborhood.

Indication of Value by Sales Comparison Approach	$ 168,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,056 s.f. Log cape on 1.44 acres. As indicated in the body of the report the site is located in the General Residence district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Property Address	173 Sunrise Hill Rd				
City	Thornton	County Grafton	State NH	Zip Code 03285	
Owner	Bruce Koble				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the General District zoning requirements of a 1 acre for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 47 Trapper Rd
Campton, NH 03223

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 47 Trapper Rd
City: Campton County: Grafton State: NH ZIP: 03223
Legal Description: See attached legal description

Tax Parcel #: Map 21, Lot 9-6 RE Taxes: 2,692 Tax Year: 2012
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Patrice M. Plante

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on December 11, 2012 for $129,900, under agreement 212 days later on July 11, 2013 and closed on August 15, 2013 for $117,000. Purchase was financed with conventional mortgage funds; there were no reported seller concessions to buyer.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	$ 121,000
Indication of Value by Cost Approach	$
Indication of Value by Income Approach	$

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: August 15, 2013	$ 121,000

Exposure Time: 6 months

The above opinion is subject to: ☒ Hypothetical Conditions and/or ☒ Extraordinary Assumptions cited on the following page.

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** August 15, 2013

Interest Appraised: ☒ Fee Simple ☐ Leasehold ☐ Other

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Campton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Sales Comparison Approach:

☒ Is necessary for credible results and is developed in this analysis
☐ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Income Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ None ☐ Disclose Name(s) and contribution:

Market area description and characteristics: Campton is primarily a residential community of less than 3,500 year round residents located between the White Mountain National Forest and NH's lakes region. Marketability of the community is enhanced due to close proximity to I-93 and surrounding ski resorts and lakes. Campton has appeal to second home buyers in all seasons with multiple ski resorts and lakes within a half hour drive. Essential services such as shopping and some employment are located in nearby Plymouth which is easily accessible via I-93.

Although the broader region had seen low to mid single digit market appreciation from 2012-2013, market conditions in Campton had remained relatively stable. In the year prior to the effective date of this assignment (8/2012-8/2013) the median sales price in Campton was $155,000 with 180 days on market. In the year prior (8/2011-8/2012) the median sales price was also $155,000.

In the broader region, the Federal Housing Finance Agency (FHFA) reports that property values had increased 5.94% from the third quarter of 2012 to the third quarter of 2013 in New Hampshire.

Site description and characteristics: The subject lot is located in Central Park Estates and is one of twenty residences in the sub-division. Restrictive covenants recorded at GCRD book 1941 page 406 are primarily for the preservation of the residential character and composition of the subject neighborhood. The covenants prevent any further sub-division of the subject property by right and for no other use other than the use as for a single family residence.

The attached deed also identifies that the subject property has the benefit with three others for the use of a common well located on lot 20. The cost of the well is shared with with each of the beneficiaries required to pay 1/4th of any maintenance costs associated with the well. For 2012 the annual fee for the common well for the subject property was $80.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. The restrictive covenants references in the attached deed prevent any other use of the subject parcel other than single family residential use. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Comments and reconciliation of the sales comparison approach: Three sales of double wide manufactured homes are considered in the sales comparison approach. Adjustments are made for significant differences in living area and amenities where applicable. Market data shows that the median sales price of a single family residence in Campton was unchanged in the year prior to the effective date of the appraisal. No time adjustments are applied for differences in market conditions. Significant weight is placed on comp 1 as it is most similar to the subject in terms of size, bedroom count, amenities, and also required the least amount of adjustments.

Indication of Value by Sales Comparison Approach	$ 121,000

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales that were external to the subject's immediate neighborhood and any external influence from an HVTL corridor.
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,620s.f. Double Wide manufactured home on 1.00 acre. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the covenant and restrictions referenced in the attached deed, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and

Owner	Patrice M. Plante						

inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS: That Michael D. Ray and Pauline Mae Ray, Husband and Wife, of 47 Trapper Road, Campton NH 03223, for consideration paid grant(s) to Patrice M. Plante, Married, of 74 Banjo Drive, Thornton NH 03285, with WARRANTY COVENANTS:

A certain tract or parcel of land, and any buildings or improvements thereon, on Lower Park Square Road (now known as Trapper Road) in Campton, Grafton County, New Hampshire, shown as Lot 14, on a plan entitled, "Subdivision Plan of Central Park Estates for Frederick E. Brown" dated April 1980, as revised, prepared by Peter S. Hodges, R.L.S. approved by the Campton Planning Board on April 10, 1980 and reaffirmed by the Campton Planning Board on September 11, 1990, and recorded in the Grafton County Registry of Deeds as Plan No. 616.

The improvements on the lot include a 2002 Independence Marlette Doublewide having Serial #020379, originally conveyed by Manufactured Housing Warranty Deed from JRE of Vermont To Anthony Stewart, dated May 31, 2002, and recorded in the Grafton County Registry of Deeds book 2673, Page 102.

Also conveying the right of Lot 14 in common with Lots 18, 19 and 20 to the use of a well located on Lot 20, together with the right to lay and maintain water pipes across Lot 20. The cost of maintenance and repairs of said well shall be shared equally by the owners of the four respective Lots. The cost of maintaining the lines shall be that of the Lot(s) services by said lines. The electric meter shall be in the name of the owner of Lot 20. The monthly cost shall be shared equally by the owners of the four respective Lots.

TOGETHER WITH a one-quarter (1/4) interest in the Protective Well Radius Easement conveyed by R.L.C., Inc. to Frederick E. Brown by Easement Deed dated May 10, 2002, and recorded in the Grafton County Registry of Deeds in Book 2665, Page 560. See also, Easement Deed of Walter Keough to R.L.C., Inc. recorded in the Grafton County Registry of Deeds in Book 2658, Page 454.

RE: 2013-6554

TOGETHER WITH the benefit of an underground electric utility line easement and water line easement across Lot 20, doing no unnecessary damage and returning the premises to their original condition.

Also conveying a 2002 Independence Marlett Manufactured Home, Serial #020379

SUBJECT TO the right of way given to the New Hampshire Electric Cooperative, Inc. and Public Service Company of New Hampshire to construct, repair, maintain, patrol, replace and remove overhead and underground lines consisting of wires, cables, ducts, poles and other apparatus necessary for the transmission and distribution of electricity and/or telephone service on, over and under said land including but not limited to Easements recorded in the Grafton County Registry of Deeds in Book 1299, Page 466, Book 1017, Page 493, and Book 1419, Page 709. Also SUBJECT TO any rights heretofore granted to New Hampshire Electric Cooperative, Inc. for the pole located on Lot 14.

SUBJECT TO a certain Declaration of Covenants and Restrictions for Central Park Estates recorded in the Grafton County Registry of Deeds in Book 1941, Page 406. The former obligation of Lot owners to belonging to a Lot Owner's Association has been rendered void by the acceptance of the roads in Central Park Estates by the Town of Campton.

A Certificate of Exemption from the provisions of N.H. RSA 356:A is recorded in the Grafton County Registry of Deeds in Book 1920, Page 321.

SUBJECT TO Frederick E. Brown, his heirs, and assigns, and Jay H. Miller, et ux, their heirs and assigns, a right of way over Park Square Road for ingress and egress, and utility lines for access to land located easterly of Central Park Estates.

Meaning and intending to describe and convey the same premises conveyed to Michael D. Ray and Pauline Mae Ray by virtue of a deed dated 10/28/2009 and recorded in the Grafton County Registry of Deeds at Book 3657 and Page 0006.

I/We, the grantor(s) hereby release all rights of homestead in the above described premises.

Executed this 15th day of August, 2013.

Michael D. Ray

Pauline Mae Ray

State of New Hampshire
County of Grafton August 15, 2013

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ Market Value Definition (below) ☐ Alternate Value Definition (attached)

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS, CANDIDATES AND PRACTICING AFFILIATES

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

▪ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	▪ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 723 Rte 175
Campton, NH 03223

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** April 6, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Campton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Market area description and characteristics: Campton is primarily a residential community of less than 3,500 year round residents located between the White Mountain National Forest and NH's lakes region. Marketability of the community is enhanced due to close proximity to I-93 and surrounding ski resorts and lakes. Campton has appeal to second home buyers in all seasons with multiple ski resorts and lakes within a half hour drive. Essential services such as shopping and some employment are located in nearby Plymouth which is easily accessible via I-93.

As like the broader region, the single family residential market in Campton had been eroding due to the implosion of toxic mortgage lending from the years prior. In the year prior to the effective date of this assignment (04/2010-04/2009) the median sales price in Campton was $158,250 with 163 days on market. In the year prior (04/2009-04/2008) the median sales price was $170,000. This is a 6.91% decline in single family residential values in one year.

In the broader region, the Federal Housing Finance Agency (FHFA) reports that property values had decreased 5.15% from the second quarter of 2009 to the second quarter of 2010 in New Hampshire.

Street Lights	☐ Public	☐ Private	

Site description and characteristics: Site is located on the west side of route 175 and is relatively flat. The site is improved with a 1940's residence, a two car detached garage, and a small barn. The area is comprised of a compatible mix of residential, retail, and light commercial sites. The subject site is in the commercial zone which requires a minimum of a 1 acre lot and 200' of road frontage. As the subject site has 151' of road frontage the site is considered to be "grandfathered" and is considered to be a legal and non-conforming lot of record.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Car Storage	☒ Driveway Dirt	☒ Garage 2 car detached	☐ Carport	☐ Finished
Other Elements	Dwelling has a front 8' x 20' enclosed porch as well as a rear 7' x 6' mudroom entry porch. Also on site is a small detached barn			

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1				1			690
Level 2							2	1			690

Finished area above grade contains: Bedroom(s): 2 Bath(s): 2 GLA: 1,380

Summarize Above Grade Improvements: Per MLS the subject dwelling has a first floor full bath, two bedrooms and an additional full bath on the second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											690
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: Originally built in 1940 the residence has wood flooring in most living area and vinyl sheet flooring in kitchen. Interior photos show a well kept but dated interior specifically kitchen cabinets, counters, and appliances. The property has a detached barn in addition to a two car detached garage. Given the residence and lot size the detached barn is considered a superadequacy for a 1.40 acre parcel. The two car detached garage serves a 1,380 s.f. residence however an additional garage or barn is considered an overimprovement.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Size and materials are typical for the era built, interior considered slightly dated for market. Lot size at 1.40 acres does not lend itself as an equestrian property which relegates the detached barn to ancillary storage beyond that of the detached garage.

Comments and reconciliation of the sales comparison approach: Three sales of older style residences in Campton were considered in the sales comparison approach. All three were reported and shown by MLS photos to have, when compared to the subject, to be updated kitchens.

Of the three sales considered most weight is applied to comps 1 and 2 as they are most similar in terms of functional utility as two bedroom residences.

Indication of Value by Sales Comparison Approach	$ 150,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,380 s.f. New Englander on 1.40 acres. As indicated in the body of the report the site is located in the Commercial district. This district allows single family use. The surrounding area is comprised of a compatible mix of residential, retail, and light commercial uses. Therefore, the existing use is legally permissible and physically possible.

File No. 11-011-059

Client	Devine, Millimet & Branch, P.A				
Property Address	723 Rte 175				
City	Campton	County Grafton	State NH	Zip Code 03223	
Owner	Kate E. Ramsey				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the commercial zoning requirements of 200' road frontage for a building lot, the subject lot cannot be used for any other purpose than its existing use which is single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Devine, Millimet & Branch, P.A
111 Amherst Street
Manchester, NH 03101

Re: Property: 74 Trapper Rd
Campton, NH 03223

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Sincerely,

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** May 11, 2010

Interest Appraised: ☒ Fee Simple ☐ Leasehold ☐ Other

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Campton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Sales Comparison Approach:

☒ Is necessary for credible results and is developed in this analysis
☐ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Income Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ None ☐ Disclose Name(s) and contribution:

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Amenities:

Market area description and characteristics: Campton is primarily a residential community of less than 3,500 year round residents located between the White Mountain National Forest and NH's lakes region. Marketability of the community is enhanced due to close proximity to I-93 and surrounding ski resorts and lakes. Campton has appeal to second home buyers in all seasons with multiple ski resorts and lakes within a half hour drive. Essential services such as shopping and some employment are located in nearby Plymouth which is easily accessible via I-93.

As like the broader region, the single family residential market in Campton had been eroding due to the implosion of toxic mortgage lending from the years prior. In the year prior to the effective date of this assignment (05/2010-05/2009) the median sales price in Campton was $156,700 with 160 days on market. In the year prior (05/2009-05/2008) the median sales price was $167,500. This is a 6.45% decline in single family residential values in one year.

In the broader region, the Federal Housing Finance Agency (FHFA) reports that property values had decreased 5.15% from the second quarter of 2009 to the second quarter of 2010 in New Hampshire.

Street Lights	☐ Public	☐ Private	

Site description and characteristics: The subject lot is located in Central Park Estates and is one of twenty residences in the sub-division. Restrictive covenants recorded at GCRD book 1941 page 406 are primarily for the preservation of the residential character and composition of the subject neighborhood. The covenants prevent any further sub-division of the subject property by right and for no other use other than the use as for a single family residence.

The attached deed also identifies that the subject property has the benefit with the unit owner of lot 3 for the use of a common well located on lot 3 The cost of the well is shared between the owners of lots 3 and 4 with each required to pay 1/2th of any maintenance costs associated with the well.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. The restrictive covenants references in the attached deed prevent any other use of the subject parcel other than single family residential use. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				2	2			1,140
Level 2											

Finished area above grade contains: Bedroom(s): 2 Bath(s): 2 GLA: 1,140

Summarize Above Grade Improvements: Per MLS and tax assessment records subject unit is a two bedroom, two bath, double wide manufactured home. Added features include a gas insert fireplace, a two car detached garage, front porch, and a small rear deck.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											
Other Area											

Summarize below grade and/or other area improvements: Unit rests on posts and piers on a floating slab foundation.

Discuss physical depreciation and functional or external obsolescence: Per deed and assessment records the unit was manufactured in 1997. Interior photos from the MLS show a unit in relatively good condition with what appears to be first generation components and fixtures.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Unit with two bedrooms is slightly smaller than other manufactured home in the neighborhood. Upgraded features such as a two car detached garage, fireplace, and front porch all enhance value and marketability.

Comments and reconciliation of the sales comparison approach: Three sales of manufactured homes sold in Campton were analyzed. As of the effective date of the appraisal market conditions were declining rapidly and inventory increasing significantly. In a period of declining values manufactured homes can experience a slightly greater decline in values and higher marketing times than conventional built residences. Comp 1 is a sale of a significantly older manufactured home that was on a full foundation. Comp 2 is most similar to the subject in terms of size, bedroom, and bath count. Comp 3 least similar as a single wide unit.
Of the three sales considered most weight is placed on comp 2 as it is most similar to the subject and required the least amount of adjustments.

Indication of Value by Sales Comparison Approach	$ 129,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales that were external to the subject's immediate neighborhood and any external influence from an HVTL corridor.
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,140 s.f. Double wide manufactured home on 1.00 acre. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the covenants and restrictions referenced in the attached deed, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and

Lender	Devine, Millimet & Branch, P.A						

inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, That I, **Lauren E. Belyea, single,** with a mailing address of P.O. Box 461, Plymouth, NH 03264 for consideration paid grant to **Dennis E. Smith, Sr. and Kelly L. Smith, husband and wife,** with a mailing address of 19 O'Rourke Drive, Lincoln, NH 03251 as Joint Tenants with Rights of Survivorship, and with Warranty Covenants:

Certain tracts or parcels of land with the buildings and/or manufactured housing thereon situate in Campton, Grafton County, New Hampshire, being more particularly bounded and described as follows:

TRACT I:

A certain tract or parcel of land, with any buildings or improvements thereon, located on the northerly side of the northerly spur of Park Square Road, so-called, in Campton at an iron pin, said iron pin being located at the southwesterly corner of the herein conveyed premises and the southeasterly corner of Lot 3; thence running North 00° 10' 39" East 163.34 feet along Lot 3 to an iron pin on the southerly sideline of land now or formerly of Moulton; thence turning and running South 81° 48' 08" East 293.66 feet along Moulton to an iron pin at the northwest comer of Lot 21; thence turning and running South 12° 21' 29" West 153.32 feet along Lot 21 to an iron pin at the imaginary extension of the northerly sideline of the aforesaid road; thence turning North 83° 44' 54" West along said extension and along the northerly sideline of said road 259.89 feet to the point of beginning.

Meaning and intending to convey Lot 4 containing 43,560 square feet as more particularly shown on the aforesaid Plan.

TRACT II:

Certain manufactured housing situate in Campton, Grafton County, New Hampshire, being more particularly bounded and described as follows:

A 1997 Patriot Manufactured Home, Model Patriot NP-008, 16' x 80', Serial # PAT21416IN.
The manufacturing housing described herein is situate on other land of the within grantors described as Tract I of this deed.

Subject to any and all matters, including setbacks if any, as shown on Plan No. 616 recorded in the Grafton County Registry of Deeds.

Reserving the right-of-way given to the New Hampshire Electric Cooperative, Inc. and Public Service of New Hampshire to construct, repair and operate, maintain, patrol, replace and remove overhead and underground lines consisting of wires, cables, ducts, poles and other apparatus necessary for the transmission of and distribution of electric and/or telephone service on, over and under said land including, but not limited to Book 1299, Page 466, Book 1017, Page 493 and Book 1419, Page 709.

Subject to the Declaration of Covenants and Restrictions of Central Park Estates as recorded in said Registry at Book 1941, Page 406. Park Square Road has been accepted by the Town of Campton as town road.

Subject to a Certificate of Exemption for the provisions of RSA 356A as recorded in said Registry at Book 1920, Page 321. Planning Board approval was reaffirmed by the Campton Planning Board on September II, 1990.

Subject to a utility line easement to Public Service Company of NH, affecting Lots 4, 9, 14, 20 and 21, as more particularly shown on the Plan referred to above.

Excepting and Reserving to Frederick E. Brown, his heirs and assigns, and Jay H. Miller, et. ux., their heirs and assigns, a right of way over Park Square Road for ingress and egress and utility line for access to land located easterly of Central Park Estates.

Also conveying to the within grantees, their heirs, successors and assigns, certain well, water and water rights to be used in common with the owners of Lot 3 as shown on said plan. The well is situate on Lot 3, and is to be used by the owners of Lot 3 and 4. This easement shall include an easement to use said well and well rights, and shall include the right to enter upon Lot 3 to maintain and repair said well. The owners of Lot 3 and 4 shall share equally in any expense for the operation of the well on Lot 3.

Meaning and intending to describe and convey the same premises conveyed to Lauren E. Belyea by deed dated March 25, 2005 and recorded in Volume 3121, Page 187, of the Grafton County Registry of Deeds.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ Market Value Definition (below) ☐ Alternate Value Definition (attached)

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 313 Mount Prospect Rd
Holderness, NH 03245

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** April 24, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property abuts a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Holderness, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: Holderness, NH is home to the Squam Lakes and with easy access to I-93 the community is a popular vacation and second home destination. There are less than 2,500 year round, permanent residents in Holderness, however in the summer months the population figure can triple due to the amount of seasonal vacation homes located on both Squam and Little Squam lakes. Close proximity to I-93 and major ski mountain resorts also make Holderness a popular off season destination. Access to essential services such as shopping, health care, and some employment is easily accessible via route 175 to Plymouth, NH.
Typically there are less than 25 residential sales sold through the MLS in Holderness in any given year which makes is statistically unreasonable to use local data to determine a finite market direction.
The Federal Housing Finance Agency (FHFA) report that property values had increased 3.47% from the second quarter of 2012 to the second quarter of 2013 in New Hampshire. Improvement in market conditions can be attributed to have been improving in the subject market and the region due to sustained low interest rates, diminishing inventory levels of single family residences, and diminishing levels of bank REO's and short sales.

Site description and characteristics: The subject site has 140' of frontage on Mt. Prospect Road which is a public class V road, and approximately 460' on Huckins Hill Road which is a discontinued class VI road. Per assessment records the subject site is improved with a 1790 cape style dwelling and attached barn with loft.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1	1		1	1			2,085
Level 2							2	1			761

Finished area above grade contains:	Bedroom(s): 3	Bath(s): 2	GLA: 2,846

Summarize Above Grade Improvements: Per MLS the majority of the living area is on one floor with a master bedroom and full bath on the first floor. Second floor has two bedrooms and a full bath. MLS photos show four mason fireplaces.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											1,080
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject has a full basement under the main cape dwelling and crawl space under the ells.

Discuss physical depreciation and functional or external obsolescence: Inherently antique style residences have some degree of functional obsolescence when compared to modern building techniques and floor plans. Small or limited closet space, large barns, and shallow basements are part of the antique experience and are largely accepted by buyers interested in such residences. The interior photos show a residences that has been well kept and has to a degree preserved the remaining antique features of the dwelling.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Features, style, and floor plan are considered typical for era built. Mason hearths, rounded beehive fireplace, exposed ceiling beams, and wide pine floors add to character and marketability that a well preserved antique can provide. Just under 2,900 s.f. of living area the subject residence is slightly larger than typical. Site size is considered typical for the area.

Comments and reconciliation of the sales comparison approach: Due to a lack of sales in Holderness of antique style residences similar to the subject in most respects, it was necessary to expand the search parameters to a broader geographical area. The geographical area searched is the same that a buyer would consider competing with the subject. All three sales are well kept and or updated antique style residences. Most have barns or outbuildings similar to the subject. Although not waterfront, comp 1 is located across the street from a pond and has pleasant views that are adjusted for when compared to the subject. The subject has a select finished area in its barn however comp 3 had a detached barn that was converted to quest quarters.

Of the three sales considered in the sales comparison approach, most weight is applied to comp 2 which is most similar to the subject in terms of living area.

Indication of Value by Sales Comparison Approach **$ 334,000**

Owner	Max Dannis				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,846 s.f. Cape on 6.43 acres. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-061

Client	Devine, Millimet & Branch, P.A				
Property Address	313 Mount Prospect Rd				
City	Holderness	County Grafton	State NH	Zip Code 03245	
Owner	Max Dannis				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Rural District zoning requirements of 300' road frontage on a class V road for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

WE, LAWRENCE R. GOOCH and JUDITH A. GOOCH, husband and wife, both of 5010 Seaward Court, Southport, NC 28461, for consideration paid, grant to MAX DANNIS with a mailing address of PO Box 8, Philmont, NY 12565, with WARRANTY covenants,

A certain tract or parcel of land together with the buildings and improvements thereon situated in Holderness, Grafton County, New Hampshire, and depicted as Lot 1 consisting of 6.43 acres on Plan entitled "Subdivision of Land of Andre & Colette Heuveline, Mt. Prospect Road, known as 'Archie Hutchings Farm', Holderness, N.H." surveyed June 1983 by John R. French, Lots #1 and #2 subdivided June 1988 and approved by the Holderness Planning Board on October 27, 1988 and recorded in the Grafton County Registry of Deeds as Plan No. 5356, said lot 1 being more particularly bounded and described as follows:

Beginning at the point where the northwesterly boundary line of Mt. Prospect Road intersects with the northeasterly boundary line of Hutchins Hill Road; thence running in a northwesterly direction along the northeasterly side of Hutchins Hill Road along a line which is partially marked by segments of stone wall via the following courses and distances: North 46° 21' 40" West 238.1 feet; North 47° 19' 30" West 142.69 feet; North 49° 43' 25" West 86.98 feet to an iron pipe; thence North 11° 23' 35" East 549.53 feet to an iron pipe; thence South 84° 05' 45" East 372.71 feet to an iron pipe; thence South 07° 07' 35" West 313.46 feet to a calculated point; thence South 05° 14' 40" West 399.23 feet to an iron pipe; thence South 79° 32' 40" East 35.25 feet to a calculated point on the northwesterly edge of Mt. Prospect Road; thence following a curve to the left along the northwesterly edge of Mt. Prospect Road 140.3 feet to the point of beginning (the tie line distance between the two aforementioned points being South 42° 57' 50" West 139.28 feet).

SUBJECT to an easement to New Hampshire Electric Cooperative, Inc. and Verizon New England dated March 17, 2005 and recorded at Book 3202, Page 780.

SUBJECT TO a release pursuant to RSA 674:41 dated October 14, 1988 and recorded in the Grafton County Registry of Deeds at Book 1771, Page 269 wherein the Heuvelines release the Town of Holderness from liability or any damages resulting from the use of Hutchins Hill Road, which is a Class VI highway in the Town of Holderness.

MEANING AND INTENDING to describe and convey a portion of the premises conveyed to the within Grantors by Warranty Deed of Andre F. Heuveline and Colette L. Heuveline dated June 26, 1991 and recorded in the Grafton County Registry of Deeds at Book 1916, Page 688.

The Grantors release their rights of homestead together with any and all other rights they may have in and to the subject premises.

IN WITNESS WHEREOF, we hereunto set our hands this 16TH day of April, 2013.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

▪ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	▪ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Manchester, NH 03101

Re: Property: 81 Sargent Rd
Holderness, NH 03245

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

Address: 81 Sargent Rd
City: Holderness **County:** Grafton **State:** NH **ZIP:** 03245
Legal Description: See attached legal description
Tax Parcel #: Map 227, Lot 36 **RE Taxes:** 9,284.63 **Tax Year:** 2012
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Michael Giovan & Kelley Zogopoulos

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property transferred from two individuals into a trust via a quitclaim deed dated July 10, 2013. The transfer was between known parties and not considered a qualified or fair market value sale of the real property.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on June 1, 2010 for $1,095,000 with the listing expiring on May 16, 2012 with a last list price of $800,000. Subject property re-listed on June 15, 2012 at $745,000 and was withdrawn from the market on November 30, 2012 with a last list price of $690,000. The subject property transferred on September 27, 2013 for $760,000. NH Dept of Revenue PA-34 form indicates that the transfer was a sale with no special circumstances

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 740,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** September 27, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Holderness, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Holderness, NH is home to the Squam Lakes and with easy access to I-93 the community is a popular vacation and second home destination. There are less than 2,500 year round, permanent residents in Holderness, however in the summer months the population figure can triple due to the amount of seasonal vacation homes located on both Squam and Little Squam lakes. Close proximity to I-93 and major ski mountain resorts also make Holderness a popular off season destination. Access to essential services such as shopping, health care, and some employment is easily accessible via route 175 to Plymouth, NH.
Typically there are less than 25 residential sales sold through the MLS in Holderness in any given year which makes is statistically unreasonable to use local data to determine a finite market direction.
The Federal Housing Finance Agency (FHFA) report that property values had increased 5.94% from the third quarter of 2012 to the third quarter of 2013 in New Hampshire. Improvement in market conditions can be attributed to have been improving in the subject market and the region due to sustained low interest rates, diminishing inventory levels of single family residences, and diminishing levels of bank REO's and short sales.

Site description and characteristics: The subject parcel is located in the Rural Residential zoning district which requires a minimum of 300' of road frontage and at a minimum a 1 acre lot. The subject parcel has 5.00 acres and 300' road frontage on Sargent Road. The covenant and restrictions recorded in GCRD book 1534 page 17 are primarily for the preservation of the residential character and composition of the neighborhood. The covenants also restrict any lot of record from being further sub-divided.
Per the MLS photos and narratives the subject parcel has slightly obstructed views over an open pasture of distant foothills and mountains.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. Both existing zoning and the covenants and restrictions that are references in the attached deed restrict any sub-division of the subject lot by right. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

IMPROVEMENTS ANALYSIS

General	Design: Contemporary	No. of Units: 1	No. of Stories: 2	Actual Age: 4	Effective Age: 4
☒ Existing ☐ Under Construction ☐ Proposed		☐ Attached	☒ Detached	☐ Manufactured	☐ Modular
Other:					

Exterior Elements	Roofing: Asphalt shingle	Siding: Wood shingle	Windows: Double Hung
☐ Patio ☐ Deck ☐ Porch ☐ Pool ☐ Fence			
Other:			

Interior Elements	Flooring: Wood, tile, cpt, laminate	Walls: Drywall & Paint	☒ Fireplace # 1
Kitchen: ☐ Refrigerator ☐ Range ☐ Oven ☐ Fan/Hood ☐ Microwave ☐ Dishwasher		Countertops:	
Other:			

Foundation	☐ Crawl Space	☐ Slab	☒ Basement Full, part finished
Other:			

Attic	☐ None ☐ Scuttle	☐ Drop Stair	☐ Stairway	☐ Finished
Mechanicals	HVAC: FHA	Fuel: Geothermal/Electric	Air Conditioning: Central	
Car Storage	☐ Driveway	☒ Garage 3 att / 2 det	☐ Carport	☐ Finished

Other Elements Per assessment records the basement has a full foundation under; MLS shows that basement is part finished with an 870 s.f. home gym and theater room.
Dwelling is heated via geothermal heat and heat pump coil that also provides central air conditioning.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1	1		3	2			3,383
Level 2							2	1			2,700

Finished area above grade contains: Bedroom(s): 5 Bath(s): 3 GLA: 6,083

Summarize Above Grade Improvements: Assessment records show the dwelling footprint as represented in the MLS but does not take into consideration the total amount of second floor living area or basement finish. As is common for young residences, the assessment card has flags set for future follow up to pick up finished areas. In this case, the living area shown and represented via the MLS is considered to be the the more credible source as well as representative of the extent of the interior finish.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade						1				42	2,094
Other Area											

Summarize below grade and/or other area improvements: MLS listing and photos show an expansive contemporary residence that has a first floor master bedroom suite, cathedral ceilings, open concept kitchen, office/home study over garage, and a home gym and theater room in a finished basement area.

Discuss physical depreciation and functional or external obsolescence: Recently completed new construction in 2009 the dwelling would be expected to show little physical depreciation of short or long lived building components. MLS listing indicates a cost to build of over $1 million and a list price initially over that amount. Considering the cost to recently build at $1 million and a recent sale of $760,000 it would appear that the residence is either an over improvement for the area or was built with materials that are either not in favor or are not valued as much by the market. In either event the sale to cost ratio indicates a high level of functional obsolescence inherent in the dwelling built.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: 6,000 s.f. residences are not uncommon in the subject's market however they are typically waterfront to some of the more significant bodies of water. Waterfront estates 5,000 to 10,000 s.f. in size are common in New Hampshire's lakes region as they serve a luxury second home market. However, once off the water large residences not located on sizeable tracts of land are less common. At 6,000 s.f. in size located in a residential sub-division, the subject property presents itself to the smaller, primary residence market for Holderness. Given the size of the dwelling, the lot size of five acres, and the market that it appeals to, the subject property is considered to be an overimprovement for the market.

Comments and reconciliation of the sales comparison approach: Sales of executive style residences in New Hampshire's Lakes Region were considered in the sales comparison approach. Of the three comparables considered most weight is placed on comps 1 and 2. Comp 1 as it is most proximate to the subject and would compete directly with the subject for a buyer looking for a primary residence in close proximity to the subject neighborhood. Comp 2 is most similar to the subject in terms of land and dwelling size. Comp 3 with competing amenities such as a pool, barn, and acreage is weighted the least.

Indication of Value by Sales Comparison Approach	$ 740,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 6,083 s.f. Contemporary style residence on 5.00 acres. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Property Address	81 Sargent Rd				
City	Holderness	County Grafton	State NH	Zip Code 03245	
Owner	Michael Giovan & Kelley Zogopoulos				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Rural Residential District zoning requirements of 300' road frontage for a single family building lot, as well as the restrictive covenants referenced in the deed, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use.
The subject dwelling is deemed to be an overimprovement for the market. As referenced earlier in the appraisal report there is a significant amount of functional obsolescence inherent in the design, size, and materials used in constructing the residence. Given the amount of functional obsolescence as well as the difficulty in obtaining reliable material costs for the subject dwelling the cost approach is not considered applicable or reliable for this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED
Statutory Short Form

HORATIO S. MELO and CYNTHIA M. MELO, TRUSTEES OF THE HORATIO AND CYNTHIA MELO 2013 TRUST, under trust indenture dated July 7, 2013, (erroneously dated July 10 2013 in Grantor's deed), having a mailing address of Post Office Box 549, Holderness, Grafton County, New Hampshire 03245, for consideration paid, grants to **MICHAEL GIOVAN AND KELLEY ZOGOPOULOS,** husband and wife, of 23 Winterberry Lane, Plymouth, Grafton County, New Hampshire 03264, as joint tenants with rights of survivorship, with WARRANTY COVENANTS:

A tract of land, with the buildings thereon, in Holderness, County of Grafton and State of New Hampshire, and more particularly described as follows:

A certain tract of land shown as **LOT 3** on a plan entitled "WESTRIDGE Owned by Merrill J. Feldman, M.D. & William J. Goade, M. D., Henry Smith Road, Holderness, NH. Surveyed March-May 1984 by John R. French", Lots 3-17 subdivided March 1985, which was approved by the Holderness Planning Board on June 27, 1985 and which is recorded as Plan No. 2916 in the Grafton County Registry of Deeds.

For reference, see also "Boundary Survey Prepared for Horatio S. & Cynthia M. Melo Tax Map 227, Lot 36 81 Sargent Road" by Ames Associates, recorded in the Grafton County Registry of Deeds as Plan Number 13207, Sheet Number 001.

EXCEPTING AND RESERVING the power line which passes through the premises and reference is made to deeds to Public Service Company of New Hampshire dated August 16, 1930 and recorded in said Registry, Book 621, Page 361 and Book 621, Page 362. Reference is also made to "Power Line" as shown on plan entitled "Heritage Hill Development" recorded in Book 1021, Page 71.

ALSO granting a right of way, in common with others, from the public highway known as Route 175 to the premises conveyed hereby, over the strip of land, situate partly in Ashland and partly in Holderness, shown as "proposed road" on the plan recorded in the Grafton County Registry of Deeds at Book 1224, Page 69, which strip was conveyed to Feldman and Goade by Milton W. Huckins by warranty deed dated January 11, 1985 and recorded in the Grafton County Registry of Deeds, Book 1534, Page 162, together with a right of way in common with others over the continuation of aforementioned strip in a northerly direction which is shown as Sargent Road on the plan first mentioned in this instrument. For source of title to said continuation of aforementioned right of way strip, reference is made to warranty deed from Westwind Realty Corporation to Merrill J. Feldman and William J. Goade dated March 15, 1971 and recorded in said Registry, Book 1135, Page 37.

This conveyance is given SUBJECT TO and with the BENEFIT OF all of the provisions of the "Declaration of Exceptions, Restrictions, and Covenants for West Ridge Subdivision" dated January 31, 1985 and recorded in the Grafton County Registry of Deeds, Book 1534, Page 17.

SUBJECT TO the restrictions contained in deed of Janet M. Lenentine to Dana S. Dickson and Cynthia L. Dickson, dated June 10, 1994, recorded in the Grafton County Registry of Deeds Book 2094, Page 0762.

MEANING AND INTENDING to describe and convey the same premises conveyed in Quitclaim Deed of Horatio S. Melo and Cynthia M. Melo to Horatio S. Melo and Cynthia M. Melo, Trustees of the Horatio and Cynthia Melo 2013 Trust dated July 10, 2013 and recorded at the Grafton County Registry of Deeds at Book 3996, Page 783.

Horatio S. Melo and Cynthia M. Melo, husband and wife, join in individually to release their homestead rights in the subject property.

Real property taxes assessed against the premises for the tax year beginning 1 April 2013 shall be prorated between the parties as of the date of delivery of the deed.

CERTIFICATE OF TRUSTEE AUTHORITY

The undersigned, as Trustees under the Horatio and Cynthia Melo 2013 Trust created by Horatio S. Melo and Cynthia M. Melo as Grantors under trust agreement dated July 7, 2013 and pursuant thereto, have full and absolute power in said trust agreement to convey any interest in real estate and improvements thereon held in said Trust, and no purchaser or third party shall be bound to inquire whether the Trustees have said power or are properly exercising said power or to see to the application of any Trust asset paid to the Trustees for a conveyance thereof. The Declaration of Trust has not been amended, revoked, or altered in any way so as to affect the power of the Trustees to convey any interest in real estate and improvements thereon.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 849 Rte 132
New Hampton, NH 03256

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 849 Rte 132
City: New Hampton **County:** Belknap **State:** NH **ZIP:** 03256
Legal Description: See attached legal description
Tax Parcel #: Map R20, Lot 11 **RE Taxes:** 2,609.03 **Tax Year:** 2012
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Steven & Lisa Rajaniemi

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on March 23, 2013 for $164,500 under agreement 38 days later on April 30, 2013 and closed on June 7, 2013 for $164,500. Purchase was made with FHA financing and with the seller paying 3% of sales price ($4,935) for buyer's closing costs.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	$ 157,000
Indication of Value by Cost Approach	$
Indication of Value by Income Approach	$

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: June 7, 2013	$ 157,000

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** June 7, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property abuts a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the New Hampton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior review by appraiser. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: From HVTL corridor

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: New Hampton is primarily a residential community of approximately 2,500 residents that is located in the center of New Hampshire's Lakes region and just south of the White Mountain's major ski resorts. Connectivity to essential services is via I-93 which bisects the town as a major north-south commuter artery. Plymouth, NH is 15 miles north of New Hampton, and the state capital Concord is 30 miles south.

Typically there are less than 30 residential sales sold through the MLS in New Hampton in any given year which makes is statistically unreasonable to use local data to determine a finite market direction.

The Federal Housing Finance Agency (FHFA) reports that property values had increased 3.47% from the second quarter of 2012 to the second quarter of 2013 in New Hampshire. Improvement in market conditions can be attributed to sustained low interest rates, diminishing inventory levels of single family residences, and diminishing levels of bank REO's and short sales.

Off Site Improvements

Street	☒ Public ☐ Private	paved asphalt	
Alley	☐ Public ☐ Private		
Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: Subject site is located in the General Residence zoning district which requires a minimum of a one acre lot and 150' road frontage for a single family residence. Based on current zoning requirements the subject lot is considered to be a legal and conforming lot of record.

The subject site is located on route 132 which is the local north-south artery in New Hampton.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				1	.5			780
Level 2							2	1			570

Finished area above grade contains:	Bedroom(s): 3	Bath(s): 1.5	GLA: 1,350

Summarize Above Grade Improvements: Per MLS and assessment records the subject has one bedroom on the first floor and two on the second. Assessment records show a third of the second floor is open as a cathedral ceiling open to the first floor below.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											780
Other Area											

Summarize below grade and/or other area improvements: Tax assessment records indicate an unfinished basement. MLS mentions a partially finished basement, however the extent of basement finish shown by MLS photos show a throw rug and furniture only. Given that the extent of the basement finish appears to be personal property only the residence is considered to physically have an unfinished basement.

Discuss physical depreciation and functional or external obsolescence: Subject property listed through the MLS in both 2006 and 2013. There is a considerable difference in the dwellings materials and condition between the two listings. The 2013 listing details extensive renovations such as a new heating system, windows, roof, siding, and a newly built front enclosed porch. Interior photos show a residence that is in relatively good condition that has modern updates. Floor plan with three bedrooms and 1.5 baths considered functional for a 1,350 s.f. residence.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling and lot size are slightly smaller than typical for the market area. Recent updates and renovations to both short and long lived building components lend to a lower effective age than what is typical for the immediate area. Recent updates and dwelling appeal contribute to shorter marketing times and enhanced value.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Comments and reconciliation of the sales comparison approach: Three sales of similar size residences are considered in the sales comparison approach. Of the three sales considered most weight is applied to comps 1 and 2. Comp 1 as the most recent sale and requiring the least amount of adjustments, and comp 2 as it is the most similar in size as the subject.

Indication of Value by Sales Comparison Approach **$ 157,000**

* **NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,350 s.f. Cape on 1.02 acres. As indicated in the body of the report the site is located in the General Residence district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

City	New Hampton	County Belknap	State NH	Zip Code 03256	
Owner	Steven & Lisa Rajaniemi				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the General Residence district zoning requirements of 150' road frontage and an acre lot for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS: That Christopher M. Krotz and Kimberly F. Krotz, Husband and Wife, of 849 NH Route 132, New Hampton NH 03256, for consideration paid grant(s) to Steven Rajaniemi and Lisa Rajaniemi, Husband and Wife, of 47 Pinker Road, Bridgewater NH 03222, as joint tenants with rights of survivorship, with WARRANTY COVENANTS:

A certain tract of land with the buildings thereon situated in New Hampton, Belknap County, New Hampshire, being Lot 23 as shown on plan untitled "Survey for Joseph L. Hyde, New Hampton, New Hampshire, Survey by Associated Surveyors", which plan appears of record in Belknap County Registry
of Deeds, Book 51, Pages 17 and 18, to which Plan reference may be made for a more particular description.

Together with an easement for pedestrian access, in common with others across Lots 7, 8, 9, 10, 11, 12, 13, 14, and 15 to the Recreation Area as shown on said plan, as well as use of the Recreation Area in common with others.

Subject to the following:

1. Subject to easements, facts, issues and notations as shown on Plan Book 51, Pages 17 and 18.
2. Subject to an easement to Public Service Company of New Hampshire as recorded in Book 188, Page 228, Book 228, Page 173 and Book 341, Page 56.
3. Subject to Commissioner's Return of Highway Layout recorded at Book 435, Page 15, excepting and reserving any rights by State of New Hampshire therein.

Meaning and intending to describe and convey the same premises conveyed to Christopher M. Krotz and Kimberly F. Krotz by virtue of a deed from Joy S. Hartson n/k/a Joy S. Farber dated March 24, 2006 and recorded in the Belknap County Registry of Deeds at book 2283 and page 0154.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 696 Coolidge Woods Rd
New Hampton, NH 03256

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** January 27, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the New Hampton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: New Hampton is primarily a residential community of approximately 2,500 residents that is located in the center of New Hampshire's Lakes region and just south of the White Mountain's major ski resorts. Connectivity to essential services is via I-93 which bisects the town as a major north-south commuter artery. Plymouth, NH is 15 miles north of New Hampton, and the state capital Concord is 30 miles south.

Typically there are less than 30 residential sales sold through the MLS in New Hampton in any given year which makes is statistically unreasonable to use local data to determine a finite market direction.

The Federal Housing Finance Agency (FHFA) report that property values had increased 0.07% from the first quarter of 2011 to the second first of 2012 in New Hampshire which is relatively indicating a stable market. Market conditions in New Hampton and the broader region were improving from market lows in 2010 caused by the implosion of exotic mortgage lending in years prior. Improvement in market conditions can be attributed to sustained low interest rates, diminishing inventory levels of single family residences, and diminishing levels of bank REO's and short sales.

Alley	☐ Public ☐ Private		
Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: Subject site is located in the General Residence zoning district which requires a minimum of a one acre lot and 150' road frontage for a single family residence. Based on current zoning requirements the subject lot is considered to be a legal and conforming lot of record. Per MLS narrative and photo description as well as site plan, there is a small brook that runs through the middle of the property.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Other:			

Foundation	☐ Crawl Space	☐ Slab	☒ Basement 25' x 33', part finished
Other:			

Attic	☐ None ☐ Scuttle	☐ Drop Stair	☐ Stairway	☐ Finished
Mechanicals	HVAC:	Fuel:	Air Conditioning:	
Car Storage	☐ Driveway	☒ Garage 1 car built in	☐ Carport	☐ Finished
Other Elements				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				1	1			825
Level 2				1			2	1			439

Finished area above grade contains:	Bedroom(s): 3	Bath(s): 2	GLA: 1,264

Summarize Above Grade Improvements: MLS photos show an open concept log cape that has a cathedral ceiling above the family room area. MLS markets the dwelling as having a first floor master bedroom and full bath. Second floor has two additional bedrooms, a den area looking down to the below family room, and a full bath.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade					1					36	825
Other Area											

Summarize below grade and/or other area improvements: MLS market the dwelling as having a full basement of which 300 s.f. is finished as a family room. Tax assessment records identify another 169 s.f. in the basement as a built in garage.

Discuss physical depreciation and functional or external obsolescence: Seller property statement and MLS describe a residence in relatively good condition. Interior photos show what appears to be a well kept residence. With three bedrooms, two baths, and each floor that has a bedroom having a full bath, the dwelling is considered to have a functional floor plan.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Typical for log homes, the added character of open space cathedral ceilings comes at the expense of usable living area. At less than 1,300 s.f. of living area above grade the dwelling is smaller than typical. However the smaller area is offset by a higher degree of character and warmth with wide pine walls and ceilings as well as a wood stove hearth in between the family and dining rooms.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. Comments and reconciliation of the sales comparison approach: Three sales of residences with similar appeal as the subject property were considered in the sales comparison approach. Comp 1 is a contemporary colonial with cathedral ceilings above to above and similar to the subject with hardwood flooring on first floor. Comp 2 is similar to the subject as a log cape, and comps 3 is most similar in size as the subject. Of the three comps, most weight was applied to comps 2 and 3 as they required the least amount of adjustments and most similar in style and size as the subject.

Indication of Value by Sales Comparison Approach	$ 200,000

File No. 11-011-063

Client	Devine, Millimet & Branch, P.A				
Property Address	696 Coolidge Woods Rd				
City	New Hampton	County Belknap	State NH	Zip Code	03256
Owner	Charles J. Malagodi, Jr.				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,264 s.f. Log cape on 5.40 acres. As indicated in the body of the report the site is located in the General Residence district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum File No. 11-011-063

Client	Devine, Millimet & Branch, P.A				
Property Address	696 Coolidge Woods Rd				
City	New Hampton	County Belknap	State NH	Zip Code 03256	
Owner	Charles J. Malagodi, Jr.				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the topography and the General Residence zoning requirements of 150' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

EXHIBIT A

A certain tract or parcel of land, with the buildings thereon, situated in the Town of New Hampton, County of Belknap, State of New Hampshire, being Lot #8, as shown on a plan of land entitled "Donald L. Belford and Robert C. Pynenburg, Coolidge Woods Road, New Hampton, NH", dated April 1981, drawn by John R. French, recorded in the Belknap County Registry of Deeds in Plan Book #88, Page 61.

More particularly bounded and described as follows:

Beginning at an iron pipe on the easterly side of Coolidge Woods Road at a point marking the southwesterly corner of Lot #6 and the northwesterly corner of Lot #8;

Thence running North fifty degrees fifty minutes East (N 50° 50' E) along Lot #6 a distance of five hundred seventy-six and seven tenths feet (576.7'), more or less, to an iron pipe located at a stone wall marking the boundary of land now or formerly of Eugene Morgan;

Thence turning and running along said stone wall approximately South twenty-eight degrees East (S 28° E) a distance of one hundred fifty-two and five tenths feet (152.5'), more or less, to a point on said stone wall;

Thence continuing along said stone wall and across a brook South twenty-nine degrees and fifteen minutes East (S 29° 15' E) a distance of four hundred fourteen and eight tenths feet (414.8'), more or less, to a concrete post, which post marks the southeasterly corner of Lot #8;

Thence turning and running South sixty-seven degrees forty-minutes West (S 67° 40' W) along land now or formerly of Robert Laiwaneck a distance of four hundred sixty-five and four tenths feet (465.4'), more or less, to a blazed maple tree located on the easterly side of Coolidge Woods Road;

Thence turning and running generally along the easterly side of Coolidge Woods Road along a curve having a radius of four hundred fifty-four and four tenths feet (454.4'), a distance of four hundred forty-three and zero tenths feet (443.0'), more or less, to an iron pipe and the point of beginning.

Meaning and intending hereby to convey Lot #8 as shown on Plan entitled "LOTS 1-10 OF SUBDIVISION OWNED BY DONALD L. BELFORD AND ROBERT C. PYNENBURG, COOLIDGE WOODS ROAD, NEW HAMPTON, N.H.", dated March and April 1981 and recorded in the Belknap County Registry of Deeds as Plan Book 88, Pages 61-62.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 226 Salisbury Rd
Franklin, NH 03235

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Tax Parcel #: Map 82, Lot 8 **RE Taxes:** 3,877.40 **Tax Year:** 2013

Use of the Real Estate As of the Date of Value: Single Family Residential

Use of the Real Estate Reflected in the Appraisal: Single Family Residential

Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Richard F. & Mary E. West

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had marketed in 2011 as a bank REO that required both cosmetic and mechanical system replacement. The subject property sold after 83 days on the market with MLS exposure for $78,500 as a bank REO. The transaction closed on August 31, 2011 as a cash sale for $78,500. There were no reported seller concessions to buyer at closing.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on April 25, 2014 for $175,900, under agreement 21 days later on May 16, 2014 and closed on June 27, 2014 for $176,000 with a $4,000 seller concession to buyer at closing for buyer's closing costs. Purchase was financed with FHA mortgage proceeds.

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** June 27, 2014

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property abuts a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Franklin, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Amenities:

Market area description and characteristics: Franklin is a small city of less than 8,500 residents. There are a variety of shopping, employment, and all essential services within the city limits. Connectivity to a wider array of shopping and employment centers is accessible via I-93 which is a short distance from downtown Franklin. The subject neighborhood is located on the west side of the Merrimack river opposite of the downtown area. Neighborhoods to the west of the Merrimack river are more suburban in character and composition. Having a suburban setting and being within a 5 minute drive of downtown Franklin enhances the subject neighborhood's marketability.
In the year prior to the effective date of this assignment the median sales price of a single family residence in Franklin was $132,000 with 115 days on market. This is a 7.31% improvement from the year prior which had a median sales price of $123,000 and 117 days on market. The single digit market improvement in the year prior to the effective date of the appraisal correlates with the Federal Housing Finance Agency (FHFA) report that property values had increased 3.40% from the second quarter of 2013 to the second quarter of 2014 in New Hampshire. Improvement in market conditions can be attributed to have been improving in the subject market and the region due to sustained low interest rates, diminishing inventory levels of single family residences, and diminishing levels of bank REO's and short sales.

Site description and characteristics: Subject site is located on Salisbury Road in Franklin which is also referred to as Route 127. The site is located in the Conservation zoning district which requires a larger than typical lot of record and road frontage (225,000 s.f. or 5.17 acre lot and 400' of road frontage). The site is improved with a cape style, single family residential dwelling that sits back considerably from the road. Also on site is a small detached 1.5 story, one car, detached garage. The site has considerable wetlands and is bounded to the west by the Shaw Brook.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				1	1			896
Level 2							2	.5			573

Finished area above grade contains:	Bedroom(s): 3	Bath(s): 1.5	GLA: 1,469

Summarize Above Grade Improvements: Per MLS the dwelling features a first floor master bedroom and a full bath, second floor with two additional bedrooms and a half bath. MLS shows a 12' x 16' enclosed porch off of dining area.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											896
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: Per data sources including seller statement the dwelling had been extensively remodeled and updated from the 2011 REO sale to the June, 2014 sale. Replacement of both short and long-lived building components contribute to an effective age considerably lower than physical age. Slight functional inadequacy due to two bedrooms on a floor that is serviced by a half bath only. No external inadequacies noted.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling size and age typical for neighborhood. Updates, remodeling, and replacement since 2011 REO sale include addition of a 12' x 16' enclosed porch, new heating system, new plumbing system, updated electrical system, new well pump, remodeled kitchen, all living area (with exception of baths) had new hardwood flooring installed, interior walls with new paint. The effect of the remodeling and updating contributes to an effective age that is considerably lower than the immediate neighborhood.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Comments and reconciliation of the sales comparison approach: Three sales of cape style residences in Franklin are considered in the sales comparison approach. All three sales were found to have some level of updated and or remodeling that would be considered competing with the subject in terms of condition. Given the similarities between the subject and the comparables weight is placed on comps 2 and 3 as they are most similar to the subject in terms of living area and required the least amount of adjustments.

Indication of Value by Sales Comparison Approach	$ 174,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.
In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,469 s.f. Cape on 5.23 acres. As indicated in the body of the report the site is located in the Conservation zoning district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-064

Client	Devine, Millimet & Branch, P.A				
Property Address	226 Salisbury Rd				
City	Franklin	County Merrimack	State NH	Zip Code 03235	
Owner	Richard F. & Mary E. West				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Conservation zoning district's requirements of 400' road frontage and a 5.17 acre lot for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 76 Lark St
Franklin, NH 03235

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** August 16, 2011

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Franklin, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and the MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Neighborhood Name: Webster Lake

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Franklin is a small city of less than 8,500 residents. There are a variety of shopping, employment, and all essential services within the city limits. Connectivity to a wider array of shopping and employment centers is accessible via I-93 which is a short distance from downtown Franklin. The subject neighborhood is located on the west side of the Merrimack river opposite of the downtown area and just south of Webster Lake. Residences on and near Webster Lake range from elaborate waterfront residences to seasonal camps located in the general area of the lake.

In the year prior to the effective date of this assignment the median sales price of a single family residence in Franklin was $99,900 with 87 days on market. This is a precipitous drop of over 27% from the year prior which had a median sales price of $138,000 and 93 days on market.

The single digit market improvement in the year prior to the effective date of the appraisal correlates with the Federal Housing Finance Agency (FHFA) report that property values had decreased 4.43% from the third quarter of 2010 to the third quarter of 2011 in New Hampshire. The decline in residential values can be attributed to sustained foreclosures of distressed properties, short sales, and increasing REO activity. In

Street Lights	☐ Public	☐ Private	

Site description and characteristics: The subject site is 110' x 400' and is located in the Lake Protection (LP) zoning district. Minimum lot requirements for the LP district with one public utility is a minimum of 2.50 acre site and 200' of public road frontage. The subject parcel is relatively flat and is a short walk from the public beach and boat landing on Webster Lake.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				2	2			1,040
Level 2											

Finished area above grade contains: Bedroom(s): 2 Bath(s): 2 GLA: 1,040

Summarize Above Grade Improvements: Per MLS and tax assessment records the subject unit has two bedrooms and two full baths. MLS photos show kitchen, living, and dining rooms as well.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records unit is located on a concrete slab foundation.

Discuss physical depreciation and functional or external obsolescence: Seller statement of property condition contained in the MLS as well as interior photos show condition and materials that are most likely first generation. Two bedrooms is considered typical for manufactured homes under 1,200 s.f. in size.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Size, materials, and condition considered typical and common for a double wide manufactured home. Manufactured homes on land not uncommon for the market however they are not considered typical. There are fewer financing programs for manufactured homes than there are for conventional 'stick built' dwellings which can contribute to longer marketing times and a lower predominant market value for manufactured units when compared to similar size stick built residences.

Prior Transfer History	None in the prior three years	None in the prior year		$86,449 - foreclosure deed 04/06/2009		None in the prior year	

Comments and reconciliation of the sales comparison approach: Three sales of manufactured homes are considered in the sales comparison approach. Adjustments are made for differences in living area. Differences in bedroom count are incorporated in the GLA adjustment. Of the three sales considered most weight is placed on comp 1 as it is most similar in size, functional utility, and most proximate to the subject.

Indication of Value by Sales Comparison Approach	$ 73,000

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. Owner	Susan L. Ives				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,040 s.f. Double wide manufactured home on 1.01 acres. As indicated in the body of the report the site is located in the Lake Protection district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-066

Client	Devine, Millimet & Branch, P.A				
Property Address	76 Lark St				
City	Franklin	County Merrimack	State NH	Zip Code 03235	
Owner	Susan L. Ives				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Lake Protection district zoning requirements of a minimum of a 2.50 acre lot for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS: That Gary M. Newton and Alison Newton, as Guardians for the Guardianship of Patricia Newton (HCPC No. 317-2011-GI-00036), and as Trustees of the Newton Family Trust dated April 30, 1999, (Lee W. Newton died on May 23, 2005) of 5 Mudgett Avenue, Meredith NH 03253, for consideration paid grant(s) to Suzanne L. Ives, Single, of 50 Chase Road, Londonderry NH 03053, with WARRANTY COVENANTS:

A certain tract or parcel of land with buildings thereon located on Lark Street, so-called, in Franklin, County of Merrimack and State of New Hampshire, known as Tax Map Lot No. 001-76-040, and being more particularly bounded and described as follows:

Beginning at a point on the easterly side of Lark Street; thence running approximately 400 feet along said street in a generally northerly direction to a point; thence turning and running approximately 110 feet in a generally easterly direction perpendicular to said street to a point; thence turning and running in a generally southerly direction approximately 400 feet to a point; thence turning and running in a generally westerly direction approximately 110 feet to the point of beginning.

Subject to the following:

1. Subject to public utility easements or rights-of-way of record, if any which may affect these premises.

Meaning and intending to describe and convey the same premises conveyed to Lee W. Newton and Patricia A. Newton, Trustees of the Newton Family Trust dated April 30, 1999 by virtue of a deed from Lee W. Newton and Patricia A. Newton dated April 30, 1999 and recorded in the Merrimack County Registry of Deeds at book 2153 and page 0114.

This is not the homestead property of the grantor.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 575 Oak Hill Rd
Northfield, NH 03276
Borrower:
File No.: 11-011-067

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** July 31, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Northfield, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: Northfield is primarily a residential community of less than 5,000 residents located just south of the city of Laconia and approx. 20 miles north of the state capital city of Concord. Both Northfield and the town of Tilton's have town centers that meet on opposite sides of a small river. The combined town centers offer some convenience and retail shops; with a larger array of shopping, employment, and health care sites located in the cities of Franklin and Laconia; both of which are within a 5 minute drive of Northfield center.

In the year prior to the effective date of the appraisal the median sales price in Northfield was $135,500 which is a 2.26% increase from the year previous which had a median sales price of $132,500. The Northfield residential real estate market was improving in 2013 from market lows of 2010. The rate of improvement however was tepid compared to the broader region which was experiencing market increases at almost twice the rate of Northfield. The Federal Housing Finance Agency (FHFA) reports that property values had increased 5.94% from the third quarter of 2012 to the third quarter of 2013 in New Hampshire.

Sewer	☐ Public ☒ Other	Septic system	

Off Site Improvements

Street	☒ Public ☐ Private	Asphalt	
Alley	☐ Public ☐ Private		
Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: At 50 acres in size the subject site is larger than typical. Road frontage is estimated at less than 550' based on the attached tax map. MLS photos show some distant foothill views from the top of the unfinished third floor; however at ground level the only view is of natural pastures. The tax assessment records indicates that there are no significant views from the dwelling.

The first 500' on either side of Oak Hill Road is considered to be the R1 zoning district. Beyond 500' the area is considered to be in the Conservation zoning district. Considering the subject parcels size it is considered to be in two separate zoning districts. The 500' closest to the road being in the R1 district and the remainder in the Conservation zone.

The R1 district requires a minimum of 150' road frontage and 2 acres, the Conservation district requires 250' of road frontage and 5 acres for development of a single family residence.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. Although there is surplus acreage and road frontage the position of the improvements makes in financially unfeasible to remove and sub-divide. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1				0.5			999
Level 2							3	1			999

Finished area above grade contains:	Bedroom(s): 3	Bath(s): 1.5	GLA: 1,998

Summarize Above Grade Improvements: Per MLS and assessment records the third floor is unfinished and is used as attic storage space. Typical for era built the first floor has living area rooms such as kitchen, living, and dining rooms. Living room has a mason fireplace. Second floor has sleeping quarters with three bedrooms and a full bath.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											999
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject has a full, unfinished basement and used for mechanical system storage.

Discuss physical depreciation and functional or external obsolescence: Floor plan is typical for era built and is considered functional and market accepted. MLS photos shows a slightly dated kitchen and vinyl sheet flooring for most living areas and unfinished plywood flooring for bedrooms.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Originally built in 1850 some period features still exist such exposed post and beams. Flooring is considered less than typical for quality as living area has either dated vinyl sheet flooring and unfinished plywood in bedrooms. Dwelling size is typical for market however lot size at 50 acres is considerably larger than what is typical and common for the residential market.

Comments and reconciliation of the sales comparison approach: Sales with larger than typical tracts of land were considered in the sales comparison approach. With the exception of comp 2 sales were adjusted for condition and age when compared to the subject. The subject property had a slightly dated interior with minimal flooring materials. Comps 1 and 3 were found to be modern in terms of updates and materials. Of the three sales considered most weight is placed on comps 1 and 2. Comp 1 as it was a sale most recent to the subject and comp 2 as it is located on the subject street and is a sale of an older residence that required updating at the time of sale.

Indication of Value by Sales Comparison Approach	$ 170,000

Owner	Joseph F. Rich, Jr. & Debbie L. Rich				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,998 s.f. Colonial on 50.00 acres . As indicated in the body of the report the site is located in both the R1 and Conservation zoning districts. These districts allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-067

Client	Devine, Millimet & Branch, P.A				
Property Address	575 Oak Hill Rd				
City	Northfield	County Merrimack	State NH	Zip Code 03276	
Owner	Joseph F. Rich, Jr. & Debbie L. Rich				

Due to the position of the improvements, the demand, value, and cost to develop land, it would not be financially feasible to further sub-divide the subject lot any further at this time.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

I, Donna A. Webster, of Northfield, Merrimack County, New Hampshire, (hereinafter, "Grantor") for consideration of One Hundred Sixty-Five Thousand and 00/100 ($165,000.00) Dollars paid grant to Joseph F. Rich, Jr. and Debbie L. Rich of 27 Chestnut Street, Wakefield, Middlesex County, Massachusetts 01880, husband and wife as joint tenants with rights of survivorship, (hereinafter, "Grantee") with WARRANTY COVENANTS,

A certain tract or parcel of land with any improvements thereon situate on the westerly side of Oak Hill Road in Northfield, County of Merrimack, State of New Hampshire, bounded and described as follows:

On the north by land formerly of Adelarde Paquette and land formerly of Amos H. Rouse; on the east by Oak Hill Road, so-called; on the south by land formerly of B.F. Ayers, land formerly of John B. Yeaton and land formerly of Horace Sewell, on the west by land formerly of Harry L. Clough.

Containing fifty (50) acres, more or less.

This conveyance is made subject to an easement given by John Buczynski to Public Service Company of New Hampshire dated December 11, 1928, recorded in Merrimack County Registry of Deeds at Book 502, Page 249 and to easement given by Louise Buczynski to Public Service Company of New Hampshire dated December 2, 1960 and recorded in said Registry At Book 693, Page 38.

I, Donna A. Webster, hereby release any and all rights of homestead and other rights I may have in the above-described premises.

For Grantor's Title see deed dated July 31, 1985, and recorded in Book 1521 Page 900. John A. Webster died April 30, 2013. See Death Certificate recorded in Book 3386 Page 585.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

111 Amherst Street
Manchester, NH 03101

Re: Property: 23 Battis Crossing Rd
Canterbury, NH 03224

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

Subject Property:	23 Battis Crossing Rd, Canterbury, NH 03224	Appraisal File #:	11-011-069

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** June 28, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Canterbury, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and the MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Canterbury is a bedroom community of less than 5,500 residents located just north of the capital city of Concord. Its rural character yet close proximity to I-93 and the city of Concord make it an ideal commuter location. Canterbury is primarily residential in character and composition with little commercial or business sites other than some agricultural uses, home businesses, and small retail. Connectivity to essential services and a larger array of shopping is within a 10 minute drive south on I-93 to the city of Concord.

Due to the low population density it is difficult to determine market direction using data specific to Canterbury as there are less than 30 sales of single family residences in Canterbury in any given year.

The Federal Housing Finance Agency (FHFA) report that property values had increased 1.66% from the second quarter of 2011 to the second quarter of 2012 in New Hampshire. Improvement in market conditions can be attributed to have been improving in the subject market and the region due to sustained low interest rates, diminishing inventory levels of single family residences, and diminishing levels of bank REO's and short sales.

Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: The subject site is in the Rural district which requires a minimum of a 3 acre lot and 300' of road frontage for single family residential development. The attached deed references covenants and restrictions on use and performance as a residential property. All of the restrictions are primarily for the preservation of the residential character of the neighborhood. None of the restrictions are considered to be adverse to the marketability of the subject property.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Other Elements Per assessment records the site is also improved with a 12' x 24' shed with an attached 4' x 12' lean to. MLS identifies a wood stove, a greenhouse porch, and enclosed porch, and a deck.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				1	1			960
Level 2							2	1			480

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2 GLA: 1,440

Summarize Above Grade Improvements: Per MLS dwelling has a first floor bedroom and full bath with two additional bedrooms and full bath on second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade					1					60	960
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records 576 s.f. of the basement is finished as a family room.

Discuss physical depreciation and functional or external obsolescence: Per MLS records the dwelling was built in 1979. Interior photos show wide pine flooring through out and the appearance of a basic kitchen and appliances. Assessment records indicate no heat on second floor. Dwellings that lack heat on second floor are typical for older style antiques however for a dwelling built in the last few decades lack of heat is considered to have albeit a curable but functional defect.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: At approximately 1,500 s.f. in living area the dwelling size is slightly smaller than typical for the market. An additional 576 s.f. of finished area below grade mitigates the smaller size of the above grade area to some degree. Assessment records indicate that the basement finish is minimal in quality.

Comments and reconciliation of the sales comparison approach: Three sales in Canterbury of residences with similar functional utility are considered in the sales comparison approach. Adjustments are made for differences in surplus land and living area where applicable. MLS listings for both comps 1 and 2 marketed both as having updated and modern kitchens. Both are adjusted accordingly. All sales were under contract within six months of the effective date of this assignment. Differences in market conditions are negligible.
Of the three sales considered most weight is placed on comp 2 as it required the least amount of adjustments.

Indication of Value by Sales Comparison Approach	$ 205,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,440 s.f. Cape on 5.40 acres. As indicated in the body of the report the site is located in the Rural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Owner	Dane F. Percy, Susan E. Storey, and Peter J. Saccocia				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Rural District zoning requirements of 300' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

KNOW ALL MEN BY THESE PRESENTS, That, **CHARLES R. COOK**, a single person, with a mailing address of 23 Battis Crossing Road, Canterbury, NH 03224, for consideration paid, grants to **DANE F. PERCY**, a single person and **SUSAN E. STOREY**, a single person, an undivided 1/2 interest, with a mailing address of PO Box 485, Kimberton, PA 19442 and **PETER J. SACCOCIA**, a single person, an undivided 1/2 interest, with a mailing address of 30 Country Way, South Dartmouth, MA 02748, as joint tenants with rights of survivorship, with WARRANTY COVENANTS:

A certain tract of land with all improvements thereon situated in the Town of Canterbury, County of Merrimack and State of New Hampshire shown as Lot #14 on a Plan of land of Raymond Glines recorded at the Merrimack County Registry of Deeds, Plan No. 4979, bounded and described as follows:

Beginning at a point on the westerly sideline of the East Branch of Battis Crossing Road, so-called, being the northeast corner of the tract herein conveyed; thence running N 85°32' 43' W, 792.85 feet to a point; thence turning and running S 18° 21' 43" E, 325.47 feet to a point; thence turning and running S 85° 32' 43" E, 796.55 feet to the westerly sideline of the said East Branch of Battis Crossing Road; thence turning and running by the westerly sideline of East Branch of Battis Crossing Road N 48° 15' 43" W 180.90 feet to a point; thence continuing on the said westerly sideline of said East Branch of Battis Crossing Road N 57° 48' 39" W, 151.25 feet to the point of beginning.

Containing 5.4 acres, more or less.

Excepting and reserving from the within conveyance the powerline right of way of the Public Service Company of New Hampshire as shown on said plan.

LT1-2-815050-1

The lot herein conveyed is subject to the following covenants, conditions, restrictions and reservations which shall be deemed to run with the land.

A. No trailers, mobile homes, shacks, abandoned cars, temporary structures, excavations, basements or privies shall be permitted on the lot.

B. No trash, ashes, refuse or garbage may be deposited or dumped on the lot. All such trash or refuse shall be kept in suitable enclosed receptacles which shall be screened from public view.

C. No building or outbuilding shall be located closer than 75' from the sideline of any road or roadway or located closer than 25' from the lot boundary line.

D. No activities shall be carried on nor anything done or permitted on the lot which shall constitute a public nuisance.

E. No septic system or facilities shall be located or constructed on the lot unless the same shall have first been approved by the New Hampshire Water Supply and Pollution Control Commission.

F. The construction of any structure or improvements to be located on the lot shall be completed within one year of the date construction is commenced.

G. All surface areas disturbed by construction shall be promptly returned to their natural condition and repaired in such manner as may be practicable or consistent with the soil and terrain.

Meaning and intending to describe and convey the same premises as conveyed to Charles R. Cook by Quitclaim Deed dated October 31, 1989 recorded in the Merrimack County Registry of Deeds in Book 1822, Page 31.

The above Grantor does hereby release all rights of homestead and other interests therein.

Executed this 28 day of June, 2012.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 41 Hoit Rd
Concord, NH 03301

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Mariya Andrrijivna Yevtushenko and Derik Ogg

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on July 16, 2012 for $219,000 reduced on August 14, 2012 to $209,000, and reduced again on September 11, 2012 to $199,000. The listing was cancelled on October 12, 2012 with a last list price of $199,000. The subject property transferred on March, 15, 2013 for $180,000. Buyer certified on PA-34 property inventory transfer form that transfer was a fair market value transaction.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 209,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: March 15, 2013	**$ 209,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** March 15, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Concord, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and the MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Condo	%	Vacant	%
Multifamily	5%		%

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: The subject property is located in East Concord. The northern part of East Concord has more of a rural feel and character to the area due to a lower population and building density. However, connectivity to downtown and all city amenities is easily accessible via I-93 at exit 16. Concord as the state capital is home to numerous state government departments and jobs as well as a major retail and manufacturing center.

Single family residential market conditions in Concord were relatively flat in the first quarter of 2013. The median sales price of a single family residence in Concord in the year prior to the effective date of this appraisal was $191,900 with 78 days on market. This is relatively the same from the year previous to that which had a median sales price of $192,000 and 101 days on market.

Street Lights	☐ Public ☐ Private		

Site description and characteristics: Subject site is located at the corner of Hoit and Mountain Roads and is in the RM zoning district. The RM zoning district requires lots with private utilities to have a minimum of 40,000 s.f. and 200' of road frontage. With over 775' of road frontage and 77,140 s.f. the subject site is considered to be a legal, and conforming lot of record.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				2	1			971
Level 2							2	2			653

Finished area above grade contains: **Bedroom(s):** 4 **Bath(s):** 3 **GLA:** 1,624

Summarize Above Grade Improvements: Per MLS listing dwelling has two bedrooms on first floor and a full bath and two bedrooms and two three-quarter baths on the second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade					1					22	816
Other Area											

Summarize below grade and/or other area improvements: Per MLS listing the main cape dwelling has an 816 s.f. full basement of which 210 s.f. is finished as a family room.

Discuss physical depreciation and functional or external obsolescence: MLS interior photos show a modern and updated interior, wood flooring in living areas, vinyl in kitchen, carpeting in bedrooms. Marketability is enhanced with two baths for each bedroom on second floor. Seller's property statement details a relatively good schedule of replacement, upkeep, and maintenance.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: At less than 1,700 s.f. for a residence the dwelling is slightly smaller than typical. Typical for a single family residence the property also has a porch, deck, and two car garage. Atypical for the area as well as for a lot of land less than two acres in size is a three stall barn and a fenced paddock that consumes nearly the entire rear yard. Paddocks and barns have a tangible value for equestrian buyers however their requirements also include a slightly larger than typical lot of land to accommodate and separate horses from the residential aspects of a single family residence. Although being used in an equestrian capacity prior to and including the effective date of the appraisal, the most likely use and value to a typical buyer is the subject property as a single family residence with a 1.77 acre lot landscaped as a yard for a single family residence with the 572 s.f. barn as a shed.

Comments and reconciliation of the sales comparison approach: Three sales of cape style residences in suburban sections of Concord were considered in the sales comparison approach. Comp 2 is similar to the subject with a small two stall horse barn that was part of the sale. Market conditions six months prior and after the effective date of the assignment were relatively stable and showed negligible differences in market values. Comp 2 saw a small difference in market conditions and was adjusted accordingly.
Within the sales comparison approach most weight is placed on comps 1 and 2. Comp 1 as it was most similar in size and residential features as the subject (bedroom and garage count, porch, deck, etc) and comp 2 as it demonstrates the contributory value of small equestrian improvements on a small residential lot.

Indication of Value by Sales Comparison Approach	$ 209,000

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. File No. 11-011-072

Client	Devine, Millimet & Branch, P.A				
Property Address	41 Hoit Rd				
City	Concord	County Merrimack	State NH	Zip Code 03301	
Owner	Mariya Andrrijivna Yevtushenko and Derik Ogg				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,624 s.f. Cape on 1.77 acres. As indicated in the body of the report the site is located in the RM zoning district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-072

Client	Devine, Millimet & Branch, P.A				
Property Address	41 Hoit Rd				
City	Concord	County Merrimack	State NH	Zip Code 03301	
Owner	Mariya Andrrijivna Yevtushenko and Derik Ogg				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the RM zoning requirements of a 40,000 s.f. lot for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

Warranty Deed

KNOW ALL MEN BY THESE PRESENTS, that I, Melanie D. MacNeill, unmarried, of Concord, New Hampshire, for consideration paid, grant to Mariya Andrijivna Yevtushenko and Derik Ogg, an unmarried couple, as joint tenants with rights of survivorship, of Tilton, New Hampshire, with warranty covenants, 15 A CHESTNUT ST. TILTON NH 03276

A certain tract of land with the buildings thereon, situate in Concord, County of Merrimack and State of New Hampshire, more particularly bounded and described as follows:

Beginning at a point at the intersection of Mountain Road and Hoit Road; thence proceeding north 56 degrees 34 minutes 20 seconds west 275 feet; thence proceeding north 28 degrees 13 minutes 15 seconds east 339.28 feet to land now or formerly of Woods; thence proceeding south 84 degrees 26 minutes 50 seconds east 184.94 feet along said Woods' land to Mountain Road; thence proceeding along Mountain Road south 09 degrees 0 minutes west 442.45 feet to the point of beginning.

Being that lot as shown on a Plan entitled "Subdivision of Land belonging to Albert G. and Constance H. Wescott in Concord, New Hampshire, April 6, 1977-Scale 1 inch = 100 feet, Gilbert C. Castle, Surveyor", registered as Plan No. 4941 at the Merrimack County Registry of Deeds.

Subject to easements of record in the Public Service Company of New Hampshire, Inc. and a slope easement of the City of Concord for the widening of Hoit Road. Subject further to the restriction in the deed of Constance H. Wescott to the Heritage Homes and Land Development Co., Inc. that houses to be erected on lots shall have a market value of not less than $35,000.00.

I hereby release all rights of homestead for myself and my family.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 569 Mountain Rd
Concord, NH 03301
Borrower:
File No.: 11-011-073

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** January 5, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Concord, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

Multifamily	5%		%

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: The subject property is located in East Concord. The northern part of East Concord has more of a rural feel and character to the area due to a lower population and building density. However, connectivity to downtown and all city amenities is easily accessible via I-93 at exit 16. Concord as the state capital is home to numerous state government departments and jobs as well as a major retail and manufacturing center.

Single family residential market conditions in Concord were still declining in the first quarter of 2012. The median sales price of a single family residence in Concord in the year prior to the effective date of this appraisal was $192,450 with 97 days on market. The year prior to this period had a median sales price of $199,450 with 107 days on market which is a 3.51% decrease in residential values.

Street Lights	☐ Public ☐ Private		

Site description and characteristics: Subject site is located in the RM zoning district. The RM zoning district requires lots with private utilities to have a minimum of 40,000 s.f. and 200' of road frontage. With approximately 700' of road frontage and 6.30 acres the subject site is considered to be a legal, and conforming lot of record.

The majority of the subject lot is wetlands from the Burnham Brook. Assessment records identify 5.30 of the 6.30 acres to be in wetlands. Subdivision may be possible by right but due to declining market conditions and question of identifying a dry building envelope indicates that it may not have been financially feasible as of the effective date of the appraisal.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Other Elements				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				3	1.5			1,344
Level 2											

Finished area above grade contains: Bedroom(s): 3 Bath(s): 1.5 GLA: 1,344

Summarize Above Grade Improvements: Per tax assessment records and MLS the subject property is improved with a 1,344 s.f. single level, ranch style dwelling built in 1965. The dwelling has an attached two car garage and a rear deck.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade										0	1,344
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject basement is unfinished and used for mechanical system storage.

Discuss physical depreciation and functional or external obsolescence: MLS interior photos show a slightly dated kitchen and bath with basic pine cabinets and formica counter tops. Floor plan with three bedrooms, full bath, and half bath considered functional and market accepted. Physical depreciation considered typical for age. MLS listing identifies a good schedule of update and maintenance for the property since the very first owner.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling size, bedroom, and bath count considered typical for neighborhood and era built. Lot size larger than typical however most of lot is located in wetlands. Based on interior photos interior is considered to be dated but functional and serviceable.

Comments and reconciliation of the sales comparison approach: Two sales on Concord's east side and one sale similar to the subject in terms of lot size are considered in the sales comparison approach. Adjustments are made for differences in surplus land where applicable. Market conditions in the nine months prior to the effective date of the assignment were relatively stable and showed negligible differences in market values.

All three sales have a feature that is similar to the subject in some respect and as such all three sales are weighted equally within the sales comparison approach.

Indication of Value by Sales Comparison Approach $ 196,000

Owner	Kelly A. Mulroy & Patrick J. LaFave				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,344 s.f. Ranch on 6.30 acres. As indicated in the body of the report the site is located in the RM zoning district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

File No. 11-011-073

Client	Devine, Millimet & Branch, P.A				
Property Address	569 Mountain Rd				
City	Concord	County Merrimack	State NH	Zip Code 03301	
Owner	Kelly A. Mulroy & Patrick J. LaFave				

Due to the excess frontage of the subject lot sub-division by right may be possible. However, due to the excessive amount of wetlands on the subject parcel as well as the economic climate as of the effective date of assignment, it was not feasible to speculate on the feasibility to sub-divide the subject parcel.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

Sandra G. Wescott, Successor Trustee of the Constance H. Wescott Revocable Trust dated June 29, 2004, of 569 Mountain Road, Concord NH 03301, for consideration paid grant to Kelly A. Mulroy, single, of 905 Mammoth Road, Manchester NH 03104 and Patrick J. LaFave, single, of 905 Mammoth Road, Manchester NH 03104, as joint tenants with rights of survivorship, with warranty covenants;

A certain tract or parcel of land, together with any building(s) or other improvement(s) thereon, located on the westerly side of Mountain Road in Concord, Merrimack County, New Hampshire, shown as Lot 122-5-4 on a plan entitled "RESUBDIVISION BETWEEN ALBERT G. & CONSTANCE H. WESCOTT AND GEORGE J. & LAURA M. ROBERTS IN CONCORD, N.H.", Scale 1" = 50', dated October 3, 1989, by Cornerstone Surveyors, Inc., signed as approved by the Concord Planning Board December 20, 1989, recorded in Merrimack County Registry of Deeds as Plan #11445, to which plan reference is made for a more particularly description.

Containing 6.3 acres, more or less.

Subject to any and all matters as shown on Plan No. 11445.

Subject to such matters as are set forth in the deed from Clarence E. Huggins and Gladys R. Huggins to Albert G. Wescott and Constance H. Wescott dated May 9, 1955, recorded in Merrimack County Registry of Deeds in Book 770, Page 18, as such matters may affect the premises herein conveyed if at all.

Meaning and intending to describe and convey the same premises conveyed to Constance H. Wescott, Trustee of the Constance H. Wescott Revocable Trust dated June 29, 2004 by Warranty Deed from Constance H. Wescott, dated January 31, 2005 and recorded in Book 2747, Page 353 of the Merrimack County Registry of Deeds.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☐ None ☒ Specify services provided: Mark Correnti, SRA had provided a professional service regarding the subject property in 2011. Mark Correnti, SRA performed a real property appraisal regarding the subject property with an appraisal report dated December 26, 2011.

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 16 Brookwood Dr
Concord, NH 03301

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** December 16, 2011

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property abuts a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Concord, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Condo	%	Vacant	%
Multifamily	5%		%

Neighborhood Name: Brookwood

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: The subject property is located in East Concord. The northern part of East Concord has more of a rural feel and character to the area due to a lower population and building density. However, connectivity to downtown and all city amenities is easily accessible via I-93 at exit 16. Concord as the state capital is home to numerous state government departments and jobs as well as a major retail and manufacturing center.
Single family residential market conditions in Concord were still declining in the fourth quarter of 2011. The median sales price of a single family residence in Concord in the year prior to the effective date of this appraisal was $195,375 with 96 days on market. The year prior to this period had a median sales price of $198,500 with 112 days on market which is a 1.57% decrease in residential values.

Off Site Improvements

Street	☒ Public ☐ Private	Asphalt	
Alley	☐ Public ☐ Private		
Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: Subject site is located in the RM zoning district. The RM zoning district requires lots with private utilities to have a minimum of 40,000 s.f. and 200' of road frontage. With approximately 167' of road frontage and 1.71 acres the subject site is considered to be a legal, non-conforming lot of record.
Covenants, conditions, and restrictions (CC&R's) were reviewed at MCRD book 1309 page 1045. The CC&R's were found to be primarily for the preservation of the residential character and composition of the neighborhood. Specific in the CC&R's are that the subject lot cannot be used for any other use other than single family residential and that no lot may be further sub-divided.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1				.5			1,156
Level 2							4	1			988

Finished area above grade contains: Bedroom(s): 4 Bath(s): 1.5 GLA: 2,144

Summarize Above Grade Improvements: Per MLS the residence has four bedrooms and a full bath on the second floor. First floor den may also be considered a sunroom and has roof skylights and direct access to an expansive deck.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade						1				25	988
Other Area											

Summarize below grade and/or other area improvements: Basement has 246 s.f. of finished area that is used as a rec. room. Remainder of basement is used for mechanical systems and unfinished storage area.

Discuss physical depreciation and functional or external obsolescence: Recent improvements prior to sale have contributed to an effective age considerably lower than the dwellings physical age. Improvements just prior to sale include all new hardwood flooring in dining and living rooms, stairs, and second floor hallway. Bedrooms all had new carpeting installed. New asphalt shingles on house roof four years prior to sale, garage roof in the year prior to sale, and a new septic leah field six years prior to the sale and effective date of this assignment.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling size and lot size are both typical for the neighborhood and general market area. Recent updates to flooring, roof, and septic enhanced marketability as a dwelling with a good schedule of updates and maintenance.

Comments and reconciliation of the sales comparison approach: Three sales in Concord's east side are considered in the sales comparison approach. All three sales have similar updates as the subject and are similar in appeal. Of the three sales most weight is placed on comp 2 as it is most similar to the subject in terms of size.

Indication of Value by Sales Comparison Approach	$ 235,000

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,144 s.f. Colonial on 1.71 acres. As indicated in the body of the report the site is located in the RM district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

City	Concord	County Merrimack	State NH	Zip Code 03301	
Owner	Jason T. Judd & Shannon Y. Quinn				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the RM zoning requirements of 200' road frontage for a single family building lot, as well as the restrictive covenants referenced in the deed, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, That I, **Nancy B. Moffett, single,** with a mailing address of 294A Pleasant Street, Concord, NH 03301 for consideration paid grant to **Jason T. Judd and Shannon Y. Quinn,** with a mailing address of 6 McKinley St. #5, Concord, NH 03301 as Joint Tenants with Rights of Survivorship, and with Warranty Covenants:

A certain tract or parcel of land, with any buildings or improvements thereon, situated in the City of Concord, County of Merrimack and State of New Hampshire, being shown as Lot No. 19 on a certain plan of Brookwood Subdivision entitled "A Subdivision of Land belonging to Heritage Holmes & Land Development Co., Inc. in Concord New Hampshire, August 23, 1978 – Scale: 1' =50', Gilbert C. Castle, Surveyor", which plan was approved by the City of Concord Planning Board on September 27, 1978, and recorded in the Merrimack County Registry of Deeds as Plan No. 5530, and being more particularly bounded and descried as shown on said Plan.

Said Lot No. 19 containing 74,500 square feet, more or less, according to said Plan.

Subject to any and all matters, including setbacks if any, as shown on Plan No. 5530 recorded in the Merrimack County Registry of Deeds.

Subject to easements and agreements to Concord Electric Company recorded at the Merrimack County Registry of Deeds at Book 1308, Page 168, Book 1308, Page 171, Book 1328, Page 960 and Bock 1328, Page 967.

Subject to covenants and restrictions dated November 28, 1977 recorded at the Merrimack County Registry of Deeds at Book 1309, Page 1045.

NBM
Initials

Subject to slope easements and other matters contained in Commissioners Return recorded at the Merrimack County Registry of Deeds in Book 832, Page 233.

Subject to utility easement shown on plan recorded at the Merrimack County Registry of Deeds as Plan No. 4619.

Subject to restrictions recorded at the Merrimack County Registry of Deeds in Book 1294, Page 294.

Meaning and intending to describe and convey the same premises conveyed to Nancy B. Moffett by deed dated October 11, 2006 and recorded in Volume 2937, Page 618, of the Merrimack County Registry of Deeds. See also deed recorded at Volume 2113, Page 557.

Executed this 16th day of December, 2011.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 86 Oak Hill Rd
Concord, NH 03301
Borrower:
File No.: 11-011-075

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

SUBJECT PROPERTY IDENTIFICATION

Address: 86 Oak Hill Rd
City: Concord **County:** Merrimack **State:** NH **ZIP:** 03301
Legal Description: See attached legal description
Tax Parcel #: Map 118F, Lot 2-11 **RE Taxes:** 2,744.46 **Tax Year:** 2010
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Kevin Perron

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on May 24, 2011 for $118,500, under agreement on June 27, 2011, and closed on August 3, 2011 for $115,000. The purchase was financed with conventional mortgage funds and there were no reported seller concessions.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 109,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: August 3, 2011	**$ 109,000**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** August 3, 2011

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Concord, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Multifamily	5%		%

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: The subject property is located in East Concord. The northern part of East Concord has more of a rural feel and character to the area due to a lower population and building density. However, connectivity to downtown and all city amenities is easily accessible via I-93 at exit 16. Concord as the state capital is home to numerous state government departments and jobs as well as a major retail and manufacturing center.

Single family residential market conditions in Concord were declining in the third quarter of 2011. The median sales price of a single family residence in Concord in the year prior to the effective date of this appraisal was $196,900 with 93 days on market. The year prior to this period had a median sales price of $202,050 with 113 days on market which is a 2.55% decrease in residential values.

Off Site Improvements

Street	☒ Public ☐ Private	paved asphalt	
Alley	☐ Public ☐ Private		
Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: The subject site is in the RO zoning district which requires a minimum of a 2 acre lot and 200' of road frontage. With 2.34 acres and 250' of road frontage the subject site is considered to be a legal and conforming lot of record.

The subject site parallels both the Turtletown Pond as well as the public landing (see aerial photo). The shoreline of Turtletown Pond is marsh which makes up a significant portion of the subject site. The subject shorefront is ineffective for swimming, fishing, or boating due to the amount of marsh between the subject yard and water. However, the relatively close proximity of the public landing presents some benefits for easy water access.

The subject having close water access to Turtletown Pond is not exclusive to the subject as any member of the public can use the landing as well. However, what the subject site does have that is extraordinary is a pleasant and unencumbered view over the marsh to the pond (see subject photo addenda).

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* **NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Other Elements	MLS and tax assessment records show a 280 s.f. detached garage on site.			

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1		1				1	1			638
Level 2											

Finished area above grade contains: Bedroom(s): 1 Bath(s): 1 GLA: 638

Summarize Above Grade Improvements: Per MLS the dwelling has three rooms. Kitchen and living room are open concept, one single bedroom and full bath.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											638
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the dwelling rests on a 638 s.f. post and pier crawl space basement.

Discuss physical depreciation and functional or external obsolescence: Originally built in 1940 as a seasonal camp; the dwelling was extensively renovated in 1997 with modern materials and features. Seller property condition statement indicates kitchen renovated between 2002 and 2004. MLS interior photos just prior to the 2011 sale show a modern and well kept residence.
Single bedroom residences have limited market appeal due to functional occupancy limitations. There is a market for single bedroom residences however it is a small and defined market.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling with 638 s.f. containing one bedroom is considered smaller than typical for market. Recent upgrades and contribute to a lower effective age than actual physical age.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Comments and reconciliation of the sales comparison approach: Sales of smaller than typical dwellings that had some form of waterfront access or view were considered in the sales comparison approach. All three sales had been remodeled or were reported to have been in good condition prior to the sale. Adjustments are made for land and above grade living area where applicable. Differences in bedroom count is incorporated in the living area adjustment.

Of the three sales considered most weight is placed on comp 2 as it is proximate to a similar size body of water as the subject.

Indication of Value by Sales Comparison Approach	$ 109,000

Owner	Kevin Perron				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 638 s.f. Ranch on 2.34 acres. As indicated in the body of the report the site is located in the RO zoning district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-075

Client	Devine, Millimet & Branch, P.A				
Property Address	86 Oak Hill Rd				
City	Concord	County Merrimack	State NH	Zip Code 03301	
Owner	Kevin Perron				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the RO zoning district requirements of 250' road frontage and a 2 acre lot for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

Exhibit A

File No: 2011254

**Property Address: 86 Oak Hill Road,
Concord, New Hampshire 03301**

A certain tract of land with any improvements thereon, situated in Concord, County of Merrimack, State of New Hampshire, bounded and described as follows:

Beginning at an iron post set at the intersection of the easterly line of Oak Hill Road and the southeasterly line of an access road, commonly called the Pond Road, to Turtle Pond and running a distance of three hundred eighty-five (385) feet along said Pond Road to the edge of said Turtle Pond; thence turning and running in a southerly direction along the shore of said Pond a distance of two hundred fifty (250) feet, measured in a straight line; thence turning and running in a southwesterly direction to a point where a small brook crosses Oak Hill Road a distance of three hundred eighty-five (385) feet; thence turning and running in a northerly direction along the easterly line of said Oak Hill Road a distance of two hundred fifty (250) feet to the point of beginning.

There is further conveyed a permanent easement on, over and under the following described premises located on the westerly side of Oak Hill Road in Concord, Merrimack County, New Hampshire, for the purposes of installing and maintaining a leach bed for private septic waste disposal to be appurtenant to those premises owned by James I. Brown and Muriel J. Brown situated on the easterly side of Oak Hill Road and as more particularly described in the deed from James I. Brown and Muriel J. Brown dated November 8, 1974 and recorded in Book 1228, Page 355 at the Merrimack County Registry of Deeds, together with a right of ingress and egress to repair, replace and maintain said leach bed, and the rights acquired hereunder are transferable and shall run with the land.

The easement hereby granted is more particularly bounded and described as follows:

Commencing at a concrete bound on the westerly line of Oak Hill Road at the southeast corner of the land of Dean and Myrtle Hughes; thence North 33° 05' 45" East by Oak Hill Road one hundred twenty (120) feet to a point; thence North 23° 20' 10" West one hundred twenty (120) feet to a point; thence South 33° 05' 45" West one hundred twenty (120) feet to a point; thence South 23° 20' 10" East one hundred twenty (120) feet to the poing of beginning.

Subject to:

Permanent Easement as described in deed recorded with the Merrimack County Registry of Deeds at Book 1228, Page 355 and Book 1362, Page 307.

Agreement with Public Service Company of New Hampshire recorded with the Merrimack County Registry of Deeds at Book 3077, Page 809.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 534 Cross Country Rd
Pembroke, NH 03275
Borrower:
File No.: 11-011-078

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

SUBJECT PROPERTY HISTORY

Owner of Record: Calvin E. Johnson

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on June 6, 2010 for $268,886, under agreement on November 8, 2010, and closed on November 29, 2010 for $250,000. The transaction was financed with conventional mortgage funds with a reported $500 seller concession to buyer.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	$ 259,000
Indication of Value by Cost Approach	$
Indication of Value by Income Approach	$

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: November 29, 2010 **$** 259,000

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** and/or ☒ **Extraordinary Assumptions** cited on the following page.

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** November 29, 2010

Interest Appraised: ☒ Fee Simple ☐ Leasehold ☐ Other

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Pembroke, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and MLS.

Co-Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Sales Comparison Approach:

☒ Is necessary for credible results and is developed in this analysis
☐ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Income Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ None ☐ Disclose Name(s) and contribution:

Amenities:

Market area description and characteristics: Pembroke is a bedroom community to the nearby city of Concord as well as the more distant city of Manchester. The subject property's immediate neighborhood is comprised of a residences that vary in age, style, and value. Shopping, schools, and municipal services are located close by and easily accessible via routes 3 and 106. Access to employment centers as well as additional services is considered favorable via I-93 and I-393 which are located in reasonable commuting distances.
The single family residential market conditions in Pembroke, much like the broader region, were declining in the last quarter of 2010. The median sales price of a single family residence in Pembroke in the year prior to the effective date of this appraisal was $191,450 with 71 days on market. The year prior to this period had a median sales price of $195,810 with 83 days on market which is a 2.22% decrease in residential values. In the broader region the Federal Housing Finance Agency (FHFA) reports that in the last quarter of 2010 residential values declined 2.82% in New Hampshire.

Street	☒ Public ☐ Private		
Alley	☐ Public ☐ Private		
Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: The subject site contains 5.83 acres and has 240' of frontage on Cross Country Road. The dwelling is set back slightly from the road and is in a private setting surrounded by woods. Subject site is located in the R-3 zoning district which requires a minimum of an 80,000 s.f. lot and 200' of road frontage.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1				.5			1,024
Level 2							3	2			1,000

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2.5 GLA: 2,024

Summarize Above Grade Improvements: Per MLS residence has a typical floor plan for decade built with living area and half bath on first floor, three bedrooms and two full baths on second floor. Dwelling also has an oversized 22' x 30' two car attached garage, front farmers porch, and a rear deck.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade										0	1,024
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the basement area is unfinished

Discuss physical depreciation and functional or external obsolescence: Floor plan is typical and market accepted. Interior MLS photos, and tax assessment description of residence show physical depreciation typical for age. All systems and surfaces appear to be first generation with no major updates, renovations, or additions added in the last nine years. Dwelling is set back slightly from the road with with a rural feel and character of the neighborhood. No negative external inadequacies noted.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Although site size at 5.83 acres is slightly larger than the typical 2 acre parcel, dwelling size at just over 2,000 s.f. is typical and common for Pembroke. Dwelling at 9 years of age is slightly younger than the predominant age of the neighborhood and community. Building materials and interior finishes considered average for the market.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Comments and reconciliation of the sales comparison approach: Three sales of similar size residences in Pembroke that had sold recent to the effective date are considered in the sales comparison approach. All sales are adjusted for condition; specifically flooring. Comp 1 had hardwood on first floor, carpet on the second. The subject has carpeting and vinyl in relatively good condition. Both comps 2 and 3 with hardwood flooring on the first floor including the kitchen and are adjusted for superior construction quality when compared to the subject which had carpeting on the first floor and sheet vinyl in the kitchen. All three comps were weighted equally within the sales comparison approach.

Indication of Value by Sales Comparison Approach	$ 259,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales that were external to the subject's immediate neighborhood and any external influence from an HVTL corridor.
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,024 s.f. Colonial on 5.83 acres. As indicated in the body of the report the site is located in the R3 district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the R3 district zoning requirements of 200' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and

Lender	Devine, Millimet & Branch, P.A						

inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.
The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ Market Value Definition (below) ☐ Alternate Value Definition (attached)

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS, CANDIDATES AND PRACTICING AFFILIATES

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

▪ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	▪ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

111 Amherst Street
Manchester, NH 03101

Re: Property: 50 Mount Delight Rd
Allenstown, NH 03275

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 50 Mount Delight Rd
City: Allenstown **County:** Merrimack **State:** NH **ZIP:** 03275
Legal Description: See attached legal description
Tax Parcel #: Map 402, Lot 134 **RE Taxes:** 6,635.96 **Tax Year:** 2012
Use of the Real Estate As of the Date of Value: Two Family Residential
Use of the Real Estate Reflected in the Appraisal: Two Family Residential
Opinion of highest and best use (if required): Two Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: James W. & Sandra A. Irvine, and Robin L. Leavitt

Description and analysis of sales within 3 years (minimum) prior to effective date of value: Prior to the effective date of this assignment the subject property had transferred to the current owners as a bank REO on June 20, 2012. Subject property listed for sale as a bank REO that required significant updates and repairs on May 11, 2012 for $129,900, under agreement on June 8, 2012, and closed on June 20, 2012 as a cash sale for 103,000. There were no reported seller concessions.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service as a two family residence on May 9, 2013 for $299,900, under agreement on May 31, 2013, and closed on July 3, 2013 for $285,000. The transaction was financed with conventional mortgage funds with a reported $3,850 seller concession to buyer.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 266,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$ 237,600**

Final Reconciliation of the Methods and Approaches to Value: Due to the level of owner occupancy for two family residences, relevancy of the income approach is diminished. For this assignment the sales comparison approach best represents what a owner-occupant would value the subject property as. See attached narrative addenda for an expanded discussion of the approaches to value considered in this assignment and the final reconciliation

Opinion of Value as of: July 3, 2013	**$ 266,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** July 3, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Allenstown, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☒ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Amenities:

Market area description and characteristics: Allenstown is primarily a residential community with a town center at the convergence of the Merrimack and Suncook Rivers. The town center is referred to as Suncook which comprises the a retail and commercial sections of both the towns of Pembroke and Allenstown. The subject neighborhood however is located between Bear Brook state park and the town of Deerfield. The area is residential in character and composition and has a rural feel to it due to the proximity and of the state park which is undeveloped. Access to retail and commercial amenities is convenient via route 28 to Suncook. The cities of Manchester and Concord are also accessible as both are within 20 miles of Allenstown.

Single family residential market conditions in Allenstown were improving in the third quarter of 2013. The median sales price of a single family residence in Allenstown in the year prior to the effective date of this appraisal was $138,000 with 101 days on market. The year prior to this period had a median sales price of $130,000 with 133 days on market which is a 6.15% increase in residential values.

In the broader region the Federal Housing Finance Agency (FHFA) reports that in the third quarter of 2013 residential values increased 5.94% in New Hampshire.

Site description and characteristics: The subject lot is located in the Open Space & Farming (OSF) district which requires a minimum of a 2 acre lot and 200' road frontage for single family development and a minimum of 4 acres for two family development. Developed with a two family residence on 7.15 acres and 222' of road frontage the subject property and use is considered to be a legal and conforming use with regards to zoning requirements.

Pease brook and a small pond are located on the subject site. However, both are relatively small and lack any other utility other than aesthetics a natural setting.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Level 2							4	2F			1,144

Finished area above grade contains: **Bedroom(s):** 4 **Bath(s):** 2F2H **GLA:** 2,216

Summarize Above Grade Improvements: Both units have symmetrical floor plans with eat in-kitchen, living room, and half bath on first floor, two bedrooms and a full bath on the second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade					1	1				85	1,072
Other Area											

Summarize below grade and/or other area improvements: There is 912 s.f. of additional living space in the basement. Basement finish and quality is similar to that of the above grade area.

Discuss physical depreciation and functional or external obsolescence: Floor plan for both units are highly typical for townhouse style duplexes. Both units were extensively remodeled in the year prior to the effective date of this assignment. No negative external influences noted.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Purchased as bank REO in 2012 the interior of both units were extensively renovated, quite possible for resale and profit. Interior renovations included remodeled kitchens, baths, basement finish and all surfaces to include new flooring and interior paint. Size of lot is larger than the typical 2-3 acre parcel in the area. Size of units at 1,108 s.f. and two bedrooms for each considered typical for two family units.

		Net Adj. 11.2 %	Net Adj. 6.8 %	Net Adj. 5.4 %
Indicated Market Rent		Gross Adj. 11.2 % $ 2,335	Gross Adj. 11.4 % $ 2,350	Gross Adj. 9.4 % $ 2,875

Rent comparable analysis and reconciliation of market rent of subject property: For the income approach to be relevant an investment property should be rented at the time of sale. All three of the above two family residences were rented at time of sale and are located in the subject's market. Adjustments are made with respect to how a typical tenant reacts to size, features, and amenities. Updates and age are less of a tenant's concern when pricing a unit to rent as the responsibility to repair, improve, or update rests with the property owner. Factors that weigh on a tenant's decision to lease are unit size and accommodations (parking, laundry hook ups, etc). Of the three rentals considered, most weight is applied to rental #1 as it is most similar to the subject in terms of bedroom count.

Opinion of Market Rent $ 2,400

Gross Rent Multiplier Analysis

ADDRESS	DATE	SALE PRICE	GROSS RENT	GRM	COMMENTS
133 Tina Drive, Pembroke, NH	03/27/2014	270,000	3,040	88.82	6 bedrooms
312 Pembroke St, Pembroke, NH	11/14/2012	153,500	2,200	69.77	5 bedrooms
54 Towle Pasture Dr, Epsom, NH	07/26/2013	195,000	1,800	108.33	4 bedrooms
302 Black Hall Rd Epsom, NH	12/23/2013	195,000	1,925	101.30	4 bedrooms

Comment and reconciliation of the gross rent multiplier (GRM): Sales of two family residences that were full rented at time of sale were considered in developing the gross rental multiplier. Because two family residences are typically owner occupied, there was a limited number of sales that had both units rented at the time of sale. Of the four sales considered in developing the GRM most weight was applied to the 4 bedroom sales.

Opinion of Market Rent: $ 2,400 x 99 **GRM = $** 237,600

Indication of Value by Income Approach **$ 237,600**

Comments and reconciliation of the sales comparison approach: Three sales of two family residences are considered in the sales comparison approach. Both comps 1 and 3 are similar to the subject as they were extensively renovated just prior to sale. Comp 2 had only one unit renovated and is adjusted accordingly.
Of the three sales considered most weight is applied to comp 2 as it is most recent to the effective date of this assignment.

Indication of Value by Sales Comparison Approach	$ 266,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,216 s.f. Colonial style two family residence on 7.15 acres. As indicated in the body of the report the site is located in the OSF district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

File No. 11-011-079

Client	Devine, Millimet & Branch, P.A				
Property Address	50 Mount Delight Rd				
City	Allenstown	County Merrimack	State NH	Zip Code 03275	
Appraiser	Mark Correnti, SRA				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the OSF zoning requirements of 200' road frontage for a single family building lot, the subject lot cannot have more than two residential units by right. Consideration was given to the legal option of condexing the subject parcel as it would be physically possible, legally permissible, and could be done with minimal financial resources. However, it may not have resulted in the highest value as of the effective date of this assignment. Condexing would result in two units that could (and did) list for $149,900. Considering a sales to list price ratio of 95%, broker fees (for two units), and tax stamps (for two units) it would not be financially feasible to sell the units separately.

In analyzing the highest and best use of the subject property, it is in our opinion that the use of the site and improvements as a two family residence represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach was considered and developed in this report as the subject property has income potential. The income capitalization approach is a method of value that an investor considers when making a purchase decision based on rents collected relative to purchase price. In order to develop this approach a reliable Gross Rent Multiplier (GRM) needs to be developed. To obtain a GRM for this particular assignment, sales of two family residences that had both units rented at the time of sale were identified.

In the Allenstown/Pembroke market two family residences are typically owner occupied, which was the case of the purchase transaction for the subject property. For the transaction that represents the effective date of this assignment, the buyers had purchased the property to occupy for their own personal use. Because personal use and not income stream was the motivating factor for the purchasers of the subject property the relevancy of the income capitalization approach is diminished.

Additionally, the level, type of renovations, and remodeling done just prior to the sale would only appeal to an owner occupant. Although tenants appreciate updated rental units, rents rarely reflect any measure of preference for updating to the extent that the sales comparison approach does.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

Appraiser	Mark Correnti, SRA				

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

EXHIBIT A

A certain tract or parcel of land, with the buildings thereon, situated in the Town of Allenstown, County of Merrimack and State of New Hampshire, being Lot 4, as shown on a plan of land entitled "subdivision plan prepared for David Webster, RFD No. 7, 9 Munroe Drive, Hooksett, New Hampshire 03106, Mt. Delight Road, Allenstown, New Hampshire" , by Storch and Bard Engineers, Surveyors, planners and Environmental Consultants, dated October 3, 1986, approved by the Allenstown Planning Board on October 17, 1986, recorded at the Merrimack County Registry of Deeds as Plan No. 9212, to which plan reference may be made for a more particular description.

Subject to:

1. Any and all matters as shown on said Plan No.9212.

2. The easement to New Hampshire Electric Cooperative, Inc. and New England Telephone and Telegraph Company, dated December 12, 1991, recorded with said Deeds in Book 1877, Page 808.

3. The building setback restrictions, as shown on said Plan.

4. The obligations and conditions imposed on the "Builder" as recited in the deed recorded with said Deeds in Book 2787, Page 1963, if applicable.

5. The extent applicable thereto, the rights and easements conveyed to New Hampshire Electric Cooperative, Inc. and New England Telephone and Telegraph Company by a deed recorded with said Deeds in Book 1422, Page 985.

6. The rights and easements conveyed to Public Service Company of New Hampshire by a deed recorded with said Deed in Book 745, Page 329, which easement is also shown on the Plan as " P.S. Co. N.H. R.O.W.".

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 39 Haynes Rd
Deerfield, NH 03037

File No.: 11-011-082

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Sincerely,

Mark Correnti, SRA

Brian C Underwood, CRE

Client:	Devine, Millimet & Branch, P.A	Client File #:	11-011-082
Subject Property:	39 Haynes Rd, Deerfield, NH 03037	Appraisal File #:	11-011-082

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** June 13, 2013

Interest Appraised: ☒ Fee Simple ☐ Leasehold ☐ Other

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Deerfield, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Sales Comparison Approach:

☒ Is necessary for credible results and is developed in this analysis
☐ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Income Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ None ☐ Disclose Name(s) and contribution:

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Deerfield is a desirable bedroom community to the city of Manchester as well as more distant employment centers such as Concord and Portsmouth. The subject property's immediate neighborhood is comprised of homes that vary in age, style, and value. Shopping, schools, and municipal services are located close by and easily accessible via routes 43, 107, 101 and 202.

Single family residential market conditions in Deerfield were improving in the second quarter of 2013. The median sales price of a single family residence in Deerfield in the year prior to the effective date of this appraisal was $224,000 with 164 days on market. The year prior to this period had a median sales price of $218,900 with 148 days on market which is a 2.33% increase in residential values.

In the broader region the Federal Housing Finance Agency (FHFA) reports that in the second quarter of 2013 residential values increased 3.47% in New Hampshire.

Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: The subject lot is located in the Agricultural-Residential district which requires a minimum of a 3 acre lot and 200' road frontage for single family development. As the subject site has 6.76 acres and 202' of road frontage it is considered to be a legal and conforming lot of record.

The subject deed contains restrictive covenants that prevent any future sub-division or use of the subject lot for any other use than single family residential.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Additionally, the restrictive covenants contained in the deed prevent any other use of the subject property other than single family residential use.Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1				1			936
Level 2							3	1			936

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2 GLA: 1,872

Summarize Above Grade Improvements: Per MLS records the subject has full baths on both the first and second floors. Three bedrooms on on the second floor. The 12' x 16' sunroom is finished and insulated however lacks heat. As such it is considered an enclosed three season porch and not included in the GLA.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											936
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the basement area is unfinished with a two car built in garage.

Discuss physical depreciation and functional or external obsolescence: MLS interior photos show an updated kitchen, mason fireplace in living room, and a rear deck overlooking a private and natural setting. Floor plan typical for style and decade built. No external inadequacies noted.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling size, style, and room count all are typical for the decade built as well as what is predominant in the Deerfield market. Lot size is considered to be slightly larger than the typical 2-3 acre parcel in Deerfield.

Comments and reconciliation of the sales comparison approach: Three sales of residences similar in size as the subject are considered in the sales comparison approach. Adjustments are made for differences in surplus land and living area above and below grade where applicable. Comp 1 is most similar to the subject in terms of lot size, comp 2 most similar in GLA, and comp 3 most recent to the effective date of this assignment. All three sales were weighted equally within the sales comparison approach.

Indication of Value by Sales Comparison Approach	$ 239,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales that were external to the subject's immediate neighborhood and any external influence from an HVTL corridor.
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.
In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,872 s.f. Colonial on 6.76 acres. As indicated in the body of the report the site is located in the Residential-Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Agricultural-Residential district zoning requirements of 200' road frontage for a single family building lot, as well as the restrictions in the subject deed, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and

Lender	Devine, Millimet & Branch, P.A						

inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

ROCKINGHAM COUNTY
REGISTRY OF DEEDS

WARRANTY DEED

KNOW ALL BY THESE PRESENTS: That John S. Brandte, a married person, of 205 East Side Drive, Concord, County of Merrimack, New Hampshire 03301, for consideration paid grant(s) to Christopher A. Bartley and Mary Helen McDowell, single persons, of 208B Mount Delight Road, Deerfield, County of Rockingham, New Hampshire 03037, as joint tenants with rights of survivorship, with WARRANTY COVENANTS:

A certain tract or parcel of land, with the buildings thereon, situated on the westerly side of Haynes road, so-called, in the Town of Deerfield, County of Rockingham, State of New Hampshire, and shown as Lot 8-52-2 on a plan of land entitled "Subdivision Plan, Haynes Farm, Deerfield, N.H.", dated December 2, 1985, surveyed by William T. Wormell, L.L.S. and recorded in the Rockingham County Registry of Deeds as Plan D-14503, being more particularly bounded and described as follows:

Beginning at a stone bound to be set at the end of a stone wall on the westerly side of Haynes Road, so-called, said point being the easterly corner of the herein described premises;

Thence running South 33° 32'15" West, 201.72 feet, more or less, along said Haynes Road to a stone bound to be set;

Thence turning and running North 72° 42' 21" West, 1,153.34 feet, more or less, along the center of right of way of Public Service Company of New Hampshire, to an iron pin to be set;

Thence turning and running North 33° 26' 08" East, 334.85 feet, more or less, across said right of way and along Lot No. 8-52-11 of the above mentioned plan to an iron pin to be set;

Thence turning and running South 78° 43' 09" East, 315 feet, more or less, along land now or formerly of William and Roberta Simoneau to a 4" x 4" x 18" high granite bound with drill hole found in pile of stones;

Thence running South 76° 20' 04" East, 166.47 feet, more or less, along land now or formerly of Thomas Kamberis to an iron pin to be set;

Thence turning and running North 33° 26' 08" East, 178.55 feet, more or less, along Lot No. 8-52-1 of the above mentioned plan, to an iron pin to be set;

Unofficial Document

Thence turning and running South 72° 42' 21" East, 686.91 feet, more or less, along said Lot No. 8-52-1, to the point of beginning.

Said lot containing 6.76 acres, more or less. Said lot is subject to a ten (10') foot wide slope easement, as shown on said plan and subject to the right-of-way of Public Service Co. of New Hampshire as shown on said Plan.

This conveyance is subject to the following restrictions, which shall run with the land and pass with the deed:

1. No structure or building shall be erected, altered, place or permitted to remain on any lot other than a single family dwelling together with appurtenant private garage, barns or car shelters.

2. No structure of a temporary character, trailer, mobile home or modular home shall be allowed upon any lot or used at any time as a residence or otherwise.

3. No lot shall be further subdivided.

Meaning and intending to describe and convey the same premises conveyed to John S. Brandte by virtue of a deed from Linda M. Smith dated 11/30/2000 recorded in Book 3524, Page 238, with the Rockingham County Registry of Deeds.

The above described premises is not the homestead of the within Grantor nor his spouse.

Executed this 13th day of June, 2013.

John S. Brandte

Unofficial Document

STATE OF NEW HAMPSHIRE

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ Market Value Definition (below) ☐ Alternate Value Definition (attached)

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

AMIDON APPRAISAL COMPANY

Scope of Work and Methodology

Amidon Appraisal was retained by the McLane Law Firm on behalf of Eversource Energy ("Eversource") to carry out a real estate research assignment under the direction of Chalmers & Associates, LLC. The objective was to identify recent sales of residential properties that are crossed by, or abut, high voltage transmission lines ("HVTL") and carry out the research necessary to come to a conclusion as to whether the sale price in the transactions and/or the marketing period was influenced by the HVTL[1]. Two Case Studies were completed along a large HVTL corridor that comes down through western New Hampshire (referred to below as Corridor #1) and 6 Case Studies were completed along several smaller corridors in and around Portsmouth (referred to as Study Area #3).

Property Selection

Sale properties were selected from two areas—the southern- most portion of Corridor #1 and Study Area #3. Corridor #1 extends northerly from the Massachusetts border in Pelham, NH to the Vermont border in Monroe, NH.

The Corridor #1 selection area included the municipalities intersected by the existing HVTL corridor south of Bedford, NH. Potential case study properties in Bedford and points north had already been researched by another study group. Over the period 2013 to 2014 three sales were identified in the town of Windham and one sale was identified in the town of Hudson.

Study Area #3 was defined to include a 10-mile radius originating in Portsmouth, NH and excluding Maine municipalities. An attempt was made to identify the two most recent sales over the period 2013 to 2014 from each municipality. Of the 12 municipalities in this area, seven included sales that were abutting or encumbered by HVTL corridors. This resulted in two recent sales from each of the following municipalities Dover, Durham, Greenland, Madbury, Newington, New Market and Portsmouth.

When combined, the Corridor #1 search resulted in four sales and Study Area #3 search yielded 14 sales for a total of 18 sales that were further screened and described below.

After the sales were identified, municipal tax cards and tax maps were obtained. Sales were eliminated during this step if the HVTL Row did not encumber or abut the property of if the sale did not meet the "fair market sale" criterion; i.e. willing seller, willing buyer, knowledgeable, typically motivated and unrelated.

[1] The New Hampshire PUC defines power lines of 69 kV or above as transmission lines and lines less than 69 kV as distribution lines. This Report is focused on the potential effect of transmission lines on real estate markets but four of the 8 Case Studies involve properties that abut, or are crossed by, a ROW containing 34.5 kV lines. When speaking generally about the research, we will continue to use the acronym HVTL but when discussing the particular cases with the 34.5 kV lines, they will be referred to as distribution lines.

Collection of data

Data was collected through site visits, telephone surveys, email surveys, directly from municipal or state agencies and from independent qualified appraisal services. The vast majority of municipal assessment data was collected using the Internet and included tax cards, tax maps and recorded deed information. New Hampshire Registry of Deeds online services were utilized to review case study subject property deeds and lot surveys. Existing corridor data was provided by Eversource identifying specific corridor configurations including ROW width, structure height, structure type, and line voltage. Publicly available New Hampshire GIS Data was sourced for development of the case study GIS maps. Appraisal services of The Stanhope Group of Portsmouth, NH were also employed to determine the retrospective fair market value opinion of each of the case study properties absent the influence of HVTL.

Site visits were conducted on February 7 and February 11 of 2015. During the site visit, photographs were taken and an interview with the homeowner was attempted. Corridor visibility was classified into one of three categories:

- Clearly visible – Unobstructed view of the conductors and/or an unobstructed view of all of that portion of the structure to which the conductors are attached.
- Partially visible – Obstructed view of the conductors and/or an obstructed view of at least a portion of a structure but neither are clearly visible.
- Not visible – neither structures nor conductors are visible.

If the homeowner was available and willing to answer questions, they were asked about specific motivating factors influencing their decision to purchase the home.

Telephone and email surveys were conducted with both listing and selling agents involved in each sale. A two-phase questioning method was employed. The first email inquiry purposefully avoided discussing the presence of HVTL to see whether HVTL proximity would be volunteered as an issue in the transaction. The second follow-up call, or question set, specifically brought up presence of HVTL and asked whether the HVTL affected the sale price or the marketing period.

During the data collection process 10 of the 18 sales proved to be unsuitable for analysis, and included:

1. 5 Jan Lane, Newmarket – so unique in the market area that it could not be analyzed;
2. 153 Back Road, Dover – not considered a fair market sale;
3. 70 Monmouth Road, Windham – not considered a fair market sale;
4. 52 Gundalow Landing, Newington – not encumbered with or abutting HVTL;
5. 65 Grifiin Road, Portsmouth – not considered a fair market sale;
6. 233 Nimble Hill Road, Newington – so unique in the market area that it could not be analyzed;
7. 12 Cutts Road, Durham – not considered a fair market sale;
8. 138 Castle Road, Windham – not considered a fair market sale;
9. 2 Sarah Paul Hill Road, Madbury – not considered a fair market sale and,
10. 174 Madbury Road, Madbury – not considered a fair market sale.

Analysis

Physical Relationship of Transmission Lines to the Property & GIS map development: Each property was analyzed for four criteria – distance from the single-family residence to the HVTL corridor, distance from the single-family residence to the nearest HVTL structure, distance from the single-family residence to the most visible structure, and the size of the area encumbered by the HVTL ROW on the property. Due to the absence of digitized parcel data for the state of NH, parcels were drawn in the ArcGIS software program and georeferenced with the most recent aerial imagery and municipal tax maps. Aerial photogrammetry was provided through the UNH GRANIT data catalog. Each HVTL corridor was then drawn over the property by utilizing the width measurements provided by Eversource, from which the encumbered area was calculated.

Results and Conclusion

Conclusions in each Case Study were based on the facts of the sale, the physical relationship of the property to the HVTL, the interview evidence and independent appraisal evidence presented in appraisal reports by the Stanhope Group.

Exterior property inspections were used to illustrate the physical relationship of the improvements to the encumbering or abutting HVTL. The homeowner interview (if available) was utilized as a basis for understanding buyer motivation. Broker interviews illustrated perceived influence, if any, of HVTL on sales price or marketing period of the case studies, and appraisal evidence presented a retrospective value opinion of the subject's potential value, absent influence by HVTL. One of three possible outcomes was concluded:

- There was no effect of the HVTL on the Cast Study sale price or marketing period,
- There was a possible effect attributable to the HVTL on the Case Study sale price and/or marketing period, and
- There was an effect attributable to the HVTL on the Case Study sale price and or marketing period.

Eight Case studies follow. They are divided into seven sections – Property Identification & Description, Physical Relationship of Transmission Line sot the Property, Property Sale Data, Interview Data, Appraised value on Date of Sale Absent Influence of HVTL, Property Assessment Related to HVLT, and Conclusions.

CASE STUDY #A1

Property Identification & Description

Address: 9 Autumn Street, Windham
Rockingham County, New Hampshire

Identification: Tax Map 19, Lot B 922
Source Deed: Book 5524, Page 1843
Land Area: 2.1 AC

Improvements: Improvements include a two story, 1,800 SF single family residence with 3 bedrooms and 1.5 baths, constructed in 1983.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The ROW width is 350 feet and contains three HVTL. There are two 230 kV lines on lattice structures approximately 65 feet in height, and a 115 kV line on wood H-frame structures approximately 45 feet in height.

Number of Structures on Site: 1
ROW Encumbered Acreage: 1.02 AC
Distance from House to ROW: 93 ft
Distance to Nearest Structure: 321 ft
Distance to Most Visible Structure: 321 ft
HVTL Visibility from Yard: Partially visible

Property Sale Data

Sale Date: April 14, 2014
Conditions of Sale: Arm's length
Marketing Period: 189 Days on market
Average DOM for Town: 100 days
Marketing History: The property was listed on 8/12/13 for $299,000. It went under contract on February 17, 2014 and closed on April 14, 2014 for $287,000.

Sale Price: $287,000

Interview Data

Conducted by: Robert Ball

Transaction Interview: Based on the listing broker's comments, both marketing time and sale price were affected by the presence of HVTL corridor. Approximately 90% of all potential buyers commented on and had questions relative to the encumbrance. When asked for a point estimate, the agent did not quantify the perceived impact of the HVTL corridor.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject includes a 2.1 AC land parcel with a HVTL encumbering 1.02 AC or 48.6% of the western portion of the parcel. The improvements are 93 ft from the transmission corridor and the closest and most visible structure is 321 feet from the improvements.

Sale Data: Three sales were utilized in the valuation of the subject property. All sales are located in the Town of Windham within 1.5 miles of the subject. All of the comparables are of similar style and gross living area . Equal weight has been applied to all transactions. Subsequent to the adjustments, concluded values ranged from $318,900 to $324,200. Sales #1 (14 Heritage Hill Rd) and #2 (60 Castle Hill Rd) are considered superior in quality compared to the subject property.

Appraised Value: $320,000

Property Assessment Related to HVTL

Overview: The 2014 assessed values are $175,300 for land, $113,400 for the residence, and $6,200 for outbuildings, for a total of $294,900.

Assessment Card Notes: None

Conclusions

Improvements & Visibility

The subject site is improved with a single-family residence situated 93 feet from a HVTL corridor. The most visible structure is 321 feet from the residence, and approximately 48% of the subject parcel is encumbered by the HVTL transmission corridor. Due to the topography and naturally occurring vegetation screen, the closest structure is partially visible from the improvements.

Interview

An interview was conducted with the listing broker. Based on the broker's comments, the majority of potential buyers commented on, or otherwise indicated sensitivity to, the presence of the HVTL corridor. No point estimates were given to indicate any diminution in sales price or extension of marketing period although the broker indicated that the subject's transfer was negatively impacted both in terms of its selling price and marketing period.

Appraised Value / Sale Price / Marketing Period

The subject sold for $287,000 on April 14, 2014 which was 10.3% less than the appraised value on the same date, absent HVTL influence, of $320,000.

The subject was on the market for 189 days compared to the town average of 100 days.

Summary

It was the broker's opinion that the sales price and marketing period were negatively impacted by the subject's proximity to the HVTL. This was reinforced by the difference between the appraised value and the sale price as well as the above average days on market. Based on the above, it is concluded that the HVTL had an adverse affect on both the sale price and marketing period in this transaction.

Re: 9 Autumn Street
Windham, NH 03087
Stanhope Group File #150072

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of April 15, 2014 to be:

Three Hundred Twenty Thousand Dollars
$320,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

UNIFORM RESIDENTIAL APPRAISAL REPORT

Property Description **File No.** 150072

Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply	[ ] Vacant (over 5%)	375	20	Commercial				
Marketing time	[ ] Under 3 mos.	[X] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	20			

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area roads in west Windham with Route Rt. 128 to the west, Pelham-south, and Rt. 111 up to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of various style, average size homes on average size lots. The subject is convenient to Interstate 93 and Routes 38 & 111. Center for services and employment are the greater Nashua and Lowell, MA areas; Boston is a commutable distance.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Overall growth is relatively stable for the area; mid-range values are stabilized. Exposure time is typically 45-120 days assuming typical market parameters and when properties are priced at market. Sales and finance concessions may occur in this area and most loans are conventionally financed at market rates.

		Sq. Ft. @ $	=	0
			=	
Garage/Carport		Sq. Ft. @ $	=	0
Total Estimated Cost New			= $	0
Less Depreciation	Physical $0	Functional $0	External $0	= $ 0
Depreciated Value of Improvements			= $	0
"As-is" Value of Site Improvements			= $	
INDICATED VALUE BY COST APPROACH			= $	N/A

Est. Remaining Econ. Life: 0

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 60-63 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines.
Explanatory comments are an integral part of this report. See Text Addendum.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised 06/93).

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 04/15/2014 (retrospective)
(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $ 320,000

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct.

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximally productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous

substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

SUBJECT COMMENTS

Interior MLS Listing pictures showed the residence to be vacant. Property sold for asking after 6 days on market.

SALES COMPARISON COMMENTS

Condition adjustments to comparables one and two are at $10 per square foot, rounded, and reflect the reported recent, interior improvements and upgrades prior to the sale of these comparables.

Bathrooms are adjusted at $1000 per fixture.

GLA adjustment to comparable three is market derived at $25 per square foot, rounded. No adjustment given to comparables one or two, since the market does not react to differences this small.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket.

All comparables are considered as they are each a similar colonial style as the subject, and each enjoys similar market influences as the subject.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser has not performed appraisal services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

ADDENDUM

Borrower: N/A	File No.: 150072	
Property Address: 9 Autumn St	Case No.:	
City: Windham	State: NH	Zip: 03087
Lender: Chalmers & Associates, LLC		

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

ROCKINGHAM COUNTY
REGISTRY OF DEEDS

WARRANTY DEED

WENDY D'AMORE SALTER, *an unmarried individual,* of Windham Rockingham County, New Hampshire 03087, for consideration paid, grant to

MARC H. FIORENTINO and JENNIFER L. FIORENTINO, *husband and wife,* of 9 Autumn Street, Windham, Rockingham County, New Hampshire 03087, ***as joint tenants with rights of survivorship,***

with **WARRANTY COVENANTS,**

A certain tract or parcel of land with buildings thereon, if any situated in Windham, Rockingham County, New Hampshire, and being on shown as Lot 19-B-922 on a Plan of Land entitled, "West Windham Park Subdivision, Sheet 1 of 2 Scale 1"50', Hudco Development, Owner; Six K's Surveyor, plan being recorded with Rockingham County Registry of Deeds as Plan D-10268 and plan 10195, said lot being more particularly bounded and described as follows:

Beginning at a point at the Northerly corner of Lot 19- B903 and the Southwesterly side of Autumn Street; thence turning and running S 53-02-07 W along the Northwesterly line of Lot 19-B-903 a distance of One hundred and No/1000 (100.000) feet to a point as shown on said plan; thence running S 74-26-24 E again along Lot 19-B-903 a distance of One Hundred Twenty One and 455/100 (121.455) feet to a point as shown on said plan; thence running S 54-36-48 W again along Lot 19-B-903 a distance of One Hundred Seventy-Five and 027/1000 (175.027) feet to a point as shown on said plan; thence turning and running N 36-23-13 W along New England Power Company Easement a distance of Two Hundred Ninety-Three and 455/1000 (293.455) feet to a point as shown on said plan; thence turning and running N 65-36-20 E along the Southerly line of Lot 19-b-923 a distance of One Hundred Seventy-Eight and 904/1000 (178.904) feet to a point as shown on said plan; thence turning and running N 36-23-12 W along the Easterly line of Lot 19-B-923 a distance of approximately Five (5) feet to a point as shown on said plan; thence turning and running S 76-25-59 E along the Southwesterly line of Lot 19-B-921 a distance of Two Hundred Fourteen and 727/1000 (214.727) feet to a point as shown on said plan; thence running N 87-10-46 E again along Lot 19-b-921 a distance of line of Autumn

Unofficial Document

Street as shown on said plan; thence turning and running S 2-49-14 W along the Westerly line of Autumn Street a distance of Fifteen and 025/1000 (15.025) feet to a point as shown on said plan; thence running in a general Southeasterly direction by a curved line the dimensions of which are as follows: -34-15-35, R=221.279, L=132.313 to a point situated at the Northerly corner Lot 19-B-903 and the point of beginning.

Said Lot 19-B-922 contains 96,394 square feet of land, less 52,514 square feet of land under easement to New England Power Company for a net of 43,880 square feet of land, all according to said plan. The square footages recited in the deed from Six K's Development, Inc., to William Lahaye and Jane M. Lahaye dated July, 1983 and recorded in the Rockingham County Registry of Deeds at Book 2453, Page 1327 are erroneous.

Subject to a 350' easement to New England Power Company along the Westerly part of said Lot 19-B-922 as shown on said plan. Subject to a slope easement as shown on said plan. Subject to an easement to New England Telephone and Company recorded with Rockingham Country registry of Deeds, Book 2393, Page 1236. Subject to an easement to Granite State Electric Company recorded with the Rockingham County Registry of Deeds, Book 2393, Page 1280.

Subject to and with the benefit of easements, restrictions and rights of way of record insofar as they are in force and applicable.

For title see deed recorded with Rockingham County Registry of Deeds, Book 3346, Page 1535. The said William Calvin Salter having died on October 28, 2012 in Derry, NH. See Death Certificate recorded in the Rockingham County Registry of Deeds, Book 5399, Page 2398.

WITNESS my hand this 14th day of April, 2014.

Sale Date: 05/17/2013
Sale Price: $ 339,500

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY #A2

Property Identification & Description

Address: 57 Kienia Road, Hudson
Hillsborough County, New Hampshire

Identification: Tax Map 112, Lot 20
Source Deed: Book 8614, Page 0705
Land Area: 1.506 AC

Improvements: Improvements consist of a two story 2,128 SF 3 bedroom and 2.5 baths single family residence, constructed in 2000.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The ROW width is 566.5 feet (350 feet owned by NGrid, 216.5 feet owned by Eversource). There are two 230 kV lines on lattice structures approximately 65 feet in height, one 450 kV line on lattice structures approximately 75 feet in height and one 345 kV line on wood H frames, approximately 65 feet in height.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.18
Distance from House to ROW: 247 ft
Distance to Nearest Structure: 469 ft
Distance to Most Visible Structure: 469 ft
HVTL Visibility from Yard: Partially visible

Property Sale Data

Sale Date: October 16, 2013
Conditions of Sale: Arm's length
Marketing Period: 6 Days on market
Average DOM for Town: 53 days
Marketing History: The property was listed on September 18, 2013 for $284,900. It went under contract on September 24, 2013 and closed on October 16, 2013 for $284,900.

Sale Price: $284,900

Interview Data

Conducted by: Robert Ball

Transaction Interview: According to the listing agent, neither the marketing time nor sale price were affected by the HVTL corridor. Aerial imagery indicates that 12% of the subject site is encumbered by a HVTL corridor along its southwesterly lot line. Per the listing agent people concerned with the corridor never attended a showing and the encumbrance was never part of a conversation with potential buyers.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject includes a 1.506 AC land parcel with a HVTL corridor encumbering the western portion of the parcel. The improvements are set back from the road and located on the eastern half of the parcel. The HVTL corridor is well buffered from the improvements via the naturally occurring vegetative screening although the HVTL is very prominent as one enters the property from Kienia road.

Sale Data: Three sales were utilized in the valuation of the subject property. All sales are located in the Town of Hudson within 2.5 miles of the subject. All of the comparables are of similar style and gross living area, therefore equal weight was applied to all sales. Subsequent to the adjustments, concluded values ranged from $290,500 to $312,600.

Appraised Value: $295,000

Property Assessment Related to HVTL

Overview: The 2014 assessed values are $102,600 for land, $198,200 for the residence, and 8,700 for outbuildings, for a total of $309,500

Assessment Card Notes: None

Conclusions

Improvements & Visibility

Subject site includes a 1.5 AC lot improved with a two story single family residence located approximately 250 feet from the HVTL corridor. Based on a review of aerial imagery, the closest structure to the subject improvements is approximately 469 feet. Based on the site visit, visibility of the structure is limited by the naturally occurring vegetation on the subject site and location of the improvement although the HVTL are very prominent as one enters the property from Kienia Road.

Interview

Transaction interviews were conducted with the listing agent. The listing agent stated neither marketing time nor sales price was affected by the presence of the HVTL corridor. The broker also indicated that due to the high visibility of the HVTL corridor from Kienia Road, individuals interested in viewing the property who may have been sensitive to the presence of the corridor were deterred before initially viewing the property.

Appraised Value / Sale Price / Marketing Period

The subject sold for $284,900 on October 16, 2013, which was 3.55% less than an appraisal as of the same date, absent HVTL influence, of $295,000.

Marketing time for the subject was six days whereas the average days on market for residential properties within the town was 53 days.

Summary

Although the home is well screened from the HVTL and it was the brokers opinion that the sales price and marketing period were unaffected by the line the intrusive nature of the HVTL corridor accessing the property and the appraisal evidence suggests there may have been a small adverse impact on the sales price. Based on the above, it is concluded that there was a possible adverse impact on the sales price but no impact on the marketing period.

Re: 57 Kienia Road
Hudson, NH 03051
Stanhope Group File #150070

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of October 16, 2013 to be:

Two Hundred Ninety Five Thousand Dollars
$295,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

Property Description

Marketing time	[ ] Under 3 mos.	[X] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	30			

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area roads in northeast Hudson with Londonderry and Windham not far to the north and east with Robinson Rd to the west.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of various style, average size homes on average size lots. The subject is convenient to Interstate 93 and Routes 102 & 111. Center for services and employment are the greater Nashua and Lowell, MA areas; Boston is a commutable distance.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Overall growth is relatively stable for the area; mid-range values are stabilized. Exposure time is typically 45-120 days assuming typical market parameters and when properties are priced at market. Sales and finance concessions may occur in this area and most loans are conventionally financed at market rates.

COMMENTS

Additional features (special energy efficient items, etc.): Fireplace in living room; deck at rear of residence.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Overall condition of the subject property appears average. See Extraordinary Assumptions and Hypothetical Condition in the Text Addendum.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None

Valuation Section

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 150070

COST APPROACH

ESTIMATED SITE VALUE			= $	
ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:				
Dwelling 2,064 Sq. Ft. @ $			= $	0
Bsmt. 1032 Sq. Ft. @ $			=	0
			=	
Garage/Carport Sq. Ft. @ $			=	0
Total Estimated Cost New			= $	0
Less Physical	Functional	External	Est. Remaining Econ. Life:	
Depreciation $0	$0	$0	= $	0
Depreciated Value of Improvements			= $	0
"As-is" Value of Site Improvements			= $	
INDICATED VALUE BY COST APPROACH			= $	0

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 62-65 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines.
Explanatory comments are an integral part of this report. See Text Addendum for Extraordinary Assumption.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised 06/93).

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 10/16/2013 (retrospective) **(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $** 295,000

ADDENDUM

Borrower: N/A	File No.: 150070	
Property Address: 57 Kienia Rd	Case No.:	
City: Hudson	State: NH	Zip: 03051
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct.
The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximally productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification

of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

SUBJECT COMMENTS

Interior MLS Listing pictures showed the residence to be vacant. Property sold for asking after 6 days on market.

SALES COMPARISON COMMENTS

Condition adjustment to comparable one reflects its reported, recent kitchen upgrade and appliances. Condition adjustment to comparable two is at $6 per square foot, rounded, and reflect the reported improvements and updates to flooring, kitchen and cosmetic components throughout prior to the sale of this comparable.

Site area adjustments to comparables one and three are market derived and reflect the subject's larger lot size for greater utility and privacy.

Bathrooms are adjusted at $1000 per fixture.

GLA adjustments to comparables one and two are market derived at $25 per square foot, rounded. No adjustment given to comparable three, since the market does not react to differences this small.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket.

All comparables are considered as they are each a similar colonial style as the subject, and each enjoys similar market influences as the subject.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser has not performed appraisal services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

ADDENDUM

Borrower: N/A		File No.: 150070
Property Address: 57 Kienia Rd		Case No.:
City: Hudson	State: NH	Zip: 03051
Lender: Chalmers & Associates, LLC		

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

Sale Date: 04/25/2013
Sale Price: $ 276,500

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:

1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY #A3

Property Identification & Description

Address: 7 Pinewood Circle, Greenland
Rockingham County, New Hampshire

Identification: Tax Map R2, Lot 44
Source Deed: Book 5488, Page 0227
Land Area: 4.192 AC

Improvements: The subject site is improved with a 1,821 SF 3-bedroom, 2.5 bath single-family residence. The cape style improvement was built in 2013 with average to good quality construction.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The ROW width is 170 feet and includes one 345 kV line on steel H-frames approximately 75 feet in height.

Number of Structures on Site: 0
ROW Encumbered Acreage: 1.59
Distance from House to ROW: 114 ft
Distance to Nearest Structure: 309 ft
Distance to Most Visible Structure: 309 ft
HVTL Visibility from Yard: Partially visible. The home is well screened from the HVTL, with partial views through hardwood and softwood trees.

Property Sale Data

Sale Date: October 17, 2013
Conditions of Sale: Arm's length
Marketing Period: 30 Days on market
Average DOM for Town: 95 days
Marketing History: The property was listed on May 22, 2013 for $459,900 and went under contract on June 21, 2013 and closed on October 16, 2013 for $459,900.

Sale Price: $459,900

Interview Data

Conducted by: Robert Ball

Transaction Interview: According to the listing agent, the marketing time and sale price were not affected by the HVTL. The broker stated an estimated 60% - 70% of potential buyers did not consider the HVTL a detriment.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject is bisected by a 170 foot wide corridor, which encumbers 1.59 AC or 37.8% of the parcel. The subject is located in a large residential subdivision and was constructed in phase 2 of the subdivision's development. The subject improvement was constructed in 2013 utilizing energy star rated materials, typical for this marketplace.

Sale Data: Three sales were utilized in the valuation of the subject property. Sales #1 (20 Ridgecrest Drive) and #3 (50 Ridgecrest Drive), are located in the subject's subdivision, are considered new construction and sold within one year of the date of value. Most weight has been applied to sales #1 and #3, which are most like the subject in terms of location. Subsequent to the adjustments concluded values ranged from $453,500 to $471,000.

Appraised Value: $469,000

Property Assessment Related to HVTL

Overview: According to the municipal tax card, the 2014 assessed value was $230,600 for the improvements and $209,600 for the land for a total $440,200.

Assessment Card Notes: None

Conclusions

Improvements & Visibility

The subject's improvements are located approximately 114 feet from the HVTL corridor. Based on a review of aerial imagery, the closest structure to the subject improvements is approximately 309 feet and is well screened by naturally occurring vegetation.

Interview

The listing broker indicated there was no impact on sale price or marketing time attributable to the presence of the HVTL corridor.

Appraised Value / Sale Price / Marketing Period

The subject sold for $459,900 on October 17, 2013. This is 2.1% less than an appraisal as of the same date, absent HVTL influence, of $469,000.
The average days on market for competitive properties within the subject's municipality is 95, whereas the subject transferred within 30 days of its original listing.

Summary

Given the small difference between the sale price and the appraisal evidence, the physical relationship of the property to the corridor, the short marketing period and the comments of the broker, it is concluded that there was no impact of the HVTL on the subject's sale price or marketing period.

Re: 7 Pinewood Circle
Greenland, NH 03840
Stanhope Group File #150069

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of October 17, 2013 to be:

Four Hundred Sixty Nine Thousand Dollars
$469,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of new condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

UNIFORM RESIDENTIAL APPRAISAL REPORT

Property Description — File No. 150069

SUBJECT

Property Address 7 Pinewood Cir. | City Greenland | State NH | Zip Code 03840

NEIGHBORHOOD

					Predominant occupancy	Single family housing PRICE $ (000)	AGE (yrs)	Present land use %		Land use change
Location	[ ] Urban	[X] Suburban	[ ] Rural							
Built up	[X] Over 75%	[ ] 25-75%	[ ] Under 25%					One family	95%	[X] Not likely [ ] Likely
Growth rate	[ ] Rapid	[X] Stable	[ ] Slow		[X] Owner	275 Low	0	2-4 family	0%	[ ] In process
Property values	[ ] Increasing	[X] Stable	[ ] Declining		[ ] Tenant	550 High	5	Multi-family	0%	To: Not Applicable
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply		[X] Vacant (0-5%)	Predominant		Commercial	0%	
Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.		[ ] Vacant (over 5%)	Mix	Mix	(Vacant)	5%	

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Falls Way subdivision is the subject's immediate neighborhood. Falls Way was developed in two phases and is off Breakfast Hill Rd.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
No unfavorable factors noted within the neighborhood that affects marketability. Greenland center, municipal buildings, police and fire departments, public school are approximately 2 to 2.5 miles northwest.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time -- such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Based on sales used/considered for this report, the mean sales price vs list price ratio exceeds 100%; the mean marketing time is 2.3 months and the estimated exposure time is 120 days. Growth rate is stable due to ongoing construction of the remaining building lots.

PUD

Project Information for PUDs (If applicable) -- Is the developer/builder in control of the Home Owners' Association (HOA)? [ ] YES [ ] NO
Approximate total number of units in the subject project N/A . Approximate total number of units for sale in the subject project N/A .
Describe common elements and recreational facilities: Not Applicable

COMMENTS

Additional features (special energy efficient items, etc.): Standard energy efficient items.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: No curable/incurable physical deterioration since it is new construction. No functional or external obsolescence noted. Kitchen and baths being of good quality and new condition. The floor plan is acceptable in this submarket.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None

Valuation Section

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 150069

COST APPROACH

ESTIMATED SITE VALUE . . . . . = $

ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:

Dwelling _____ Sq. Ft. @ $_____ = $_____

_____ Sq. Ft. @ $_____ = _____

_____ = _____

Garage/Carport _____ Sq. Ft. @ $_____ = _____

Total Estimated Cost New . . . . . = $_____

Less Physical | Functional | External — Est. Remaining Econ. Life:

Depreciation _____ = $_____

Depreciated Value of Improvements . . . . . = $_____

"As-is" Value of Site Improvements . . . . . = $_____

INDICATED VALUE BY COST APPROACH . . . . . = $

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):

The Cost Approach is not developed due to the lack of an interior inspection.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Equal emphasis placed on sales #1 and #3 since they are comparable homes within Falls Way. Sale #2 was constructed by the same builder, however it is in a subdivision that is directly off Rte. 33 with typically lower lot values warranting an inferior location adjustment. Sale #1 was original constructed as a custom home with upgrades warranting a quality adjustment at $10 (rounded) per sq.ft. GLA. $25 (Rounded) per sq.ft. GLA adjustment is used when a significant difference was evident. Other differences are adjusted for based on anticipated and/or observed market reaction to such differences.

ITEM	SUBJECT	COMPARABLE NO. 1	COMPARABLE NO. 2	COMPARABLE NO. 3

Analysis of any current agreement of sale, option, or listing of the subject property and analysis of any prior sales of subject and comparables within one year of the date of appraisal:

The previous transfers of comparables #1 and #2 reflect vacant lot sales.

INDICATED VALUE BY SALES COMPARISON APPROACH . . . . . $ 469,000

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ N/A /Mo. x Gross Rent Multiplier 0.00 = $ 0

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Extraordinary Assumptions: Good quality and new condition kitchen and baths; that the improvements are in similar condition on 10/17/2013 as viewed on 01/26/2015. Extraordinary Assumption: No adverse easements, encroachments and/or HVTL effecting value.

Final Reconciliation: Emphasis has been placed on the Sales Comparison Analysis since it best reflects the market. The Cost Approach is not developed due to the lack of an inteior inspection. The Income Approach is not developed due to the lack of pertinent rental data of single family homes.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised 06/93).

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 10/17/2013 **(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $** 469,000

City: Greenland	State: NH	Zip: 03840
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct.

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximally productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

ADDENDUM

Borrower: N/A	File No.: 150069	
Property Address: 7 Pinewood Cir.	Case No.:	
City: Greenland	State: NH	Zip: 03840
Lender: Chalmers & Associates, LLC		

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of new condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by L. Larocque, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser has not performed appraisal services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

WARRANTY DEED

2013 OCT 17 AM 11:50

Chinburg Builders, Inc., a New Hampshire corporation of 3 Penstock Way, Newmarket, New Hampshire 03857

for consideration paid,

grants to **Charles R. Robidoux and Kelly E. Robidoux, husband and wife**, of 15 K Street, Hampton, NH 03842, as joint tenants with rights of survivorship,

with **WARRANTY COVENANTS.**

That certain parcel of land situated at 07 **Pinewood Circle**, Greenland, Rockingham County, New Hampshire, being shown as Lot 30 on a plan of land entitled "Falls Way II Subdivision for Endicott General Partnership c/o Newbury North Development, September Drive, Greenland, New Hampshire", drawn by Doucet Survey, Inc., dated February 25, 2002, scale 1" = 100 feet, recorded with the Rockingham County Registry of Deeds as Plan No. D-30539 ("Plan"). (Lot 30 is shown on Town of Greenland Tax Map R-2 as Lot 44.)

05370

Said Lot contains 182,608 square feet (4.192 acres) of land, more or less, as shown on the Plan.

There is specifically reserved to the Grantor the fee interest in all the streets and ways shown on Plan No. D-30538 and Plan No. D-30539. There is conveyed herewith the right to pass and re-pass and use the streets as shown on the Plans for all purposes for which streets and ways are commonly used in the Town of Greenland in common with all others entitled thereto.

ROCKINGHAM COUNTY
REGISTRY OF DEEDS

Subject to and with the benefit of that certain declaration of Protective Covenants for Falls Way Subdivision, Greenland, New Hampshire recorded at Book 4916, Page 1195 and Protective Covenants for Falls Way II Subdivision dated April 28, 2010, recorded at Book 5107, Page 206 and amendment thereto dated June 14, 2011, recorded at Book 5222, Page 211.

Subject to the Department of Environmental Services Wetlands and Non-Site Specific Permit 2002-01268 recorded at Book 5083, Page 2156 ("DES Permit"). In compliance with the DES Permit, Land Resources Preservation condition number 4, it is noted that the conservation

easement deed recorded at Book 4874, Page 791 as affected by amendment recorded at Book 4928, Page 817 shall run with the land described in the easement and both existing and future property owners shall be subject to the easement.

Subject to and with the benefit of the Declaration of Falls Way Greenland Homeowners' Association, Greenland, New Hampshire dated May 13, 2008, recorded with the Rockingham County Registry of Deeds at Book 4919, Page 1336, as affected by First Amendment recorded at Book 4928, Page 820. By acceptance and recording of this deed, grantee(s) as and for so long as they remain owner(s) of the lot described in this deed are members of the Falls Way Greenland Homeowners' Association.

There is reserved unto the grantor Drainage Easement 20 as shown on the Plan.

A portion of said Lot is within a Wetland Conservation Easement Area and an Upland Conservation Easement Area. That area is subject to a Conservation Easement Deed date December 27, 2007 and recorded at Book 4874, Page 791, as affected by First Amendment to Conservation Easement dated April 29, 2008 and recorded at Book 4928, Page 817.

A portion of said Lot is subject to the Voluntary Deed Restriction recorded at Book 4919, Page 1343.

A portion of said Lot is subject to an Electric Easement recorded at Book 2328, Page 1646.

Being the same premises described in deed to Chinburg Builders, Inc. dated August 16, 2013, recorded with the Rockingham County Registry of Deeds at Book 5471 Page 0939.

This is not homestead property.

Signed as a sealed instrument this 16th day of OCTOBER, 2013.

Chinburg Builders, Inc.

By: Jan L. Chinburg
Its: Vice President

STATE OF NEW HAMPSHIRE

Rockingham, ss 10/16, 2013

Then personally appeared the above named Jan L. Chinburg, Vice President of Chinburg Builders, Inc. and acknowledged the foregoing to be his free act and deed, before me.

COMPARABLE SALE #3

50 Ridgecrest Dr.
Greenland, NH 03840
Sale Date: 10/01/2012
Sale Price: $ 459,000

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:

1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY #A4

Property Identification & Description

Address: 85 Ridgecrest Drive, Greenland
Rockingham County, New Hampshire

Identification: Tax Map R2, Lot 29
Source Deed: Book 5383, Page 2011
Land Area: 1.91 AC

Improvements: The subject site is improved with a 1,872 SF 3-Bedroom, 2.5 bath single-family residence. The colonial style improvement was built in 2012 and includes average to good quality construction.

Physical Relationship of Lines to the Property

Transmission Corridor: The ROW width is 135 feet and contains three distribution lines. The line voltages are 34.5 kV and the structures are wood poles approximately 30 feet in height.

Number of Structures on Site: 3
ROW Encumbered Acreage: 0.45
Distance from House to ROW: 0 ft
Distance to Nearest Structure: 71 ft
Distance to Most Visible Structure: 71 ft
Visibility from Yard: Clearly visible. Three 35-foot structures are within 100 feet of the subject improvements and in full view.

Property Sale Data

Sale Date: November 30, 2012
Conditions of Sale: Arm's length
Marketing Period: 117 Days on market
Average DOM for Town: 93 days
Marketing History: It was listed on May 13, 2012 for $384,900, went under contract on September 7, 2012, closing on November 30, 2012 for $391,935.

Sale Price: $391,935

Interview Data

Conducted by: Robert Ball

Transaction Interview: According to the listing agent, the marketing time and sale price were not affected by the encumbering corridor. During the listing period an estimated 60% - 70% of the potential buyers did not consider the corridor a detriment.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject property is located in a large subdivision and was constructed in 2012 during phase 2 of the subdivision development. The improvement was constructed utilizing energy star rated materials which are typical for this marketplace.

Sale Data: Three sales were utilized in the valuation of the subject property. All of the comparable sales are located in the subject's subdivision along Ridgecrest Drive, are considered new construction and sold within six months of the date of value. Equal weight has been applied to each sale. Subsequent to the adjustments, concluded values ranged from $423,094 - $435,350.

Appraised Value: $428,000

Property Assessment Related to the Lines

Overview: According to the municipal tax card, the 2011 assessed value was $103,400, applied to the land only.

Assessment Card Notes: None

Conclusions

Improvements & Visibility

The subject includes a 1.9 AC land parcel, of which 25.7% is encumbered with a corridor along its western boundary. Based on aerial imagery a portion of the subject property improvements actually appear to be within the ROW. Based on the site visit the closest structure is clearly visible from the subject property yard and improvements.

Interview

The listing broker indicated no impact on sale price or marketing period was observed attributable to the Lines.

Appraised Value / Sale Price / Marketing Period

The subject most recently transferred for $391,935 on November 30, 2012. An appraisal as of the same date, resulted in a value of $428,000 or 8.4% above this most recent sale price. The $36,000 difference is consistent with lot sale data for the subject and the three comparables. The subject lot was discounted $15,000, $35,000 and $30,000, respectively, relative to the three comparable properties.

The average days on market for competitive properties within the subject's municipality was 93 days whereas the subject sold within 117 days of its listing.

Summary

Despite the broker's opinion, the combination of physical proximity, clear structure visibility, significant encumbrance and the appraisal evidence, it is concluded there was an adverse effect on sales price but no effect on marketing period due to the Lines.

Re: 85 Ridgecrest Drive
Greenland, NH 03840
Stanhope Group File #150068

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of December 03, 2012 to be:

Four Hundred Twenty Eight Thousand Dollars
$428,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of new condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

N/A

UNIFORM RESIDENTIAL APPRAISAL REPORT

Property Description — File No. 150068

SUBJECT

Property Address 85 Ridgecrest Dr. | City Greenland | State NH | Zip Code 03840

Neighborhood or Project Name Falls Way | Map Reference 40484 | Census Tract 1075.00
Sale Price $ N/A | Date of Sale N/A | Description and $ amount of loan charges/concessions to be paid by seller Not Applicable
Lender/Client Chalmers & Associates, LLC | Address 616 Park Ln., Billings, MT 59102
Appraiser Peter E Stanhope | Address 500 Market St. Unit 1C, Portsmouth, NH 03801

NEIGHBORHOOD

Location	[ ] Urban	[X] Suburban	[ ] Rural	**Predominant occupancy**	**Single family housing** PRICE $ (000)	AGE (yrs)	**Present land use %**		**Land use change**	
Built up	[X] Over 75%	[ ] 25-75%	[ ] Under 25%	[X] Owner	275 Low	0	One family	95%	[X] Not likely	[ ] Likely
Growth rate	[ ] Rapid	[X] Stable	[ ] Slow	[ ] Tenant	550 High	5	2-4 family	0%	[ ] In process	
Property values	[ ] Increasing	[X] Stable	[ ] Declining	[X] Vacant (0-5%)	Predominant		Multi-family	0%	To: Not Applicable	
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply	[ ] Vacant (over 5%)	Mix	Mix	Commercial	0%		
Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	5%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Falls Way subdivision is the subject's immediate neighborhood. Falls Way was developed in two phases and is off Breakfast Hill Rd.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Hypothetical Condition: The low tension power lines that cross the subject's lot have not been taken into account. No unfavorable factors noted within the neighborhood that affects marketability. Greenland center, municipal buildings, police and fire departments, public school are approximately 2 to 2.5 miles northwest.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time -- such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Based on sales used/considered for this report, the mean sales price vs list price ratio exceeds 100%; the mean marketing time is less than one month and the estimated exposure time is 140 days. Growth rate is stable due to ongoing construction of the remaining building lots.

PUD

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Equal emphasis placed the sales in estimating Market Value. Each of the sales had out-of-pocket upgrades that are reflected in the purchase price warranting adjusting under quality. These type of upgrades are not reflected by their individual deed stamps. This is typical practice of this builder and not considered adverse. $25 (Rounded) per sq.ft. GLA adjustment is used when a significant difference was evident.

Analysis of any current agreement of sale, option, or listing of the subject property and analysis of any prior sales of subject and comparables within one year of the date of appraisal:
The previous transfers of the subject and comparables reflect vacant lot sales.

INDICATED VALUE BY SALES COMPARISON APPROACH . . . . . $ 428,000

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ N/A /Mo. x Gross Rent Multiplier 0.00 = $ 0

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Extraordinary Assumptions: Good quality and new condition kitchen and baths; that the improvements are in similar condition on 12/03/2012 as viewed on 01/26/2015. Extraordinary Assumption: No adverse easements, encroachments or effects from low/high tension power lines (HVTL).

Final Reconciliation: Emphasis has been placed on the Sales Comparison Analysis since it best reflects the market. The Cost Approach is not developed due to the lack of an interior inspection. The Income Approach is not developed due to the lack of pertinent rental data of single family homes.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised 06/93).

(WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 12/03/2012

(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $ 428,000

Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct.

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximally productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

ADDENDUM

Borrower: N/A	File No.: 150068	
Property Address: 85 Ridgecrest Dr.	Case No.: N/A	
City: Greenland	State: NH	Zip: 03840
Lender: Chalmers & Associates, LLC		

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of new condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by L. Larocque, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser has not performed appraisal services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

ROCKINGHAM COUNTY
REGISTRY OF DEEDS

(Space Above this Line Reserved for Register of Deeds)

WARRANTY DEED

Chinburg Builders, Inc., a New Hampshire corporation of 8 Newmarket Road, Suite 2, Durham, New Hampshire 03824

for consideration paid,

grants to **Jodi A. Siviski, a single person,** of 31 Barrett Farm Drive, Greenland, New Hampshire 03840,

with **WARRANTY COVENANTS,**

That certain parcel of land with buildings and improvements thereon, situated at **85 Ridgecrest Drive**, Greenland, Rockingham County, New Hampshire, being shown as **Lot 15** on a plan of land entitled "Falls Way II Subdivision for Endicott General Partnership c/o Newbury North Development, September Drive, Greenland, New Hampshire", drawn by Doucet Survey, Inc., dated February 25, 2002, scale 1" = 100 feet, recorded with the Rockingham County Registry of Deeds as Plan No. D-30539 ("Plan"). (**Lot 15** is shown on Town of Greenland Tax Map R-2 as Lot 29.)

Said Lot contains 83,199 square feet (1.910 acres) of land, more or less, as shown on the Plan.

There is specifically reserved to the Grantor the fee interest in all the streets and ways shown on Plan No. D-30538 and Plan No. D-30539. There is conveyed herewith the right to pass and re-pass and use the streets as shown on the Plans for all purposes for which streets and ways are commonly used in the Town of Greenland in common with all others entitled thereto.

Subject to and with the benefit of that certain Declaration of Protective Covenants for Falls Way Subdivision, Greenland, New Hampshire recorded at Book 4916, Page 1195.

Subject to and with the benefit of that certain declaration of Protective Covenants for Falls Way Subdivision II, Greenland, New Hampshire recorded at Book 5107, Page 206.

Subject to the Department of Environmental Services Wetlands and Non-Site Specific Permit 2002-01268 recorded at Book 5083, Page 2156 ("DES Permit"). In compliance with the DES Permit, Land Resources Preservation condition number 4, it is noted that the conservation easement deed recorded at Book 4874, Page 791 as affected by amendment recorded at Book 4928, Page 817 shall run with the land described in the easement and both existing and future property owners shall be subject to the easement.

Subject to and with the benefit of the Declaration of Falls Way Greenland Homeowners' Association, Greenland, New Hampshire dated May 13, 2008, recorded with the Rockingham County Registry of Deeds at Book 4919, Page 1336, as affected by First Amendment recorded at Book 4928, Page 820. By acceptance and recording of this deed, grantee(s) as and for so long as they remain owner(s) of the lot described in this deed are members of the Falls Way Greenland Homeowners' Association.

A portion of said Lot is subject to a 135' wide electric easement as shown on the Plan.

There is reserved unto the grantor a drainage easement over, under, across and through that portion of Lot 15 designated as "DE 14" on Plan D-30539.

There is conveyed herewith to be appurtenant to and run with the title to Lot 15 a Protective Well Radius Easement over, under and through that portion of Lot 16 within the Protective Well Radius Easement for Lot 15 as shown on Plan D-35196 and subject to the terms of the Voluntary Protective Well Radius Easements recorded at Book 4919, Page 1340.

A portion of said Lot is within a Wetland Conservation Easement Area. That area is subject to a Conservation Easement Deed dated December 27, 2007, and recorded at Book 4874, Page 791, as affected by First Amendment to Conservation Easement dated April 29, 2008, and recorded at Book 4928, Page 817.

A portion of said Lot is subject to the Voluntary Deed Restriction recorded at Book 4919, Page 1343.

Being the same premises described in deed to Chinburg Builders, Inc. dated October 23, 2012, recorded with the Rockingham County Registry of Deeds at Book 5370, Page 1411.

This is not homestead property.

Signed as a sealed instrument this 30th day of November, 2012.

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:

1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY #A5

Property Identification & Description

Address:	146 Durham Point Road, Durham Strafford County, New Hampshire
Identification:	Tax Map 16, Lot 3/1
Source Deed:	4238/893
Land Area:	13.4 AC
Improvements:	The subject is improved with 4,187 SF one and one-half story single family residence constructed in 1989.

Physical Relationship of Lines to the Property

Transmission Corridor:	The ROW is 100 feet wide with one 34.5 kV line on 34 foot poles.
Number of Structures on Site:	1
ROW Encumbered Acreage:	0.63
Distance from House to ROW:	243 ft
Distance to Nearest Structure:	290 ft
Distance to Most Visible Structure:	290 ft
Visibility from Yard:	Partially visible. Due to the naturally occurring vegetative screening, which consists of a mixture of hardwood and softwood tree species, the most visible structure from the improvements can barely be seen through the trees in the winter.

Property Sale Data

Sale Date:	August 28, 2014
Conditions of Sale:	Arm's length
Marketing Period:	71 Days on market
Average DOM for Town:	87 days
Marketing History:	The property was listed on May 19, 2014 for $689,000. It went under contract on July 29, 2014 and closed on August 28, 2014 for $635,000.
Sale Price:	$635,000

Interview Data

Conducted by: Robert Ball

Transaction Interview: According to the listing broker, the corridor encumbering the subject did not affect the marketing time or sale price of the subject's most recent transfer. The listing broker indicated a few potential buyers requested to walk to the corridor, with the majority commenting on the significant vegetative buffer.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The property is accessed by private ROW and improved with a 4,187 SF single family residence built in 1989. The site is located southeast of the downtown area between the Great Bay and the city center. The subject's 13.4 AC lot is crossed by a 100-foot corridor. The corridor encumbers 0.63 AC along the subject's southerly lot line or 4.70% of the parcel. The improvements are 243 feet from the corridor and the closest structure within the corridor is 290 feet from the improvements.

Sale Data: Three sales were utilized in the valuation of the subject property. All of the comparable sales are located in the Town of Durham, within 3.5 miles of the subject. Sales #1 and #3 are located within 0.4 miles. Sale #1 includes owned water frontage and Sale #3 includes water views. Most weight has been applied to Sale #1 which is most like the subject in terms of construction and date of sale.

Appraised Value: $635,000

Property Assessment Related to the Lines

Overview: The subject's assessed values are $64,758 for land and $419,600 for building for a total of $484,358.

Assessment Card Notes: None

Conclusions

Improvements & Visibility

The subject parcel is a 13.4 AC lot of which 4.70% is encumbered by a utility corridor along the subject's southerly lot line. The structures can only be seen in winter through the trees.

Interview

It was the listing agents opinion that the Lines had no adverse impact on the sales price or marketing period.

Appraised Value / Sale Price / Marketing Period

The subject sold for $635,000 on August 28, 2014. An appraisal as of the same date, absent of the Lines influence, resulted in a value opinion of $635,000.

The average days on market for competitive properties within the subject municipality was 87 days whereas the subject sold within 71 days of its listing.

Summary

Based on the above it is concluded there is no impact on sales price or marketing period due to the Lines.

Re: 146 Durham Point Road
Durham, NH 03824
Stanhope Group File #150059

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of August 29, 2014 to be:

Six Hundred Thirty Five Thousand Dollars
$635,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

UNIFORM RESIDENTIAL APPRAISAL REPORT

Property Description — File No. 150059

SUBJECT

Property Address 146 Durham Point Road | City Durham | State NH | Zip Code 03824-3133

NEIGHBORHOOD

					Predominant occupancy	Single family housing PRICE $ (000) / AGE (yrs)	Present land use %	Land use change
Location	[ ] Urban	[X] Suburban	[ ] Rural					
Built up	[ ] Over 75%	[X] 25-75%	[ ] Under 25%					
Growth rate	[ ] Rapid	[X] Stable	[ ] Slow		[X] Owner	200 Low / 0	One family 60%	[ ] Not likely [ ] Likely
Property values	[ ] Increasing	[X] Stable	[ ] Declining		[ ] Tenant	2000 High / 300	2-4 family	[ ] In process
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply		[X] Vacant (0-5%)	Predominant	Multi-family	To:
Marketing time	[ ] Under 3 mos.	[X] 3-6 mos.	[ ] Over 6 mos.		[ ] Vacant (over 5%)	350 / 40	Commercial	
							(Vacant) 40%	

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Neighborhood is residential and bounded by the Oyster River to the north, Route 108 to the west, the town line to the south and Great Bay to the east.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Durham is popular with buyers for its well regarded schools and its suburban setting located in close proximity of commuter routes and employment centers in Portsmouth, Dover and Rochester. The University of NH is located within 10 minute drive. Taxes are among the highest in the state due to the well regarded Oyster River School District but, has a negative affect on values due to the cost of ownership.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time -- such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Average marketing time reported in local MLS for Durham sales during prior 12 month period is 124 days with an increase to 163 days reported for prior 90 day period. Values in subject's submarket estimated to be stable from the beginning of the first quarter 2012 through the present. Exposure time estimated at 3-6 months.

COMMENTS

Additional features (special energy efficient items, etc.): Oak floors, carpet in bedrooms, vinyl and tile in baths. 2 Stone fireplaces. Solid surface counters in kitchen. Exposed timber construction in LR and kitchen area.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical curable/incurable physical deterioration is assumed (NO ON SITE INSPECTION PERFORMED FOR THIS ASSIGNMENT. See EXTRAORDINARY ASSUMPTION in addendum) unless reported otherwise in sources used for this analysis. No functional obsolescence known or considered. No external obsolescence.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None

Depreciation _____ = $ _____

Depreciated Value of Improvements . . . . . = $ _____

"As-is" Value of Site Improvements . . . . . = $ _____

INDICATED VALUE BY COST APPROACH . . . . . = $

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but, not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 60 years.

INDICATED VALUE BY SALES COMPARISON APPROACH . . . . . $ 635,000

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ _____ /Mo. x Gross Rent Multiplier 0 = $ 0

RECONCILIATION

This appraisal is made ☒ "as is" ☐ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: See explanatory comments for HYPOTHETICAL CONDITIONS AND EXTRAORDINARY ASSUMPTIONS. Note: This is a retrospective appraisal with a DOV as indicated below and a DOI (Date of Drive-By Inspection) of 01/26/2015.

Final Reconciliation: The Cost Approach has been considered but, not developed due to age of improvements. The Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised _____).

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 08/29/2014

(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $ 635,000

ADDENDUM

Borrower: N/A	File No.: 150059	
Property Address: 146 Durham Point Road	Case No.:	
City: Durham	State: NH	Zip: 03824-3133
Lender: Chalmers and Associates, LLC		

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct.

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximaly productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous

substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

COMMENTS ON SALES ANALYSIS:

An adjustment is made under site that estimates the influence on value of variations in lot size affecting privacy and utility.

An adjustment is made under view to Comp 1 for its frontage on the Lamprey River which is a privacy factor and a minor recreational amenity but, not a view amenity. Comp 3 is adjusted for its marsh and minor water views and accessibility to the Oyster River and Great Bay.

An adjustment is made under quality to Comp 2 for it lack of upgrades. The broker reports very marginal quality that was inconsistent with the size and location of the house.

An adjustment is made under age to Comps 1 and 2 for greater deterioration to long-lived components at a nominal $5/SF, rounded. The broker for Comp 2 reported original 1990 throughout with exterior rot and "punky" trim boards noted.

An adjustment is made under condition to Comps 1 and 2 for greater deterioration to cosmetic elements. The subject is cosmetically refreshed throughout with newer flooring and paint and updating to kitchen and some bath fixtures. The broker for Comp 2 reports the house was "very heavily lived in".

Variations in gross living area are adjusted at $30 per square foot, rounded, where a difference exceeds 10% of the subject's GLA.

Bath, basement finish, fireplace, hearth, garage, deck, porch and pool adjustments are made based on market extraction, paired sales comparison or observed/ anticipated market behavior. NOTE: Comp 3 is adjusted for a finished area over the garage that is used as an in-law suite at $35 per square foot which gives some consideration to its added contribution of a bath and a kitchenette.

In the final reconciliation of the sales analysis consideration is given to all three Comps with more weighting to Comp 1 for its similar sales date and its similar timberframe construction.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Jeffrey Wood, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser's firm, The Stanhope Group, has performed appraisal services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of

Borrower: N/A	File No.: 150059

Lender: Chalmers and Associates, LLC		

associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

Register of Deeds, Strafford County

Confirmatory Warranty Deed

KNOW ALL PERONS BY THESE PRESENTS, that Jillangelique Moxcey, a single person, of Tuftonboro, Carroll County, State of New Hampshire, for consideration paid, grants to Jochen Meissner and Marie-Francoise Meissner, husband and wife, as joint tenants with rights of survivorship, of ***146 Durham Point Road, Durham, NH 03824***, with warranty covenants, the following property:

A certain lot or tract of land, with buildings thereon, if any, situated on the southerly side of Durham Point Road in Durham, Strafford County, New Hampshire, being depicted as Tax Map 16 Lot 3-1 on a plan of land entitled, "Lot Line Adjustment for Jillangelique Moxcey on Durham Point Road in Durham, N.H." by Bruce L. Pohopek dated September 16, 1996, and recorded in the Strafford County Registry of Deeds as Plan 41A-87;

Together with the benefit and burden of all covenants, conditions, restrictions, easements and other matters depicted on said plan;

Subject to and with the benefit of all covenants, conditions, restrictions, easements and other matters affecting the said property of record.

This confirmatory deed is given for the purpose of correcting the plan reference and clarifying the description of the property conveyed in that certain deed from the above-named grantor to the above-named grantees recorded at Book 1971, Page 367, in the Strafford County Registry of Deeds.

This is not homestead property.

Sale Date: 09/2013
Sale Price: $ 785,000

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY #A6

Property Identification & Description

Address: 175 Odiorne Point Road, Portsmouth
Rockingham County, New Hampshire

Identification: Tax Map 224, Lot 10/031
Source Deed: Book 5373, Page 1786
Land Area: 1.59 AC

Improvements: The subject is improved with a 4,120 SF single-family residence built in 2002.

Physical Relationship of Lines to the Property

Transmission Corridor: The ROW width is 100 feet and contains one distribution line. The line voltage is 34.5 kV and the structures are wood poles approximately 35 feet in height.

Number of Structures on Site: 1
ROW Encumbered Acreage: 0.45
Distance from House to ROW: 175 ft
Distance to Nearest Structure: 234 ft
Distance to Most Visible Structure: 234 ft
Visibility from Yard: Partially visible. Due to vegetation, the corridor structures are difficult to see from the improvements.

Property Sale Data

Sale Date: October 31, 2012
Conditions of Sale: Arm's length
Marketing Period: 319 days
Average DOM for Town: 63 days
Marketing History: The subject was listed on September 12, 2012 for $1,175,000. It went under contract on July 27, 2012 and closed on October 31, 2012 for $1,090,000.

Sale Price: $1,090,000

Interview Data

Conducted by: Robert Ball

Transaction Interview: According to the Listing Agent, marketing time and sale price were not affected by the corridor due to the natural buffer.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject property is located in an above average subdivision on a 1.59 AC lot and improved with a 4,120 SF residence.

Sale Data: Three sales were utilized in the valuation of the subject property. Sales #1 (260 Odiorne Point Road) and #2 (260 Gosport Road) are both located in the City of Portsmouth, within two tenths of a mile from the subject. Sale #3 (5 Whitehorse Dr, Rye) is located in the seaside community of Rye, NH. Sale #2 sold subsequent to the date of value. Subsequent to adjustments, the concluded values ranged from $1,124,500 to $1,150,000.

Appraised Value: $1,140,000

Property Assessment Related to the Line

Overview: According to the municipal tax card, the 2012 assessed value was $267,200 for the land, $629,400 for the improvement for a total assessed value of $896,600.

Assessment Card Notes: None

Conclusions

Improvements & Visibility

The subject includes a 1.59 AC land parcel, of which 28.3% is encumbered with a corridor along its southerly boundary. The subject improvements are 175 ft from the transmission corridor. Although HVLT structures are within 250 feet of the subject improvements, they are difficult to see given the mature vegetation.

Interview

Based on the listing agents comments, the subject properties sale price or marketing period were not impacted by the Line.

Appraised Value / Sale Price / Marketing Period

The subject sold for $1,090,000 on October 31, 2012 which was 4.39% less than an appraisal as of the same date, of $1,140,000.

The average days on market for competitive properties within the subject's municipality was 63 days whereas the subject sold within 319 days of its listing.

Summary

Despite the broker's comments and the fact that the structures are well screened from the improvements, the appraisal evidence suggests that there may have been some adverse effect on sales price due to the corridor. Likewise, the extended marketing period may have been influenced by the corridor. Based on the above, it is concluded that there was a possible adverse effect on both sales price and marketing period due to the Line.

Re: 175 Odiorne Point Road
Portsmouth, NH 03801
Stanhope Group File #150066

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of November 01, 2012 to be:

One Million One Hundred Forty Thousand Dollars
$1,140,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 150066

SUBJECT

Property Address 175 Odiorne Point Road | City Portsmouth | State NH | Zip Code 03801

Neighborhood or Project Name Tuckers Cove | Map Reference 40484 | Census Tract 1072.00
Sale Price $ 1,090,000 | Date of Sale 11/01/2012 | Description and $ amount of loan charges/concessions to be paid by seller N/A
Lender/Client Chalmers and Associates, LLC | Address 616 Park Lane, Billings, MT 59102
Appraiser Peter E Stanhope | Address 500 Market Street, Unit 1C, Portsmouth, NH 03801

NEIGHBORHOOD

					Predominant occupancy	Single family housing PRICE $ (000)	AGE (yrs)	Present land use %		Land use change
Location	[ ] Urban	[X] Suburban	[ ] Rural							
Built up	[ ] Over 75%	[X] 25-75%	[ ] Under 25%					One family	50%	[ ] Not likely [ ] Likely
Growth rate	[ ] Rapid	[X] Stable	[ ] Slow		[X] Owner	250 Low	0	2-4 family	5%	[ ] In process
Property values	[ ] Increasing	[X] Stable	[ ] Declining		[ ] Tenant	1500 High	200	Multi-family	5%	To:
Demand/supply	[ ] Shortage	[X] in balance	[ ] Over supply		[X] Vacant (0-5%)	Predominant		Commercial	5%	
Marketing time	[ ] Under 3 mos.	[X] 3-6 mos.	[ ] Over 6 mos.		[ ] Vacant (over 5%)	350	60	(Vacant)	35%	

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Neighborhood is residential and bounded Sagamore Creek to the north, the city line to the east and south and Route 1 to the west.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Portsmouth is popular with home buyers for its oceanfront location in close proximity of area employment and commuter routes. There is an attractively renovated downtown commercial district with theater and restaurants and residential neighborhoods of renovated antique houses. Portsmouth property taxes are considered attractive and schools are well regarded. Oceanfront beaches and parks located 3-4 miles. Boston is one hour +/-.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time -- such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Average marketing time reported in the local MLS for Portsmouth residential sales in prior 12 month period is 111 days increasing to 113 days for prior 90 day period. Values estimated to be stable from the 1st quarter 2010 through the date of sale. Seller participation in closing costs is common with typically no influence on value. Exposure time is estimated to be 4-6 months.

COMMENTS

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical curable/incurable physical deterioration is assumed (NO ON SITE INSPECTION PERFORMED FOR THIS ASSIGNMENT. See EXTRAORDINARY ASSUMPTION in addendum) unless reported otherwise in sources used for this analysis. No functional obsolescence known or considered. No external obsolescence.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None

COST APPROACH

ESTIMATED SITE VALUE . . . . . = $

ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:

Dwelling _____ Sq. Ft. @ $ _____ = $ _____

_____ Sq. Ft. @ $ _____ = _____

_____ = _____

Garage/Carport _____ Sq. Ft. @ $ _____ = _____

Total Estimated Cost New . . . . . = $ _____

Less Depreciation: Physical | Functional | External = $ _____ Est. Remaining Econ. Life:

Depreciated Value of Improvements . . . . . = $ _____

"As-is" Value of Site Improvements . . . . . = $ _____

INDICATED VALUE BY COST APPROACH . . . . . = $

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but, not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 65 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: See explanatory comments for HYPOTHETICAL CONDITIONS AND EXTRAORDINARY ASSUMPTIONS. Note: This is a retrospective appraisal with a DOV as indicated below and a DOI (Date of Drive-By Inspection) of 02/03/2015.

Final Reconciliation: The Cost Approach has been considered but, not developed due to age of improvements. The Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised _____).

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 11/01/2012 **(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $** 1,140,000

ADDENDUM

Borrower: N/A	File No.: 150066	
Property Address: 175 Odiorne Point Road	Case No.:	
City: Portsmouth	State: NH	Zip: 03801
Lender: Chalmers and Associates, LLC		

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct.

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximaly productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

ADDENDUM

Borrower: N/A	File No.: 150066	
Property Address: 175 Odiorne Point Road	Case No.:	
City: Portsmouth	State: NH	Zip: 03801
Lender: Chalmers and Associates, LLC		

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

COMMENTS ON SALES ANALYSIS:

An adjustment is made under site that estimates the influence on value of variations in lot size affecting privacy and utility.

No adjustment is made under age as the subject and Comps are estimated to have similar effective ages.

An adjustment is made under condition to Comp 3 for greater wear to cosmetic elements. The broker reports: "the seller had 5 or 6 kids and the condition was tired."

Variations in gross living area are adjusted at $50 per square foot, rounded, where a difference exceeds 10% of the subject's GLA.

Bath, basement finish garage, fireplace, deck, patio and porch adjustments are made based on market extraction, paired sales comparison or observed/ anticipated market behavior.

In the final reconciliation of the sales analysis consideration is given to all three Comps with more weighting to Comps 1 and 2 for their location within the subject's neighborhood.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Jeffrey Wood, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser has not performed appraisal services or any other services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value

or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

WARRANTY DEED

KNOW ALL BY THESE PRESENTS, that ROBERT E. PUTNAM, JR. and CYNTHIA J. PUTNAM, husband and wife, both of 20 Dunlin Way, Portsmouth, New Hampshire 03801, for consideration paid grant to ROBERT C. MONTVILLE and JULIANNA MONTVILLE, husband and wife, of 617 Woodbury Avenue, Portsmouth, New Hampshire 03801,

with WARRANTY COVENANTS, as joint tenants with rights of survival, the following described premises:

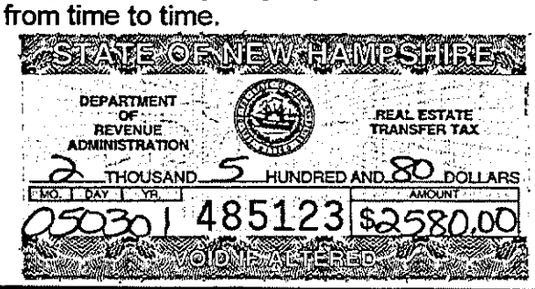
A certain tract or parcel of land, situate in the City of Portsmouth, County of Rockingham and State of New Hampshire, being described as Lot #35 on a plan entitled "Definitive Subdivision Plan in the City of Portsmouth, NH, Tucker's Cove" by Landtech Consultants, Inc. dated February 18, 1993 as revised, and recorded in the Rockingham County Registry of Deeds as Plan D-24827, being more particularly bounded and described as follows:

Beginning at a point on Odiorne Point Road at a corner of the herein described lot and Lot 36 on said plan; thence on a curve having a radius of 395.00 feet, a distance of 150.00 feet along Odiorne Point Road to a corner of Lot 34 on said plan; thence South 55° 57' 18" West along Lot 34, a distance of 367.01 feet to a corner at land now or formerly of Roland & Clayton Chartier; thence North 60° 44' 35" West along said Chartier land, a distance of 89.43 feet to land now or formerly of Barbara F. Barboza; thence North 54° 52' 48" West along said Barboza land, a distance of 73.54 feet to a point being a corner of the herein described lot; thence North 34° 48' 48" East along Lot 42, a distance of 147.35 feet to a point; thence North 64° 28' 30" East along Lot 36, a distance of 307.22 feet to the point of beginning. Containing 69,451 square feet or 1.59 acres, more or less.

Subject to an Easement Agreement between Tucker's Cove Limited Liability Company and Public Service Company of New Hampshire dated October 22, 1998 and recorded in Book 3343, Page 121 of the Rockingham County Registry of Deeds.

The above Lot is conveyed subject to any and all easements, rights, restrictions, covenants, conditions, encumbrances, and reservations of record or otherwise, insofar as the same are in force and applicable to the premises, including, but not limited to, the following:

1. The terms, easements, covenants, conditions, rights, restrictions, encumbrances, servitudes, and reservations as described and contained or otherwise set forth within a document entitled "Tucker's Cove Limited Liability Protective Covenant" by and between Tucker's Cove Limited Liability Company and the City of Portsmouth dated January 28, 1998 and recorded in the Rockingham County Registry of Deeds at Book 3276, Page 2555, as it may be amended from time to time.



Printed from Internet for on 2/5/2015

2. Subject to the terms, easements, covenants, conditions, rights, restrictions, encumbrances, servitudes, and reservations as set forth in the Declaration of Protective Covenants promulgated by Tucker's Cove Limited Liability Company dated December 28, 1998 and recorded in the Rockingham County Registry of Deeds at Book 3357, Page 747, and any amendments thereto.

3. Easements, rights, restrictions, covenants, reservations and exceptions as set forth in and/or referred to in a Quitclaim Deed from Robert A. Shaines, Stuart N. Shaines, and R & S Trust to Tucker's Cove Limited Liability Company dated September 17, 1993 and recorded in the Rockingham County Registry of Deeds at Book 3006, Page 2208, insofar as they may apply to the property conveyed herein.

4. Subject to all utility lines, utility pads and easements for utility services (including, without limitation, electricity, water, gas, telephone, cable television, sewer, and the like) as may be now or in the future deeded to municipal, quasi-governmental, and/or private utility companies.

Subject to the rights reserved by Tucker's Cove Limited Liability Company, for itself, its successors and assigns, to the fee in all roadways shown on the Subdivision Plan, until such time as said fee interest is conveyed to the City of Portsmouth.

Subject to the rights reserved by Tucker's Cove Limited Liability Company, for itself, its successors and assigns, a temporary slope easement over that portion of the premises that lies within twenty (20) feet of the sideline of the subdivision road for the purposes of sloping and grading and other work lawfully required by the City of Portsmouth, New Hampshire. This easement will automatically terminate upon the acceptance of the subdivision improvements by the City of Portsmouth.

This is not the homestead property of said Grantors.

Meaning and intending to convey the same premises conveyed to the Grantors by deed of Tucker's Cove Limited Liability Company dated October 8, 1999 and recorded at said Registry of Deeds at Book 3429, Page 1160.

Rye, NH 03870
Sale Date: 11/2012
Sale Price: $ 1,260,000

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY #A7

Property Identification & Description

Address: 178 New Road, Newmarket
Rockingham County, New Hampshire

Identification: Tax Map R3, Lot 59-1
Source Deed: 5503/1592
Land Area: 2.21

Improvements: The subject is improved with a 1,400 SF single-family residence constructed in 2003.

Physical Relationship of Line to the Property

Transmission Corridor: The ROW is 100 feet in width and includes a single 34.5 kV distribution line on single wood poles approximately 35 feet in height.

Number of Structures on Site: 1
ROW Encumbered Acreage: 0.42
Distance from House to ROW: 11
Distance to Nearest Structure: 73 ft
Distance to Most Visible Structure: 73 ft
Visibility from Yard: Clearly visible. Due to the lack of screening and proximity of the Line to the residence, the structure is clearly visible. In addition supporting guy-wires anchor the structure in the subject's immediate front yard.

Property Sale Data

Sale Date: December 18, 2013
Conditions of Sale: Arm's length
Marketing Period: 169 days on market
Average DOM for Town: 65 days
Marketing History: According to the MLS, the property was listed on May 21, 2013 for $209,000 and closed on December 18, 2013 for $213,000.

Sale Price: $213,000

Interview Data

Conducted by: Robert Ball

Transaction Interview: The broker indicated potential buyers were not concerned with the presence of the corridor. The current owner indicated the presence of the corridor was not a significant factor impacting their decision to purchase the home although the guy-wires subsequently were recognized as a nuisance. The buyer also indicated that EMF tests were conducted which satisfied their health related concerns.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject site includes a 2.21 AC land parcel crossed by a corridor that encumbers 0.42 acres or 19% of the subject lot. The site is improved with a 1,400 SF single-family residence located approximately 73 feet from the nearest structure. The subject improvements are located 11 feet from the ROW.

Sale Data: Three sales were utilized in the valuation of the subject property. All of the comparable sales were located in the Town of Newmarket within 2 miles of the subject. Subsequent to the adjustments, concluded values ranged from $223,000 - $238,000.

Appraised Value: $229,000

Property Assessment Related to the Line

Overview: The 2014 assessed values are $74,900 for the land, $152,600 for the building for a total assessment of $227,500.

Assessment Card Notes: None

Conclusions

Improvements & Visibility

The subject includes a 2.21 AC parcel of which 19% is encumbered with a corridor crossing its southeasterly frontage. The home is located within 11 feet of the transmission corridor. There is a clearly visible structure within 73 feet of the home and a supporting guy-wire in the front yard.

Interview

The listing agent was of the opinion the corridor did not adversely impact the sale price or marketing period.

Appraised Value / Sale Price / Marketing Period

The subject most recently transferred for $213,000 on December 18, 201 which was 6.99% less than an appraisal as of the same date, of $229,000. The average days on market for competitive properties within the subject's municipality was 65 days, whereas the subject sold within 169 days of listing or 2.6 times greater than the municipal average.

Summary

Despite the broker's comments, given the location of the Line, its visibility and the appraisal evidence, it is concluded the subject's sales price and marketing period were adversely affected by the Line.

Re: 178 New Road
Newmarket, NH 03857
Stanhope Group File #150056

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of December 20, 2013 to be:

Two Hundred Twenty Nine Thousand Dollars
$229,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Exeter Rd. West; New Rd. North; New Rd. East; New Rd. South is the immediate neighborhood.
* Low end of neighborhood values refers to manufactured homes in a MH park within the neighborhood; not considered adverse.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
No unfavorable factors noted within the neighborhood that affects marketability. New Rd. is a through street with 30 MPH speed limit. Exeter Rd. (aka Rte. 108) provides easy access to employment and shopping facilities. Newmarket center, municipal buildings, public schools, in-town shopping and restaurants are approximately three miles north.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Based on sales used/considered for this report, the mean sales price vs list price ratio is 99.4%; the mean marketing time is 1.5 months and the estimated exposure time is 50 days. Growth rate is slow due to limited vacant, buildable land within the neighborhood.

COMMENTS

Additional features (special energy efficient items, etc.): Standard energy efficient items assumed.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical curable/incurable physical deterioration from use and age. No external obsolescence noted. Kitchen and baths being of average quality and average condition. Per broker, the subject offers a den, however the subject property could offer three bedrooms.The floor plan being acceptable in this submarket. The two car detached garage offers a storage loft. Fenced dog kennel area.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Equal emphasis placed on the comparable sales. $20 (Rounded) per sq.ft. GLA adjustment is used when a significant difference was evident. No adjustment is warranted for the subject's two bedrooms since the den could be utilized as a third bedroom. Other differences have been adjusted for based on anticipated and/or observed market reaction to such differences.

Analysis of any current agreement of sale, option, or listing of the subject property and analysis of any prior sales of subject and comparables within one year of the date of appraisal:
The previous transfer of sale #2 was as an REO. Per broker, it was in "move-in ready" condition with "new carpets and paint".

INDICATED VALUE BY SALES COMPARISON APPROACH . . . . . $ 229,000

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ ____ /Mo. x Gross Rent Multiplier 0.00 = $ 0

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Extraordinary Assumptions: Average quality and condition kitchen and baths; that the improvements are in similar condition on 08/20/2013 as viewed on 01/26/2015. Extraordinary Assumption: No adverse easements, encroachments and or low/high tension powers lines (HVTL).

Final Reconciliation: Emphasis has been placed on the Sales Comparison Analysis since it best reflects the market. The Cost Approach is not developed due to the lack of an interior inspection. The Income Approach is not developed due to the lack of pertinent rental data of single family homes.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised 06/93).

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 12/20/2013 **(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $** 229,000

ADDENDUM

Borrower: N/A		File No.: 150056
Property Address: 178 New Rd.		Case No.: N/A
City: Newmarket	State: NH	Zip: 03857
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct.
The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximally productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

The value estimated is based on the assumption that the property is not negatively affected by the existence of

hazardous substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by L. Larocque, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser has not performed appraisal services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

Public Rems: Seller says sell !!!!! 2-3 BR HOME MOVE IN CONDITION: One level living at its best here! All Handicap equipped. if need be. This home reads 2 Bedrooms but really could be 3 (this extra room could be an office/bedroom/den). Open concept kitchen to living room, sliders off kitchen to nice 3-4 season room. Enter through front door into a wonderful wood ceiling enclosed porch (heated). First floor laundry room, separate 2 car garage (currently only 1 as other bay has work bench's, but could be changed back and plenty of storage above this garage for expansion. Large, landscaped lot (fenced dog area), garden boxes for all those vegetables to grow, and a fire pit--a wonderful place to live in the country but close to local shopping and highways.(JUST DOWN THE STREET FROM SHIP TO SHORE) Room to expand in lower level also. A unique property not to be missed.

Directions: From Rte 33 to Rte 108 Newmarket to New Road (right after Ship to Shore restaurant) follow appx 1/2 mile, home on left.

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY #A8

Property Identification & Description

Address: 229 Back Road, Dover
Strafford County, New Hampshire

Identification: Tax Map M, Lot 3/A
Source Deed: 4249/249
Land Area: 1.1 AC

Improvements: The subject is improved with a 996 SF one story single family residence constructed in 1959.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 125 feet and includes a 115 kV line on single pole laminated wood structures, approximately 75 feet in height.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.54
Distance from House to ROW: 66 ft
Distance to Nearest Structure: 282 ft
Distance to Most Visible Structure: 346 ft
HVTL Visibility from Yard: Clearly visible. Two structures are located east and west of the subject parcel and can be partially seen through hardwood and softwood trees. The conductors are clearly visible from the residence as there is no vegetative buffer.

Property Sale Data

Sale Date: October 10, 2014
Conditions of Sale: Arm's length
Marketing Period: 21 Days on market
Average DOM for Town: 78 days
Marketing History: The property was originally listed on August 7, 2012 for $174,900 and withdrawn of December 28, 2012. It was relisted on July 28, 2014 for $180,000 and closed on October 10, 2014 for $178,000.

Sale Price: $178,000

Interview Data

Conducted by: Robert Ball

Transaction Interview: According to the current owner, there were several factors considered when purchasing the subject including the abutting conservation land, its proximity to the City of Dover and access to a larger trail network via the ROW. The owner also mentioned the biodiversity within the corridor. The visibility of the HVTL structures was not part of his decision making process. According to the listing agent, there were multiple potential buyers concerned about the encumbering HVTL, but not enough to affect the marketing time or sale price.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject includes a 1.1 AC land parcel crossed by a HVTL which encumbers 49% of the parcel. The subject also abuts a conserved area managed by Three Rivers Land Trust and is located close to downtown Dover. The site is improved with a 996 SF single-family residence. No HVTL structures are located on the subject's lot.

Sale Data: Three sales were utilized in the valuation of the subject property. All of the comparable sales were located in the City of Dover, and within 2.5 miles of the subject. Subsequent to the adjustments, concluded values opinions ranged from $178,000 $181,800.

Appraised Value: $179,000

Property Assessment Related to HVTL

Overview: The subject's assessed values are $85,100 for land, $96,700 for building for a total of $181,800.

Assessment Card Notes: None

Conclusions

Improvements & Visibility

The subject includes a 1.1 AC land parcel of which 49% is encumbered by a HVTL along its southwesterly boundary. No HVTL structures are located on the subject and the nearest and most visible structure is 282 feet from the improvements. The residence is 66 feet from the transmission corridor. Although the HVLT structures are partially obscured by vegetative screening, they are nonetheless easily seen from the improvements. The conductors are clearly visible from the residence as there is no vegetative buffer.

Interview

Based on the listing agents comments, some potential buyers were concerned by the presence of the HVTL corridor. These buyers tended to be families that included small children. In spite of the concern voiced by some potential buyers, the broker thought that there was no measurable impact of the HVTL on the marketing period or sales price. This was reinforced by comments from the buying agent who also thought that the sale price and marketing period were unaffected by the HVTL.

The homeowner's comments indicated that the positive attributes of the corridor outweighed any potential concerns.

Appraised Value / Sale Price / Marketing Period

The subject sold for $178,000 on October 10, 2014. An appraisal as of the same date, absent HVTL influence, resulted in the value of $179,000.

The average days on market for competitive properties within the subject's municipality were 78 days whereas the subject sold within 21 days of its listing.

Summary

Based on the above, it is concluded that there is no impact on sales price or marketing period attributable to the HVTL.

Re: 229 Back Road
Dover, NH 03820
Stanhope Group File #150062

Dear Mr. Chalmers:

In accordance with your request for appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a summary report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report.

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable market value of the subject property, in fee simple interest subject to the extraordinary assumption and hypothetical condition, as of October 10, 2014 to be:

One Hundred Seventy Nine Thousand Dollars
$179,000

Extraordinary Assumption: This appraisal is subject to the extraordinary assumption there was no on-site inspection of the subject. The value conclusion is based on the extraordinary assumption that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there is no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

Hypothetical Condition: This appraisal is subject to the hypothetical condition that the subject has no exposure to high voltage transmission lines (HVTL).

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

UNIFORM RESIDENTIAL APPRAISAL REPORT

Property Description — File No. 150062

SUBJECT

NEIGHBORHOOD

Location	[ ] Urban	[X] Suburban	[ ] Rural	**Predominant occupancy**	**Single family housing** PRICE $ (000)	AGE (yrs)	**Present land use %**		**Land use change**	
Built up	[ ] Over 75%	[X] 25-75%	[ ] Under 25%							
Growth rate	[ ] Rapid	[X] Stable	[ ] Slow	[X] Owner	100 Low	0	One family	60%	[ ] Not likely	[ ] Likely
Property values	[ ] Increasing	[X] Stable	[ ] Declining	[ ] Tenant	1000 High	200	2-4 family	3%	[ ] In process	
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply	[X] Vacant (0-5%)	Predominant		Multi-family	5%	To:	
Marketing time	[ ] Under 3 mos.	[X] 3-6 mos.	[ ] Over 6 mos.	[ ] Vacant (over 5%)	350	60	Commercial	2%		
							(Vacant)	35%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Neighborhood is residential and bounded by Route 16 to the west, the town line to the south and east and downtown Dover to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Dover is popular with buyers for its renovated downtown commercial district, neighborhoods of victorian buildings and its close proximity to area employment in Portsmouth, Dover and Rochester and close proximity to commuter routes Rte 16, Rte 4, Rte 125 and I- 95. The University of NH is a 10 minute drive; Boston, MA is a 75 minute drive.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time -- such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
Average marketing time reported in the local MLS for Dover residential sales in prior 12 month period is 107 days increasing to 123 days for prior 90 day period. Values estimated to be stable from the 1st quarter 2012 through the date of sale. Seller participation in closing costs is common with typically no influence on value. Exposure time is estimated to be 3-4 months.

COMMENTS

Additional features (special energy efficient items, etc.): 2 Small Porches.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical curable/incurable physical deterioration is assumed (NO ON SITE INSPECTION PERFORMED FOR THIS ASSIGNMENT. See EXTRAORDINARY ASSUMPTION in addendum) unless reported otherwise in sources used for this analysis. No functional obsolescence known or considered. No external obsolescence.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property:

Valuation Section

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 150062

COST APPROACH

ESTIMATED SITE VALUE . . . . . = $

ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:

Dwelling _____ Sq. Ft. @ $_____ = $_____

_____ Sq. Ft. @ $_____ = _____

_____ = _____

Garage/Carport _____ Sq. Ft. @ $_____ = _____

Total Estimated Cost New . . . . . = $_____

Less Physical | Functional | External — Est. Remaining Econ. Life:

Depreciation _____ = $_____

Depreciated Value of Improvements . . . . . = $_____

"As-is" Value of Site Improvements . . . . . = $_____

INDICATED VALUE BY COST APPROACH . . . . . = $

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):

The Cost Approach has been considered but, not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 50 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: See explanatory comments for HYPOTHETICAL CONDITIONS AND EXTRAORDINARY ASSUMPTIONS. Note: This is a retrospective appraisal with a DOV as indicated below and a DOI (Date of Drive-By Inspection) of 02/03/2015.

Final Reconciliation: The Cost Approach has been considered but, not developed due to age of improvements. The Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition that are stated in the attached Freddie Mac Form 439/Fannie Mae Form 1004B (Revised _____).

(WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 10/10/2014 **(WHICH IS THE EFFECTIVE DATE OF THIS REPORT) TO BE $** .179,000

EXPLANATORY COMMENTS

PROBLEM TO BE SOLVED AND FUNCTION: The purpose of this appraisal is to estimate the market value of the subject property. The function of the appraisal is to assist the above named client, the intended user, in evaluating the subject property for the purpose of measuring the influence on market value of the presence of HVTL. Use of this appraisal by any other party in not intended by the appraiser.

SCOPE OF WORK: The scope of this appraisal requires compliance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: Investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when provided and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, leases, locations, sizes, types of properties and distances from the subject will start with a relatively narrow constraint and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The estimated market value of the property appraised in this

report is estimated as of the aforementioned date. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING

A definitive opinion regarding zoning conformity is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible and maximaly productive elements of Highest and Best Use for the subject property have been evaluated. The subject's current use as a residential property is its highest and best use as that is its only allowable use. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted.

ENVIRONMENTAL

The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substances and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

COMMENTS ON SALES ANALYSIS:

An adjustment is made to Comp 1 for seller concessions that inflated the selling price above the asking price.

An adjustment is made under site that estimates the influence on value of variations in lot size affecting privacy and utility.

No adjustment is made under age as the subject and Comps are estimated to have similar effective ages.

An adjustment is made under quality to Comp 2 for its hardwood floors throughout.

An adjustment is made under condition to Comp 2 for greater updating to cosmetic elements, specifically its newer kitchen.

Variations in gross living area are adjusted at $25 per square foot, rounded, where a difference exceeds 10% of the subject's GLA.

Basement finish, garage, fireplace deck and porch adjustments are made based on market extraction, paired sales comparison or observed/ anticipated market behavior.

In the final reconciliation of the sales analysis consideration is given to all three Comps as all share similarities to the subject.

RETROSPECTIVE APPRAISAL: This is a retrospective appraisal. The date of value reported in this appraisal is the date of sale (DOS) while the date of this appraisal analysis and drive-by inspection (DOI) are as indicated in the report.

HYPOTHETICAL CONDITIONS (A hypothetical condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis):

HVTL / Hypothetical Condition: The subject is appraised based on the HYPOTHETICAL CONDITION that the subject has no exposure to high voltage transmission lines (HVTL).

EXTRAORDINARY ASSUMPTIONS (An extraordinary assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which if found to be false, could alter the appraiser's opinions or conclusion):

NO ON SITE INSPECTION / Extraordinary Assumption: No on-site inspection has been performed for this appraisal. The value conclusion is based on the EXTRAORDINARY ASSUMPTION that the subject improvements are of average condition, unless reported otherwise in sources used for this analysis. It is assumed that there are no structural defects or undisclosed conditions of the property, that roofing and exterior elements are sound; that all mechanical systems, equipment and appliances are in proper working condition and that all electrical components are in proper working condition.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Jeffrey Wood, an associate of the Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: The appraiser has not performed appraisal services or any other services for the subject property in the prior three years. This disclosure statement is a USPAP requirement.

This APPRAISAL has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP). The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.

I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

My engagement in this assignment was not contingent upon developing or reporting predetermined results.

My compensation for completing this assignment is not contingent upon development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

The appraisal is based on the information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the Data Source section of the market grid along with the source of confirmation, if available. The source is presented first. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in the report nor used as a basis for the value conclusion.

COMPARABLE SALE #3

3 Snow Avenue
Dover, NH 03820
Sale Date: 07/2014
Sale Price: $ 180,000

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

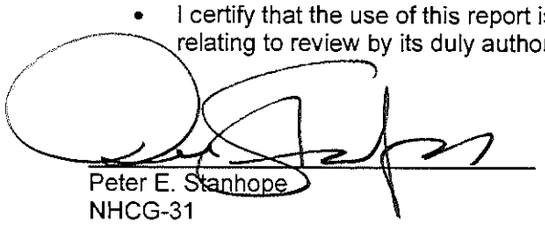
STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.



Peter E. Stanhope
NHCG-31

Peter E. Stanhope, Certified General Appraiser

(NHCG-31 and MECG-647)

EDUCATION:

American Institute of Real Estate Appraisers — 1980 - 1984

						Douglas C. Elliott	James H. Bresnick and Harolyn S. Bresi	4/7/1987	1660	769	land only	$136.00 / $18,100.00	Rate: $0.75 / $100 Lot 20
						James H. Bresnick and Harolyn S. Bresi	Lost Valley Corporation	3/25/1978	1341	94	land only	$26.50 / $10,600.00	Rate: $0.25 / $100 The consideration for this deed is for two lots (20 & 21) consideration should be split
						Lost Valley Corporation	Ann Marie O'Neill	3/14/1978	1338	185	land only	$10.00 / $0.00	Minimum tax stamp paid. The calculation of consideration based on the stamp would be $4,000.00 but historically in these chains of title in transfers between the numerous developers and/or their spouses they either stated a consideration of $1,000.00 or stated the conseration was >$100
						Ann Marie O'Neill	Lost Valley Corporation by Thomas E. H	7/24/1975	1256	110	land only	$6.00 / $4,000.00	Rate: $0.15 / $100 This deed transfers four lots (16,19,20 &22) consideration should be split
104	44	Black Bear Rd	Woodstock	1.44	unimproved	Cheryl Rea, Trustee of Ouch Realty Tru	Charles P. Tringale	9/8/2010	3749	873	land only	$933.00 / $62,200.00	
						Charles P. Tringale	Gary T. Quiricone and Margaret I. Quir	10/31/1994	2117	588	land only	$150.00 / $15,000.00	Rate: $10.00 / $1000
						Gary T. Quiricone and Margaret I. Quir	CMB Construction Company, Inc.	4/12/1989	1799	684	land only	$168.00 / $24,000.00	Rate: $0.70 / $100
						CMB Construction Company, Inc.	Mark C. Lavitt	11/14/1988	1784	766	land only	$105.00 / $15,000.00	Rate: $0.70 / $100
						Mark C. Lavitt	James H. Bresnick and Harolyn S. Bresi	4/7/1987	1660	771	land only	$135.00 / $18,000.00	Rate: $0.75 / $100
						James H. Bresnick and Harolyn S. Bresi	Lost Valley Corporation	3/25/1978	1341	94	land only	$26.50 / $10,600.00	Rate: $0.25 / $100 The consideration for this deed is for two lots (20 & 21) consideration should be split
						Lost Valley Corporation	Kenneth W. Cline	3/16/1978	1338	187	land only	$10.00 / $0.00	Minimum tax stamp paid. I do not believe there was any consideration for this deed as it transfers the property back to the developer. If you want to consider this an arms length transaction the consideration based on the tax stamps would be $4,000.00
						Kenneth W. Cline	Lost Valley Corporation by Thomas E. H	10/4/1974	1243	459	land only	$6.75 / $4,500.00	Rate: $0.15 / $100

APPROVAL FOR SUBDIVISION

APPROVAL NO. 5 A A

The subdivision identified as Heritage Hill Dev. Lots 1 thru 29 Incl.

_____, located in Hooksett N.H. and owned by

Robert Bevis, has this date, Dec. 15, 1968

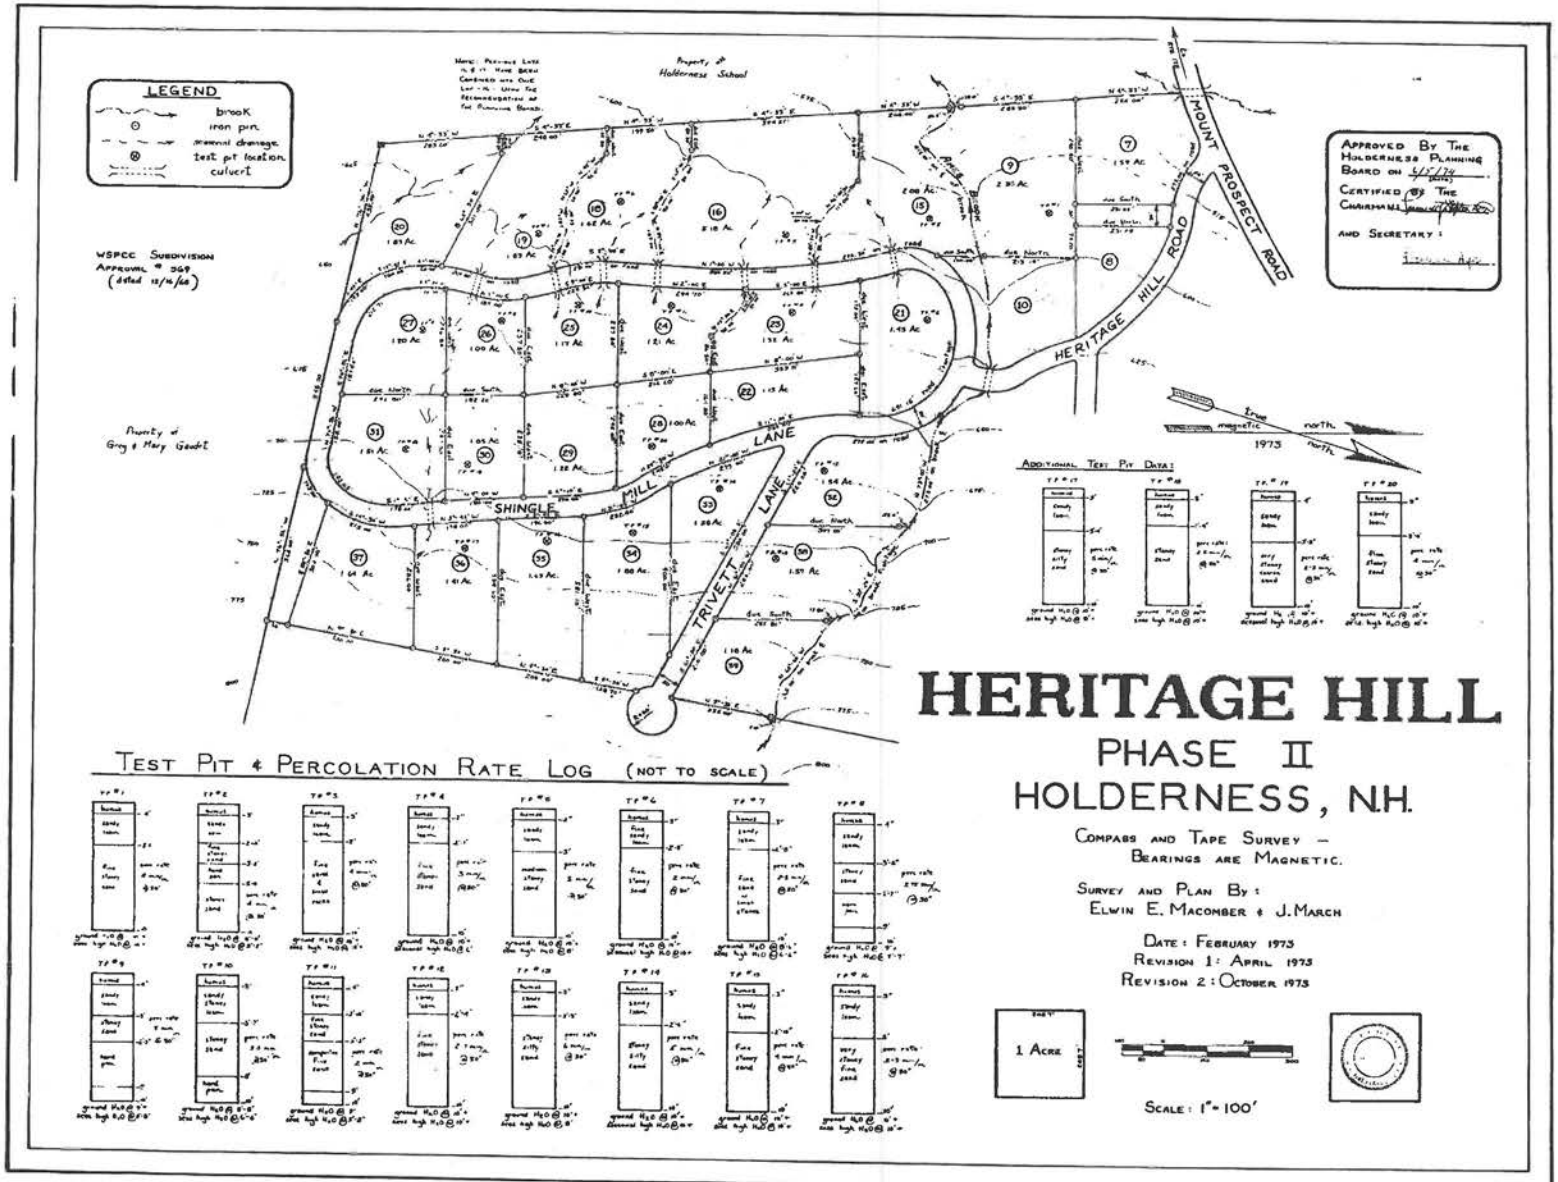
been approved in accordance with the requirements of the Water Supply and Pollution Control Commission as set forth in Chapter 149-M (as inserted by Chapter 347, Laws of 1967) and the rules, regulations, standards and procedures promulgated thereunder. Copy of plan & approval sent to Bd. of Selectmen, Goffstown, N.H.

This approval, based on information submitted by the subdivider, implies but does not warrant that soil and other conditions are generally suitable for subsurface sewage disposal systems within this subdivision.

(In Triplicate)

Approved by: _____

Chairman, Water Supply & Pollution Control Commission



HERITAGE HILL

PHASE II

HOLDERNESS, N.H.

Compass and Tape Survey — Bearings are Magnetic.

Survey and Plan By: Elwin E. Macomber & J. March

Date: February 1973
Revision 1: April 1973
Revision 2: October 1973

Attest: Kathi L. Guay, CPO, Register
NOTES
1. TOPOGRAPHY, WETLAND BOUNDARY LOCATION AND BOUNDARY PROVIDED BY W. G. HOWARD & ASSOCIATES, INC. OF 1 CRANEVIEW DRIVE, BOW, NH.
2. SEE SHEETS A4-A6 FOR ALL EASEMENT INFORMATION.
3. SEE SHEETS A2-A3 FOR ALL SETBACKS AND LABELS.
WETLAND NOTES
1. WETLANDS WERE DELINEATED BY SCHAUER ENVIRONMENTAL IN THE WINTER/SPRING OF 2002. IN ACCORDANCE WITH THE 1987 CORPS OF ENGINEERS WETLANDS DELINEATION MANUAL.
2. DOMINANT HYDRIC SOIL CONDITIONS WITHIN THE WETLANDS WERE IDENTIFIED BY SCHAUER ENVIRONMENTAL UTILIZING THE CRITERIA OF FIELD INDICATORS FOR IDENTIFYING HYDRIC SOILS IN NEW ENGLAND, VERSION 2, JULY, 1998.
3. DOMINANCE OF WETLAND VEGETATION WAS ASSESSED BY SCHAUER ENVIRONMENTAL UTILIZING THE NATIONAL LIST OF PLANT SPECIES FOR NEW HAMPSHIRE DATED MAY 1988.

WETLAND NOTES
1. WETLANDS WERE DELINEATED BY SCHAUER ENVIRONMENTAL IN THE WINTER/SPRING OF 2002, IN ACCORDANCE WITH THE 1987 CORPS OF ENGINEERS WETLANDS DELINEATION MANUAL.
2. DOMINANT HYDRIC SOIL CONDITIONS WITHIN THE WETLANDS WERE IDENTIFIED BY SCHAUER ENVIRONMENTAL UTILIZING THE CRITERIA OF FIELD INDICATORS FOR IDENTIFYING HYDRIC SOILS IN NEW ENGLAND, VERSION 2, JULY, 1998.
3. DOMINANCE OF WETLAND VEGETATION WAS ASSESSED BY SCHAUER ENVIRONMENTAL UTILIZING THE NATIONAL LIST OF PLANT SPECIES FOR NEW HAMPSHIRE DATED MAY 1988.

Methodology

Introduction

In April, 2018, Eversource Energy ("Eversource") asked Chalmers & Associates, LLC ("C&A") to add additional Case Studies to High Voltage Transmission Lines and Real Estate Markets in New Hampshire, June 30, 2015 (the "NH Research Report"). The objective was to increase the geographic representativeness of the Report by adding more Case Studies located in the southeastern region of New Hampshire. A total of twenty new case studies have been completed and have been added to what is now a revised NH Research Report. C&A authored the new case studies, but substantial assistance was provided by JB Hall Appraisal Co., the Stanhope Group, LLC and Land Decision Resources, LLC. Brendan Hall of JB Hall Appraisal was instrumental in identifying candidate properties, in performing site visits and in preparing graphics showing house location relative to the HVTL corridor. Peter Stanhope performed the retrospective appraisals of each property under the hypothetical condition that the property had no HVTL influence. Bruce Burger of Land Decision Resources carried out the interviews of real estate agents involved in the sale transactions.

Property Selection

Four utility corridors were selected, two in Dover, one in Hooksett and one in Danville. The Dover properties on Back Road and Falcon Drive (B1 – B6) border line R169 which is a 115 kV line in a ROW 125 feet wide. The Dover properties on Gerrish Road and Toftree Lane (B7 – B10) border line 307 which is a 345 kV line in a ROW which is typically 150 feet wide. The Hooksett properties (B11, B12, B17 – B20) border line D118. It is a 115 kV line in a ROW 100 feet wide. The Danville properties (B13 – B16) border a ROW that is 280 feet wide which contains three lines. Line 363 is 345 kV, line J147 is 115 kV and line V103 is 115 kV.

Sections of each of these lines were selected and all recent sales of properties which were within 300 feet of the ROW boundary were identified.[1] Since the objective was to end up with approximately twenty additional case studies, we started with approximately ten sales in each section. After these sales were identified preliminarily, municipal tax cards and tax maps were obtained. Sales were then eliminated if the sale did not meet the "fair market sale" criterion; i.e. willing seller, willing buyer, knowledgeable, typically motivated and unrelated. Finally, the six or seven most recent remaining sales were selected for each of the four sections. This resulted in 26 sales being forwarded to the Stanhope Group. After initial investigation, six additional sales were dropped — two because they turned out to be short sales and four

[1] This deviates from our previous procedure of only selecting encumbered or adjacent properties. The slightly broader selection criteria implies that there may be a more diverse distribution of houses in terms of their distance from the ROW boundary. It may also be possible to better understand the independent effect of encumbrance since more of these properties may be proximate and have structure visibility but not be encumbered.

because they were sufficiently unique that appropriate comparable sales would have been very difficult to find.

Collection of data

Data were collected by Brendan Hall through site visits, from municipal or state agencies and from online real estate data sources. The Stanhope Group used standard residential appraisal methods and data sources. Bruce Burger conducted the real estate agent interviews by phone. Existing corridor data was provided by Eversource identifying specific corridor configurations including ROW width, structure height, structure type, and line voltage. Publicly available New Hampshire GIS Data was sourced for development of the case study GIS maps.

Site visits were conducted in June 2018 by Brendan Hall and photographs were taken. Corridor visibility was assessed from the street in front of the property and was classified into one of three categories:

- Clearly visible – clear view of that portion of structure to which conductors are attached.
- Partially visible – obstructed view of structures or view of a portion of a structure.
- Not visible – structures not visible.

Attempts were made by both telephone and text to contact both listing and selling agents involved in each sale. The focus of the interviews was on possible effects of the HVTL on the listing price, on the traffic of potential buyers and on the final sale price. Effect of the HVTL on the marketing period was also discussed.

Following completion of the appraisals and interviews, Dr. Chalmers and Peter Stanhope did a field inspection in early July, 2018 of each property verifying the visibility of structures, subjectively evaluating the intrusiveness of the HVTL on each property and resolving any inconsistencies in the appraisal, MLS or property record card data. The subjective evaluation of intrusiveness generated a rating encompassing several considerations: distance of the house to the ROW, distance to nearest structure, distance to most visible structure, visibility of most visible structure, encumbrance, orientation of the home, other visual focal points and contents of the ROW. The scale was from 0 to 10 and basically reflects the extent to which the HVTL would be recognized as an attribute of the property. It ranges from not an attribute, to an incidental attribute, to an attribute but not a conspicuous one, to higher and higher levels of intrusion to the point that the HVTL were a dominant attribute of the property.

Analysis

An analysis of the physical relationship of the HVTL to each property was developed. Each property was analyzed for four criteria – distance from the single-family residence to the ROW boundary, distance from the single-family residence to the nearest HVTL structure, distance

from the single-family residence to the most visible structure, and the size of the area encumbered by the HVTL ROW on the property. Due to the absence of digitized parcel data for the state of NH, parcels were drawn in ArcGIS and georeferenced with the most recent aerial imagery and municipal tax maps. Aerial photogrammetry was provided through the UNH GRANIT data catalog. Each HVTL corridor was then drawn over the property by utilizing the width measurements provided by Eversource, from which the encumbered area was calculated.

Results and Conclusion

Conclusions in each Case Study were based on the facts of the sale, the physical relationship of the property to the HVTL, the interview evidence and independent appraisal evidence presented in the appraisal reports by the Stanhope Group.

Exterior property inspections were used to illustrate the physical relationship of the improvements to the HVTL. Broker interviews illustrated perceived influence, if any, of HVTL on sales price or marketing period of the case studies, and appraisal evidence presented a retrospective value opinion of the subject's potential value, absent influence by HVTL. One of three possible outcomes was concluded:

- There was no effect of the HVTL on the Case Study sale price or marketing period.
- There was an effect attributable to the HVTL on the Case Study sale price and or marketing period.
- The effect of the HVTL on sale price or marketing period was indeterminate. These cases typically involved contradictory interview and appraisal evidence.

Twenty Case Studies follow. Each is divided into seven sections – Property Identification & Description, Physical Relationship of Transmission Lines to the Property, Property Sale Data, Appraised Value on Date of Sale Absent Influence of HVTL, Property Assessment Related to HVTL, Interview Data and Conclusions.

CASE STUDY B1

Property Identification & Description

Address: 18 Falcon Drive, Dover
Strafford County, New Hampshire

Identification: Tax Map N19, Lot 2
Source Deed: Book 4231, Page 412
Land Area: 0.57 AC

Improvements: The subject is improved with a two story colonial style single family residence constructed in 2005 with 3,259 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 125 feet and includes a 115 kV line on single pole laminated wood structures, approximately 75 feet in height. The corridor is identified as R169. The subject's lot is buffered from the ROW by neighboring properties and open space.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 289 ft
Distance to Nearest Structure: 394 ft
Distance to Most Visible Structure: 394 ft
HVTL Visibility from House: Clearly visible. The tower located northeast of the subject is unobstructed by vegetation or topographic features.

Property Sale Data

Sale Date: July 29, 2014
Conditions of Sale: Arm's Length
Marketing Period: 31 Days on Market
Average DOM for Town: 75 Days
Marketing History: MLS date indicate the property was originally listed May 14, 2014 for $497,500, went under contract June 14th and closed July 29, 2014 for $445,000. Municipal data shows the sale as recorded July 29, 2014.

Sale Price: $445,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 4.7 miles of the subject. Consideration was given to all the sale comparables, with Sale #1 weighted as it was the most proximate and has the most similar locational influences. Sales #2 and #3 were supportive. Subsequent to adjustment, comparable values ranged from $441,700 to $448,700:

Sale #1 (22 Overlook Drive): $445,300
Sale #2 (123 Boxwood Lane): $448,700
Sale #3 (19 Grady's Lane): $441,700

Appraised Value: $445,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $75,900 for land, $357,100 for the residence, for a total of $433,000.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: Field inspection confirmed that the most visible structure from the property was clearly visible. The house is oriented so that neither the front nor back faces the HVTL corridor. Nevertheless, there is an open view of the corridor as one drives down Falcon Drive which makes the location of the house relative to the corridor explicit. Overall intrusion is rated subjectively as moderate (4).

There were no questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Lee Ann Ashley Parks, Selling (Buyer) Agent
Interviewed on: June 13, 2018

Notes: Reached Lee Ann on my first attempt just after 9:15am local time. She recalled the sale; saying that in this case the HVTL were not a factor for the buyer. She added that there were seller-paid concessions and sellers were highly motivated, as they were close to losing the home to a pending foreclosure.

She has been active in the area market for 13 years and has lived in the vicinity for over 35 years. She

commented that she has experienced transaction effects from HVTL in certain instances and currently has a listing that is struggling on the market due to an intrusive HVTL affecting the property.

She believes HVTL can create both price and marketability effects, mostly through thinning of the buyer pool, particularly if they are highly visible or intrusive. She feels the magnitude of effects depends on the overall combination of features and attributes offered by the property relative to the level of HVTL intrusion; and when HVTL are intrusive, whether positive on or off-property features such as location, schools, etc. can be positioned to offset any perceived negative impacts.

She felt market conditions are also a significant factor in how, or to what degree HVTL effects may be exhibited in a given sale transaction; commenting that the subject in this case, if on the market today, "would sell faster and for a lot more," as area inventory is currently very tight with respect to homes in this price category.

(Interview #2)

Interviewer: Bruce M. Burger
Interviewee: Kathryn Ahlin, Listing Agent
Interviewed on: June 16, 2018

Notes: After repeated contact attempts, Kathryn texted back, saying that she had to do some thinking to recall the sale, "….but no, I don't think it (the TL) affected the property."

Conclusions

Improvements & Visibility

The subject is improved with a two-story colonial style single family residence constructed in 2005 with 3,259 SF of gross living area. The subject includes a 0.57 AC parcel, which is neither encumbered by nor abutting the HVTL corridor ROW. The improvements are 289' from the transmission corridor and the closest and most visible structure is 394' from the improvements.

The HVTL are clearly visible from the residence, unobstructed by vegetative screening or topography. Overall intrusion of the HVTL on the property is subjectively rated as moderate.

Appraised Value / Sale Price / Marketing Period

The subject sold for $445,000 on July 29, 2014, which is equal to the appraised value of $445,000 concluded as of the same date, absent HVTL influence. The comparable sales set appeared very good, with a modest total of net adjustments applied to each. The appraiser did not feel the seller-paid concessions were relevant to the value of the subject.

The subject was on the market for 31 days, versus the town average of 75 days at the time of sale.

The sale price and appraised value were 89.4% of original list price. The appraisal notes an average sale/list price ratio of 94% to 100%, thus suggesting the original list price in this transaction was high relative to competitive properties in the market.

Interview Evidence

Both agents involved in the transaction remembered the sale; and neither indicated that the HVTL were a factor affecting the listing price or the marketing of the property. The selling agent commented that the seller was highly motivated, which contributed to the seller concessions paid.

Summary

Although the HVTL are clearly visible from the house, their intrusion on the property is moderate. There was no difference in the appraiser's concluded value as of the date of sale absent the HVTL and the sale price of the subject on that date, and neither agent felt the HVTL affected the listing price or overall sale of the property.

Both the interview evidence and the appraisal evidence support a conclusion of no adverse effect from the HVTL on either the sale price or the marketing period in this transaction.

Re: 18 Falcon Drive
Dover, NH 03820
Stanhope Group File # 180550

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of July 29, 2014 to be:

Four Hundred Forty Five Thousand Dollars
$445,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180550

SUBJECT

Property Address: 18 Falcon Drive | City: Dover | State: NH | Zip Code: 03820

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	10%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Average marketing times are typically between one to four months. Average list to sales price ratio is 94% to 100%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 90 days.

PUD

COMMENTS

Additional features (special energy efficient items, etc.): Colonial on full basement, with finished attic/third floor. Master suite has private bath with spa tub. Rear deck, fireplace in living room. Upgrades include hardwood and tile flooring, granite countertops, and stainless appliances.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical physical depreciation from use and age, mitigated by regular maintenance. No functional or external depreciation noted or disclosed.

Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and Municipal Record descriptions, that have been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF July 29, 2014

TO BE $ 445,000

ADDENDUM

Borrower: N/A		File No.: 180550
Property Address: 18 Falcon Drive		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

No adjustment warranted for variation in lot size; subject has larger effective lot size due to open space lots, and comparables have similar level of privacy and recreation area.

No adjustment for variation in building design as each offers similar market appeal.

Variation in GLA adjusted at $30 per square foot, rounded, where there is a significant difference. GLA based on

municipal record, MLS or appraiser information, and visual inspection.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS: That we, **John J. Ross** and **Tawnia P. Ross**, husband and wife, of 18 Falcon Drive, Dover, Strafford County, State of New Hampshire 02820, for consideration paid grant to **William F. Cook** and **Shacina J. Hersey**, of 99 Beech Road, Salisbury, Commonwealth of Massachusetts 01952, **as joint tenants with rights of survivorship**, with **WARRANTY COVENANTS**, the following:

A certain tract or parcel of land, with the buildings thereon, if any, located in the City of Dover, County of Strafford and State of New Hampshire, shown as Lot 2 on plan entitled "Open Space Lot Plan - Phase 1 of Open Space Subdivision for Daniel & Jacqueline Ayer, Tax Map N, Lots 18, 19 and 21, Back Road & McKone Lane, Dover, Strafford County, New Hampshire" (sheet 5 of 7), prepared by KEM Land Survey, Inc., dated December 5, 2004, said plan having been recorded in the Strafford County Registry of Deeds as Plan 80-40, said Lot 2 being more particularly bounded and described as follows:

Beginning at a point on the westerly sideline of a proposed 30' wide private right of way, shown on the herein referenced plan as "Falcon Drive"; thence running N 73° 55' 43" W, along land shown as Open Space 1 on the herein referenced plan a distance of 203.84 feet to the southwesterly corner of the herein described parcel; thence turning and running N 02° 04' 45" W, by said Open Space 1, a distance of 70.00 feet to a point at the northwesterly corner of the herein described parcel; thence turning and running S 69° 15' 22" E, by said Open Space 1, a distance of 100.00 feet to a point; thence turning and running N 47° 11' 27" E, by said Open Space 1, a distance of 193.35 feet to a point on the southerly bound of Lot 3 as shown on the herein referenced plan; thence turning and running S 68° 31' 13" E, along the southerly bound of said Lot 3, a distance of 20.00 feet to a point on the westerly sideline of said Falcon Drive; thence turning and running S 24° 29' 26" W, along the westerly sideline of Falcon Drive, so called, a distance of 222.21 feet to the point of beginning.

Together with a right-of-way in common with others, to pass and repass over, across and across Falcon Drive as shown on the herein referenced Plan.

Sale Price: $ 457,700

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B2

Property Identification & Description

Address:	26 Falcon Drive, Dover Strafford County, New Hampshire
Identification:	Tax Map N19, Lot 3
Source Deed:	Book 4223, Page 861
Land Area:	0.76 AC
Improvements:	The subject improvments include a colonial style single family residence constructed in 2007 with 2,652 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor:	The width of the ROW is 125 feet and includes a 115 kV line on single pole laminated wood structures, approximately 75 feet in height. The corridor is identified as R169. The subject's lot is buffered from the ROW by open space.
Number of Structures on Site:	0
ROW Encumbrance:	0 SF
Distance from House to ROW:	214 ft
Distance to Nearest Structure:	299 ft
Distance to Most Visible Structure:	299 ft
HVTL Visibility from House:	Clearly Visible. The tower located northeast of the subject is ubobstructed by vegetation or topographic features.

Property Sale Data

Sale Date:	June 23, 2014
Conditions of Sale:	Arm's Length
Marketing Period:	32 Days on Market
Average DOM for Town:	75 Days
Marketing History:	MLS data indicates the property was originally listed April 9, 2014 for $474,900, went under contract June 24th and closed June 27, 2014 for $435,000. Municipal data shows the sale as recorded June 23, 2014.
Sale Price:	$435,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 4.7 miles of the subject. Consideration was given to all the sale comparables, with Sale #1 weighted as it was the most proximate and has the most similar locational influences. Sales #2 and #3 were supportive. Subsequent to adjustment, comparable values ranged from $434,600 to $438,000:

Sale #1 (22 Overlook Drive): $435,000
Sale #2 (123 Boxwood Lane): $438,000
Sale #3 (19 Grady's Lane): $434,600

Appraised Value: $435,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $79,900 for land, $366,600 for the residence, for a total of $466,500.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9,2018

Notes: The field inspection confirmed that the most visible structure was clearly visible from the property. The orientation of the house combined with some screening limited intrusion of the HVTL on the property. Intrusion was subjectively rated as low (3).

There were no questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Paul Thibodeau, Listing Agent
Interviewed on: June 13, 2018

Notes: Reached Paul on my first attempt at about 9:30am local time. He recalled the listing; saying that the HVTL were not a factor in setting the listing price or in how the property fared on the market in his opinion. There was never any discussion of them by his seller, nor could he recall comments from any prospective buyers during the time the property was on the market. No one brought them up.

He recalled the TL being a fair ways distant from the home and it "was not a very big line," attributing lack of effects to their lack of intrusiveness. He thought the protected open space benefit provided by

the ROW easement (he referred to these as "conservation lands") was more of a positive to the property than the view of the TL's was a negative in this instance.

He believes the potential for price and marketing effects associated with HVTL to be very much a function of their intrusiveness to the property, whether physical or visual, and the degree or extent to which effects are exhibited is very much case by case.

(Interview #2)

Interviewer: Bruce M. Burger
Interviewee: Mike Allen, Selling (Buyer) Agent
Interviewed on: June 13, 2018

Notes: Mike returned my first call attempt at around 9:45am local time. He recalled the sale; saying that the HVTL were a consideration for his buyer, but in the end, they liked the house and decided that they didn't matter. He added that the TLs were far enough distant to be less of a concern than they might otherwise be. He said the buyer did do some "EMF research" to satisfy themselves that the TLs were in fact far enough away from the home that they were unlikely to pose a health risk. They did not affect the offering price.

He feels the issue of market effects relative to HVTL is very inventory dependent; with the primary concern being resale of the property. In tight markets, proximate HVTL tend to be more readily accepted or more easily "looked past" by buyers. He said he advises his buyer clients considering homes near HVTL that if the market is soft at the time they go to resell, their property may take a harder hit relative to others not impacted by presence of HVTL. This was his experience coming out of the 2008-'10 downturn when the market was flush with inventory. He felt that price and/or marketability effects were more frequently encountered under the market conditions at that time than those conditions exhibited by the current market, which is very short of inventory.

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 2007 with 2,652 SF of gross living area. The subject includes a 0.76 AC parcel, which is neither encumbered by nor abutting the HVTL corridor ROW. The improvements are 214' from the transmission corridor and the closest and most visible structure is 299' from the improvements.

The most visible structure is clearly visible from the residence, unobstructed by vegetative screening or topography. However, there is some screening of the line and the orientation of the house is such that the overall intrusion of the HVTL on the property is subjectively rated as low.

Appraised Value / Sale Price / Marketing Period

The subject sold for $435,000 on June 23, 2014, which is equal to the appraised value of $435,000 concluded as of the same date, absent HVTL influence. The comparable sales set appeared very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 32 days, versus the town average of 75 days at the time of sale.

The sale price and appraised value were 91.6% of original list price. The appraisal notes an average sale/list price ratio of 94% to 100%, thus suggesting the original list price in this transaction was high relative to competitive properties in the market.

Interview Evidence

Both agents involved in the transaction recalled the sale; and neither felt that the HVTL were a factor affecting the listing price or the marketing of the property. The listing agent said they were of no consequence in setting the listing price or in how the property fared on the market. The selling agent noted that while they were an initial consideration for his buyer, upon completing what they felt was satisfactory research and due diligence they decided that they didn't matter. Presence of the HVTL did not affect the offering price.

Summary

Although the HVTL are clearly visible from the house, their intrusion on the property is rated as low. There was no difference in the appraiser's concluded value as of the date of sale absent the HVTL and the sale price of the subject on that date. Neither agent concluded that the HVTL affected the listing price, offering price or the overall sale of the property.

The interview evidence and the appraisal evidence both support a conclusion of no adverse effect from the HVTL on either the sale price or the marketing period in this transaction.

Re: 26 Falcon Drive
Dover, NH 03820
Stanhope Group File # 180551

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of June 23, 2014 to be:

Four Hundred Thirty Five Thousand Dollars
$435,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180551

SUBJECT

Property Address: 26 Falcon Drive | City: Dover | State: NH | Zip Code: 03820

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Average marketing times are typically between one to four months. Average list to sales price ratio is 94% to 100%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 90 days.

COMMENTS

Additional features (special energy efficient items, etc.): Colonial with finished basement RecRoom and Den, unfinished walk-up attic storage or future expansion area. Master suite has private bath with spa tub. Fireplace in family room, front farmer's porch, rear deck & patio.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical physical depreciation from use and age, mitigated by regular maintenance. Upgrades include hardwood/tile flooring, granite countertops and stainless appliances, cathedral ceilings in family room. Typical functional obsolescence noted in basement finish. No external depreciation noted or disclosed. Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Consideration given to all comparables, with comp 1 weighted as it is most proximate and has most similar locational influences. Comps 2 and 3 are supportive. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed and/or anticipated market behavior, and/or paired sales comparison. Broker verification made where available. Please refer to attached Explanatory Comments for additional discussion of sales analysis.

Analysis of any current agreement of sale, option, or listing of the subject property and analysis of any prior sales of subject and comparables within one year of the date of appraisal:

No prior sales noted for subject within three year reporting period. No prior market transfers noted for comparables within one year.

INDICATED VALUE BY SALES COMPARISON APPROACH . . . . . $ 435,000

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ N/A /Mo. x Gross Rent Multiplier N/A = $ N/A

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and Municipal Record descriptions, that have been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF June 23, 2014

TO BE $ 435,000

APPRAISER:

ADDENDUM

Borrower: N/A		File No.: 180551
Property Address: 26 Falcon Drive		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

No adjustment warranted for variation in lot size; subject has larger effective lot size due to open space lots, and comparables have similar level of privacy and recreation area.

No adjustment for variation in building design as each offers similar market appeal.

Variation in GLA adjusted at $30 per square foot, rounded, where there is a significant difference. GLA based on

municipal record, MLS or appraiser information, and visual inspection. Unfinished expansion area adjusted at $15 per square foot.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Date - Showings Begin

Remarks - Public Located at the end of a private drive with field views and bounded by conservation land stands this immaculate hip roof Colonial home with an inviting full-length farmer's porch. There are three bedrooms and room for more on the lower level if needed, serviced by public utilities. Entertain in the formal living or dining room and relax in the huge family room with fireplace and cathedral ceiling. You'll love the maple kitchen, with lovely lavender walls, breakfast bar, and breakfast nook. The 910-square-foot daylight walkout finished lower level offers a private office, separate outdoor entrance, a huge recreation room and storage. If 3,334 square feet isn't enough space, there's a walk-up attic that could be finished as well. Custom-built for its current owner, this home's amenities include a first-floor laundry, central air, custom staircase, outdoor patio, granite counters, Brazilian cherry and tile floors, and more. Plus, no smoke or pets have ever lived here!

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B3

Property Identification & Description

Address: 21 Falcon Drive, Dover
Strafford County, New Hampshire

Identification: Tax Map N19, Lot 4
Source Deed: Book 4272, Page 79
Land Area: 0.68 AC

Improvements: The subject improvements include a colonial style single family residence constructed in 2010 with 2,450 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 125 feet and includes a 115 kV line on single pole laminated wood structures, approximately 75 feet in height. The corridor is identified as R169. The subject's lot is buffered from the ROW by open space.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 153 ft
Distance to Nearest Structure: 337 ft
Distance to Most Visible Structure: 337 ft
HVTL Visibility from House: Clearly visible. The tower located north of the subject is unobstructed by vegetation or topographic features.

Property Sale Data

Sale Date: February 3, 2015
Conditions of Sale: Arm's Length
Marketing Period: 143 Days on Market
Average DOM for Town: 71 Days
Marketing History: MLS data indicate the property was originally listed June 3, 2014 for $579,000, went under contract October 23th and closed February 3, 2015 for $509,000. Municipal data shows the sale as recorded February 3, 2015.

Sale Price: $509,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 4.7 miles of the subject. Consideration was given to all the sale comparables, with Sale #3 being similar in quality level of upgrades, and Sales #1 and #2 having similar non-water influenced lots. Subsequent to adjustment, comparable values ranged from $504,000 to $517,000:

Sale #1 (22 Overlook Drive): $504,000
Sale #2 (123 Boxwood Lane): $507,000
Sale #3 (5 Lennon Drive): $517,000

Appraised Value: $509,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $78,200 for land, $444,400 for the residence, for a total of $522,600.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: the most visible structure was confirmed to be clearly visible. Both the approach to the property on Falcon Drive and the view from the front of the house had a clear view of the HVTL in an open field. There was some very limited open space buffering but the house was 153 feet from the ROW boundary. Overall, intrusion of the HVTL was rated subjectively as moderate (5).

There were no questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Jamieson Duston, Listing and Selling Agent
Interviewed on: June 13, 2018

Notes: After repeated contact attempts, Jamieson responded to my text message at about 7:20pm local time. His text said, “Lines had no impact on value for this buyer.”

In a follow up text, whereby I inquired specifically regarding any effects the HVTL may have had on his listing strategy he further confirmed they were not a factor in setting the list price for the property.

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 2007 with 2,450 SF of gross living area. The property also contains an accessory outbuilding consisting of a detached garage with in-law suite. The subject includes a 0.68 AC parcel, which is neither encumbered by nor abutting the HVTL corridor ROW. The improvements are 153' from the transmission corridor and the closest and most visible structure is 337' from the improvements.

The HVTL are clearly visible from the residence, unobstructed by vegetative screening or topography; the overall intrusion of the HVTL on the property is subjectively rated as moderate.

Appraised Value / Sale Price / Marketing Period

The subject sold for $509,000 on February 3, 2015, which is equal to the appraised value of $509,000 concluded as of the same date, absent HVTL influence. The comparable sales set was good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 143 days, versus the town average of 71 days at the time of sale.

The sale price and appraised value were 87.9% of original list price. The appraisal notes an average sale/list price ratio of 94% to 100%, thus suggesting the original list price in this transaction was high relative to competitive properties in the market.

Interview Evidence

The listing and selling agent were one and the same for this transaction. The broker said that the HVTL had no impact on the perceived value of the property to the buyer; and confirmed that they had no impact on the listing price he set for the property.

Summary

Although the HVTL are clearly visible from the home, their intrusion on the property is moderate. There was no difference in the appraiser's concluded value as of the date of sale absent the HVTL and the sale price of the subject on that date. The agent stated that the HVTL did not affect his listing price, nor did it affect the buyer's perception of value for the property.

The listing history indicates that the original list price of $579,000 was maintained for more than 90 days from the listing date, with the property going under contract about 45 days after a 5% price reduction. The agent did not address extended marketing period experienced by the subject.

Given consistency of the eventual sale price with the appraiser's concluded value, the appraisal evidence supports a conclusion of no effects from the HVTL on sale price for this transaction. The extended overall days on market relative to town average may have been the result of an original listing price that was simply set too far above the market; however, the listing agent did not address this question specifically. The interview evidence is thus considered to be indeterminate with respect to any effects from the HVTL on the marketing period for this transaction.

Re: 21 Falcon Drive
Dover, NH 03820
Stanhope Group File # 180552

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of February 03, 2015 to be:

Five Hundred Nine Thousand Dollars
$509,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180552

SUBJECT

Property Address: 21 Falcon Drive | City: Dover | State: NH | Zip Code: 03820

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.					(Vacant)	10%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Average marketing times are typically between one to four months. Average list to sales price ratio is 94% to 100%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 90 days.

COMMENTS

Additional features (special energy efficient items, etc.): Colonial with finished basement RecRoom, Bdrm, & bath. Detached 3 car gar has .5 bath and future expansion area up. Master suite has private bath with spa tub. Fireplace, heated Sunroom type porch, deck & patio.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Little physical depreciation due to recent construction. Upgrades include HW/tile flooring, cabinetry/trim, island, granite countertops, bath fixtures, stainless apps, and cathedral ceilings in family room. Some functional obsolescence noted in basement finish and detached garage. No external depreciation noted or disclosed. Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and Municipal Record descriptions, that have been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF February 03, 2015

TO BE $ 509,000

APPRAISER:

ADDENDUM

Borrower: N/A		File No.: 180552
Property Address: 21 Falcon Drive		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SUBJECT COMMENTS: Legal Description references a plan for lot line adjustment, expanding lot size from what was designated on original development plan (attached). Revised plan could not be located; adjusted lot line added in red on Plat Map, and is consistent with municipal record and tax maps.

SALES ANALYSIS COMMENTS

No adjustment warranted for variation in lot size; subject and comp 3 have larger effective lot size due to open space lots, and comparables have similar level of privacy and recreation area. Comp 3 adjusted for ROW to

water Cocheco River; no ocean access at this location, limited recreational utility.

Comparable 3 adjusted for superior water view amenity of Cocheco River from site and improvements.

No adjustment for variation in building design as each offers similar market appeal.

Quality adjustment warranted on comps 1 and 2 for inferior level of upgrades noted, including flooring and kitchen/bath finishes. Comp 3 is similar in level of upgrading; no adjustment applied.

Comparable 3 adjusted for variation in age based on market perceptions of wear and tear to long life components.

Condition adjustments based on level of wear and tear noted/disclosed to cosmetics and other short life components. Greater wear on comps 1 and 2, and less wear on comp 3 (new construction).

Differences in GLA are not significant enough to be market recognized. GLA based on municipal record, MLS or appraiser information, and visual inspection.

Subject unfinished expansion area over detached garage adjusted at $15 per square foot. Reduced adjustment of $5 per square foot for walk-up attic expansion area in house, as access is through Master Bedroom, diminishing utility, per broker.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Peter E. Stanhope

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B4

Property Identification & Description

Address: 229 Back Road, Dover
Strafford County, New Hampshire

Identification: Tax Map M3, Lot A
Source Deed: Book 4249, Page 249
Land Area: 1.1 AC

Improvements: The subject is improved with a 996 SF one story single family residence constructed in 1959.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 125 feet and includes a 115 kV line on single pole laminated wood structures, approximately 65 to 84 feet in height. The corridor is identified as R169. The subject's lot area is nearly half encumbered by the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 21,175 SF
Distance from House to ROW: 66 ft
Distance to Nearest Structure: 282 ft
Distance to Most Visible Structure: 346 ft
HVTL Visibility from House: Clearly visible. Structures are located to the west and south of the subject. Although a vegetative buffer exists adjacent to the subject and between the residence and the HVTL corridor, structure height and proximity permit relatively unobstructed views.

Property Sale Data

Sale Date: October 10, 2014
Conditions of Sale: Arm's Length
Marketing Period: 42 Days on Market
Average DOM for Town: 77 Days
Marketing History: MLS data indicate the property was originally listed July 28, 2014 for $180,000, went under contract September 8th and closed October 10, 2014 for $178,000. Municipal data shows the sale as recorded October 10, 2014.

Sale Price: $178,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 2.5 miles of the subject. Consideration was given to all the sale comparables, with Sales #1 and #3 weighted due to having the most similar gross living area. Sale #2 was supportive. Subsequent to adjustment, comparable values ranged from $177,000 to $181,900:

Sale #1 (47 Applevale Drive): $181,900
Sale #2 (25 Applevale Drive): $179,300
Sale #3 (3 Snow Avenue): $177,000

Appraised Value: $179,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $85,100 for land, $109,300 for the residence, for a total of $194,400.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The field inspection confirmed that the most visible structure was clearly visible. The property is relatively open to the ROW from the rear of the house with unobstructed view of a structure. The house is close to the ROW and the lot is heavily encumbered. Overall intrusion is rated as high (7).

No questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Jon Kenyon/Susan Kenyon, Listing Agent
Interviewed on: June 18, 2018

Notes:

After some discussion she was able to recall the property and the listing and didn't recall the presence of the TLs being an issue in marketing the property.

She said the house was in great condition, in a nice setting in a demand location. The lot offered several extras including a detached screened porch/house, storage shed, and raised bed gardens enabled by the open space associated with the ROW easement. She commented that wooded backdrop of the ROW

corridor tended to soften the view of the lines and the house was slightly elevated above the backyard and the ROW. She didn't recall any allowance being made for the TLs in the listing price.

Conclusions

Improvements & Visibility

The subject is improved with a 996 SF one-story single family residence constructed in 1959. The subject includes a 1.1 AC parcel, of which 44.2% or 21,175 SF are encumbered by the HVTL corridor ROW. The improvements are 66' from the transmission corridor, the closest structure is 282' from the improvements and the most visible structure is 346' from the improvements.

The HVTL are clearly visible from the residence. Although there is some vegetative buffer between the residence and the ROW, their height and proximity leave the HVTL structures relatively unobstructed from view. Overall intrusion of the HVTL on the property is subjectively rated as high.

Appraised Value / Sale Price / Marketing Period

The subject sold for $178,000 on October 10, 2014, which is 0.6% less than the appraised value of $179,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 42 days, versus the town average of 77 days at the time of sale.

The sale price was 98.9% of original list price, with the appraised value at 99.4% of list; the appraisal notes an average sale/list price ratio of 94% to 100%. These factors suggest the original list price in this transaction was set competitively relative to alternative properties in the market.

Interview Evidence

The listing broker recalled the sale and didn't recall the presence of the TLs being an issue in marketing the property. She also didn't recall any allowance being made for them in the listing price.

Summary

The HVTL are clearly visible from the home which, combined with proximity of the house to the ROW and the extent to which the property is encumbered results in high intrusion of the HVTL on the property. As noted by the listing agent the condition of the home, its demand location and the amenities of the lot combined as strengths of the property resulting in an appealing overall package notwithstanding the ROW encumbrance. In her recollection the HVTL had no impact on either the listing price or the marketing effort associated with the property. The sale price discount of 0.6% from the appraiser's concluded value absent the HVTL is considered negligible in amount and within the negotiating space typical of buyers and sellers active in an arms-length market.

The interview evidence and appraisal evidence together support a conclusion that there were no adverse effects from the HVTL on either the sale price of the property or its time on market in this transaction.

Re: 229 Back Road
Dover, NH 03820
Stanhope Group File # 180553

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of October 10, 2014 to be:

One Hundred Seventy Nine Thousand Dollars
$179,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser's opinions or conclusions.

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180553

SUBJECT

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.					(Vacant)	10%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Average marketing times are typically between one to four months. Average list to sales price ratio is 94% to 100%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 90 days.

COMMENTS

Additional features (special energy efficient items, etc.): Three bedroom Ranch on full basement with porches. Storage outbuildings given no consideration due to condition. Wood stove and AC unit considered personal property; no consideration.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical physical depreciation from use and age, mitigated by maintenance and major system updating; seller disclosure indicates heat and roof recently updated. No functional or external depreciation noted or disclosed. Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

Valuation Section

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180553

COST APPROACH

ESTIMATED SITE VALUE . . . . . = $

ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:

Dwelling ____ Sq. Ft. @ $ ____ = $ ____

____ Sq. Ft. @ $ ____ = ____

____ = ____

Garage/Carport ____ Sq. Ft. @ $ ____ = ____

Total Estimated Cost New . . . . . = $

Less Depreciation: Physical | Functional | External | Est. Remaining Econ. Life: = $

Depreciated Value of Improvements . . . . . = $

"As-is" Value of Site Improvements . . . . . = $

INDICATED VALUE BY COST APPROACH . . . . . = $ N/A

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):

Cost Approach not developed as it is most reliable as a value indicator for new construction. Remaining Economic Life is estimated at 48-52 Years.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Consideration given to all comparables, with comps 1 and 3 weighted due to most similar GLA. Comp 2 is supportive, but less weighted due to superior quality upgrades and condition/level of updating. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed and/or anticipated market behavior, and/or paired sales comparison. Broker verification made where available. Please refer to attached Explanatory Comments for additional discussion of sales analysis.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF October 10, 2014

TO BE $ 179,000

Property Address: 229 Back Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

Adjustment warranted for price inflation to comparable 1 due to seller paid concessions; adjustment reflects corresponding inflation, or difference between and list price ($184,900) and sale price ($188,000). No adjustment warranted on comparable 2, as no price inflation was evident.

Site adjustment warranted on comparables for significant difference in lot size and associated diminished privacy and recreation area.

ADDENDUM

Borrower: N/A		File No.: 180553
Property Address: 229 Back Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

No adjustment for variation in building design as each offers similar market appeal.

Quality adjustment warranted on comparable 2 for superior flooring upgrades (hardwood throughout).

Condition adjustment warranted based on level of updating noted or disclosed. Comparable 2 adjusted for superior kitchen updating.

Variation in bath count adjusted at $1,000 per fixture. GLA adjusted at $25 per square foot, rounded where there is a significant difference. GLA based on municipal record, MLS information, and visual inspection. Adjustments for below grade finished areas take into account several factors including: size of finished area, number and type of rooms, as well as quality and condition of finish.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B5

Property Identification & Description

Address: 303 Back Road / 321 Back Road - Lot #3, Dover
Strafford County, New Hampshire

Identification: Tax Map M105, Lot 2
Source Deed: Book 4227, Page 428
Land Area: 1.315 AC

Improvements: The subject improvements include a bungalow style single family residence constructed in 2014 and includes 2,273 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 125 feet and includes a 115 kV line on single pole laminated wood structures, approximately 65 to 84 feet in height. The corridor is identified as R169. The subject's lot is partially encumbered by the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 11,673 SF
Distance from House to ROW: 91 ft
Distance to Nearest Structure: 310 ft
Distance to Most Visible Structure: 375 ft
HVTL Visibility from House: Partially visible. A tower is located southeast of the subject across Back Road and is partially visible despite moderate vegetative screening.

Property Sale Data

Sale Date: July 11, 2014
Conditions of Sale: Arm's Length
Marketing Period: 26 Days on Market
Average DOM for Town: 75 Days
Marketing History: MLS data indicate the property was originally listed January 30, 2014 for $349,900, went under contract February 25th and closed July 14, 2014 for $349,900. Municipal data shows the sale as recorded July 11, 2014.

Sale Price: $349,900

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 4.3 miles of the subject. Consideration was given to all the sale comparables, with Sales #1 and #2 weighted due to new construction. Sale #3 was weighted less due to mixed age of construction/renovation, but is supportive. Subsequent to adjustment, comparable values ranged from $365,000 to $370,900:

Sale #1 (26 Piscataqua Road): $370,900
Sale #2 (15 Lika Drive): $365,000
Sale #3 (85 Court Street): $368,000

Appraised Value: $368,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $87,100 for land, $307,500 for the residence, for a total of $394,600.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: Confirmed that the most visible structure was partially visible. The house is partially screened but has an open view to the corridor from the rear of the house. The lot is encumbered and the house is relatively close to the ROW. Intrusion is subjectively rated as moderate (5).

There was an inconsistency in the GLA on the property record card and the GLA reported in the appraisal. Peter reported that the property record card improperly included unfinished space over the garage in GLA. The source for the appraisal GLA of 2,273 sq. ft. was another appraiser who had measured the property at the time of the sale.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Jason Saphire, Listing Agent / David Smith-Graystone Builders, Seller
Interviewed on: June 19, 2018

Notes: Jason Saphire runs a non-traditional flat fee listing service (EntryOnly.com) for “self-service” sellers. MLS referred all contact directly to the builder (Graystone Builders) to arrange showings.

Reached Dave Smith of Graystone Builders at his office on June 19, about 8:20am local time. He comes

from a real estate background and is a certified residential appraiser (currently non-practicing) in addition to a builder. He commented that this training and experience very much informs his approach to building.

He said he did have concerns about the TL in acquiring 321-Lot 3 for spec building purposes, as he has had difficulty selling TL-affected properties in the past. He said the lot was priced aggressively however (he thought he paid $75,000 for the 1.31-acre lot, which had been subdivided from a larger parcel); and because he was able to buy it well and the TL was a couple hundred feet from the homesite with the ROW just clipping the edge of the lot, he was willing to take a chance on the property. He noted also that this was "not a big line" with respect to visual impact or intrusiveness.

He priced the home aggressively and sold it to an engineer who didn't seem concerned about the TLs. The buyer also elected to make several upgrades to the base building package which further helped the overall profitability of the project. He said that while this one worked out, he generally stays away TL-affected lots. He related instances in past projects where he'd bought groups of lots, some number of which were TL-affected, and had to soften the prices of the homes built on that subset of lots to move them.

He's not convinced tight market conditions are necessarily an offset to this; relating a current project (not his) in Rochester where the developer is having trouble selling lots, some portion of which are TL-affected. Dave wasn't sure what all of the reasons for the slow absorption on that project might encompass; but said he has been approached by the developer to buy 11 of the lots at $70,000 to $75,000 apiece. He said he's not interested at anything over $50,000.

Whether due to visual intrusiveness or concerns over health effects from EMFs, in his experience there's no question that TL proximity thins the market for affected properties, which affects value if/when price concessions are required to move those properties within an otherwise typical absorption timeline.

Conclusions

Improvements & Visibility

The subject improvements include a bungalow style single family residence constructed in 2014 which includes 2,273 SF of gross living area. The subject includes a 1.315 AC parcel of which 20.4% or 11,673 SF are encumbered by the HVTL corridor ROW. The improvements are 91' from the transmission corridor, the closest structure is 310' from the improvements and the most visible structure is 375' from the improvements.

The HVTL are partially visible from the home. A tower is located southeast of the subject across Back Road and is visible despite moderate vegetative screening. Overall intrusion of the HVTL on the property is subjectively rated as moderate.

Appraised Value / Sale Price / Marketing Period

The subject sold for $349,900 on July 11, 2014, which is 4.9% less than the appraised value of $368,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 26 days, versus the town average of 75 days at the time of sale.

The sale price was 100.0% of original list price and appraised value was 105.2%; the appraisal notes an average sale/list price ratio of 94% to 100%. This suggests the original list price in this transaction was aggressively set relative to competitive properties in the market.

Interview Evidence

The builder (seller) indicated some concern with proximity of the HVTL to the lot when he acquired it, indicating he proceeded with the acquisition due to it being priced aggressively, thereby allowing him to price his finished home product aggressively as well.

Summary

Intrusiveness of the HVTL on the property is rated as moderate. The interview evidence encompassing the seller's motivations and business requirements relative to building and pricing the subject, along with the appraisal evidence indicating that the sale price reflected a 4.9% discount to the market absent HVTL influence, indicate sale price effects were associated with the HVTL. Aggressive pricing of the home helped to generate an expedient sale; thus, no negative effects to time on market impacted the property.

Re: 303 Back Road
Dover, NH 03820
Stanhope Group File # 180554

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of July 11, 2014 to be:

Three Hundred Sixty Eight Thousand Dollars
$368,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser's opinions or conclusions.

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	10%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Average marketing times are typically between one to four months. Average list to sales price ratio is 94% to 100%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 90 days.

COMMENTS

Additional features (special energy efficient items, etc.): Contemporary Cape design with two car garage, fireplace, front Farmer's Porch and additional open porch to rear. Hardwood and tile flooring upgrades disclosed.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: No physical depreciation as this is new construction. No functional or external depreciation noted or disclosed. Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.
