Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Consideration given to all comparables, with comps 1 and 2 weighted due to new construction. Comp 3 is less weighted due to mixed age of construction/renovation, but is supportive. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed and/or anticipated market behavior, and/or paired sales comparison. Broker verification made where available. Please refer to attached Explanatory Comments for additional discussion of sales analysis.

Analysis of any current agreement of sale, option, or listing of the subject property and analysis of any prior sales of subject and comparables within one year of the date of appraisal:
No prior transfers as improved; this is new construction. Comps 1 and 2 also new construction with no prior transfers as improved. No prior sales for comparable 3 within one year.

INDICATED VALUE BY SALES COMPARISON APPROACH $ 368,000

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ N/A /Mo. x Gross Rent Multiplier N/A = $ N/A

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and Municipal Record descriptions, that have been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was included and is reasonably supportive. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF July 11, 2014 **TO BE $** 368,000

ADDENDUM

Borrower: N/A		File No.: 180554
Property Address: 303 Back Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SUBJECT COMMENTS: Subject 2014 taxes on page one of report represent vacant land only. Improvements first appear in 2015 tax assessment, typical for new construction; 2015 taxes were $9,407.

SALES ANALYSIS COMMENTS

No adjustment warranted for variation in lot size; comparables have similar level of privacy and recreation area.

No adjustment for variation in building design as each offers similar market appeal.

ADDENDUM

Borrower: N/A		File No.: 180554
Property Address: 303 Back Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

Quality adjustments based on level of upgrades noted or disclosed. Comp 1 has superior kitchen and bath upgrades. Comp 2 has superior kitchen upgrades and built-ins.

Age adjustment warranted on comparable 3 for mixed age of construction and associated wear and tear to long life components; 1925 foundation and first floor framing, with rest built in 2005/2006 timeframe.

Condition adjustment warranted on comparable 3 for typical wear and tear to cosmetic and other short life components.

GLA differences are not significant enough to be market recognized. GLA based on municipal record, MLS information or appraiser information, and visual inspection.

Unfinished expansion areas adjusted at $15 per square foot, rounded, where there is existing access to expansion area. Comp 3's expansion area is accessed by a dropstairs only; diminished adjustment amount ($10/sf rounded) due to additional cost of creating permanent stairs.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Peter E. Stanhope

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B6

Property Identification & Description

Address: 321 Back Road, Dover
Strafford County, New Hampshire

Identification: Tax Map M105, Lot 0
Source Deed: Book 4259, Page 450
Land Area: 1.236 AC

Improvements: The subject improvements include a cape style single family residence constructed in 1875 which includes 1,679 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 125 feet and includes a 115 kV line on single pole laminated wood structures, approximately 65 to 84 feet in height. The corridor is identified as R169. Over one third of the subject's lot is encumbered by the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 20,809 SF
Distance from House to ROW: 107 ft
Distance to Nearest Structure: 244 ft
Distance to Most Visible Structure: 469 ft
HVTL Visibility from House: Clearly visible. A tower located north of the subject is unobstructed by vegetation or topographic features.

Property Sale Data

Sale Date: November 21, 2014
Conditions of Sale: Arm's Length
Marketing Period: 84 Days on Market
Average DOM for Town: 73 Days
Marketing History: MLS data indicate the property was originally listed July 28, 2014 for $289,000, went under contract October 21st and closed November 21, 2014 for $275,000. Municipal data shows the sale as recorded November 21, 2014.

Sale Price: $275,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 2.3 miles of the subject. Consideration was given to all the sale comparables, with Sales #1 and #2 being the most similar in condition/level of renovation. Sale #3 was most proximate and most similar in lot utility, and was weighted. Subsequent to adjustment, comparable values ranged from $281,000 to $285,000:

Sale #1 (50 Cushing Street): $285,000
Sale #2 (212 Dover Point Road): $281,000
Sale #3 (363 Middle Road): $283,000

Appraised Value: $283,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $86,600 for land, $156,100 for the residence, for a total of $251,700.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The most visible structure was confirmed as being clearly visible. The property has substantial encumbrance and a clear window to a distant structure. The house is well-screened from the ROW where it is closest to the house. Overall intrusion is subjectively rated as moderate (4).

There is an inconsistency between the GLA of 1,634 sq. ft. shown on the property record card and the GLA in the appraisal of 1,679 sq. ft. There is a floor plan diagram in the appraisal that shows that the correct GLA is 1,679 sq. ft.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Jackie Flanagan, Listing Agent
Interviewed on: June 18, 2018

Notes:

After two previous call attempts and a text messages left on June 14 and 15, finally reached Jackie on my third attempt on June 18 at about 4:20pm local time. She really didn't recall the TLs or the ROW being significant to the lot, so she didn't feel that they had any effect in the marketing of the property.

No allowance was made for them in setting the listing price.

She recalled that the property was originally larger and was subdivided into three lots around the time of this sale. One lot was bought by a builder (we know that as 321-Lot 2, now 303 Back Road next door to this property; see Case Study #B5). A second was bought by a neighbor; this one had the greatest ROW encumbrance. The third was "the old house" on the remaining 1.23 acres comprising the subject.

The TLs ran down the side of the property, separated by trees from the house and core of the property as she recalled, and was not significant to the property in her opinion.

(Interview #2)

Interviewer: Bruce M. Burger
Interviewee: Barbara Dunnington, Selling (Buyer) Agent
Interviewed on: June 26, 2018

Notes:

Reached Barbara on a second call attempt on June 26 at 9:15am local time. She struggled to recall the sale initially, remembering it as a different address. As we talked further about the home, the lot and the location she began to recall the buyers and more details about the property and the transaction.

She said the TLs were not a concern for the couple that bought the home and not a factor in their offer for the property.

Conclusions

Improvements & Visibility

The subject is improved with a cape style single family residence constructed in 1875 which includes 1,679 SF of gross living area. The subject includes a 1.236 AC parcel of which 38.6% or 20,809 SF are encumbered by the HVTL. The improvements are 107' from the transmission corridor, the closest structure is 244' from the improvements and the most visible structure is 469' from the improvements.

The structure located north of the subject is unobstructed by vegetative screening or topographic features. Overall intrusion of the HVTL on the property is subjectively rated as moderate.

Appraised Value / Sale Price / Marketing Period

The subject sold for $275,000 on November 21, 2014, which is 2.8% less than the appraised value of $283,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 84 days, versus the town average of 73 days at the time of sale.

The sale price was 95.2% of original list price, with the appraised value at 97.9% of list; the appraisal notes an average sale/list price ratio of 94% to 100%. These factors suggest the original list price in this transaction was set competitively relative to alternative properties in the market.

Interview Evidence

The listing broker recalled the transaction, but really didn't recall the HVTL being significant to the property or the ROW encumbrance impacting the lot. She didn't feel that they had any effect on the marketing of the property and no allowance was made for them in setting the listing price. The selling agent had a harder time recalling the subject at first, but in her memory of the transaction the HVTL were not a concern for the couple that bought the home, nor a factor in their offer for the property.

Summary

Although offsite HVTL infrastructure is clearly visible from the home, the HVTL's overall intrusion on the property is moderate. The area of ROW encumbrance is not dissimilar in character from the remainder of the lot and is separated from the home by vegetation. Neither agent associated with the transaction recalled the HVTL as having an impact on the marketing of the home, the buyer's perception of the property, the listing price or the offering price. Thus, the interview evidence indicates no adverse effects on either sale price or marketing were attributable to the HVTL.

While the appraisal evidence suggests a modest discount of 2.8% to the market absent HVTL influence, the home as described is non-typical in layout and could be initially perceived as smaller than its livable size. As an 1875 vintage property atypical of modern design trends, its appeal to the market could be considered as potentially narrower than that for a home of newer, more modern construction. These factors are explanatory for a property that realized slightly less than full market price upon sale, while requiring slightly longer than the average time on market to achieve that sale.

While the appraisal evidence suggests a possible modest effect on sale price, the combination of the physical attributes of the property, the moderate intrusiveness of the HVTL, and the reported impressions of the parties to the transaction together suggest that the modest sale price discount and slightly above average time on market were more likely due to the unique characteristics of the property relative to its peers, and not attributable to adverse effects from the HVTL in this instance.

Re: 321 Back Road
Dover, NH 03820
Stanhope Group File # 180555

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

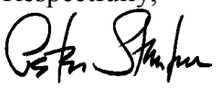
These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of November 21, 2014 to be:

Two Hundred Eighty Three Thousand Dollars
$283,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,



Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Average marketing times are typically between one to four months. Average list to sales price ratio is 94% to 100%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 90 days.

COMMENTS

Additional features (special energy efficient items, etc.): New Englander design with one car garage, open front entry porch and rear patio. See-thru FP in LR/Kitchen. Recently updated kitchen and baths. Granite tops & tile surrounds. Refinished & reclaimed wood floors.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Less than typical physical depreciation due to recent updating; kitchen/baths remodeled within 1 year. Replacement windows, new septic, updated wiring, plumbing, and partial new roof. Recent addition at Kitchen/Dining area. No functional or external depreciation noted or disclosed. Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Consideration given to all comparables. Comps 1 and 2 are most similar in condition/level of renovation. Comp 3 is most proximate and most similar in lot utility, and is weighted. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed and/or anticipated market behavior, and/or paired sales comparison. Broker verification made where available. Please refer to attached Explanatory Comments for additional discussion of sales analysis.

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ N/A /Mo. x Gross Rent Multiplier N/A = $ N/A

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition.

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF November 21, 2014 **TO BE $** 283,000

ADDENDUM

Borrower: N/A		File No.: 180555
Property Address: 321 Back Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SUBJECT COMMENTS: Legal Description describes two parcels, subject parcel is the second tract of land described only (Lot 2), according to recorded site plan, municipal record/tax map, and listing broker.

Room count/GLA and other interior details based on interior inspection completed at time of sale.

SALES ANALYSIS COMMENTS

Adjustment warranted for price inflation to comparable 3 due to seller paid concessions; adjustment reflects

corresponding inflation, or difference between and list price ($294,000) and sale price ($296,000).

Comparable 2 warranted adjustment for heavier through traffic levels on Dover Point Road, a primary access route to Spaulding Turnpike.

Site adjustment warranted on comparables 1 and 2 for significant difference in lot size and associated diminished privacy and recreation area.

No adjustment for variation in building design as each offers similar market appeal.

Quality adjustments warranted based on level of upgrades to finish materials noted or disclosed. Comparable 3 noted to have inferior quality bath upgrades.

Variation in bath count adjusted at $1,000 per fixture. GLA differences are not significant enough to be market recognized. GLA based on municipal record, MLS information, and visual inspection. Adjustments for below grade finished areas take into account several factors including: size of finished area, number and type of rooms, as well as quality and condition of finish.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Remarks - Public With it's premier location, this tastefully redone home is just waiting for it's new owners. This house is much larger on the inside than it appears - partially due to the new addition in the living room. Seller kept to the integrity of this lovely Cape, including reclaimed wood floors, curved walls, mahogany bannister, stained glass window, and built-in cabinet. Lovely kitchen with cherry cabinets, granite & stainless appliances. Open fireplace between kitchen & living room. 2 completely remodeled baths- featuring a claw foot tub. Custom tile work. 3 good sized bedrooms all upstairs- including a master with a walk-in closet. A 4th bedroom/guest/office room on the 1st floor. New wiring, new plumbing, and a brand new septic.Beautiful brick patio overlooking hay fields and conservation land. Fantastic location- 10 minutes to Portsmouth on a beautiful, scenic road.
Directions From Portsmouth bridge, take exit 6. Bear right onto Middle Road. Middle Road bears left- stay straight and it becomes Back Road. House on left

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B7

Property Identification & Description

Address: 5 Toftree Lane, Dover
Strafford County, New Hampshire

Identification: Tax Map M108, Lot
Source Deed: Book 4214, Page 250
Land Area: .78 AC

Improvements: The subject improvements include a raised ranch style single family residence constructed in 1980 which includes 1,530 SF of above grade, gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 100 to 150 feet and includes a 345 kV line on single pole laminated wood structures, approximately 90 to 100 feet in height. The corridor is identified as 307. The subject's rear lot line abuts the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 294 ft
Distance to Nearest Structure: 389 ft
Distance to Most Visible Structure: 389 ft
HVTL Visibility from House: Partially visible. A tower is located to the south of the subject and is partially visible due to vegetative screening and topography.

Property Sale Data

Sale Date: May 16, 2014
Conditions of Sale: Arm's Length
Marketing Period: 16 Days on Market
Average DOM for Town: 79 Days
Marketing History: MLS data indicate the property was originally listed February 28, 2014 for $279,900, went under contract March 16th, and closed May 16, 2014 for $282,400. Municipal data shows the sale as recorded May 16, 2014. The sale price appears to have been inflated by $2,500 of seller concessions.

Sale Price: $282,400

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 1.5 miles of the subject. Consideration was given to all the sale comparables, with Sale #1 weighted due to its location on the subject's street. Sales #2 and #3 were more similar to the subject in condition and level of upgrading, but less weighted due to locational differences. Subsequent to adjustment, comparable values ranged from $275,700 to $286,000:

Sale #1 (27 Toftree Lane): $283,200
Sale #2 (212 Dover Point Road): $275,700
Sale #3 (363 Middle Road): $286,000

Appraised Value: $283,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $95,000 for land, $196,500 for the residence, for a total of $291,500.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The most visible structure was barely visible in the summer leaf-on condition but aerial imagery in a leaf-off condition suggests it would be partially visible. The house is separated from the ROW by vegetation and a pond. Overall intrusion is rated as low (2).

The appraisal reported the lot at .78 ac and both the property record card and the MLS reported it as 1.0 ac. The plat map included in the appraisal showed the lot at .78 ac.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Betsy Doolan, Selling (Buyer) Agent
Interviewed on: June 16, 2018

Notes: Betsy returned my first call attempt on Saturday morning while she was in between showings. She said this was an unusual sale, in that the buyer had in fact grown up in the house (the home was built in 1980). When it came on the market he decided to look at it and after walking thru it, noting that it had changed a lot since, decided he wanted to buy it.

The transaction closed 16 days after the home was listed. The buyer was pre-approved with first time homebuyer money, which was still available and not uncommon in this market at that time. Such transactions frequently resulted in seller's contributing closing costs to enable the deal. A $7,500 seller concession was negotiated, $2,500 of which is shown as an addition to list price as the final sale price reported by MLS.

She said the TLs played no role in the sale whatsoever and were not a factor at all.

Conclusions

Improvements & Visibility

The subject is improved with a raised ranch style single family residence constructed in 1980 which includes 1,530 SF of above grade, gross living area. The subject includes a .78 AC parcel which abuts the HVTL corridor ROW. The improvements are 294' from the transmission corridor and the closest and most visible structure is 389' from the improvements.

A structure located to the south of the subject is partially visible. The overall intrusion of the HVTL on the property is subjectively rated as low.

Appraised Value / Sale Price / Marketing Period

The subject sold for $282,400 on May 16, 2014, which is 0.2% less than the appraised value of $283,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 16 days, versus the town average of 79 days at the time of sale.

The sale price was 100.9% of original list price, with the appraised value at 101.1% of list; the appraisal notes an average sale/list price ratio of 94% to 100%. These factors suggest the original list price in this transaction was set aggressively relative to competitive properties in the market.

Interview Evidence

The selling agent confirmed the unique characteristics of the sale associated with this transaction, with the buyer having been a childhood occupant of the home who viewed the property as soon as it came on the market and then acted expeditiously to acquire it. The HVTL were of no consequence to his offer. She further confirmed that the seller-paid concessions were closing cost related and were typical of the first-time homebuyer financing available at the time for which the buyer had been pre-approved.

Summary

Although there is partial HVTL visibility from the home, the corridor is almost 300 ft. from the house and intrusiveness to the property is low. The sale price discount of 0.2% from the appraiser's concluded value absent HVTL influence is considered negligible in amount and within the negotiating space typical of the area market at the time of sale. The appraisal evidence therefore does not support existence of an adverse price effect.

The buyer was motivated by an uncommon personal attachment to the subject. Though atypical, this suggests further evidence of the absence of any adverse effects from HVTL proximity on the property, as he had experienced them in previously growing up in the home. While buyer motivation was an interesting side note to this transaction, neither the interview evidence nor the appraisal evidence suggests an adverse effect from the HVTL on either sale price or marketing time in this case.

Re: 5 Toftree Lane
Dover, NH 03820
Stanhope Group File # 180558

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

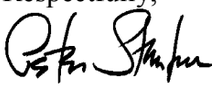
These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of May 16, 2014 to be:

Two Hundred Eighty Three Thousand Dillars
$283,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,



Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.					(Vacant)	10%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Average marketing times are typically between one to four months. Average list to sales price ratio is 94% to 100%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 90 days.

COMMENTS

Additional features (special energy efficient items, etc.): Three bedroom Split-Entry style Ranch on full basement with rear deck/patio, and fully fenced rear yard. Abv-grd pool, shed, and wall AC unit considered personal property; no consideration.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Less than typical physical depreciation due to recent updating; 2010 renovation including roof, kitchen, baths, and flooring. Some functional obsolescence in basement finish. No external depreciation noted or disclosed. Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF May 16, 2014

TO BE $ 283,000

ADDENDUM

Borrower: N/A		File No.: 180558
Property Address: 5 Toftree Lane		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

Adjustment warranted for price inflation to comparable 3 due to seller paid concessions; adjustment reflects corresponding inflation, or difference between and list price ($294,000) and sale price ($296,000).

Comparable 2 warranted adjustment for heavier through traffic levels on Dover Point Road, a primary access route to Spaulding Turnpike.

ADDENDUM

Borrower: N/A		File No.: 180558
Property Address: 5 Toftree Lane		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

Site adjustment to comparables 1 and 2 for subject's larger site with superior privacy to rear due to lot size and small brook to rear of site. Comp 3 has similar level of privacy as subject, due to larger lot size, and greater recreation area; superior adjustment applied. All comparables adjusted for inferior view amenity; subject has small brook to rear of site.

No adjustment for variation in building design as each offers similar market appeal.

Quality adjustments warranted based on level of upgrades to finish materials noted or disclosed. Comparable 2 noted to have superior quality bath upgrades.

Comparable 1 warranted condition adjustment for inferior bath updating, and less recent cosmetic and major system updates.

Variation in bath count adjusted at $1,000 per fixture. Variation in GLA adjusted at $30 per square foot, rounded, where there is a significant difference. GLA based on municipal record, MLS or appraiser information, and visual inspection.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

KNOW ALL MEN BY THESE PRESENTS: That we, **JUSTIN M. LOOSER and LAUREN G. LOOSER**, Husband and Wife, of 5 Toftree Lane, Dover NH 03820,

FOR CONSIDERATION PAID GRANTS to CHRISTOPHER M. MOORE, an unmarried man, of 62 Dunns Bridge Lane, Dover NH 03820, as sole owner,

with WARRANTY COVENANTS:

A certain tract or parcel of land with the buildings thereon, situate at 5 Toftree Lane, in Dover, County of Strafford and State of New Hampshire, and being Lot No. 3 as shown on a plan of land entitled "Subdivision Plan of Land in Dover, New Hampshire, County of Strafford, owned by Samuel Tamposi and Edward Lehoullier, "Scale 1" = 100', dated August 28, 1978, revised January 26, 1979, said plan recorded in the Strafford County Registry of Deeds as Plan No. 19-65, which plan reference is made for a more particular description of said lot.

Subject to an Easement to Public Service Company of New Hampshire and New England Telephone and Telegraph Company recorded in Book 1039, Page 790 of said Registry.

Being the same premises conveyed to Justin M. Looser and Lauren G. Looser by deed of Huts to Homes, LLC dated January 19, 2011 and recorded in Book 3900, Page 88 of the Strafford County Registry of Deeds on January 24, 2011.

We, the grantors hereby release all rights of homestead in the above described premises.

Executed this 16th day of May, 2014.

Justin M. Looser

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B8

Property Identification & Description

Address: 7 Toftree Lane, Dover
Strafford County, New Hampshire

Identification: Tax Map M109, Lot
Source Deed: Book 3919, Page 677
Land Area: 0.751 AC

Improvements: The subject improvements include a cape style single family residence constructed in 1980 which includes 1,440 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 100 to 150 feet and includes a 345 kV line on single pole laminated wood structures, approximately 90 to 100 feet in height. The corridor is identified as 307. The subject's rear lot line abuts the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 274 ft
Distance to Nearest Structure: 420 ft
Distance to Most Visible Structure: 0 ft
HVTL Visibility from House: No visibility. Vegetative screening is sufficient to prevent views to the existing structures.

Property Sale Data

Sale Date: April 17, 2018
Conditions of Sale: Arm's Length
Marketing Period: 5 Days on Market
Average DOM for Town: 60 Days
Marketing History: MLS data indicate the property was originally listed February 27, 2018 for $375,000, went under contract March 5th, and closed April 27, 2018 for $370,000. Municipal records were not yet updated with the recorded date of this sale. The deed indicated conveyance on April 17, 2018.

Sale Price: $370,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 1.8 miles of the subject. Consideration was given to all the sale comparables, with Sale #1 weighted for similar updating and similar sale date. Sales #2 and #3 were given secondary weighting; Sale #2 is also updated but is an older sale, and Sale #3 is a more recent sale with a similar finished basement amenity to the subject but inferior in its overall level of updating and layout. Subsequent to adjustment, comparable values ranged from $369,700 to $371,900:

Sale #1 (10 Mulligan Drive): $369,700
Sale #2 (30 Governor Sawyer Lane): $371,900
Sale #3 (1 Roberts Road): $371,000

Appraised Value: $370,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $89,100 for land, $167,400 for the residence, for a total of $256,500.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: Field inspection confirmed that there were no structures visible from the house. Nearest structure is over 400 ft. distant and even in leaf-off appeared not to be visible. Intrusiveness of the HVTL on the property was rated subjectively as very low (1).

The property record card showed GLA of 1,358 sq. ft. while the appraisal showed 1,440 sq. ft. The appraiser reported that the second floor GLA should be calculated at 1.5 times first floor GLA, not 1.4 times first floor GLA as had been done by the assessor.

Participant Interview Notes:

Interview #1:

Interviewer: Bruce M. Burger
Interviewee: Dan Hickman, Listing and Selling Agent
Interviewed on: June 16, 2018

Notes: After repeated contact attempts, he returned a text that said, “The power lines for 7 Toftree were far enough away from 7 to make any difference (that I know of). But...there are plenty of houses in the development that are closer, and I have heard from other agents that it is a negative for resale on those houses.”

Conclusions

Improvements & Visibility

The subject is improved with a cape style single family residence constructed in 1980 which includes 1,440 SF of gross living area. The subject includes a 0.751 AC parcel which abutts the HVTL corridor ROW. The improvements are 274' from the transmission corridor and the closest structure is 420' from the improvements.

The HVTL are not visible from the home; overall intrusion of the HVTL on the property is subjectively rated as very low.

Appraised Value / Sale Price / Marketing Period

The subject sold for $370,000 on April 17, 2018, which is equal to the appraised value of $370,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 5 days, versus the town average of 60 days at the time of sale.

The sale price was 98.7% of original list price, with the appraised value also at 98.7% of list; the appraisal notes an average sale/list price ratio of 95% to 103%. These factors suggest the original list price in this transaction was set competitively relative to alternative properties in the market.

Interview Evidence

The listing and selling agent were one and the same for this transaction. The HVTL were far enough distant not to have had any effect on the property or the transaction in his estimation.

Summary

The HVTL are not visible to the subject, and their intrusiveness on the property is very low. Sale price and appraised value absent HVTL influence were identical, the home sold within the first week of its listing period, and the broker involved felt that the HVTL were too distant to be a factor. Both the appraisal evidence and the interview evidence support a conclusion of no adverse effect from the HVTL on either sale price or time on market in this transaction.

Re: 7 Toftree Lane
Dover, NH 03820
Stanhope Group File # 180559

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of April 17, 2018 to be:

Three Hundred Seventy Thousand Dollars
$370,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Appreciation beginning within this submarket in 2016 Average marketing times are typically under 90 days. Average list to sales price ratio is 95% to 103%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 45 days.

COMMENTS

Additional features (special energy efficient items, etc.): Cape with two car garage, open front entry porch and rear deck. Recently updated kitchen/bath; quartz/slate tops in kitchen, granite top & ceramic tile surround in one bath. Finished basement rooms and bath.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Less than typical physical depreciation due to recent updating within 2 years, including: kitchen/bath remodel, paint, flooring, deck. Heat and roof disclosed to be updated within 7 +/- years. Some functional obsolescence noted in basement finish. No external depreciation noted or disclosed. Alternative heat stoves are personal property.

Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

Adjusted Sales Price of Comparable			$ 369,700		$ 371,900		$ 371,000

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Consideration given to all comparables with comparable 1 weighted for similar updating and similar sale date. Comps 2 and 3 given secondary weighting; comp 2 is also updated, but is an older sale; comp 3 is a recent sale with similar finished basement amenity, but inferior in level updating and layout. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed and/or anticipated market behavior, and/or paired sales comparison. Broker verification made where available. Please refer to attached Explanatory Comments for additional discussion of sales analysis.

ITEM	SUBJECT	COMPARABLE NO. 1	COMPARABLE NO. 2	COMPARABLE NO. 3
Date, Price and Data Source for prior sales within year of appraisal	None Per Municipal Record	None Per Municipal Record	None Per Municipal Record	None Per Municipal Record

Analysis of any current agreement of sale, option, or listing of the subject property and analysis of any prior sales of subject and comparables within one year of the date of appraisal:
No prior transfers of subject noted noted within three year reporting period. No prior transfer noted for comparables within one year reporting period.

INDICATED VALUE BY SALES COMPARISON APPROACH . . . . . $ 370,000

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ N/A /Mo. x Gross Rent Multiplier N/A = $ N/A

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF April 17, 2018

TO BE $ 370,000

APPRAISER:

ADDENDUM

Borrower: N/A		File No.: 180559
Property Address: 7 Toftree Lane		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SUBJECT COMMENTS: A more recent sale of the subject property has occurred than appears on attached municipal tax card. Sale on 04/17/2018 (date recorded was 04/30/2018) for $370,000. Verified with registry record and municipal assessor's office. MLS record of the April 2018 transfer is also attached as an addendum to this report.

SALES ANALYSIS COMMENTS

Market conditions adjustment warranted for appreciation evident in submarket. Adjustment is estimated at 6%

annually (.5% per month) rounded, from date of contract. No adjustment where contract date is within 30 days from date of value. Adjustment is based on county, state and regional statistical data as reported by New Hampshire Association of Realtors, Federal Housing Administration, and Federal Housing Finance Authority.

Site adjustment for subject's larger site with superior privacy to rear due to lot size and small brook to rear of site. Comparables also adjusted for inferior view amenity.

No adjustment for variation in building design as each offers similar market appeal.

Quality adjustment warranted on comparable 3 for lack of stone surface countertop upgrade in kitchen.

Condition adjustments based on level of wear and tear noted/disclosed to cosmetics and other short life components. Comparable 3 warranted adjustment for inferior kitchen updating.

Variation in bath count adjusted at $1,000 per fixture. Variation in GLA adjusted at $30 per square foot, rounded, where there is a significant difference. GLA based on municipal record, MLS or appraiser information, and visual inspection.

Comparable 3 warranted adjustment for Functional Utility due to inferior two bedroom layout.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Remarks - Public Stunning!! This four bedroom, two bathroom home is on a pristine, private lot with water views of Canney Brook in a desirable South Dover neighborhood. From the outside, this home is welcoming and beautifully landscaped with amazing curb appeal, but it's the immaculate inside that will make you never want to leave. As soon as you go through the door, your eyes are immediately drawn through the den to the new panoramic window that overlooks the back of the property and water. The den, which includes a gas stove with large stone tiles and hardwood floors is open to the stunning NEW KITCHEN. The details in the kitchen are like no other.... stainless steel appliances, gas range (with tile backsplash), cherry cabinets, quartz countertops and much more! The upstairs was recently painted and has new/neutral carpet throughout. The walk out basement is completely finished and updated with two LARGE rooms and full bathroom. The new Trex deck (accessible from the master bedroom and Den) is perfect for bird watchers or nature lovers to relax and enjoy the views. You have to take your time going through this home to see all the detail and how well maintained it is. Natural gas, city water and city sewer (the big three!). Central air conditioning. Nest thermostat. Large two car attached garage with third garage door in the back. Nothing to do! This home is move in ready!
Directions From South/Portsmouth: Take Dover Point Rd. north. Toftree Lane is just after Tendercrop Farm on the right. 7 Toftree is the fourth house on the right.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B9

Property Identification & Description

Address: 9 Gerrish Road, Dover
Strafford County, New Hampshire

Identification: Tax Map M28, Lot 0
Source Deed: Book 4506, Page 309
Land Area: 0.294 AC

Improvements: The subject improvements include a ranch style single family residence constructed in 1956 which includes 1,008 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 100 to 150 feet and includes a 345 kV line on single pole laminated wood structures, approximately 90 to 100 feet in height. The corridor is identified as 307. There are two lots in between the subject and the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 133 ft
Distance to Nearest Structure: 290 ft
Distance to Most Visible Structure: 290 ft
HVTL Visibility from House: Clearly visible. A tower located to the southwest across Gerrish Road from the subject is fully visible and unobstructed by vegetation or topographic features.

Property Sale Data

Sale Date: March 19, 2018
Conditions of Sale: Arm's Length
Marketing Period: 29 Days on Market
Average DOM for Town: 60 Days
Marketing History: MLS data indicate the property was originally listed January 11, 2018 for $265,000, went under contract February 9th, and closed April 20, 2018 at $265,750. Municipal records are not yet updated with the recorded date of this sale. The deed indicated conveyance on March 19, 2018.

Sale Price: The appraiser reported the sale at $265,800.

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 3.5 miles of the subject. Consideration was given to all the sale comparables; like the subject all have been recently renovated. Sale #1 is weighted, as the most recent and being similar in lot size and GLA. Sales #2 and #3 are older sales given secondary weighting, with Sale #2 similarly located on a through street and Sale #3 similar in lot size and GLA. Subsequent to adjustment, comparable values ranged from $266,000 to $269,300:

Sale #1 (12 Austin Street): $266,000
Sale #2 (129 Tolend Road): $266,100
Sale #3 (11 Oak Hill Drive): $269,300

Appraised Value: $266,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $66,500 for land, $103,000 for the residence, for a total of $169,500.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: It was confirmed that the most visible structure was clearly visible. This property has two properties buffering it from the ROW. However, it has a clear view from the front of the house to a structure which results in a subjective rating of intrusion as moderate (5).

There were no questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Michael Whitney, Listing Agent
Interviewed on: June 18, 2018

Notes: Michael said the TLs had a big impact on marketing of the property, believing that buyer traffic was reduced by 20%. He said in that's what his data generally show when comparing performance of his listings of TL proximate properties to his listings not located near TLs, other factors on the properties being equal.

He believes the reduced traffic is typically a function of prospective buyers checking out the property on Google Earth and simply passing on looking at it. He attributes the market resistance as 50% generated by aversion to the TLs visually and 50% to concerns over EMF related health effects. He feels the EMF issue needs to be addressed thru a concerted public education effort, as the information out there that says there are no proven health effects is swamped by that now available on the internet that claims to show that there are.

He did not indicate that he made any accommodation for the TLs in setting the listing price.

Conclusions

Improvements & Visibility

The subject is improved with a ranch style single family residence constructed in 1956 which includes 1,008 SF of gross living area. The subject includes a 0.294 AC parcel which is neither unencumbered by nor abutting the HVTL corridor ROW. The improvements are 133' from the transmission corridor and the closest and most visible structure is 290' from the improvements.

The HVTL are clearly visible from the subject, with a tower located to the southwest across Gerrish Road fully visible and unobstructed by vegetation or topography. Overall intrusion of the HVTL on the property is subjectively rated as moderate.

Appraised Value / Sale Price / Marketing Period

The subject sold for $265,800 on March 19, 2018, which is 0.1% less than the appraised value of $266,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 29 days, versus the town average of 60 days at the time of sale.

The sale price was 100.3% of original list price, with the appraised value at 100.4%. The appraisal notes an average sale/list price ratio of 95% to 103%. These factors suggest the original list price in this transaction was set competitively relative to alternative properties in the market.

Interview Evidence

The listing agent said TLs had a big impact on marketing of the property, believing that buyer traffic was reduced by 20%. This comment however, while offered in response to a question specific to the subject, was also generalized to his wider experience across the market. He did not indicate that he made any accommodation for the HVTL in setting the listing price for the subject in this transaction.

Summary

Overall intrusion of the HVTL on the property is subjectively rated as moderate. The subject sold within half the average time on market for the market area at the time of sale. Thus, the generalized market thinning effects associated with HVTL proximity noted in the listing agent's comments do not appear to have adversely affected the subject's time on market in this instance. The home sold at over list price and there was no indication of any accommodation for the HVTL made in the list price.

The appraiser's concluded value is consistent with the transaction's outcome with respect to sale price of the home. The sale price discount of 0.1% from the appraiser's concluded value absent the HVTL is considered negligible in amount and within the negotiating space typical of the area market at the time of sale. The appraisal evidence shows no indication of existence of an adverse price effect.

Notwithstanding the listing agent's comment specific to market thinning effects in general, neither the interview evidence nor the appraisal evidence supports a conclusion of any adverse effects associated with the HVTL on either sale price or time on market in this instance.

Re: 9 Gerrish Road
Dover, NH 03820
Stanhope Group File # 180560

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of March 19, 2018 to be:

Two Hundred Sixty Sic Thousand Dollars
$266,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

							(Vacant)	10%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Appreciation beginning within this submarket in 2016 Average marketing times are typically under 90 days. Average list to sales price ratio is 95% to 103%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 60 days.

COMMENTS

Additional features (special energy efficient items, etc.): Recently renovated Ranch on full basement. Front and rear decks, and fenced yard. Updated kitchen/baths, flooring, interior doors, interior and exterior paint. Basement has three finished rooms and bath.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Less than typical physical depreciation due to recent updating within 1 year, including: kitchen/bath remodel, paint and flooring. Heat and roof age disclosed to be 5 +/- years.

Some functional obsolescence noted in basement finish. No external depreciation noted or disclosed. Detached storage shed considered personal property.

Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Consideration given to all comparables; like the subject property, all have recent renovations noted. Comp 1 is most recent sale, has similar lot size and GLA, and is weighted. Comps 2 and 3 are older sales given secondary weighting; comp 2 similarly located on a through traffic street, and comp 3 similar in lot size and GLA. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed and/or anticipated market behavior, and/or paired sales comparison. Broker verification made where available. Please refer to attached Explanatory Comments for additional discussion of sales analysis.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF March 19, 2018

TO BE $ 266,000

APPRAISER:

ADDENDUM

Borrower: N/A		File No.: 180560
Property Address: 9 Gerrish Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SUBJECT COMMENTS: A more recent sale of the subject property has occurred than appears on attached municipal tax card. Sale on 03/19/2018 (date recorded was 04/23/2018) for $265,800. Verified with registry record and municipal assessor's office. MLS record of the most recent transfer is also attached as an addendum to this report.

SALES ANALYSIS COMMENTS

Adjustment warranted for price inflation to comparable 2 due to seller paid concessions; adjustment reflects

Borrower: N/A		File No.: 180560
Property Address: 9 Gerrish Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

corresponding inflation, or difference between and list price ($268,000) and sale price ($272,000).

Market conditions adjustment warranted for appreciation evident in submarket. Adjustment is estimated at 6% annually (.5% per month) rounded, from date of contract. No adjustment where contract date is within 30 days from date of value. Adjustment is based on county, state and regional statistical data as reported by New Hampshire Association of Realtors, Federal Housing Administration, and Federal Housing Finance Authority.

Subject is located on a through traffic street. Location adjustment warranted on comparables 1 and 3 for superior location on low traffic streets within walking distance of area Elementary Schools. Comp 2 is similarly located on through traffic street as the subject; no adjustment warranted.

Site adjustment warranted on comp 2 for significant difference in lot size and associated increase in privacy and recreation area.

No adjustment for variation in building design as each offers similar market appeal.

Comparables warranted superior quality adjustment for superior hardwood flooring and granite countertop upgrades. Comp 3 warranted additional adjustment for superior bath fixture upgrades.

Condition adjustments based on level of updates to cosmetics and other short life components. Comp 1 had similar cosmetic updating throughout; superior adjustment for more recent roof/furnace update. Comp 2 adjusted for only partial kitchen/bath updates.

Variation in bath count adjusted at $1,000 per fixture. Variation in GLA adjusted at $25 per square foot, rounded, where there is a significant difference. GLA based on municipal record, MLS or appraiser information, and visual inspection.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Peter E. Stanhope

Remarks - Public Beautiful Light Filled Ranch has been updated throughout and has lots of space upstairs and down! This home was thoroughly updated inside and out, with a fresh coat of paint, refinished floors, new doors, kitchen cabinets and appliances! It has a master bedroom with a large closet, plus 2 bedrooms, a full all on the first floor. The kitchen has new appliances including a fridge, electric range, microwave, dishwasher and kitchen cabinets. Open living room is spacious and has large windows allowing for lots of natural light. The Basement has two great family rooms plus two additional finished rooms, plus a half bath. There is also separate storage space, with washer dryer and utilities with bulkhead access. There is a wonderful back deck that overlooks the fenced in backyard, with a wonderful shed for all your storage needs.This move in ready home is available immediately! A must see in a great commuter location in a desirable neighborhood! One or more members of the managing entity is a licensed real estate salesperson and/or agent.
Directions Off Dover Pt Rd, on the corner of Gerrish Rd and Old Colony Rd.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B10

Property Identification & Description

Address: 13 Gerrish Road, Dover
Strafford County, New Hampshire

Identification: Tax Map M33, Lot D0
Source Deed: Book 4238, Page 284
Land Area: 0.275 AC

Improvements: The subject improvements include a cape style single family residence constructed in 1988 which includes 1,728 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 100 to 150 feet and includes a 345 kV line on single pole laminated wood structures, approximately 90 to 100 feet in height. The corridor is identified as 307. An adjacent property lies between the subject and the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 68 ft
Distance to Nearest Structure: 237 ft
Distance to Most Visible Structure: 237 ft
HVTL Visibility from House: Clearly visible. A tower located to the southwest across Gerrish Road from the subject is clearly visible.

Property Sale Data

Sale Date: October 13, 2017
Conditions of Sale: Arm's Length
Marketing Period: 6 Days on Market
Average DOM for Town: 55 Days
Marketing History: MLS data indicate the property was originally listed August 25, 2017 for $263,000, went under contract August 31st, and closed October 16, 2017 for $260,000. Municipal records were not updated with the recorded date of this sale. The deed indicated conveyance on October 13, 2017.

Sale Price: $260,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the City of Dover within approximately 3.6 miles of the subject. Consideration was given to all the sale comparables; like the subject all have been recently renovated. Sales #1 and #3 are most similar to the subject in GLA. Sale #2 is most proximate and is weighted. The comparables bracket the subject in several regards. Subsequent to adjustment, comparable values ranged from $262,300 to $270,500:

Sale #1 (125 Tolend Road): $262,300
Sale #2 (55 Stark Avenue): $266,200
Sale #3 (3 Homestead Lane): $270,500

Appraised Value: $266,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $62,600 for land, $171,200 for the residence, for a total of $233,800.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The most visible structure was confirmed to be clearly visible. Despite being separated from the ROW by one property, there is a close and full view of a structure from the front of the house. Overall intrusion is rated as high (7).

No questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Erik Potts, Selling (Buyer) Agent
Interviewed on: June 26, 2018

Notes: Reached Erik on a follow up call on June 26 at 9am local time. He recalled the property and the transaction, saying that the TLs were not really an issue for the buyer.

He said there was some initial consideration given to them, as the couple had small children. But they didn't view the home as a long-term commitment and didn't plan to stay in the house for long. Given tight market conditions and the limited inventory available, they decided the home was not worth walking away from over its proximity to the TLs.

Conclusions

Improvements & Visibility

The subject is improved with a cape style single family residence constructed in 1988 which includes 1,728 SF of gross living area. The subject includes a 0.275 AC parcel which is neither unencumbered by nor abutting the HVTL corridor ROW. The improvements are 68' from the transmission corridor and the closest and most visible structure is 237' from the improvements.

The HVTL are clearly visible from the residence, with a tower located to the southwest across Gerrish Road in view. Overall intrusion of the HVTL on the property is subjectively rated as high.

Appraised Value / Sale Price / Marketing Period

The subject sold for $260,000 on October 13, 2017, which is 2.3% less than the appraised value of $266,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 6 days, versus the town average of 55 days at the time of sale.

The sale price was 98.9% of original list price., with the appraised value at 101.1% of list; the appraisal notes an average sale/list price ratio of 95% to 103%. Together these factors imply the original list price in this transaction may have been set somewhat aggressively relative to competitive properties in the market.

Interview Evidence

The selling agent said the TLs were an initial consideration for the buyer; but given tight market conditions and limited inventory available they were not a significant enough issue to justify passing on the home in this instance.

Summary

Overall intrusion of the HVTL on the property is subjectively rated as high. Notwithstanding the buyer's initial consideration relative to the HVTL, there was no indication that they affected the offering price. The subject sold well under the average days on market for the town at the time of sale. The interview evidence suggests no adverse effects from the HVTL on marketing time or the sale price realized by the subject in this transaction.

The appraised value absent HVTL influence was 101.1% of list price. This fact could reasonably lead one to conclude that the subject was initially priced somewhat aggressively. However, the sale price discount of 2.3% from the appraiser's concluded value absent the HVTL is still considered to be within the negotiating space typical of market conditions at the time. Given the interview evidence, this relatively modest discount from appraised value was less likely a result of adverse HVTL effects on price, and more likely simply an artifact of typical buyer/seller interaction in an active arms-length market. The interview evidence and the appraisal evidence together support a conclusion of no adverse impact from the HVTL on either the sale price realized or the time on market experienced by the subject in this case.

Re: 13 Gerrish Road
Dover, NH 03820
Stanhope Group File # 180561

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of October 13, 2017 to be:

Two Hundred Sixty Six Thousand Dollars
$266,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Area is primarily residential in nature. Generally bounded by Spaulding Turnpike and Bellamy River to the west, Cocheco River to the north and east, and Great Bay to the south.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Area is predominantly residential in nature. High end of value is waterfront property. Dover is popular for its proximity to the NH seacoast and University of New Hampshire. Commuter routes are easily accessible. Employment available locally; Boston, MA and Portland, ME are within 75 miles.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
A prolonged a period of decline followed by market stability evident in 2011/2012. Appreciation beginning within this submarket in 2016 Average marketing times are typically under 90 days. Average list to sales price ratio is 95% to 103%. Sales concessions occur, but do not typically inflate price. Interest rates are favorable. Exposure time estimated at 60 days.

COMMENTS

Additional features (special energy efficient items, etc.): Gambrel on full basement. Front and rear decks, and fenced yard. Basement has finished Rec Rooms and bath.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Less than typical physical depreciation due to updating and regular maintenance; baths updated within 1 to 3 years per seller disclosure, kitchen updated - timeframe unknown.

Heat and roof age disclosed to be 10 +/- years. Some functional obsolescence noted in basement finish. No external depreciation noted or disclosed. Detached storage sheds considered personal property. Refer to Explanatory Comments regarding Hypothetical Condition/Extraordinary Assumption.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: No apparent adverse environmental conditions noted or disclosed on site or in the immediate neighborhood.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Consideration given to all comparables; comps 1 and 3 most similar in GLA, comp 2 is most proximate and is weighted. Comparables bracket the subject property in several regards. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed and/or anticipated market behavior, and/or paired sales comparison. Broker verification made where available. Please refer to attached Explanatory Comments for additional discussion of sales analysis.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon.

Final Reconciliation: Emphasis on Sales Comparison Approach as it best reflects the actions of informed buyers and sellers. Cost Approach was considered but not developed due to age. Income Approach was considered but not developed as single family homes in this area are not typically purchased as income producing investments. Explanatory Comments are an integral part of this report.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF October 13, 2017

TO BE $ 266,000

APPRAISER:

ADDENDUM

Borrower: N/A		File No.: 180561
Property Address: 13 Gerrish Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Victoria A. Stanhope, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SUBJECT COMMENTS: A more recent sale of the subject property has occurred than appears on attached municipal tax card. Sale on 10/13/2017 (date recorded was 10/18/2017) for $260,800. Verified with registry record and municipal assessor's office. MLS record of the most recent transfer is also attached as an addendum to this report.

SALES ANALYSIS COMMENTS

Market conditions adjustment warranted for appreciation evident in submarket. Adjustment is estimated at 6%

Borrower: N/A		File No.: 180561
Property Address: 13 Gerrish Road		Case No.:
City: Dover	State: NH	Zip: 03820
Lender: Client: Chalmers & Associates LLC		

annually (.5% per month) rounded, from date of contract. Adjustment is based on county, state and regional statistical data as reported by New Hampshire Association of Realtors, Federal Housing Administration, and Federal Housing Finance Authority.

Subject is located on a through traffic street. Comparables 1 and 2 similarly located on through traffic streets; no adjustment warranted. Comp 3 warranted superior adjustment for location on a low traffic, cul-de-sac street.

No adjustment for variation in building design as each offers similar market appeal.

Quality adjustments based on level of upgrades to finish materials noted or disclosed. Comparable 1 warranted adjustment for superior granite countertop upgrade. Comp 2 adjusted for superior flooring, kitchen, and bath upgrades. Comp 3 adjusted for inferior flooring upgrades.

Condition adjustments based on level of updates to cosmetics and other short life components. Comparable 2 adjusted for more recent kitchen updates, and less wear and tear to cosmetics. Comparable 3 adjusted for dated kitchen and baths.

Variation in GLA adjusted at $25 per square foot, rounded, where there is a significant difference. GLA based on municipal record, MLS or appraiser information, and visual inspection.

Comparable 2 warranted adjustment for concrete slab foundation only; full basements are a preferred amenity in this geographic region, and offer space for storage, utilities, and additional below grade living area.

Comparable 1 warranted functional utility adjustment for atypical floorplan and layout; refrigerator in dining room rather than kitchen, second dining area at front door into living room, and living room divided into two small areas rather than one larger functional space.

Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Remarks - Public This 3 bedroom Gambrel in south Dover is located in the sought after Garrison School district. Conveniently minutes to major routes, down town Dover, Portsmouth and more! The 1st floor offers an open concept kitchen/dining with direct access from slider to over sized deck and fenced in back yard (ideal for grilling/entertaining family and friends). With plenty of back yard & dual sheds for exterior storage there is room for both work and play. The living room is spacious with room for office if needed. Features include: stainless steal appliances, double ovens, updated tile backsplash, wide french door refrigerator, dining room chair rail and Wainscoting with ceiling fan and tile flooring. Hardwood floors throughout the living room/office with ample natural lighting. Upstairs you'll find the large master bedroom with "his and hers" closet complete with recessed lighting with dimmer. Two additional bedrooms and two full updated baths complete with a soaking tub, & full tile brushed nickel fixtures. With a specious finished basement, wired for surround sound, recessed lighting and wall to wall carpeting this is a great space for additional recreation, family room or in home gym. The unfinished part of the basement offers space for storage as well. Come see all this home has to offer and make Dover your new home!
Directions From Portsmouth, take route 4 to exit 6N towards Dover. Follow Dover Point Road. Take slight left onto Old Dover Point Road, left onto Gerrish Road. The house is on the right.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B11

Property Identification & Description

Address: 15 Stirling Avenue, Hooksett
Merrimack County, New Hampshire

Identification: Tax Map 19, Lot 11-10
Source Deed: Book 3524, Page 567
Land Area: 0.57 AC

Improvements: The subject improvements include a colonial style single family residence constructed in 2004 with 2,112 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 105 feet and includes a 115 kV line on single pole laminated wood structures, approximately 70 to 79 feet in height. The corridor is identified as D118. The subject abuts and is encumbered by the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 1,652 SF
Distance from House to ROW: 88 ft
Distance to Nearest Structure: 182 ft
Distance to Most Visible Structure: 182 ft
HVTL Visibility from House: Partially visible. A tower is located southeast, and directly behind the subject, and despite heavy screening by hardwood and softwood vegetation, remains partially visible from the residence.

Property Sale Data

Sale Date: July 28, 2016
Conditions of Sale: Arm's Length
Marketing Period: 4 Days on Market
Average DOM for Town: 50 Days
Marketing History: MLS data indicate the property was originally listed June 1, 2016 for $349,900, went under contract June 5th, and closed July 28, 2016 for $355,000. Municipal data show the sale as recorded July 28, 2016.

Sale Price: $355,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Hooksett within approximately 1.9 miles of the subject. Consideration was given to all the sale comparables. Subsequent to adjustment, comparable values ranged from $354,100 to $357,800:

Sale #1 (12 Misty Lane): $354,100
Sale #2 (15 Garden Song Drive): $357,800
Sale #3 (55 Stirling Avenue): $355,900

Appraised Value: $355,700

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $95,600 for land, $204,500 for the residence, for a total of $300,100.

Assessment Card Notes: None

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: Field inspection confirmed that the most visible structure was partially visible. The house is relatively close to the ROW boundary but very well screened. Overall intrusion is rated as low (2).

There were no questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Erwin & McCarthy Team/Gregory McCarthy, Listing and Selling Agent
Interviewed on: June 23, 2018

Notes: After several contact attempts, Greg responded by text on Saturday, June 23. His text said, "….I don't believe the power lines effected (sic) the sale because of the desirability of the neighborhood. If it did I would say no more than 5-10K."

(Interviewer's Note: The home sold at 1.5%, over list at 4 days on market - $355,000 sale price over $349,900 list.)

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 2004 with 2,112 SF of gross living area. The subject includes a 0.57 AC parcel of which 6.7% or 1,652 SF are encumbered by the HVTL corridor ROW. The improvements are 88' from the transmission corridor, the closest and most visible structure is 182' from the improvements.

A structure is located to the southeast directly behind the subject and is partially visible despite vegetative screening. The overall intrusion of the HVTL on the property is subjectively rated as low.

Appraised Value / Sale Price / Marketing Period

The subject sold for $355,000 on July 28, 2016, which is 0.2% less than the appraised value of $355,700 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 4 days, versus the town average of 50 days at the time of sale.

The sale price was 101.5% of original list price, with the appraised price at 101.7% of list. This suggests the home was priced reasonably with respect to its peers but priced to sell.

Interview Evidence

The listing and selling agent was one and the same for this transaction. He didn't believe the HVTL affected the sale of the subject in this instance due to its location in a highly desirable neighborhood; he commented that any price effect, if discernable, would be modest.

Summary

Although the HVTL are partially visible from the residence, their intrusion on the property is low. As noted by the listing agent the subject's neighborhood was a primary driver of its appeal in an active market, as evidenced by its brief time on the market and sale at over list price. This feature was enough to offset, or substantially limit, any modest price effect from proximity of the HVTL as theorized by the agent. In this instance, the sale price discount of 0.2% from the appraiser's concluded value absent the HVTL is considered negligible in amount and would have been within the negotiating space typical of market conditions at the time. Time on market was less than 10% of the town average.

The interview evidence and appraisal evidence, taken together in the context of the subject's short duration on the market, lead to a conclusion of no adverse effects from the HVTL on either sale price of the subject or its time on market in this transaction.

Re: 15 Stirling Avenue
Hooksett, NH 03106
Stanhope Group File # 180576

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

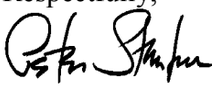
These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of July 28, 2016 to be:

Three Hundred Fifty Five Thousand Five Hundred Dollars
$355,700

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,



Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180576

SUBJECT

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	10		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Stirling Ave and all roads in the Campbell Hill and Glencrest developments off Route 3/28 between Auburn Rd to the south and Main St to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of colonial style homes. Businesses and shopping are conveniently located along Route 3/28. The subject is convenient to Interstate 93 and Routes 3, 28 & 27. Center for services and employment are the greater Manchester and Concord areas.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's estimated exposure time, at its appraised value, is estimated 75 days. This is typical for the subject's neighborhood and competing market area. Exposure time is directly associated with the appraised value and is considered to be prior to the effective date of the appraisal. This is contingent upon the listing price being reasonable and consistent with the market. Subject submarket evidence stability in the period values is estimated. Some percentage of sale price as concessions is not uncommon.

PUD

COMMENTS

Additional features (special energy efficient items, etc.): Fireplace with gas insert in living room; open porch in front; deck at rear.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Overall condition of the subject property appears to have typical evidence of use and age. No functional disclosed or external noted. See Extraordinary Assumptions and Hypothetical Condition in the Text Addendum.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None noted or disclosed.

	Sq. Ft. @ $			=	0
				=	
Garage/Carport	Sq. Ft. @ $			=	0
Total Estimated Cost New				= $	0
Less Depreciation	Physical $0	Functional $0	External $0	Est. Remaining Econ. Life: = $	0
Depreciated Value of Improvements				= $	0
"As-is" Value of Site Improvements				= $	
INDICATED VALUE BY COST APPROACH				= $	0

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 63-67 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines. See extraordinary assumption on source of data. Explanatory comments are an integral part of this report. See Text Addendum.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 07/28/2016
TO BE $ 355,700

APPRAISER:

ADDENDUM

Borrower: N/A	File No.: 180576	
Property Address: 15 Stirling Ave	Case No.:	
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

The subject is a legal nonconforming site typical of sites established prior to existing zoning regulations. The present zoning regulations require 175 road-front footage and a 1-acre lot in this area. The current use is allowed to continue in the event of total destruction provided the original footprint is not altered. The legal nonconforming site has not been demonstrated to be adverse to marketability.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

Site area adjustments are based on variance in privacy and utility rounded.

GLA adjustments to comparables twoand three are market derived at $25 per square foot, rounded.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket. Line item adjustments are market derived and are typical for this marketplace. Many may have been historically supported by paired sales analysis and/or peer review. Line adjustments may vary on a case-by-case basis, depending on which properties are being compared and the context of those comparisons. The need for any significant adjustments is fairly typical in this submarket and has not been demonstrated to be adverse to the accuracy of estimating the market value of properties in this submarket. The appraisal report is to ensure that our client has the most viable information regarding the fair market value opinion of this home based upon current, available market data.

Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers. Cost approach is not considered a reliable measure of current fair market value do to the few new construction projects in the subject's value range which makes calculation of depreciation speculative. Furthermore, it is typical for the cost approach (in recent years) in most markets to be generally afield from correlative sales data - leaving the sales comparison approach the strongest determinant of fair market value. The Income Approach was considered inapplicable, because in this submarket few, if any, single-family residences are investor-owned.

All comparables are considered, because they are the most similar sales that a search of the subject area produced: each is a similar colonial style home and each enjoys similar characteristics and market influences as the subject.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B12

Property Identification & Description

Address: 21 Lindsay Road, Hooksett
Merrimack County, New Hampshire

Identification: Tax Map 25, Lot 18-22
Source Deed: Book 3488, Page 221
Land Area: 0.69 AC

Improvements: The subject improvements include a colonial style single family residence constructed in 1992 with 2,322 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 220 feet and includes a 115 kV line on single pole laminated wood structures, approximately 70 to 79 feet in height. The corridor is identified as D118. The southern tip of the subject's lot is encumbered by the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 644 SF
Distance from House to ROW: 211 ft
Distance to Nearest Structure: 394 ft
Distance to Most Visible Structure: 0 ft
HVTL Visibility from Residence: No visibility. Vegetative screening is sufficient to obscure views of the existing structures.

Property Sale Data

Sale Date: August 12, 2015
Conditions of Sale: Arm's Length
Marketing Period: 11 Days on Market
Average DOM for Town: 40 Days
Marketing History: MLS Data indicate the property was originally listed June 28, 2015 for $349,000, went under contract July 9th, and closed August 12, 2015 for $340,000. Municipal data show the sale as recorded August 13, 2015.

Sale Price: $340,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Hooksett within approximately 2.6 miles of the subject. Consideration was given to all the sale comparables; none was considered more like the subject than the others. Subsequent to adjustment, comparable values ranged from $334,000 to $338,200:

Sale #1 (28 Stirling Avenue): $338,200
Sale #2 (46 Joanne Drive): $334,000
Sale #3 (6 Fieldstone Drive): $337,100

Appraised Value: $336,500

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $88,700 for land, $175,500 for the residence, for a total of $264,200.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The field inspection confirmed that no structures were visible from the property. The distance of the house from the ROW, vegetative screening and absence of structure visibility leads to a conclusion of no intrusion (0).

No questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Deborah Hanson, Listing Agent
Interviewed on: June 19, 2018

Notes: Deb responded to my follow up text message after a first call attempt at 4:15pm local time. My text asked if proximity of the power lines affected the listing at all – either as a factor in how she priced the property or if there were any particular buyer concerns or resistance expressed during the marketing process. I also asked about the seller concessions of $5K noted in MLS's report of the sale.

Her text back said that the power lines "…had no impact at all." She also confirmed that the seller concession noted was closing cost related.

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 1992 with 2,322 SF of gross living area. The subject includes a 0.69 AC parcel of which 2.1% or 644 SF are encumbered by the HVTL corridor ROW. The improvements are 211' from the transmission corridor and the closest structure is 394' from the improvements.

The HVTL are not visible from the residence, as the home is buffered by deep on-property vegetative screening from the ROW. There is no intrusion of the HVTL on the property.

Appraised Value / Sale Price / Marketing Period

The subject sold for $340,000 on August 12, 2015, which is 1% over the appraised value of $336,500 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 11 days, versus the town average of 40 days at the time of sale.

The sale price was 97.4% of original list price, with the appraised value at $96.4% of list. These factors suggest that the list price was fairly set, to the strong side, relative to competitive properties in the market at the time of sale.

Interview Evidence

The listing broker said the HVTL had no impact on the sale.

Summary

There is no intrusion of the HVTL on the property. The listing broker felt the HVTL had no impact on the sale; the property sold at over its appraised value absent HVTL influence, within 3% of its list price which appears to have been strongly set, and in well under the average days on market for the town at the time of sale. The interview evidence and the appraisal evidence are consistent with a conclusion of no adverse effects from the HVTL on either sale price or marketing time in this transaction.

Re: 21 Lindsay Road
Hooksett, NH 03106
Stanhope Group File # 180577

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

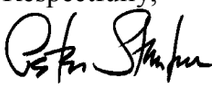
These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of August 12, 2015 to be:

Three Hundred Thirty Six Thousand Five Hundred Dollars
$336,500

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,



Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180577

SUBJECT

Property Address 21 Lindsay Rd | City Hooksett | State NH | Zip Code 03106
Legal Description Book 3488 Page 221 | County Merrimack
Assessor's Parcel No. Map 25 Lot 18-22 | Tax Year 2015 | R.E. Taxes $ 6,580.00 | Special Assessments $ N/A
Borrower N/A | Current Owner Di Mattina | Occupant: [X] Owner [ ] Tenant [ ] Vacant
Property rights appraised [X] Fee Simple [ ] Leasehold | Project Type [ ] PUD [ ] Condominium (HUD/VA only) | HOA$ N/A /Mo.
Neighborhood or Project Name Campbell Hill Estates | Map Reference No MSA# | Census Tract 0442.00
Sale Price $ 340,000 | Date of Sale 08/13/2015 | Description and $ amount of loan charges/concessions to be paid by seller $5000
Lender/Client Chalmers & Associates, LLC | Address 616 Park Lane, Billings, MT 59102
Appraiser Peter E Stanhope | Address 11 N Mast St, Goffstown, NH 03045

NEIGHBORHOOD

Location	[ ] Urban	[X] Suburban	[ ] Rural	**Predominant occupancy**	**Single family housing** PRICE $ (000)	AGE (yrs)	**Present land use %**		**Land use change**	
Built up	[X] Over 75%	[ ] 25-75%	[ ] Under 25%	[X] Owner	220 Low	1	One family	75	[X] Not likely	[ ] Likely
Growth rate	[ ] Rapid	[X] Stable	[ ] Slow	[ ] Tenant	450 High	60+	2-4 family		[ ] In process	
Property values	[ ] Increasing	[X] Stable	[ ] Declining	[X] Vacant (0-5%)	Predominant		Multi-family		To:	
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply	[ ] Vacant (over 5%)	285	10	Commercial	15		
Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	10		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Lindsay Rd and all roads in the Campbell Hill and Glencrest developments off Route 3/28 between Auburn Rd to the south and Main St to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of colonial style homes. Businesses and shopping are conveniently located along Route 3/28. The subject is convenient to Interstate 93 and Routes 3, 28 & 27. Center for services and employment are the greater Manchester and Concord areas.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's estimated exposure time, at its appraised value, is estimated at 75 days. This is typical for the subject's neighborhood and competing market area. Exposure time is directly associated with the appraised value and is considered to be prior to the effective date of the appraisal. This is contingent upon the listing price being reasonable and consistent with the market. Subject submarket evidence stability in the period values is estimated. Some percentage of sale price as concessions is not uncommon.

PUD

Project Information for PUDs (If applicable) - - Is the developer/builder in control of the Home Owners' Association (HOA)? [ ] YES [ ] NO
Approximate total number of units in the subject project N/A . Approximate total number of units for sale in the subject project N/A .
Describe common elements and recreational facilities:

COMMENTS

Additional features (special energy efficient items, etc.): Fireplace in family room; enclosed porch and deck at rear of residence.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Overall condition of the subject property appears typical evidence of use and age. No functional disclosed or external noted. See Extraordinary Assumptions and Hypothetical Condition in the Text Addendum.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None adverse noted or disclosed.

COST APPROACH

ESTIMATED SITE VALUE			= $	
ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:				
Dwelling	Sq. Ft. @ $		= $	0
	Sq. Ft. @ $		=	0
			=	
Garage/Carport	Sq. Ft. @ $		=	0
Total Estimated Cost New			= $	0
Less Depreciation	Physical $0	Functional $0	External $0	Est. Remaining Econ. Life: = $ 0
Depreciated Value of Improvements			= $	0
"As-is" Value of Site Improvements			= $	
INDICATED VALUE BY COST APPROACH			= $	0

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 58-64 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines.
Explanatory comments are an integral part of this report. See Text Addendum.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 08/12/2015
TO BE $ 336,500

Property Address: 21 Lindsay Rd		Case No.:
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

The subject is a legal nonconforming site typical of sites established prior to existing zoning regulations. The present zoning regulations require 175 road-front footage and a 1-acre lot in this area. The current use is allowed to continue in the event of total destruction provided the original footprint is not altered. The legal nonconforming site has not been demonstrated to be adverse to marketability.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of The Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

ADDENDUM

Borrower: N/A		File No.: 180577
Property Address: 21 Lindsay Rd		Case No.:
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

Site area adjustments are based on variance in privacy and utility.

Quality adjustment to comparable one is at $6 per square foot, rounded, and reflects the reported architectural features noted in this comparable when compared to the subject.

GLA adjustments to comparables one and three are market derived at $25 per square foot, rounded.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket. Line item adjustments are market derived and are typical for this marketplace. Many may have been historically supported by paired sales analysis and/or peer review. Line adjustments may vary on a case-by-case basis, depending on which properties are being compared and the context of those comparisons. The need for any significant adjustments is fairly typical in this submarket and has not been demonstrated to be adverse to the accuracy of estimating the market value of properties in this submarket. The appraisal report is to ensure that our client has the most viable information regarding the fair market value opinion of this home based upon current, available market data.

Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers. Cost approach is not considered a reliable measure of current fair market value do to the few new construction projects in the subject's value range which makes calculation of depreciation speculative. Furthermore, it is typical for the cost approach (in recent years) in most markets to be generally afield from correlative sales data - leaving the sales comparison approach the strongest determinant of fair market value. The Income Approach was considered inapplicable, because in this submarket few, if any, single-family residences are investor-owned.

All comparables are considered, because they are the most similar sales that a search of the subject area produced: each is a similar colonial style home and each enjoys similar characteristics and market influences as the subject.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B13

Property Identification & Description

Address:	175 Pine Street, Danville Rockingham County, New Hampshire
Identification:	Tax Map 4, Lot 59D
Source Deed:	Book 5848, Page 1095
Land Area:	2 AC
Improvements:	The subject improvements include a ranch style single family residence constructed in 1960 which includes 1,328 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor:	The width of the ROW is 280 feet and includes a 345 kV line, and two 115 kV lines. Structure heights range from 61 to 93 feet in height. The corridor lines are identified as 363, J147 and V103. The subject is approximately two-thirds encumbered by the ROW.
Number of Structures on Site:	2
ROW Encumbrance:	59,466 SF
Distance from House to ROW:	94 ft
Distance to Nearest Structure:	197 ft
Distance to Most Visible Structure:	263 ft
HVTL Visibility from Residence:	Partially visible. Although the home is in close proximity to the HVTL corridor, adequate visual screening exists on property to obscure structures. Partial visibility is however possible through the vegetative screening.

Property Sale Data

Sale Date:	August 25, 2017
Conditions of Sale:	Arm's Length
Marketing Period:	10 Days on Market
Average DOM for Town:	53 Days
Marketing History:	MLS data indicate the property was originally listed July 13, 2017 for $274,900, went under contract July 23rd, and closed August 25, 2017 for $280,000. Municipal data show the sale as recorded October 4, 2017. The deed indicated conveyance on August 25, 2017.
Sale Price:	$280,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Danville within approximately 2.7 miles of the subject. Consideration was given to all the sale comparables with equal emphasis due to an equal number of differences and similarities with the subject. Subsequent to adjustment, comparable values ranged from $281,800 to $290,800:

Sale #1 (44 Sweet Street): $290,800
Sale #2 (665 Main Street): $281,800
Sale #3 (13 Hummingbird Lane): $288,300

Appraised Value: $288,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $69,600 for land, $139,800 for the residence, $2,000 for additional features, for a total of $211,400.

Assessment Card Notes: Tax card indicates a land line adjustment of 20% for condition, with the notes "PSNH ROW".

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: Field investigation confirmed partial visibility of several structures. The lot is heavily encumbered with the house 94 ft. from the ROW boundary. There is significant screening, but structures would be partially visible, especially in leaf-off conditions. Overall intrusion is rated as moderate (5).

The appraisal reports the GLA at 1,328 sq. ft. which is inconsistent with the property record card which reports 1,630 sq. ft. The difference is because the assessor inappropriately includes a finished basement in the GLA.

Conclusions

Improvements & Visibility

The subject is improved with a ranch style single family residence constructed in 1960 which includes 1,328 SF of gross living area. The subject includes a 2.0 AC parcel of which 68.3% or 59,466 SF is encumbered by the HVTL. The improvements are 94’ from the transmission corridor, the closest structure is 197' from the improvements and the most visible structure is 263' from the improvements.

The HVTL are partially visible from the residence through vegetative screening on the subject between the home and the ROW. Overall intrusion of the HVTL on the property is subjectively rated as moderate.

Appraised Value / Sale Price / Marketing Period

The subject sold for $280,000 on August 25, 2017, which is 2.8% less than the appraised value of $288,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 10 days, versus the town average of 53 days at the time of sale.

The appraiser reports the mean sales price to list price ratio for the comparables was 100.5%. The sale price was 101.9% of original list price, with the appraised value at 104.8% of list. These factors suggest the subject was priced aggressively relative to competitive properties in the market.

Interview Evidence

The listing and selling agent were one and the same for this transaction. She could not be reached to complete an interview, despite multiple attempts at contact.

Summary

A sizable portion of the subject's lot is encumbered by the ROW, with the HVTL partially visible through vegetative screening adjacent to the home. The overall intrusion of the HVTL on the property is moderate.

The appraisal evidence indicates that the subject's sale was at a discount from the appraiser's concluded value absent HVTL influence; at a level which under typical sale circumstances could be considered as within the negotiating space typical of an active arms-length market. However, this observation is offset by evidence of what appears to be a rather aggressively set listing price. The home sold at significantly under the average days on market for the town, at over this list price.

Interview evidence was unobtainable. Without confirmation from the agent who both listed and sold the property as to any unusual influences on listing strategy or the existence of some uncommon seller motivation, the prompt sale at the discount to market noted cannot be fully reconciled.

While the minimal days on market exhibited by the subject supports a conclusion that nothing adversely influenced its time on market, a fair conclusion as to whether the HVTL affected the sale price in this transaction is indeterminate.

Re: 175 Pine Street
Danville, NH 03819
Stanhope Group File # 180578

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of August 25, 2017 to be:

Two Hundred Eighty Eight Thousand Dollars
$288,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser's opinions or conclusions.

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.					(Vacant)	5%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Kingston Rd. South; Main St. West; Long Pond Rd. North; Kingston town line East is the immediate neighborhood. 5% Commercial land use refers to a campground and municipal buildings which are at adequate distances.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Hypothetical Condition that an HVTL externality does not exist. No factors that affect the marketability of the properties in the neighborhood noted. Rte. 111A, Main St. is approximately one mile east providing easy access to major shopping and employment facilities. Major employment facilities are within 25 miles northwest in Manchester, NH, Salem, NH which is approximately 15 miles southwest. The Massachusetts state line is approximately 15 miles south with an easy commute.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's submarket, as well as the general market is showing evidence of improvements. Based on sales used for this report, the mean sales price vs list price ratio is 100.5%; the mean marketing time is 1.5 month and the estimated exposure time is 30 days.

COMMENTS

Additional features (special energy efficient items, etc.): Standard energy efficient items. The 275 gallon oil tank for heating fuel is assumed to be located in the basement; typical and not adverse. Brick fireplace. Granite counters and vanity top.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Renovated kitchen and bath with many "recent updates throughout". No on site inspection performed for this assignment.. See Extraordinary Assumption. No external obsolescence considered. Kitchen and bath assumed to be of average quality and good condition. The floor plan is acceptable in this submarket.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: Assumed: No adverse environmental conditions present in the improvements, on the site, or in the immediate vicinity of the subject property.

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180578

COST APPROACH

ESTIMATED SITE VALUE . . . . . = $

ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:

Dwelling _____ Sq. Ft. @ $ _____ = $ _____

_____ Sq. Ft. @ $ _____ = _____

_____ = _____

Garage/Carport _____ Sq. Ft. @ $ _____ = _____

Total Estimated Cost New . . . . . = $

Less Depreciation: Physical | Functional | External | Est. Remaining Econ. Life: _____ = $

Depreciated Value of Improvements . . . . . = $

"As-is" Value of Site Improvements . . . . . = $

INDICATED VALUE BY COST APPROACH . . . . . = $

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):

The Cost Approach is not developed due to the subject's age of construction and difficulties in estimating depreciation.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Equal emphasis placed on the comparable sales due to an equal number of differences and similarities with the subject property. The subject's submarket, as well as the general market shows evidence of improvements with the comparables adjusted @ .25%/month (rounded). Comps #2 and #3 are on lightly travelled streets warranting superior location adjustments. Based on viewed interior photographs coupled with broker's comments, comp #3 warranted a condition adjustment. Refer to attached Explanatory Comments.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: See Explanatory Comments for Hypothetical Conditions and Extraordinary Assumptions. Note: This is a retrospective appraisal with a DOV as indicated below and a DOI 06/13/2018.

Final Reconciliation: Emphasis has been placed on the Sales Comparison Analysis since it best reflects the market. The Cost Approach is not developed due to the age of improvements and the lack of an interior inspection. The Income Approach is not developed due to the lack of pertinent rental data of single family homes.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF Aug. 25th, 2017

TO BE $ 288,000

Property Address: 175 Pine St.		Case No.:
City: Danville	State: NH	Zip: 03819
Lender: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of the date reported herein. Constantly changing economic, social, political and physical conditions have varying

effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Laurie L Larocque, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

GLA adjusted at $20 per square foot, rounded where there is a significant difference. GLA based on municipal record, MLS information, and visual inspection. Below grade finished area adjusted at $10 per square foot with basement baths adjusted at $3,000. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

Other differences in physical characteristics have been adjusted for based on anticipated and/or observed market

reaction to such differences.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

RECONCILIATION

Sale #1 has a higher degree of similarity with the subject than sales #2 and #3, and as such is more heavily weighted. The mean of sales #2 and #3 is $285,000 rounded. The mean of the three sales is $287,000. Considering these indicators, the fair Market Value is estimated to be $288,000.

A calls were placed to the listing real estate agent on June 22nd, 2018. A message was left on the office phone number. I was unable to leave a message on the agent's cellular phone number. There is no appraiser listed on the Multiple Listing sheet. The selling real estate agent is the same as the listing agent.

WARRANTY DEED

We, **AMY A. SCAMMAN and NICOLAS P. CANTONE** of 175 Pine St., Danville, New Hampshire 03819,

For consideration paid and in full consideration,

Grant to **DAVID ROY FARRY, JR. and ASHLEY ANN BOWES,** as joint tenants with rights of survivorship, of 29 Frost St., Billerica, Middlesex County, Massachusetts 01821

With ***warranty covenants*** the following property in Rockingham County, New Hampshire.

Property Address: 175 Pine Street, Danville, Rockingham County, New Hampshire

A certain lot or parcel of land, with buildings thereon, situated on Pine Street, in Danville, County of Rockingham, State of New Hampshire, shown as lot D on "Plan of land in Danville, N.H. for Roy Collins, Scale 1"=50', Nov. 1974", drawn by Vernon W. Dingmam, R.L.S., which Plan is recorded with Rockingham County Registry of Deeds as Plan numbered D-6391; and being more particularly bounded and described as follows; according to said Plan;

Beginning at a point on Pine Street at an iron pipe in a stone wall at land now or formerly of Roy Collins, all as shown on said Plan and thence running N 13° 49' 02" W, along said land now or formerly of Collins, a distance of 275.81 feet to an iron pipe; thence turning and running along other land now or formerly of Collins, S 89° 41' 30" E, a distance of 371.19 feet to an iron pipe in a stone wall at a proposed right of way as shown on said Plan; thence turning and running along said stone wall and said proposed right of ways S 06° 35' 00" E, a distance of 260 feet to an iron pipe in a stone wall at Pine Street; thence turning and running along Pine Street and said stone wall, S 85°02' 00" W, a distance of 55.13 feet to a point; thence S 80° 16' 20" W a distance of 78.34 feet to the point; thence N 89° 54' 30" W, a distance of 90.64 feet to a point; thence N 84° 45' 40" W a distance of 108.84 feet to the iron pipe at the point of beginning.

Grantors hereby release all rights of homestead and any other interests therein.

Meaning and intending to convey the same premises conveyed to us by deed dated September 24, 2014 and recorded with the Rockingham Registry of Deeds in Book 5564, Page 2491 on October 2, 2014.

Witness our hands and seals on this 25th day of August 2017.

Amy A. Scamman

Nicolas P. Cantone

STATE OF NEW HAMPSHIRE

Rockingham, ss.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B14

Property Identification & Description

Address:	194 Long Pond Road, Danville Rockingham County, New Hampshire
Identification:	Tax Map 4, Lot 59G
Source Deed:	Book 5866, Page 2534
Land Area:	2.63 AC
Improvements:	The subject improvements include a ranch style single family residence constructed in 1978 which includes 1,824 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor:	The width of the ROW is 280 feet and includes a 345 kV line, and two 115 kV lines. Structure heights range from 61 to 93 feet in height. The corridor lines are identified as 363, J147 and V103. The subject is not encumbered by the ROW and is also buffered from the corridor by portions of adjacent lots.
Number of Structures on Site:	0
ROW Encumbrance:	0 SF
Distance from House to ROW:	640 ft
Distance to Nearest Structure:	707 ft
Distance to Most Visible Structure:	0 ft
HVTL Visibility from House:	No visibility. Vegetative screening is sufficient to prevent any views of the existing structures.

Property Sale Data

Sale Date:	October 30, 2017
Conditions of Sale:	Arm's Length
Marketing Period:	21 Days on Market
Average DOM for Town:	53 Days
Marketing History:	MLS data indicate the property was originally listed August 18, 2017 for $299,000, went under contract September 8th, and closed October 30, 2017 for $296,500. Municipal data show the sale as recorded October 30, 2017 at a price of $296,533. The appraiser confirmed the sale price at $296,500.
Sale Price:	$296,500

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Danville within approximately 2.4 miles of the subject. Consideration was given to all the sale comparables with equal emphasis on all due to an equal number of differences and similarities with the subject. Subsequent to adjustment, comparable values ranged from $276,600 to $294,400:

Sale #1 (44 Sweet Street): $294,400
Sale #2 (665 Main Street): $291,800
Sale #3 (71 Beechwood Drive): $276,600

Appraised Value: $290,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $87,000 for land, $158,000 for the residence, for a total of $245,000.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The field visit confirmed that no structures were visible from the property. The ROW is over 600 ft. from the house and there is very heavy vegetative screening. There is no intrusion from the HVTL on the property (0).

The lot size was shown by the assessor and MLS to be 2.0 AC. The deed referred to the plat map at 2.63 AC which is the size used in the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Brandy Paddon, Listing Agent
Interviewed on: June 23, 2018

Notes:

After several contact attempts, Brandy replied by text on Saturday morning June 23. Her text stated, "….The power lines didn't play a factor in the sale. No prospective buyers mentioned it and I did not adjust the price for them."

Conclusions

Improvements & Visibility

The subject is improved with a ranch style single family residence constructed in 1978 which includes 1,824 SF of gross living area. The subject includes a 2.63 AC parcel which is neither encumbered by nor abuts the HVTL corridor ROW. The improvements are 640' from the transmission corridor and the closest structure is 707' from the improvements.

The HVTL are not visible from the residence, as the home is buffered from the ROW by a deep area of vegetative screening on the subject and neighboring properties. There is no intrusion of the HVTL on the property.

Appraised Value / Sale Price / Marketing Period

The subject sold for $296,500 on October 30, 2017, which is 2.2% over the appraised value of $290,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 21 days, versus the town average of 53 days at the time of sale.

The appraiser reports the mean sales price to list price ratio for the comparables was 97.2%. Appraised value was 97.0% of list. The subject's sale price was 99.2% of original list price, which looked to have been set strongly relative to competitive properties in the market at the time of sale.

Interview Evidence

The listing agent stated clearly that the HVTL had no influence on the sale of the property and no accommodation was made for them in setting the listing price.

Summary

The ROW does not encumber the lot and there is no intrusion from the HVTL on the property. The listing broker was clear in confirming the HVTL played no role in the sale of the property or the marketing process, having never been raised as an issue by prospective buyers. No accommodation was made for them in her listing price.

The property sold strongly, at just under its listing price which appears to have been set judiciously, and over its appraised value absent HVTL influence. The home also sold well under the average days on market for the town at the time of sale.

The interview evidence and appraisal evidence are consistent with a conclusion of no adverse effects from the HVTL on either sale price or time on market in this case.

Re: 194 Long Road
Danville, NH 03819
Stanhope Group File # 180580

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of October 30, 2017 to be:

Two Hundred Ninety Thousand Dollars
$290,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser's opinions or conclusions.

Property Description

UNIFORM RESIDENTIAL APPRAISAL REPORT

File No. 180580

SUBJECT

Property Address 194 Long Pond Rd. | City Danville | State NH | Zip Code 03819
Legal Description Book 5866, Page 2534, Dated 10/30/2017, $296,500 | County Rockingham
Assessor's Parcel No. Map 4, Lot 59G | Tax Year N/A | R.E. Taxes $ N/A | Special Assessments $ N/A
Borrower N/A | Current Owner WEINHOLD, Kristen & Scott | Occupant: [X] Owner [ ] Tenant [ ] Vacant
Property rights appraised [X] Fee Simple [ ] Leasehold | Project Type [ ] PUD [ ] Condominium (HUD/VA only) | HOA$ N/A /Mo.
Neighborhood or Project Name Danville | Map Reference 40484 | Census Tract 0530.00
Sale Price $ 296,500 | Date of Sale 10/30/17 | Description and $ amount of loan charges/concessions to be paid by seller N/A
Lender/Client Chalmers & Associates LLC | Address 616 Park Ln., Billings, MT 59102
Appraiser Peter E Stanhope | Address 500 Market St. Unit 1C, Portsmouth, NH 03801

NEIGHBORHOOD

Location	[ ] Urban	[X] Suburban	[ ] Rural	**Predominant occupancy**	**Single family housing**			**Present land use %**		**Land use change**	
Built up	[X] Over 75%	[ ] 25-75%	[ ] Under 25%		PRICE $ (000)		AGE (yrs)				
Growth rate	[ ] Rapid	[ ] Stable	[X] Slow	[X] Owner	160	Low	3	One family	75%	[X] Not likely	[ ] Likely
Property values	[X] Increasing	[ ] Stable	[ ] Declining	[ ] Tenant	400	High	150	2-4 family	5%	[ ] In process	
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply	[X] Vacant (0-5%)	Predominant			Multi-family	0%	To: Not Applicable	
Marketing time	[ ] Under 3 mos.	[X] 3-6 mos.	[ ] Over 6 mos.	[ ] Vacant (over 5%)	Mix	Mix		Commercial	10%		
								(Vacant)	5%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Kingston Rd. South; Main St. West; Long Pond Rd. North; Kingston town line East is the immediate neighborhood. 5% Commercial land use refers to a campground and municipal buildings which are at adequate distances.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Hypothetical Condition that an HVTL externality does not exist. No factors that affect the marketability of the properties in the neighborhood noted. Rte. 111A, Main St. is approximately one mile east providing easy access to major shopping and employment facilities. Major employment facilities are within 25 miles northwest in Manchester, NH, Salem, NH which is approximately 15 miles southwest. The Massachusetts state line is approximately 15 miles south with an easy commute.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's submarket, as well as the general market is showing evidence of improvements. Based on sales used for this report, the mean sales price vs list price ratio is 97.2%; the mean marketing time is 3.4 months and the estimated exposure time is 30 days.

PUD

COMMENTS

Additional features (special energy efficient items, etc.): Standard energy efficient items. Electric baseboard heat. Wood stove flue in the finished basement. Granite counters in kitchen and baths. Stainless steel appliances in the kitchen.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: New kitchen, roof,siding, windows and deck, per broker. No on site inspection performed for this assignment.. See Extraordinary Assumption. No external obsolescence considered. Kitchen and bath assumed to be of average quality and good condition. The floor plan is acceptable in this submarket.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: Assumed: No adverse environmental conditions present in the improvements, on the site, or in the immediate vicinity of the subject property.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Equal emphasis placed on the comparable sales due to an equal number of differences and similarities with the subject property. The subject's submarket, as well as the general market shows evidence of improvements with the comparables adjusted @ .25%/month (rounded). Comps #1 and #3 are on lightly travelled streets warranting superior location adjustments. Refer to attached Explanatory Comments.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: See Explanatory Comments for Hypothetical Conditions and Extraordinary Assumptions. Note: This is a retrospective appraisal with a DOV as indicated below and a DOI as of 06/13/2018.

Final Reconciliation: Emphasis has been placed on the Sales Comparison Analysis since it best reflects the market. The Cost Approach is not developed due to the age of improvements and the lack of an interior inspection. The Income Approach is not developed due to the lack of pertinent rental data of single family homes.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF Oct. 30th, 2017

TO BE $ 290,000

Property Address: 194 Long Pond Rd.	Case No.:	
City: Danville	State: NH	Zip: 03819
Lender: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of the date reported herein. Constantly changing economic, social, political and physical conditions have varying

effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Laurie L Larocque, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

GLA adjusted at $20 per square foot, rounded where there is a significant difference. GLA based on municipal record, MLS information, and visual inspection. Below grade finished area adjusted at $10 per square foot. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

Other differences in physical characteristics have been adjusted for based on anticipated and/or observed market reaction to such differences.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

An interview with the subject's listing real estate agent was completed. Per broker, the subject's contract had $5,000 in Seller's concessions and she received multiple offers on the property. Per broker, the HVTL did not detract from the property in it's marketing process.

RECONCILIATION

No sale is identical to the subject. All have some variant in physical characteristics. The mean of the three is $288,000 rounded. Sales #1 and #2 had lower gross adjustments and a mean of $293,000 rounded. The mid point of the two means is $290,350 and is weighted.

WARRANTY DEED

GEORGE H. BOHNE, JR., single, of Danville, Rockingham County, State of New Hampshire 03819, for consideration paid, grants to

KRISTEN WEINHOLD and **SCOTT WEINHOLD,** husband and wife, as joint tenants with rights of survivorship of 194 Long Pond Road, Danville, Rockingham County, State of New Hampshire 03819

with **WARRANTY COVENANTS**

A certain parcel of land situate in Danville, County of Rockingham, State of New Hampshire, as shown on "Plan of Land of Roy H. Collins, Scale 1"=100', June 1976", bounded and described according to said plan as follows:

Beginning at a point on Long Pond Road which is a common corner of Lots "G" and "B" as shown on plan above referred to and thence running S 46° 37' 00" West 555.36 feet along said Lot "B" to a point at land now or formerly of Roland Cheney as shown on said plan; thence turning and running North 76° 31' 00" East, 755.35 feet to a point on said Long Pond Road; thence turning and running along said Long Pond Road, in different courses as follows: North 35° 36' 20" West, 53.61 feet to a point; thence North 46° 02' 30" West, 36.72 feet to a point; thence North 54° 10' 00" West, 70.43 feet to a point; thence North 56° 54' 50" West 100.13 feet to a point; thence North 69° 15' 50" West, 100.44 feet to a point; and thence North 82° 52' 50" West, 38.61 feet to the point of beginning.

Being Lot "G" as shown on said Plan and containing 114,377 square feet according to said Plan.

Subject to and with the benefit of easements, restrictions and rights of way of record insofar as they are in force and applicable.

For title see deed recorded with Rockingham County Registry of Deeds at Book 2269, Page 1590 and death certificate to be recorded.

Executed under seal this 30th day of October, 2017.

GEORGE H. BOHNE, JR.

E 48132

STATE OF NEW HAMPSHIRE

Rockingham, ss October 30, 2017

Then personally appeared the above named GEORGE H. BOHNE, JR. and acknowledged the foregoing instrument to be his free act and deed before me.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

Marketing Period: 2 Days on Market
Average DOM for Town: 54 Days
Marketing History: MLS data indicate the property was originally listed February 28, 2017 for $329,900, went under contract March 3rd, and closed April 14, 2017 for $335,000. Municipal data show the sale as recorded April 14, 2017.

Sale Price: $335,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Danville within approximately 1.35 miles of the subject. Consideration was given to all the sale comparables with equal emphasis on all due to an equal number of differences and similarities with the subject. Subsequent to adjustment, comparable values ranged from $340,400 to $360,800:

Sale #1 (33 Lollipop Lane): $360,800
Sale #2 (51 Peabody Drive): $340,400
Sale #3 (80 Walker Road): $358,500

Appraised Value: $353,000

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $77,000 for land, $260,500 for the residence, $9,200 for additional features, for a total of $346,700.

Assessment Card Notes: Tax card indicates a land line adjustment of 20% for condition, with the notes "UTILITY LINES".

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The field inspection confirmed that there are multiple structures clearly visible from the house. The lot is encumbered, the house is close to the ROW and there is an unobstructed view of several structures. Overall intrusiveness of the HVTL on the property is very high (10).

There were no questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Michelle Kelley, Listing Agent
Interviewed on: June 15, 2018

Notes: This sale was of particular interest in that the non-public remark section in the MLS requested specifically of cooperating agents, *"Please have interested clients check out the property on Google maps to view the close proximity to power lines before scheduling a showing. List price reduced in consideration of this factor. For additional information please visit www.eversource.com."*

The property sold in two days at 1.5% over list price. During my first call attempt on June 14 at about

4:40pm local time I left a detailed voicemail expressing my specific interest in understanding more regarding the transaction. I followed up with a text message on July 15 just after 10am local time. That message acknowledged the bold selling strategy employed for the subject, which appeared to be significantly impacted by HVTL ROW encumbrance to the lot and intrusiveness from immediate proximity of structures and conductors within 75 feet of the home. I again expressed my sincere interest in understanding the factors driving her decision to approach the listing and marketing of the property as she did. She texted back within minutes, acknowledging my prior call and text, and then followed up 20 minutes later with a call on the way to her next showing.

Michelle had felt strongly that the best way to market the property would be to address the TLs proactively and early in the selling process. The sellers had bought the home out of foreclosure in 2010.

(Interviewer's Note: Based on historic aerial images, at the time the home was built in 2003 what is now the HVTL ROW corridor appears to have physically been no more than an open space trail easement. The first HVTL infrastructure looks to have been installed into the ROW around the 2006-'07 timeframe. Although a sizeable portion of the irregularly shaped lot is encumbered by the ROW, the orientation of the TLs relative to the residence initially left a roughly 50' buffer of mature trees behind the home, providing a visual screen from the initially constructed HVTL infrastructure. In early 2015 additional lines look to have been added to the ROW which eliminated the tree buffer. This left the house clearly exposed visually to the towers and conductors, substantially increasing the HVTL's intrusiveness on the property.)

The owners decided to sell the home in 2016 and build elsewhere, engaging Michelle as the listing agent at that time. They were not time pressured to sell and the home had been updated and well-maintained throughout their period of ownership. As the home had many positive features, Michelle felt the biggest issue was simply finding a buyer not averse to the intrusiveness of the TLs. Her strategy was to attempt to create a "negotiate up" scenario for the property rather than risk its lingering on the market and its price being chased down. She decided to set an aggressive initial price that acknowledged the TL's impact on the property; and thereby hopefully attract the audience that would see the home as a value proposition rather than as a compromised property.

The sellers agreed with this approach. The market was probed with price points in the early months of 2016, before market conditions became constrained by a lack of inventory, from $339.9K down to $299.9K ("too low," she said), pulling the home from the market in the spring after an abbreviated listing period of four months.

In early 2017 market conditions were accelerating, and Michelle comp'd the home against the market again, as if the lines were not there, at $360K to $370K in her opinion. The listing was reinstated with the price set at $329.9K, about $35K (just under 10%) below her hypothetical "non HVTL-affected" comps average, in recognition of the TLs impact on the property.

The home garnered 8 showings its first day on the market, resulting in multiple offers bidding the price up over list; going under contract in two days at $335K. The prevailing buyer accompanied their offer with a personal letter stating all the benefits that the home and location would provide to them that they could not afford otherwise. This included the size and quality of the home, the quality of the neighborhood, and the built-in opportunity to pursue recreational interests in snowmobiling, atv riding, cross-country skiing, hiking, etc. that would be enabled by the adjacent open space provided by the HVTL ROW and the legacy trail system in place therein.

Of additional note, the home next door (12 Gorton Drive) was in play around the same time; brought to the market at $370K in mid-2015 and reduced to $359K within two weeks, then pulled from the market six months later. Although this property is much less intrusively impacted by the HVTL, Michelle talked to the owner about employing a similar marketing strategy. The owner was of a more traditional mind, however, and preferred to "wait the market out" for the right buyer. That property came back on the market in May 2017 at $379.9K, listed by a different broker just after 18 Gorton closed in April, It closed at $365K later in the summer.

(Add'l Interviewer's Note: 12 Gorton was a bigger home at 3,100 finished sq. ft. compared to 18 Gorton's 2,584 finished sq. ft. Thus, on a comparative sale price per finished sq. ft. basis, 18 Gorton sold for $129.64 per sq. ft. while 12 Gorton sold for $130.36 per sq. ft. According to the MLS, 18 Gorton's below grade space was 800sf unfinished, and 12 Gorton's was 300sf finished.

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 2003 with 2,584 SF of gross living area. The subject includes a 2.12 AC parcel of which 29.3% or 27,031 SF are encumbered by the HVTL corridor ROW. The improvements are 66' from the transmission corridor, and the closest and most visible structure is 146' from the improvements.

The HVTL are clearly visible from the residence, with full extent of the structures located immediately north of the subject unobstructed from view. The overall intrusion of the HVTL on the property is subjectively rated as very high.

Appraised Value / Sale Price / Marketing Period

The subject sold for $335,000 on April 14, 2017, which is 5.1% less than the appraised value of $353,000 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 2 days, versus the town average of 54 days at the time of sale.

The sale price was 101.5% of original list price, with the appraised value at 107.0% of list. The appraisal reports a mean comparables sale price to list price ratio of 97.8%. These factors suggest the home was priced very aggressively relative to competitive properties for sale in the market at the time of sale.

Interview Evidence

The listing broker adopted a bold listing and marketing strategy that addressed the HVTL's impact on the subject property proactively. Her goal was to immediately attract the subset of prospective buyers not averse to visible, proximate HVTL and allow the stronger features and amenities of the home speak to this buyer cohort. She set the listing price at roughly 8.5% to 10.5% below what her competitive market analysis suggested should be a competitive listing price for the property, absent influence from the HVTL. The strategy was clearly effective; it generated multiple offers on the subject's first day on the market and put a buyer under contract one day later at a price over list and within 7% to 9.5% of her CMA estimate.

Summary

The listing broker's creativity essentially eliminated any adverse effects to time on market for the subject, while concurrently recognizing what she expected was a likelihood of adverse price effects. The market's response to this strategy, coupled with the appraisal and interview evidence support a conclusion of adverse impact to price but no negative effect on time on market for this sale transaction.

Re: 18 Gorton Drive
Danville, NH 03819
Stanhope Group File # 180581

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of April 14, 2017 to be:

Three Hundred Fifty Three Thousand Dollars
$353,000

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser's opinions or conclusions.

NEIGHBORHOOD

Location	[ ] Urban	[X] Suburban	[ ] Rural	**Predominant occupancy**	**Single family housing**			**Present land use %**		**Land use change**	
Built up	[X] Over 75%	[ ] 25-75%	[ ] Under 25%		PRICE $ (000)		AGE (yrs)				
Growth rate	[ ] Rapid	[ ] Stable	[X] Slow	[X] Owner	160	Low	3	One family	85%	[X] Not likely	[ ] Likely
Property values	[X] Increasing	[ ] Stable	[ ] Declining	[ ] Tenant	400	High	150	2-4 family	5%	[ ] In process	
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply	[X] Vacant (0-5%)	Predominant			Multi-family	0%	To: Not Applicable	
Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.	[ ] Vacant (over 5%)	Mix		Mix	Commercial	5%		
								(Vacant)	5%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Colby Rd. South; Sandown town line West; Hersey Rd. North; Main St. East is the immediate neighborhood. 5% Commercial land use refers to an elementary school and the DPW municipal site which are at adequate distances.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Hypothetical Condition that an HVTL externality does not exist. No factors that affect the marketability of the properties in the neighborhood noted. Rte. 111A, Main St. is approximately one mile east providing easy access to major shopping and employment facilities. Major employment facilities are within 25 miles northwest in Manchester, NH, Salem, NH which is approximately 15 miles southwest. The Massachusetts state line is approximately 15 miles south with an easy commute.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's submarket, as well as the general market is showing evidence of improvements. Based on sales used for this report, the mean sales price vs list price ratio is 97.8%; the mean marketing time is less than one month (24 days) and the estimated exposure time is 30 days.

COMMENTS

Additional features (special energy efficient items, etc.): Standard energy efficient items. The 275 gallon oil tank for heating fuel is assumed to be located in the basement; typical and not adverse. Brick fireplace. No granite counters.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical curable/incurable physical deterioration from use and age assumed. No on site inspection performed for this Assignment. See Extraordinary Assumption. No external obsolescence considered. Kitchen and baths assumed to be of average quality and average condition. The floor plan is acceptable in this submarket.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: Assumed: No adverse environmental conditions present in the improvements, on the site, or in the immediate vicinity of the subject property.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: See Explanatory Comments for Hypothetical Conditions and Extraordinary Assumptions. Note: This is a retrospective appraisal with a DOV as indicated below and a DOI 06/13/2018.

Final Reconciliation: Emphasis has been placed on the Sales Comparison Analysis since it best reflects the market. The Cost Approach is not developed due to the age of improvements and the lack of an interior inspection. The Income Approach is not developed due to the lack of pertinent rental data of single family homes.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF April 14th, 2017 **TO BE $** 353,000

Lender: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of the date reported herein. Constantly changing economic, social, political and physical conditions have varying

effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Laurie L Larocque, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

GLA adjusted at $25 per square foot, rounded where there is a significant difference. GLA based on municipal record, MLS information, and visual inspection. Below grade finished area adjusted at $10 per square foot. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

Other differences in physical characteristics have been adjusted for based on anticipated and/or observed market reaction to such differences.

ADDENDUM

Borrower: N/A		File No.: 180581
Property Address: 18 Gorton Dr.		Case No.:
City: Danville	State: NH	Zip: 03819

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

RECONCILIATION

No sale is identical to the subject. All have some variant in physical characteristics. All are weighted as follows: sale #1 is weighted heaviest, sale #3 is weighted least supporting a fair Market Value of $353,000.

Telephone calls were placed to the listing real estate broker, as well as the subject's appraiser on June 22nd, 2018 with no phone calls received in return.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS: That Michael J. Fiore and Annette Fiore, Husband and Wife, of 18 Gorton Drive, Danville, NH 03819, for consideration paid grant(s) to Ralph L. Clough III and Stephanie Clough, Husband and Wife, of 365 Mammoth Road, Londonderry, NH 03053, *as joint tenants with rights of survivorship,* with WARRANTY COVENANTS:

A certain tract or parcel of land, with the buildings or improvements thereon, being Lot 3-21-11, situated on Gorton Drive, so-called, Danville, Rockingham County, New Hampshire, being shown on a plan of land entitled, "Gorton Woods, Danville, NH", Prepared for Homeplate II, Inc., P.O. Box 238, Danville, NH 03819, Scale 1" = 50', Date: August 6, 2001, Prepared by: Promised Land Survey, LLC which plan is recorded at the Rockingham County Registry of Deeds as Plan D-29260, to which plan reference may be made for a more particular description.

Contains 92,562 square feet or 2.12 acres, more or less.

Subject to any and all matters, including setbacks if any, as shown on Plan No. D-29620 recorded with the Rockingham County Registry of Deeds.

Subject to Wetland and Building Setbacks, as shown on said Plan.

Subject to a 280' wide Easement to Public Service Company of New Hampshire, as shown on said plan and utility easements of record.

Subject to easement to Exeter and Hampton Electric and Verizon dated April 1, 2002 and recorded in the Rockingham County Registry of Deeds at Book 3756, Page 1331.

Subject to Attorney Generals Certificate of Registration dated May 6, 2002 and recorded in the Rockingham County Registry of Deeds at Book 3769, Page 138.

Meaning and intending to describe and convey the same premises conveyed to Michael J. Fiore and Annette Fiore by virtue of a Quitclaim Deed from Deutsche Bank National Trust Company, as Trustee for Morgan Stanley IXIS Real Estate Capital Trust 2006-2, dated December 22, 2009 and recorded with the Rockingham County Registry of Deeds on January 11, 2010 in Book 5081, Page 2625.

I/We, the grantor(s) hereby release all rights of homestead and other interests therein in the above described premises.

Executed this 14 day of April, 2017.

Michael J. Fiore

Annette Fiore

State of New Hampshire
County of Hillsborough

Then personally appeared before me on this 14 day of April, 2017, the said Michael J. Fiore and Annette Fiore and acknowledged the foregoing to be his/her/their voluntary act and deed.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B16

Property Identification & Description

Address: 12 Gorton Drive, Danville
Rockingham County, New Hampshire

Identification: Tax Map 3, Lot 21-10
Source Deed: Book 5844, Page 717
Land Area: 2 AC

Improvements: The subject improvements include a colonial style single family residence constructed in 2002 with 2,780 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 280 feet and includes a 345 kV line, and two 115 kV lines. Structure heights range from 61 to 100 feet in height. The corridor lines are identified as 363, J147 and V103. The rear portion of the subject's lot is encumbered by the ROW.

Number of Structures on Site: 0
ROW Encumbrance: 17,134 SF
Distance from House to ROW: 174 ft
Distance to Nearest Structure: 271 ft
Distance to Most Visible Structure: 0 ft
HVTL Visibility from House: No visibility. Vegetative screening on the subject is sufficient to prevent views of the existing structures.

Property Sale Data

Sale Date: August 11, 2017
Conditions of Sale: Arm's Length
Marketing Period: 20 Days on Market
Average DOM for Town: 53 Days
Marketing History: MLS data indicate the property was originally listed May 26, 2017 for $379,900, went under contract June 16th, and closed August 11, 2017 for $365,000. Municipal data show the sale as recorded August 11, 2017.

Sale Price: $365,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Danville within approximately 1.6 miles of the subject. Consideration was given to all the sale comparables with equal emphasis on all due to an equal number of differences and similarities with the subject. Subsequent to adjustment, comparable values ranged from $358,900 to $375,800:

Sale #1 (33 Lollipop Lane): $369,200
Sale #2 (264 Long Pond Road): $375,800
Sale #3 (80 Walker Road): $358,900

Appraised Value: $369,500

Property Assessment Related to HVTL

Overview: The 2017 assessed values are $95,700 for land, $272,000 for the residence, $2,800 for additional features, for a total of $370,500.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The field visit confirmed that no structures were visible from the house on this property. The house is located in a very heavily screened bowl which, despite the fact that the HVTL are close, eliminates any visual reference to the lines from the house. Approaching the house along Gorton Drive would, however, reveal clear views of structures behind the neighboring property at 18 Gorton Drive. Overall intrusion of the HVTL on this property is rated subjectively as low (2).

No questions on the appraisal.

Participant Interview Notes:

Notes:

(Interviewer's Note: As neither broker associated with this transaction could be reached after multiple attempts to contact them, the following relevant notes from Case Study #B15 -- the neighboring property at 18 Gorton Drive -- are provided.)

> The home at 12 Gorton Drive was in play around the same time as the 18 Gorton property was being marketed. It was brought to the market at $370K in mid-2015 and reduced to $359K within two weeks, then pulled from the market six months later.
>
> Although this property is much less intrusively impacted by the HVTL compared to the property

next door at 18 Gorton, the listing agent for 18 Gorton (Michelle Kelley) reported that she talked to the owner at 12 Gorton about employing a similar marketing strategy as had been employed for the listing at 18 Gorton. The owner was of a more traditional mindset at that time, however, and preferred to "wait the market out" for the right buyer. The property came back on the market in May 2017 at $379.9K, listed by a different broker just after the April closing of 18 Gorton. It closed at $365K later in the summer.

It was a bigger home at 3,100 finished sq. ft. compared to 18 Gorton's 2,584 finished sq. ft. Thus, on a comparative sale price per finished sq. ft. basis, 18 Gorton sold for $129.64 per sq. ft. while 12 Gorton sold for $130.36 per sq. ft. According to the MLS, 18 Gorton's below grade space was 800sf unfinished, and 12 Gorton's was 300sf finished.

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 2002 with 2,780 SF of gross living area (above grade). The subject includes a 2.0 AC parcel of which 19.7% or 17,134 SF are encumbered by the HVTL corridor ROW. The improvements are 174' from the transmission corridor, the closest and most visible structure is 271' from the improvements.

The HVTL are not visible from the residence, as the home is buffered from the ROW by a deep area of vegetative screening on the subject. The overall intrusion of the HVTL on the property is subjectively rated as low.

Appraised Value / Sale Price / Marketing Period

The subject sold for $365,000 on August 11, 2017, which is 1.2% less than the appraised value of $369,500 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 20 days, versus the town average of 53 days at the time of sale.

The sale price was 96.1% of original list price, suggesting a somewhat strong listing price. The appraisal notes a mean sale price to list price ratio for the comparable sales of 99.3%, indicating comparatively tight market conditions for the subset of the market relevant to the subject. Appraised value was 97.3% of list.

Interview Evidence

Neither the listing or selling agent associated with this transaction could be reached to complete an interview despite multiple attempts to contact both. Relevant notes from Case Study #B15 -- the neighboring property at 18 Gorton Drive – provide additional context with respect to this property's sale history and tangential insight into this transaction.

Summary

A portion of the subject's lot is encumbered by the ROW; however, the HVTL are not visible to the

improvements due to a deep stand of buffering vegetative screening on the property. The overall intrusion of the HVTL on the property is low.

The appraisal evidence indicates that the sale occurred at a modest discount from appraised value absent HVTL influence; at a level which under typical sale circumstances would be considered as within the negotiating space typical of an active arm's length market. The home sold in less than half the average days on market for the town, and within a timeframe consistent with the tighter conditions exhibited by the subject's market subset at the time of sale.

A previous attempt to sell the home two years prior was unsuccessful. However, when compared to the listing price in this transaction, which appears to have been set fairly relative to the market, the listing price established under that prior listing may have been unrealistically high for the submarket at that time.

Interview evidence was unobtainable. Although there is no information available with respect to unique influences on listing strategy or the possible existence of atypical seller motivation, the prompt sale of the subject at a modest, reconcilable discount to non-HVTL influenced market value is persuasive. The days on market exhibited by the subject supports a conclusion that nothing adversely influenced its time on market in this transaction. It is also concluded that there was no adverse HVTL effect on sale price.

Re: 12 Gorton Drive
Danville, NH 03819
Stanhope Group File # 180583

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

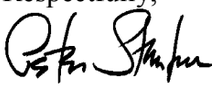
These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of August 11, 2017 to be:

Three Hundred Sixty Nine Thousand Five Hundred Dollars
$369,500

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,



Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser's opinions or conclusions.

NEIGHBORHOOD

Location	[ ] Urban	[X] Suburban	[ ] Rural	**Predominant occupancy**	**Single family housing**	PRICE $ (000)	AGE (yrs)	**Present land use %**		**Land use change**	
Built up	[X] Over 75%	[ ] 25-75%	[ ] Under 25%	[X] Owner		160 Low	3	One family	85%	[X] Not likely	[ ] Likely
Growth rate	[ ] Rapid	[ ] Stable	[X] Slow	[ ] Tenant		400 High	150	2-4 family	5%	[ ] In process	
Property values	[X] Increasing	[ ] Stable	[ ] Declining	[X] Vacant (0-5%)		Predominant		Multi-family	0%	To: Not Applicable	
Demand/supply	[ ] Shortage	[X] In balance	[ ] Over supply	[ ] Vacant (over 5%)		Mix	Mix	Commercial	5%		
Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.					(Vacant)	5%		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Colby Rd. South; Sandown town line West; Hersey Rd. North; Main St. East is the immediate neighborhood. 5% Commercial land use refers to an elementary school and the DPW municipal site which are at adequate distances.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
Hypothetical Condition that an HVTL externality does not exist. No factors that affect the marketability of the properties in the neighborhood noted. Rte. 111A, Main St. is approximately one mile east providing easy access to major shopping and employment facilities. Major employment facilities are within 25 miles northwest in Manchester, NH, Salem, NH which is approximately 15 miles southwest. The Massachusetts state line is approximately 15 miles south with an easy commute.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's submarket, as well as the general market is showing evidence of improvements. Based on sales used for this report, the mean sales price vs list price ratio is 99.3%; the mean marketing time is less than one month (22 days) and the estimated exposure time is 30 days.

COMMENTS

Additional features (special energy efficient items, etc.): Standard energy efficient items. The 275 gallon oil tank for heating fuel is assumed to be located in the basement; typical and not adverse. Brick fireplace. Palladium windows. Maple kitchen cabinets. No granite counters.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Typical curable/incurable physical deterioration from use and age assumed. No on site inspection performed for this assignment. See Extraordinary Assumption. No external obsolescence considered. Kitchen and baths assumed to be of average quality and average condition. The floor plan is acceptable in this submarket.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: Assumed: No adverse environmental conditions present in the improvements, on the site, or in the immediate vicinity of the subject property.

Comments on Sales Comparison (including the subject property's compatibility to the neighborhood, etc.): Equal emphasis placed on the comparable sales due to an equal number of differences and similarities with the subject property. The subject's submarket, as well as the general market shows evidence of improvements with the comparables adjusted @ .25%/month (rounded). Comp #2 is on a through street in a neighborhood of mixed styles and quality of construction warranting an inferior location adjustment. Comp #2 is situated across the street from Long Pond with obscured pond views warranting a superior view adjustment. Based on viewed interior photographs coupled with broker's comments, comp #3 warranted a condition adjustment. Refer to attached Explanatory Comments.

Property Address: 12 Gorton Dr.	Case No.:	
City: Danville	State: NH	Zip: 03819
Lender: Chalmers & Associates LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of the date reported herein. Constantly changing economic, social, political and physical conditions have varying

effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by Laurie L Larocque, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

GLA adjusted at $25 per square foot, rounded where there is a significant difference. GLA based on municipal record, MLS information, and visual inspection. Below grade finished area adjusted at $10 per square foot. Adjustments reflect the individual contribution of each characteristic to the value as a whole, and are estimated based on market extraction, observed/anticipated market behavior, and/or paired sales comparison.

Other differences in physical characteristics have been adjusted for based on anticipated and/or observed market reaction to such differences.

ADDENDUM

Borrower: N/A		File No.: 180583
Property Address: 12 Gorton Dr.		Case No.:
City: Danville	State: NH	Zip: 03819
Lender: Chalmers & Associates LLC		

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

RECONCILIATION

The weighting of the sales data considered the mean of $368,000 (rounded), the weighting of sales 2 & 3 for similar GLA is $367,400, and the delta price to adjusted price of most similar 1 & 2 is $372,500 in arriving at an estimated fair market value subject to the noted Extraordinary Assumption and Hypothetical Condition to be $369,500.

A telephone call was placed to the listing real estate agent on June 22nd, 2018. Per broker, he was not directly involved with this sale. A second phone was placed to the subject's appraiser with no return call received.

Directions			

Stunning, well maintained classic colonial with its exceptional gardens sits on 2.0 acres in this cul-de-sac neighborhood. It has been meticulously maintained and ready to move in. The formal front entry, dining room and living room with 9 ft ceilings feature hardwood floors, Palladian windows as well as beautiful oak stairs. From the foyer you enter into the oversized 31 x 15 maple kitchen and dining area, then onto the 12 x 28 deck through the built out bay sliding door or enter into the 16 x 25 family room with its 11 ft vaulted ceiling, huge Palladian window and wood burning fireplace. You may also reach the deck through family room sliding door. The 1st floor 1/2 bath also includes the laundry closet. Up the turning oak stairs the 2nd floor contains 4 bedrooms. The master bedroom features a vaulted ceiling and a large walk-in closet. The master bath features 4 ft shower and a whirlpool bath. The second full bath features a double sink vanity.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS: That Peter P. Cizmarik and Marta M. Cizmarik, Husband and Wife, of Danville New Hampshire, for consideration paid grant(s) to Ahmad Hussin, Married, of 724 Willard Street, Leominster, MA 01453, with WARRANTY COVENANTS:

A certain lot of land, with the buildings thereon, being Lot 3-21-10, situated on Gorton Drive, so-called, Danville Rockingham County, New Hampshire, being shown on a plan of land entitled "Gorton Woods, Danville, NH,"Prepared for Homeplate II, Inc., P.O.Box 238, Danville, NH 03819, Scale 1" = 50', Date: August 6, 2001, Prepared by: Promised Land Survey, LLC, which plan is recorded at Rockingham County Registry of Deeds as Plan D-29620, to which reference should be made for a more particular description:

Lot 3-21-10 containing 87, 120 sq. ft. or 2.00 acres, more or less;

Said Lot is subject to Wetland and Building Setbacks, as shown on said Plan.

Subject to a 280' wide Easement to Public Service Company of New Hampshire, as shown on said plan and utility easements of record.

Meaning and intending to describe and convey the same premises conveyed to Peter P. Cizmarik and Marta M. Cizmarik by deed dated March 26, 2003 and recorded with Rockingham County Registry of Deeds in Book 3984, Page 2564.

GRANTORS HEREBY RELEASE TO GRANTEE ALL RIGHTS OF HOMESTEAD AND OTHER INTERESTS IN THE PREMISES

PROPERTY ADDRESS: 12 Gorton Drive, Danville, New Hampshire

Witness my hand and seal this 28 day of July 2017.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B17

Property Identification & Description

Address: 6 Burbank Way, Hooksett
Merrimack County, New Hampshire

Identification: Tax Map 25, Lot 19-31
Source Deed: Book 3520, Page 2014
Land Area: 0.61 AC

Improvements: The subject improvements include a colonial style single family residence constructed in 1998 with 2,024 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 220 feet and includes a 115 kV line on single pole laminated wood structures, approximately 70 to 79 feet in height. The corridor is identified as D118. The subject is buffered from the ROW by a neighboring property to the rear.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 372 ft
Distance to Nearest Structure: 462 ft
Distance to Most Visible Structure: 0 ft
HVTL Visibility from House: No visibility. Vegetative screening on the subject and the lot behind it is sufficient to prevent any views of the existing structures.

Property Sale Data

Sale Date: June 30, 2016
Conditions of Sale: Arm's Length
Marketing Period: 31 Days on Market
Average DOM for Town: 44 Days
Marketing History: MLS data indicate the property was originally listed April 30, 2016 for $344,900, went under contract May 31st, and closed June 28, 2016 for $335,000. Municipal data show the sale as recorded June 30, 2016.

Sale Price: $335,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Hooksett within approximately 2.5 miles of the subject. Consideration was given to all the sale comparables; none was considered more like the subject than the others. Subsequent to adjustment, comparable values ranged from $332,900 to $336,900:

Sale #1 (12 Misty Lane): $334,700
Sale #2 (6 Fieldstone Drive): $332,900
Sale #3 (2 Greystone Terrace): $336,900

Appraised Value: $334,800

Property Assessment Related to HVTL

Overview: The 2016 assessed values are $87,800 for land, $161,100 for the residence, for a total of $248,900.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: Confirmed that the nearest structure was 400 ft. distant and was not visible from the house. The property is heavily screened and separated by one lot from the ROW. There is no intrusion form the HVTL on the property.

No questions on the appraisal.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Louis Nixon, Listing Agent
Interviewed on: June 20, 2018

Notes: Reached Louis on my first call attempt at 4:50pm local time. He said I was the second person to call on this sale that day; he had just spoken with an appraiser a bit earlier.

He said the lines had no effect on the listing or marketing of the subject, noting that the TLs were located well behind the home with another lot in between and had no meaningful visual impact on the subject property. (Interviewer's Note: The home sits on a deep .61-acre lot, including a 165' deep tree screen between the backyard pool and the neighboring home to the rear.)

However, he added that he had a current listing on Nancy Lane about a quarter-mile due east of the subject, along and immediately adjacent to the same HVTL ROW, that was experiencing market resistance due to the lines. There had not yet been a price reduction on that listing.

His experience has been that effects are very much a function of visual intrusiveness and physical proximity and/or encumbrance to the lot by the ROW. He said that in instances where the lines are highly visible and intrusive into the living space he has made listing price adjustments; however, seller motivation is a major factor as to whether a listing price adjustment or reduced-price strategy can be employed.

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 1998 with 2,024 SF of gross living area. The subject includes a 0.61 AC parcel that is neither encumbered by nor abutting the HVTL corridor ROW. The improvements are 372' from the transmission corridor and the closest structure is 462' from the improvements.

The HVTL are not visible from the residence, as the home is buffered from the ROW by a deep area of vegetative screening on the subject and the adjacent lot behind. There is no intrusion of the HVTL on the property.

Appraised Value / Sale Price / Marketing Period

The subject sold for $335,000 on June 30, 2016, which is 0.1% over the appraised value of $334,800 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 31 days, versus the town average of 44 days at the time of sale.

The sale price was 97.1% of original list price, indicating the list price was reasonably set relative to competitive properties in the market at the time of sale. Appraised value was also 97.1% of list price.

Interview Evidence

The listing agent said the HVTL had no effect on the listing or marketing of the subject, given their distance from and lack of visual impact on the property.

Summary

There is no intrusion of the HVTL on the property. The listing agent felt the HVTL had no impact on the transaction; the property sold at a reasonable ratio to list and essentially at appraised value absent HVTL influence. Days on market were less than the town average.

The interview evidence and the appraisal evidence both support the conclusion that there was no adverse effect from the HVTL on either sale price or time on market in this case.

Re: 6 Burbank Way
Hooksett, NH 03106
Stanhope Group File # 180589

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

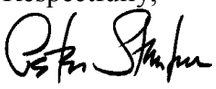
These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of June 30, 2016 to be:

Three Hundred Thirty Four Thousand Eight Hundred Dollars
$334,800

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,



Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, coul. alter the appraiser s opinions or conclusions.

Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	10		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Burbank Way and all roads in the Campbell Hill and Glencrest developments off Route 3/28 between Auburn Rd to the south and Main St to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of colonial style homes. Businesses and shopping are conveniently located along Route 3/28. The subject is convenient to Interstate 93 and Routes 3, 28 & 27. Center for services and employment are the greater Manchester and Concord areas.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's estimated exposure time, at its appraised value, is estimated at 75 days. This is typical for the subject's neighborhood and competing market area. Exposure time is directly associated with the appraised value and is considered to be prior to the effective date of the appraisal. This is contingent upon the listing price being reasonable and consistent with the market. Subject submarket evidence stability in the period values is estimated. Some percentage of sale price as concessions is not uncommon.

COMMENTS

Additional features (special energy efficient items, etc.): Fireplace in family room; enclosed porch and in-ground pool at rear of residence.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Overall condition of the subject property appears typical evidence of use and age. No functional disclosed or external noted. See Extraordinary Assumptions and Hypothetical Condition in the Text Addendum.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None adverse noted or discolsed.

	Sq. Ft. @ $		=	0
			=	
Garage/Carport	Sq. Ft. @ $		=	0
Total Estimated Cost New			= $	0
Less Depreciation	Physical $0	Functional $0	External $0	= $ 0
Depreciated Value of Improvements			= $	0
"As-is" Value of Site Improvements			= $	
INDICATED VALUE BY COST APPROACH			= $	0

Est. Remaining Econ. Life: -4

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 60-66 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines.
Explanatory comments are an integral part of this report. See Text Addendum.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 06/30/2016

TO BE $ 334,800

ADDENDUM

Borrower: N/A		File No.: 180589
Property Address: 6 Burbank Way		Case No.:
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

The subject is a legal nonconforming site typical of sites established prior to existing zoning regulations. The present zoning regulations require 175 road-front footage and a 1-acre lot in this area. The current use is allowed to continue in the event of total destruction provided the original footprint is not altered. The legal nonconforming site has not been demonstrated to be adverse to marketability.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

ADDENDUM

Borrower: N/A	File No.: 180589	
Property Address: 6 Burbank Way	Case No.:	
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

Site area adjustments are based on variance in privacy and utility rounded.

Quality adjustment to comparable one is at $5 per square foot, rounded, and reflects the reported superior fixtures and certain features noted in this comparable when compared to the subject.

GLA adjustments to comparables one and three are market derived at $25 per square foot, rounded.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket. Line item adjustments are market derived and are typical for this marketplace. Many may have been historically supported by paired sales analysis and/or peer review. Line adjustments may vary on a case-by-case basis, depending on which properties are being compared and the context of those comparisons. The need for any significant adjustments is fairly typical in this submarket and has not been demonstrated to be adverse to the accuracy of estimating the market value of properties in this submarket. The appraisal report is to ensure that our client has the most viable information regarding the fair market value opinion of this home based upon current, available market data.

Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers. Cost approach is not considered a reliable measure of current fair market value do to the few new construction projects in the subject's value range which makes calculation of depreciation speculative. Furthermore, it is typical for the cost approach (in recent years) in most markets to be generally afield from correlative sales data - leaving the sales comparison approach the strongest determinant of fair market value. The Income Approach was considered inapplicable, because in this submarket few, if any, single-family residences are investor-owned.

All comparables are considered, because they are the most similar sales that a search of the subject area produced: each is a similar colonial style home and each enjoys similar characteristics and market influences as the subject.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B18

Property Identification & Description

Address: 7 Virginia Court, Hooksett
Merrimack County, New Hampshire

Identification: Tax Map 25, Lot 18-15
Source Deed: Book 3578, Page 1658
Land Area: 1.4 AC

Improvements: The subject improvements include a contemporary cape style single family residence constructed in 1987 which includes 2,011 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 220 feet and includes a 115 kV line on single pole laminated wood structures, approximately 70 to 79 feet in height. The corridor is identified as D118. The subject's lot is over 85% encumbered by the ROW.

Number of Structures on Site: 1
ROW Encumbrance: 52,252 SF
Distance from House to ROW: 26 ft
Distance to Nearest Structure: 234 ft
Distance to Most Visible Structure: 0 ft
HVTL Visibility from House: No visibility. Vegetative screening currently within the ROW is sufficient to obscure views of the existing structures.

Property Sale Data

Sale Date: November 28, 2017
Conditions of Sale: Arm's Length
Marketing Period: 6 Days on Market
Average DOM for Town: 42 Days
Marketing History: MLS data indicate the property was originally listed September 13, 2017 for $347,000, went under contract September 20th, and closed November 28, 2017 for $347,000. Municipal data show the sale as recorded November 28, 2017.

Sale Price: $347,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Hooksett within approximately 2.7 miles of the subject. Consideration was given to all the sale comparables. Subsequent to adjustment, comparable values ranged from $346,950 to $349,000:

Sale #1 (23 Cindy Drive): $346,950
Sale #2 (38 Lantern Lane): $349,000
Sale #3 (12 Legacy Drive): $347,600

Appraised Value: $347,600

Property Assessment Related to HVTL

Overview: The 2016 assessed values are $92,700 for land, $186,300 for the residence, for a total of $279,000.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: Field investigation confirmed that due to heavy screening, no structures are visible from the house. The lot is very heavily encumbered and the house is only 24 ft. from the ROW. Vegetation, however, primarily located in the ROW, effectively screens the house. As is, there is very little intrusion of the HVTL on the property but considering the potential for tree clearing in the ROW, overall intrusion is rated a s moderate (4).

The appraisal reports GLA at 2,011 sq. ft. while the property record card shows 1,890 sq. ft. The discrepancy is due to the failure of the assessor to account for finished space on the second floor of the garage.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Kim Kojak, Selling (Buyer) Agent
Interviewed on: June 22, 2018

Notes: Reached Kim on my first call attempt at about 4pm local time. She said the TLs were not a concern for her buyer and had no effect on the offer. The buyer had very specific needs for in-law quarters within the home; and this home had an in-law apartment with private entrance which fit their needs perfectly. They had been looking for the right home for months when the subject came on the market. The lot was also a significantly positive feature of the property for them, as it gave the house a

very private feel. (Interviewer's Note: The 1.4-acre lot elevates the house 10' above the ROW and has a 120' or so deep tree buffer screening the view from the house to the TLs.)

She said the TLs played no role in the buyer's decision and were not a factor. The house was on the market 6 days at the time their full price offer was accepted; they were not going to let it get away.

Kim further commented on a listing she had where the property included an inactive cell tower near the home. The resulting visual intrusiveness made the home difficult to sell. She felt that tight market conditions constrained by lack of inventory can soften buyer concerns relative to TLs, particularly if the home has offsetting positive features, as there are simply no substitute properties available for alternative consideration.

Similarly, a high-quality build or remodel can carry a property though impacts of a ROW encumbrance on the lot, particularly if the TLs are not intrusive. However conversely, if the home is dated, not well kept or otherwise subpar relative to its peers, an HVTL ROW encumbrance can effectively "pile on" one more perceived negative to a property as well. Effects are case by case and their magnitude is often a function of the property's condition relative to its total package of features and attributes.

Conclusions

Improvements & Visibility

The subject is improved with a contemporary cape style single family residence constructed in 1987 which includes 2,011 SF of gross living area. The subject includes a 1.4 AC parcel of which 85.7% or 52,252 SF are encumbered by the HVTL corridor ROW. The improvements are 26' from the transmission corridor, and the closest structure is 234' from the improvements.

The HVTL are not visible from the residence, as the home is buffered from views of the infrastructure by substantial vegetative screening currently within the ROW. The overall intrusion of the HVTL at present is very low but given the potential for clearing in the ROW combined with the large encumbrance of the lot, intrusion on the property is rated as moderate.

Appraised Value / Sale Price / Marketing Period

The subject sold for $347,000 on November 28, 2017, which is 0.2% less than the appraised value of $347,600 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 6 days, versus the town average of 42 days at the time of sale.

The sale price was 100.0% of original list price, with appraised value at 100.2% of list price, suggesting the list price was set well relative to competitive properties in the market at the time of sale.

Interview Evidence

The selling agent said the HVTL played no role in the buyer's decision, were not a concern and had no effect on the offer. The buyer was highly motivated due to unique needs for secondary in-law quarters that this home happened to offer.

Summary

This is an interesting case where, despite very close proximity of the ROW to the home and significant encumbrance of the lot, the vegetative screening existing within the ROW not only buffers the home's view to the HVTL, but also adds an amenity of intimacy and enhanced privacy to the property's living space. These attributes supported and enhanced the unique feature of the home (the in-law quarters) that attracted and motivated the buyer, which enabled a sale at essentially full market value absent HVTL influence within the first week the property entered the market.

Both the appraisal evidence and the interview evidence support a conclusion of no adverse effect of the HVTL on either the sale price or marketing period in this transaction.

Re: 7 Virginia Court
Hooksett, NH 03106
Stanhope Group File # 180590

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of November 28, 2017 to be:

Three Hundred Forty Seven Thousand Six Hundred Dollars
$347,600

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Demand/supply	[X] Shortage	[ ] In balance	[ ] Over supply	[ ] Vacant (over 5%)	300	10	Commercial	15		
Marketing time	[X] Under 3 mos.	[ ] 3-6 mos.	[ ] Over 6 mos.				(Vacant)	10		

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Virginia Ct and all roads in the Campbell Hill and Glencrest developments off Route 3/28 between Auburn Rd to the south and Main St to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of colonial style homes. Businesses and shopping are conveniently located along Route 3/28. The subject is convenient to Interstate 93 and Routes 3, 28 & 27. Center for services and employment are the greater Manchester and Concord areas.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's estimated exposure time, at its appraised value, is estimated at 75 days. This is typical for the subject's neighborhood and competing market area. Exposure time is directly associated with the appraised value and is considered to be prior to the effective date of the appraisal. This is contingent upon the listing price being reasonable and consistent with the market. The subject submarket in 2017 evidence appreciation after a period of stability. Range is 3% to 6% average rate.

COMMENTS

Additional features (special energy efficient items, etc.): Fireplace in living room; enclosed porch, screen porch and deck at rear of residence. Finished basement is fully finished with in-law suite. Above ground pool adds no value.

Condition of the improvements, depreciation (physical, functional, and external), repairs needed, quality of construction remodeling/additions, etc.: Overall condition of the subject property appears typical evidence of use and age. No functional disclosed or external noted. See Extraordinary Assumptions and Hypothetical Condition in the Text Addendum.

Adverse environmental conditions (such as, but not limited to, hazardous wastes, toxic substances, etc.) present in the improvements, on the site, or in the immediate vicinity of the subject property: None adverse noted or disclosed.

COST APPROACH

ESTIMATED SITE VALUE			= $	
ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:				
Dwelling	Sq. Ft. @ $		= $	0
	Sq. Ft. @ $		=	0
			=	
Garage/Carport	Sq. Ft. @ $		=	0
Total Estimated Cost New			= $	0
Less Depreciation	Physical $0	Functional $0	External $0	Est. Remaining Econ. Life: = $ 0
Depreciated Value of Improvements			= $	0
"As-is" Value of Site Improvements			= $	
INDICATED VALUE BY COST APPROACH			= $	0

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 55-63 years.

INDICATED VALUE BY SALES COMPARISON APPROACH $ 347,600

INDICATED VALUE BY INCOME APPROACH (If Applicable) Estimated Market Rent $ N/A /Mo. x Gross Rent Multiplier N/A = $ 0

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines.
Explanatory comments are an integral part of this report. See Text Addendum.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 11/28/2017

TO BE $ 347,600

ADDENDUM

Borrower: N/A		File No.: 180590
Property Address: 7 Virginia Ct		Case No.:
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

The subject is a legal nonconforming site typical of sites established prior to existing zoning regulations. The present zoning regulations require 175 road-front footage and a 1-acre lot in this area. The current use is allowed to continue in the event of total destruction provided the original footprint is not altered. The legal nonconforming site has not been demonstrated to be adverse to marketability.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of The Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

All comparables are adjusted for appreciation at the rate of 0.4% average annual rate, rounded, through third

Borrower: N/A		File No.: 180590
Property Address: 7 Virginia Ct		Case No.:
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

quareter 2017, specific to the subject submarket through 3rd qt 2017.

Condition adjustment to comparable three is at $5 per square foot, rounded, and reflects the more recent updates and cosmetic improvements noted in this comparable when compared to the subject.

GLA adjustment to comparable two is market derived at $25 per square foot, rounded, which includes the in-law apartment over the large garage.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket. Line item adjustments are market derived and are typical for this marketplace. Many may have been historically supported by paired sales analysis and/or peer review. Line adjustments may vary on a case-by-case basis, depending on which properties are being compared and the context of those comparisons. The need for any significant adjustments is fairly typical in this submarket and has not been demonstrated to be adverse to the accuracy of estimating the market value of properties in this submarket. The appraisal report is to ensure that our client has the most viable information regarding the fair market value opinion of this home based upon current, available market data.

Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers. Cost approach is not considered a reliable measure of current fair market value do to the few new construction projects in the subject's value range which makes calculation of depreciation speculative. Furthermore, it is typical for the cost approach (in recent years) in most markets to be generally afield from correlative sales data - leaving the sales comparison approach the strongest determinant of fair market value. The Income Approach was considered inapplicable, because in this submarket few, if any, single-family residences are investor-owned.

All comparables are considered with sale 1 double weighted forlower level finished, because they are the most similar sales that a search of the subject area produced: each enjoys similar characteristics and maket influences as the subject.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

Peter E. Stanhope
NHCG-31

DEFINITION OF MARKET VALUE: The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller, each acting prudently, knowledgeably and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: (1) buyer and seller are typically motivated; (2) both parties are well informed or well advised, and each acting in what he considers his own best interest; (3) a reasonable time is allowed for exposure in the open market; (4) payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and (5) the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions* granted by anyone associated with the sale.

*Adjustments to the comparables must be made for special or creative financing or sales concessions. No adjustments are necessary for those costs which are normally paid by sellers as a result of tradition or law in a market area; these costs are readily identifiable since the seller pays these costs in virtually all sales transactions. Special or creative financing adjustments can be made to the comparable property by comparisons to financing terms offered by a third party institutional lender that is not already involved in the property or transaction. Any adjustment should not be calculated on a mechanical dollar for dollar cost of the financing or concession but the dollar amount of any adjustment should approximate the market's reaction to the financing or concessions based on the Appraiser's judgment.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:

1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.

2. The appraiser has provided a sketch in the appraisal report to show approximate dimensions of the improvements and the sketch is included only to assist the reader of the report in visualizing the property and understanding the appraiser's determination of its size.

3. The appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.

4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.

5. The appraiser has estimated the value of the land in the cost approach at its highest and best use and the improvements at their contributory value. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.

6. The appraiser has noted in the appraisal report any adverse conditions (such as, needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions (including the presence of hazardous wastes, toxic substances, etc.) that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.

7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties.

8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.

9. The appraiser has based his or her appraisal report and valuation conclusion for an appraisal that is subject to satisfactory completion, repairs, or alterations on the assumption that completion of the improvements will be performed in a workmanlike manner.

10. The appraiser must provide his or her prior written consent before the lender/client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the borrower; the mortgagee or its successors and assigns; the mortgage insurer; consultants; professional appraisal organizations; any state or federally approved financial institution; or any department, agency, or instrumentality of the United States or any state or the District of Columbia; except that the lender/client may distribute the property description section of the report only to data collection or reporting service(s) without having to obtain the appraiser's prior written consent. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

File No. 180590

APPRAISERS CERTIFICATION: The Appraiser certifies and agrees that:

1. I have researched the subject market area and have selected a minimum of three recent sales of properties most similar and proximate to the subject property for consideration in the sales comparison analysis and have made a dollar adjustment when appropriate to reflect the market reaction to those items of significant variation. If a significant item in a comparable property is superior to , or more favorable than, the subject property, I have made a negative adjustment to reduce the adjusted sales price of the comparable and, if a significant item in a comparable property is inferior to, or less favorable than the subject property, I have made a positive adjustment to increase the adjusted sales price of the comparable.

2. I have taken into consideration the factors that have an impact on value in my development of the estimate of market value in the appraisal report. I have not knowingly withheld any significant information from the appraisal report and I believe, to the best of my knowledge, that all statements and information in the appraisal report are true and correct.

3. I stated in the appraisal report only my own personal, unbiased, and professional analysis, opinions, and conclusions, which are subject only to the contingent and limiting conditions specified in this form.

4. I have no present or prospective interest in the property that is the subject to this report, and I have no present or prospective personal interest or bias with respect to the participants in the transaction. I did not base, either partially or completely, my analysis and/or the estimate of market value in the appraisal report on the race, color, religion, sex, handicap, familial status, or national origin of either the prospective owners or occupants of the subject property or of the present owners or occupants of the properties in the vicinity of the subject property.

5. I have no present or contemplated future interest in the subject property, and neither my current or future employment nor my compensation for performing this appraisal is contingent on the appraised value of the property.

6. I was not required to report a predetermined value or direction in value that favors the cause of the client or any related party, the amount of the value estimate, the attainment of a specific result, or the occurrence of a subsequent event in order to receive my compensation and/or employment for performing the appraisal. I did not base the appraisal report on a requested minimum valuation, a specific valuation, or the need to approve a specific mortgage loan.

7. I performed this appraisal in conformity with the Uniform Standards of Professional Appraisal Practice that were adopted and promulgated by the Appraisal Standards Board of The Appraisal Foundation and that were in place as of the effective date of this appraisal, with the exception of the departure provision of those Standards, which does not apply. I acknowledge that an estimate of a reasonable time for exposure in the open market is a condition in the definition of market value and the estimate I developed is consistent with the marketing time noted in the neighborhood section of this report, unless I have otherwise stated in the reconciliation section.

8. I have personally inspected the interior and exterior areas of the subject property and the exterior of all properties listed as comparables in the appraisal report. I further certify that I have noted any apparent or known adverse conditions in the subject improvements, on the subject site, or on any site within the immediate vicinity of the subject property of which I am aware and have made adjustments for these adverse conditions in my analysis of the property value to the extent that I had market evidence to support them. I have also commented about the effect of the adverse conditions on the marketability of the subject property.

9. I personally prepared all conclusions and opinions about the real estate that were set forth in the appraisal report. If I relied on significant professional assistance from any individual or individuals in the performance of the appraisal or the preparation of the appraisal report, I have named such individual(s) and disclosed the specific tasks performed by them in the reconciliation section of this appraisal report. I certify that any individual so named is qualified to perform the tasks. I have not authorized anyone to make a change to any item in the report; therefore, if an unauthorized change is made to the appraisal report, I will take no responsibility for it.

SUPERVISORY APPRAISER'S CERTIFICATION: If a supervisory appraiser signed the appraisal report, he or she certifies and agrees that: I directly supervise the appraiser who prepared the appraisal report, have reviewed the appraisal report, agree with the statements and conclusions of the appraiser, agree to be bound by the appraiser's certifications numbered 4 through 7 above, and am taking full responsibility for the appraisal and the appraisal report.

WARRANTY DEED

KNOW ALL PERSONS BY THESE PRESENTS, That **Elizabeth J. Schulte,** an unmarried person, of 7 Virginia Court, Hooksett, Merrimack County, State of New Hampshire for consideration paid, grants to **Dawn Pater,** an unmarried person, of 5 Dalton Court, Merrimack, County of Merrimack and State of New Hampshire 03054, with WARRANTY COVENANTS, the following described property:

A certain parcel of land with the buildings thereon situated on the southwesterly side of Virginia Court in Hooksett, County of Merrimack, State of New Hampshire being Lot 25-18-15 on a plan of land entitled "definitive Subdivision Plan of Land in Hooksett, NH 'Campbell Hill Estates', prepared for: Hooksett Partners Limited Partnership", prepared by BSC Engineering Phase 1 Dated: 12/23/85, which plan is recorded in the Merrimack County Registry of Deeds as Plan 9018.

Subject to an easement to the New England Telephone and Telegraph Company and Public Service Company of New Hampshire by instrument dated June 12, 1986 recorded in the Merrimack County Registry of Deeds in Volume 1574, Page 73.

Meaning and intending to convey the same premises conveyed to Lawrence J. Schulte and Elizabeth J. Schulte and Richard C. Nelson and Alison A. Nelson by Quitclaim Deed of Lawrence J. Schulte and Elizabeth J. Schulte dated December 16, 2004 and recorded at the Merrimack County Registry of Deeds in Book 2734, Page 344 and as further granted in the deed from Richard C. Nelson, dated April 23, 2012, recorded at Merrimack County Registry of Deeds at Book 3310, Page 1411, and the deed from Alison A. Nelson Willneff, recorded at Merrimack County Registry of Deeds at Book 3569, Page 134.

Elizabeth J. Schulte hereby waives all rights of homestead.

Signed this 28th day of November, 2017.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B19

Property Identification & Description

Address: 13 Virginia Court, Hooksett
Merrimack County, New Hampshire

Identification: Tax Map 25, Lot 19-3
Source Deed: Book 3586, Page 2826
Land Area: 0.42 AC

Improvements: The subject improvements include a colonial style single family residence constructed in 1997 with 1,956 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 220 feet and includes a 115 kV line on single pole laminated wood structures, approximately 70 to 79 feet in height. The corridor is identified as D118. The subject is buffered from the ROW by two properties between itself and the corridor.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 212 ft
Distance to Nearest Structure: 277 ft
Distance to Most Visible Structure: 0 ft
HVTL Visibility from House: No visibility. Vegetative screening on neighboring properties is sufficient to obscure views to existing structures.

Property Sale Data

Sale Date: February 28, 2018
Conditions of Sale: Arm's Length
Marketing Period: 49 Days on Market
Average DOM for Town: 52 Days
Marketing History: MLS data indicate the property was originally listed December 12, 2017 for $349,900, went under contract January 30th, and closed February 28, 2018 for $335,000. Municipal data show the sale as recorded February 28, 2018.

Sale Price: $335,000

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Hooksett within approximately 1.35 miles of the subject. Consideration was given to all the sale comparables. Subsequent to adjustment, comparable values ranged from $329,600 to $342,000:

Sale #1 (18 Lennox Street): $342,000
Sale #2 (3 Trent Road): $329,600
Sale #3 (16 Evelyn Street): $332,500

Appraised Value: $336,800

Property Assessment Related to HVTL

Overview: The 2016 assessed values are $82,300 for land, $151,600 for the residence, for a total of $233,900.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The field inspection confirmed that no structures are visible from the house. The property is buffered from the ROW by two intervening lots with sufficient screening that no structures are visible. There is some limited visibility of conductors. The overall intrusion of the HVTL is rated as very low (1).

No appraisal questions.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Stacie Berry, Listing Agent
Interviewed on: June 20, 2018

Notes: Stacie responded to my follow up text message after a first call attempt at 5:15pm local time. My text asked if proximity of the power lines affected the listing at all – either as a factor in how she priced the property or if there were any particular buyer concerns or resistance expressed during the marketing process.

Her text back said, “Only one showing commented on the power lines and we had a lot of showings.”

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 1997 with 1,956 SF of gross living area. The subject includes a 0.42 AC parcel that is neither encumbered by nor abutting the HVTL corridor ROW. The improvements are 212' from the transmission corridor and the closest structure is 277' from the improvements.

The HVTL are not visible from the residence, as the home is buffered from views of the infrastructure by vegetative screening on the two properties lying between it and the ROW. The overall intrusion of the HVTL on the property is subjectively rated as very low.

Appraised Value / Sale Price / Marketing Period

The subject sold for $335,000 on February 28, 2018, which is 0.5% less than the appraised value of $336,800 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a reasonable total of net adjustments applied to each.

The subject was on the market for 49 days, versus the town average of 52 days at the time of sale.

The sale price was 95.7% of original list price, with appraised value at 96.3% of list price, indicating the list price was set reasonably, though toward the higher side relative to the market for competitive properties at the time of sale.

Interview Evidence

Comments from the listing agent suggest no materially adverse HVTL effects on the marketing process.

Summary

The HVTL are not visible from the home, with overall intrusiveness of the HVTL on the property rated as very low. The home sold within the average days on market at close to appraised value absent HVTL influence, reflecting a nominal discount within typical negotiating space of an arm's length market. The appraisal evidence and the interview evidence yield no indications of negative effects from the HVTL on either sale price or marketing time in this transaction.

Re: 13 Virginia Court
Hooksett, NH 03106
Stanhope Group File # 180591

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of February 28, 2018 to be:

Three Hundred Thirty Six Thousand Eight Hundred Dollars
$336,800

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Virginia Ct and all roads in the Campbell Hill and Glencrest developments off Route 3/28 between Auburn Rd to the south and Main St to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of colonial style homes. Businesses and shopping are conveniently located along Route 3/28. The subject is convenient to Interstate 93 and Routes 3, 28 & 27. Center for services and employment are the greater Manchester and Concord areas.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's estimated exposure time, at its appraised value, is estimated at 75 days. This is typical for the subject's neighborhood and competing market area. Exposure time is directly associated with the appraised value and is considered to be prior to the effective date of the appraisal. This is contingent upon the listing price being reasonable and consistent with the market. Overall paired sales analysis indicates current stability in the subject's town after an earlier period of appreciation. Appreciation had been measured an average annual rate of 4% per month through third quarter 2017.

PUD

Project Information for PUDs (If applicable) - - Is the developer/builder in control of the Home Owners' Association (HOA)? [ ] YES [ ] NO

COST APPROACH

ESTIMATED SITE VALUE = $	Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
ESTIMATED REPRODUCTION COST-NEW OF IMPROVEMENTS:	The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 60-65 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines.
Explanatory comments are an integral part of this report. See Text Addendum.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 02/28/2018
TO BE $ 336,800

APPRAISER:
Signature Name Peter E Stanhope

ADDENDUM

Borrower: N/A	File No.: 180591	
Property Address: 13 Virginia Ct	Case No.:	
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

The subject is a legal nonconforming site typical of sites established prior to existing zoning regulations. The present zoning regulations require 175 road-front footage and a 1-acre lot in this area. The current use is allowed to continue in the event of total destruction provided the original footprint is not altered. The legal nonconforming site has not been demonstrated to be adverse to marketability.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of The Stanhope Group. This assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

Comparable two is adjusted for appreciation at the rate an average annual rate of 4% per year, rounded,

Borrower: N/A		File No.: 180591
Property Address: 13 Virginia Ct		Case No.:
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

through third quarter 2017, specific to the subject submarket. Sale 2 adjusted for concessions as the sale price was inflated over the list price to cover seller concessions,

Site adjustment to comparable two based on variant in privacy and utility rounded.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket. Line item adjustments are market derived and are typical for this marketplace. Many may have been historically supported by paired sales analysis and/or peer review. Line adjustments may vary on a case-by-case basis, depending on which properties are being compared and the context of those comparisons. The need for any significant adjustments is fairly typical in this submarket and has not been demonstrated to be adverse to the accuracy of estimating the market value of properties in this submarket. The appraisal report is to ensure that our client has the most viable information regarding the fair market value opinion of this home based upon current, available market data.

Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers. Cost approach is not considered a reliable measure of current fair market value do to the few new construction projects in the subject's value range which makes calculation of depreciation speculative. Furthermore, it is typical for the cost approach (in recent years) in most markets to be generally afield from correlative sales data - leaving the sales comparison approach the strongest determinant of fair market value. The Income Approach was considered inapplicable, because in this submarket few, if any, single-family residences are investor-owned.

All comparables are considered, because they are the most similar sales that a search of the subject area produced: each is a similar colonial style home and each enjoys similar characteristics and market influences as the subject. Comparable one is double-weighted for its most recent sale date.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

CASE STUDY B20

Property Identification & Description

Address: 12 Virginia Court, Hooksett
Merrimack County, New Hampshire

Identification: Tax Map 25, Lot 19-34
Source Deed: Book 3561, Page 1620
Land Area: 0.36 AC

Improvements: The subject improvements include a colonial style single family residence constructed in 1997 with 2,124 SF of gross living area.

Physical Relationship of Transmission Lines to the Property

Transmission Corridor: The width of the ROW is 220 feet and includes a 115 kV line on single pole laminated wood structures, approximately 70 to 79 feet in height. The corridor is identified as D118. The subject is buffered from the ROW by a neighboring property.

Number of Structures on Site: 0
ROW Encumbrance: 0 SF
Distance from House to ROW: 136 ft
Distance to Nearest Structure: 201 ft
Distance to Most Visible Structure: 217 ft
HVTL Visibility from House: Clearly visible. Although screened by mature trees on the subject and the neighboring property, the top of a tower located northwest of the subject is in full view.

Property Sale Data

Sale Date: June 29, 2017
Conditions of Sale: Arm's Length
Marketing Period: 3 Days on Market
Average DOM for Town: 49 Days
Marketing History: MLS data indicate the property was originally listed May 23, 2017 for $324,900, went under contract May 26th, and closed June 29, 2017 for $327,500. Municipal data show the sale as recorded July 3, 2017.

Sale Price: $327,500

Appraised Value on Date of Sale Absent Influence of HVTL

Sale Data: Three sales were utilized in the valuation of the subject property. All sales were located in the Town of Hooksett within approximately 2.25 miles of the subject. Consideration was given to all the sale comparables. Subsequent to adjustment, comparable values ranged from $325,715 to $327,800:

Sale #1 (41 Crawford Lane): $327,800
Sale #2 (128 University Circle): $325,715
Sale #3 (1 Dove Road): $327,400

Appraised Value: $326,900

Property Assessment Related to HVTL

Overview: The 2016 assessed values are $86,500 for land, $152,600 for the residence, for a total of $239,100.

Assessment Card Notes: None

Interview Data

Field Inspection Notes:

Inspected by: James A. Chalmers, Ph.D. and Peter E. Stanhope
Field visit on: July 9, 2018

Notes: The field investigation confirmed that the most visible structure was clearly visible. Despite being close to the ROW, the property is buffered by some vegetation and by one intervening lot. There is, however, a structure visible from the front of the house but vegetation keeps the level of intrusiveness to low (3).

No appraisal questions.

Participant Interview Notes:

(Interview #1)

Interviewer: Bruce M. Burger
Interviewee: Kristyn Nelson, Listing Agent
Interviewed on: June 20, 2018

Notes: Reached Krystin on my first call attempt at 5:20pm local time. She said the lines had no effect on the listing or sale of the home, noting that the TL weren't that close to the home and had no noteworthy visual impact on the subject property.

She confirmed no allowance was made for the lines in the listing price.

Conclusions

Improvements & Visibility

The subject is improved with a colonial style single family residence constructed in 1997 with 2,124 SF of gross living area. The subject includes a 0.36 AC parcel neither encumbered by nor abutting the HVTL corridor ROW. The improvements are 136' from the transmission corridor, the closest structure is 201' from the improvements and the most visible structure is 217' from the improvements.

The top of a structure northwest of the subject is in full view even though mature trees on the neighboring property largely screen the subject from the ROW. The overall intrusion of the HVTL on the property is subjectively rated as low.

Appraised Value / Sale Price / Marketing Period

The subject sold for $327,500 on June 29, 2017, which is 0.2% more than the appraised value of $326,900 concluded as of the same date, absent HVTL influence. The comparable sales set appears very good, with a modest total of net adjustments applied to each.

The subject was on the market for 3 days, versus the town average of 49 days at the time of sale.

The sale price was 100.8% of original list price, with appraised value at 100.6% of list price, indicating the list price was set reasonably, though "priced to sell" relative to competitive properties in the market at the time of sale.

Interview Evidence

The listing agent said the HVTL had no effect on the listing or sale of the home, and confirmed no allowance was made for them in the listing price.

Summary

The intrusion of the HVTL on the property is low. The listing agent confirmed the HVTL had no impact on the transaction; the property sold at a price nominally over list within a few days of entering the market. Its sale price was also slightly over its appraised value absent HVTL influence. While the listing price may appear to have been set toward the aggressive side, tight market conditions constraining the supply of inventory for sale were also specifically noted in the appraiser's report.

The interview evidence and the appraisal evidence both support the conclusion of no adverse effect from the HVTL on either sale price or marketing time in this transaction.

Re: 12 Virginia Court
Hooksett, NH 03106
Stanhope Group File # 180592

Dear Mr. Chalmers:

In accordance with your request for retrospective appraisal services, I have prepared the accompanying report on the real estate referenced above. This is a report prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The problem to be solved in this appraisal is to conclude an opinion of the most probable retrospective market value in fee simple interest of the subject property. Support for the market value estimate is developed in the attached appraisal report. This letter of transmittal is not an appraisal report, but constitutes part of the accompanying report.

These conclusions are subject to both a hypothetical condition[1] and extraordinary assumption[2].

As a result of my investigation and analysis of the data contained in this report, I estimate the most probable retrospective market value of the subject property subject in fee simple interest, as of June 29, 2017 to be:

Three Hundred Twenty Six Thousand Nine Hundred Dollars
$326,900

The value indicated is subject to the General Assumptions and General Limiting Conditions located in the report addenda.

Respectfully,

Peter E. Stanhope
NHCG-31

[1] HYPOTHETICAL CONDITION: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis.

[2] EXTRAORDINARY ASSUMPTION: an assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser s opinions or conclusions.

Note: Race and the racial composition of the neighborhood are not appraisal factors.

Neighborhood boundaries and characteristics: Virginia Ct and all roads in the Campbell Hill and Glencrest developments off Route 3/28 between Auburn Rd to the south and Main St to the north.

Factors that affect the marketability of the properties in the neighborhood (proximity to employment and amenities, employment stability, appeal to market, etc.):
The subject is located in an established, predominantly residential neighborhood mostly consisting of colonial style homes. Businesses and shopping are conveniently located along Route 3/28. The subject is convenient to Interstate 93 and Routes 3, 28 & 27. Center for services and employment are the greater Manchester and Concord areas.

Market conditions in the subject neighborhood (including support for the above conclusions related to the trend of property values, demand/supply, and marketing time - - such as data on competitive properties for sale in the neighborhood, description of the prevalence of sales and financing concessions, etc.):
The subject's estimated exposure time, at its appraised value, is estimated at 75 days. This is typical for the subject's neighborhood and competing market area. Exposure time is directly associated with the appraised value and is considered to be prior to the effective date of the appraisal. This is contingent upon the listing price being reasonable and consistent with the market. The subject submarket evidenses improving conditions in Mid 2016 to late 2017. The range of appreciation indicators on an avg annual bais was 3-5% based on various data basis.

	Sq. Ft. @ $		=	0
			=	
Garage/Carport	Sq. Ft. @ $		=	0
Total Estimated Cost New			= $	0
Less Depreciation	Physical $0	Functional $0	External $0	Est. Remaining Econ. Life: = $ 0
Depreciated Value of Improvements			= $	0
"As-is" Value of Site Improvements			= $	
INDICATED VALUE BY COST APPROACH			= $	0

Comments on Cost Approach (such as, source of cost estimate, site value, square foot calculation and for HUD, VA and FmHA, the estimated remaining economic life of the property):
The Cost Approach has been considered but not included in this appraisal as an indicator of value. The cost approach is valid and most reliable when depreciation from all sources can be accurately measured. The Subject's value can not be reliably estimated by the cost approach due to its age. The estimated remaining economic life is estimated to be 58-64 years.

RECONCILIATION

This appraisal is made ☐ "as is" ☒ subject to the repairs, alterations, inspections or conditions listed below ☐ subject to completion per plans and specifications.

Conditions of Appraisal: Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines.
Explanatory comments are an integral part of this report. See Text Addendum.

Final Reconciliation: Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers.

The purpose of this appraisal is to estimate the market value of the real property that is the subject of this report, based on the above conditions and the certification, contingent and limiting conditions, and market value definition

I (WE) ESTIMATE THE MARKET VALUE, AS DEFINED, OF THE REAL PROPERTY THAT IS THE SUBJECT OF THIS REPORT, AS OF 06/29/2017

TO BE $ 326,900

ADDENDUM

Borrower: N/A		File No.: 180592
Property Address: 12 Virginia Ct		Case No.:
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

EXPLANATORY COMMENTS

FUNCTION: The purpose of the appraisal is to estimate the market value of the subject property as herein defined. The function of the appraisal is to assist the above named client, the intended user, in evaluation of the subject property for the purpose of measuring influence on value of the presence of High Voltage Transmission Lines (HVTL). Use of this appraisal by any other party is not intended.

COMPLIANCE: The appraiser certifies and agrees that this appraisal report was prepared in accordance with the requirements of Title XI of the Financial Institutions, Reform, Recovery, and Enforcement Act (FIRREA) of 1989, as amended (12 U.S.C. 3331 et seq.), and any applicable implementing regulations in effect at the time the appraiser signs the appraisal certification.

HYPOTHETICAL CONDITION: A Hypothetical Condition is defined by USPAP as that which is contrary to what exists but is supposed for the purpose of analysis. Appraisal is made with the Hypothetical Condition that the subject has no exposure to high voltage transmission lines and the externality does not exist.

EXTRAORDINARY ASSUMPTION: An Extraordinary Assumption is defined by USPAP as an assumption, directly relating to a specific assignment, which, if found to be false, could alter the appraiser's opinions or conclusion. Report based on Extraordinary Assumption that property is as represented in MLS and the municipal record description that has been relied upon. No onsite inspection has been performed for this appraisal. It is assumed that there are no structural defects or undisclosed conditions of the property, that all exterior elements are sound, and all mechanical systems, equipment and appliances are in proper working order.

SCOPE OF WORK: This appraisal report is prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board of the Appraisal Foundation. These standards contain procedures to be followed in developing an appraisal, analysis or opinion. These standards also set the requirements with regard to the communication of the appraiser's analyses, opinions and conclusions so that those analyses, opinions and conclusions are meaningful and not misleading. The report is written to effect a clear, well-documented and relevant communication of a credible result of value opinion.

The appraisal conclusions will be communicated in a report format prepared in accordance with Standard 2 of the Uniform Standards of Professional Appraisal Practice, containing the three conventional approaches to value (if applicable) being the Cost Approach, Sales Comparison Approach, and the Income Approach. It will include photographs of the subject and comparable properties, descriptions of the subject neighborhood, the site, any improvements on the site, a description of the zoning, a highest and best use analysis, a summary of the most important sales used in the appraiser's valuation, a reconciliation and conclusion, a map illustrating the sales in relationship to the subject property, and other data deemed by the appraiser to be relevant to the assignment. Pertinent data and analysis not included in the report may be retained in appraiser's files.

The scope of work required to complete this appraisal assignment included the following: investigate the property and interview the parties familiar with the property. The appraiser will view the subject improvements at a level necessary to gather information about the physical characteristics of the subject improvements that are relevant to the valuation problem. The appraiser will rely on the deed when available and parties familiar with the property for information regarding easements, covenants, restrictions and other encumbrances. The appraisal will not research the presence of such items independently. Sales, current and pending listings, considered relevant, that have occurred over a period where changes in market conditions can be measured will be researched in the subject's geographic area. The appraiser's investigations will include research of public records through the use of commercial sources of data such as printed comparable data services and computerized databases. Search parameters such as dates of sales, locations, sizes, types of properties and distances from the subject will start with relatively narrow constraints and, if necessary, be expanded until the appraiser has either identified data sufficient to estimate market value, or until the appraiser believes that they have reasonably exhausted the available pool of data. Researched sales data will be viewed and, if appropriate, efforts will be made to verify the data with persons directly involved in the transactions such as buyers, sellers, brokers or agents. At the appraiser's discretion, some data will be used without personal verification if, in the appraiser's opinion, the data appears to be correct. The appraisal is based on information gathered by the appraiser from public records, other identified sources, exterior inspection of the subject property and neighborhood, and selection of comparable sales within the subject's market area. The original source of comparables is shown in the data source section of the market grid along with the source of confirmation, if available. The sources and data are considered reliable. When conflicting information was provided, the source deemed most reliable has been used. Data believed to be unreliable was not included in this report nor used as a basis for the value conclusion.

This appraisal is not a home inspection report and it should not be relied upon to disclose conditions of the property.

PROBABILITY OF VALUE CHANGE: The market value of the property appraised in this report is estimated as of

the date reported herein. Constantly changing economic, social, political and physical conditions have varying effects upon real property values. Even after the passage of a relatively short period of time, property values may change substantially and require a new appraisal.

ZONING: A definitive opinion regarding conformity to zoning is beyond the professional expertise of the appraiser and not within the scope of this appraisal assignment. Should a definitive conclusion as to zoning conformity be required, a licensed surveyor or attorney should be consulted.

HIGHEST AND BEST USE: The physical, legal, financially feasible, and maximally productive elements of Highest and Best Use for the subject property being appraised have been evaluated. Highest and Best Use is residential based on legal, physical and economic constraints on development. The subject is a legally permissible use based on current zoning. Also, the lot size, shape, and land-to-building ratio allow the present structure, or are legal nonconforming, and indicate a good utilization of the improvements. Based on current market conditions, the existing structure as a single family residence is its maximally productive use, as well as being financially feasible. The highest and best use, as if vacant, would be a single family residence.

The subject is a legal nonconforming site typical of sites established prior to existing zoning regulations. The present zoning regulations require 175 road-front footage and a 1-acre lot in this area. The current use is allowed to continue in the event of total destruction provided the original footprint is not altered. The legal nonconforming site has not been demonstrated to be adverse to marketability.

ENVIRONMENTAL: The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquires about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value.

PROFESSIONAL ASSISTANCE: Professional assistance has been provided by David Michaud, an associate of The Stanhope Group. THis assistance included assisting the principal appraiser, Peter Stanhope, throughout the appraisal process and preparation of the report.

PRIOR THREE YEARS: I have provided no services pertaining to the subject property, as an appraiser or in any other capacity, within three years of the date of this report.

APPRAISAL STATEMENTS AND CONDITIONS: The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal.

MAXIMUM TIME FRAME FOR LEGAL ACTION: Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non-criminal claims or causes of action of any type.

ACCEPTANCE OF APPRAISAL STATEMENTS, CONDITIONS AND ASSUMPTIONS: Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

PERSONAL PROPERTY: Personal property has not been considered in the conclusion of market value. Appliances not built-in, alternate heat stoves, furniture, equipment, above ground pools and the like, have been given no value for the following reasons; these items are portable, have limited physical lives, and there is no extractable market evidence supporting a measurable contribution to value, based on their absence or presence.

SALES ANALYSIS COMMENTS

Comparables two and three are adjusted for appreciation at an annual average rate of 0.4%, rounded, through

Borrower: N/A	File No.: 180592	
Property Address: 12 Virginia Ct	Case No.:	
City: Hooksett	State: NH	Zip: 03106
Lender: Chalmers & Associates, LLC		

third quarter 2017 specific to the subject submarket.

Site area adjustment based upon based on variant in privacy and utility rounded.

Age and condition adjustments to comparable two reflect the typical market reaction to new construction when compared to the subject.

Quality adjustment to comparable three is at $5 per square foot, rounded, and reflects the reported superior architectural features and materials noted in this comparable when compared to the subject. Conditional adjustment to comparable two is $5 per sqft for no wear & tear from use and age.

GLA adjustments to comparables one and two are market derived at $25 per square foot, rounded.

Additional adjustments are based on the observed/anticipated market reaction to these specific amenities in the subject submarket. Line item adjustments are market derived and are typical for this marketplace. Many may have been historically supported by paired sales analysis and/or peer review. Line adjustments may vary on a case-by-case basis, depending on which properties are being compared and the context of those comparisons. The need for any significant adjustments is fairly typical in this submarket and has not been demonstrated to be adverse to the accuracy of estimating the market value of properties in this submarket. The appraisal report is to ensure that our client has the most viable information regarding the fair market value opinion of this home based upon current, available market data.

Strongest indication of value is derived from the Sales Comparison Approach, since this approach best analyzes market actions of buyers and sellers. Cost approach is not considered a reliable measure of current fair market value do to the few new construction projects in the subject's value range which makes calculation of depreciation speculative. Furthermore, it is typical for the cost approach (in recent years) in most markets to be generally afield from correlative sales data - leaving the sales comparison approach the strongest determinant of fair market value. The Income Approach was considered inapplicable, because in this submarket few, if any, single-family residences are investor-owned.

All comparables are considered, because they are the most similar sales that a search of the subject area produced: each is a similar colonial style home and each enjoys similar characteristics and market influences as the subject. Comparables one and two are double-weighted for their most recent sales dates.

ADDITIONAL COMMENTS

By the receipt and implied acceptance of this report, the addressee recognizes the obligation for timely remittance, in full, of associated professional fees. Furthermore, any claims against the appraiser, for whatever reason, are limited to the amount of said fees with responsibility of the appraiser limited to the client, and not extending to any third party.

I have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment. My engagement in this assignment was not contingent upon developing or reporting predetermined results. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

DEFINITION OF MARKET VALUE: The definition of market value used in this assignment is consistent with Treasury Regulation §1.170A-1 (c) (2) which defines fair market value as follows:
Fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts.

STATEMENT OF LIMITING CONDITIONS AND APPRAISER'S CERTIFICATION

CONTINGENT AND LIMITING CONDITIONS: The appraiser's certification that appears in the appraisal report is subject to the following conditions:
1. The appraiser will not be responsible for matters of a legal nature that affect either the property being appraised or the title to it. The appraiser assumes that the title is good and marketable and, therefore, will not render any opinions about the title. The property is appraised on the basis of it being under responsible ownership.
2. If the appraiser has provided a sketch in the appraisal report, the sketch is included only to assist the reader of the report in visualizing the property and is not represented to be to scale and is included to show approximate relationships.
3. When the appraiser has examined the available flood maps that are provided by the Federal Emergency Management Agency (or other data sources) and has noted in the appraisal report whether the subject site is located in an identified Special Flood Hazard Area. Because the appraiser is not a surveyor, he or she makes no guarantees, express or implied, regarding this determination.
4. The appraiser will not give testimony or appear in court because he or she made an appraisal of the property in question, unless specific arrangements to do so have been made beforehand.
5. If the Cost Approach was developed, the appraiser has estimated the value of the land at its highest and best use and the improvements at their contributory value. A definitive opinion regarding conformity to zoning is beyond the scope of this appraisal assignment and the professional expertise of the appraiser. Should the client require a definitive conclusion as to zoning conformity, it is suggested that either a licensed surveyor and/or attorney be consulted. These separate valuations of the land and improvements must not be used in conjunction with any other appraisal and are invalid if they are so used.
6. The appraiser has noted in the appraisal report any adverse conditions observed during the inspection of the subject property or that he or she became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The value estimated is based on the assumption that the property is not negatively affected by the existence of hazardous substances or detrimental environmental conditions unless otherwise stated in this report. The appraiser is not an expert in the identification of hazardous substances or detrimental conditions. The appraiser's routine inspection of and inquiries about the subject property did not develop any information that indicated any apparent significant hazardous substances or detrimental environmental conditions which would affect the property negatively unless otherwise stated in this report. It is possible that tests and inspections made by a qualified hazardous substance and environmental expert would reveal the existence of hazardous substances or detrimental environmental conditions on or around the property that would negatively affect its value. It is assumed that there are no structural defects hidden by floor or wall coverings or any other hidden or unapparent conditions of the property; that all mechanical equipment and appliances are in good working condition; and that all electrical components and the roofing are in good condition. If the client has any questions regarding these items, it is the client's responsibility to order the appropriate inspections. The appraiser does not have the skill or expertise needed to make such inspections. The appraiser assumes no responsibility for these items. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
7. The appraiser obtained the information, estimates, and opinions that were expressed in the appraisal report from sources that he or she considers to be reliable and believes them to be true and correct. The appraiser does not assume responsibility for the accuracy of such items that were furnished by other parties. Whenever possible, the appraiser has verified data from multiple sources and relied upon the source considered most accurate. The adjustments used in the sales comparison grid are based on market extraction and/or anticipated market reaction. When adjustments could not be extracted from a paired sales analysis, the adjustment is estimated based on the appraiser's familiarity and knowledge of the local market area. In addition, consideration was given to input derived from conversations with other parties having direct knowledge of the comparables' sales and the subject's market.
8. The appraiser will not disclose the contents of the appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice.
9. When the appraiser has based their appraisal report and valuation conclusion subject to satisfactory completion, repairs, or alterations, it is assumes that completion of the improvements will be performed in a workmanlike manner.
10. The appraiser must provide his or her prior written consent before the client specified in the appraisal report can distribute the appraisal report (including conclusions about the property value, the appraiser's identity and professional designations, and references to any professional appraisal organizations or the firm with which the appraiser is associated) to anyone other than the Client's Client, opposing parties through discovery or government agencies and courts. The appraiser's written consent and approval must also be obtained before the appraisal can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.

CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, impartial, and unbiased professional analyses, opinions, and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and have no personal interest with respect to the parties involved. I have performed no services as an appraiser or in any other capacity regarding the property that is the subject of this report within the three year period immediately preceding acceptance of this engagement.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed and this report has been prepared in conformity with the Uniform Standards of Professional Appraisal Practice.
- I have made a personal inspection of the property that is the subject of this report.
- Anyone who provided real property appraisal assistance to the person signing this certification is noted in the report addenda.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Appraisal Practice of the Appraisal Institute.
- I certify the reported analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- I certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.
