High Voltage Transmission Lines and Real Estate Markets in New Hampshire: A Research Report

June 30, 2015

Revised July 15, 2018

Prepared for: Eversource Energy and National Grid

Prepared by: Chalmers & Associates, LLC

Preface to the Revised Report

The most significant revision to this Report is the addition of 20 new case studies. The objective of this addition is to increase coverage of the southeastern region of the State. The new case studies are from an area we refer to as Study Area #4. This includes an area roughly south of Concord and east of I-93. The findings of these new case studies reinforce the conclusions based on the original 58 case studies.

In addition, since this Report was originally issued, certain items have been identified that require correction, amendment or clarification. They do not affect the conclusions reached in the original Report. They include the following:

In Table 4.2.1, the lot size for Case Study #16 has been changed from 1.35 acres to 2.65 acres.

In the original Report, when there was conflicting case study evidence and it was not possible to reach a conclusion one way or the other, it was coded as a "possible" sale price or marketing time effect. That coding has been changed to "indeterminate" to more accurately reflect the evidence.

Tables 4.2.2, 4.3.2, 4.4.2 and 4.5.2, which summarize the case study results for Corridor #1, Corridor #2, Study Area #3 and Study Area #4 respectively, have been reformatted to make them easier to read. In addition, a new table, Table 4.6.1 has been added that aggregates the case study results over all four study areas.

The appraisals for Case Studies #9, #33, #35, #48 and #50 have been reissued because they contained one or more comparable sales that could not be judged independent of HVTL influence. There is no material change in the value opinions offered in the reissued appraisals nor in the conclusions of these five Case Studies.

In the Sugar Hill Subdivision Study, the size of lot 11 is changed from 5.55 acres to 5.35 acres.

In the Holderness Subdivision Study, the 1976 sale of lot 67 appears to be to a related party and is removed from the analysis.

In the Canterbury Subdivision Study, a 1987 sale of lot 20 was substituted for the 1976 sale originally reported, as the 1976 sale appears to involve a related party.

Upon review of the lot sales in the Allenstown Subdivision Study, Section 5.2.9, it appears that the sales by Donigian Properties, LLC of lots 30, 33, 36, 55 and 57 were to related parties and are removed from the analysis. Sections 5.2.9, 5.4 and 7.3 are edited accordingly.

In the Deerfield Subdivision Study, Section 5.2.10, the Purchase Date and Price for lot 133 are changed to 12/16/86 and $28,700 and the text is edited accordingly. A footnote is also added to

the effect that the sale of lots 125-129 and 132 was a bulk sale to a builder and may reflect a discounted price.

In the Newington Subdivision Study, the 1989 sale of lot 7C appears to be a foreclosure sale and is removed from the analysis.

None of the revisions to the Subdivision Studies change the conclusions of the individual studies or of the Subdivision Studies as a whole.

1 Introduction

1.1 Objective of this Report

The overall goal of this report is to provide an empirical base from which to evaluate the potential impacts of high voltage transmission lines ("HVTL") on the market value of real estate in New Hampshire. The possible effects of high voltage transmission lines on the market value of real estate have been the object of a large body of research over the past 30 years and have been widely reported in the peer-reviewed, professional literature. These studies deal with a wide variety of geographies and HVTL corridor configurations.[1] The methodology employed in these studies is generally similar and their findings have remained consistent over an extended time period. The first objective of this Report is to summarize the findings of that group of studies that represent the most reliable methodological approaches and are most frequently referenced in the professional literature.

This report then addresses the extent to which the existing body of published research considers the geography, land use patterns and market forces of northern New England. Based on this analysis, the second objective of this Report is to supplement the body of published research with a set of New Hampshire-specific studies. The findings of these studies are useful in their own right as well as establishing the extent to which the larger body of published research has applicability to New Hampshire, i.e. is there general consistency in the findings of the two bodies of research.

1.2 Organization of the Report

Following the introduction (chapter 1), the second chapter of this report summarizes the published literature on the market value effects of HVTL. It begins with a discussion of the methodological alternatives for measuring market value effects. Separate sections then address effects on residential property, commercial industrial property and vacant land. Finally, there is a brief review of opinion studies (as opposed to studies based on market data) which provides some useful insights into what appear to be inconsistencies between opinions with respect to market value effects and the empirical reality.

The third chapter of the report introduces three New Hampshire-specific research initiatives that have been carried out over the past two years. These are referred to as the "Case Studies", the "Subdivision Studies" and the "Market Activity Research".

The Case Studies focus on recent sales of improved residential lots along existing New Hampshire HVTL. They utilize a combination of field inspection, interview and appraisal methodologies to determine whether the transactions were affected by the HVTL, and if so, the nature and magnitude of the effect.

The Subdivision Studies look at the sale of unimproved lots in subdivisions where some of the lots are crossed by, or abut, an HVTL right-of-way ("ROW"). The timing of the sales and the prices at which the

[11] The term "corridor configuration" will be used to include right-of-way ("ROW") width, number and voltage of the lines and structure type and height.

lots sold are then compared for the encumbered or abutting ("Subject") lots and lots not encumbered or abutting ("Control") to gauge the effect of the HVTL. Any HVTL effects should be easiest to identify in the context of raw lot sales since there is no need to control for the value of the improvements from property to property.

The Market Activity Research examines sales of properties within a mile of an existing HVTL corridor. Data summarizing the ratio of sale price to list price and days on market are compared for properties at different distances from the HVTL to see if proximity has any systematic effect on these market indicators.

Chapter 4 provides a discussion of the methodology employed in the Case Studies and summarizes the results. The actual Case Studies are contained in Appendices E, F and H to this report.[2] There is a total of seventy-eight Case Studies carried out in four areas. Twenty-four are located along a corridor that extends from Littleton in the north to Pelham in the south and is referred to as Corridor #1. Twenty-eight cases are along a smaller corridor that originates in Dummer in the north and proceeds south to Deerfield and is referred to as Corridor #2. Six Case Studies are carried out along several short corridor segments in and around Portsmouth which is referred to as Study Area #3. Finally, twenty case studies are located in the towns of Dover, Hooksett and Danville in southeastern New Hampshire which is referred to as Study Area #4.

Chapter 5 turns to the Subdivision Studies. A total of 13 Subdivisions were studied. Ten are located along Corridor #2 and three are along corridors in Study Area #3. Title research was carried out for each subdivision to identify the pricing and timing of the original sale of lots by the developer. The original lot sales are then arranged chronologically to see if there are pricing or timing differences for Subject lots compared to Control lots.

Chapter 6 summarizes the Market Activity Research—the third New Hampshire-specific research initiative. Multiple Listing Service ("MLS") data on the ratio of sale price to list price and days on market ("DOM") are compared for groups of properties at different distances from an existing HVTL.

Finally, Chapter 7 summarizes the conclusions from the published literature and each of the three New Hampshire-specific research initiatives. This research provides a rich base of empirically-grounded evidence from which to examine the possible effect of HVTL projects on the market value of real estate in New Hampshire. Appendices A-D contain abstracts of the residential property studies, the commercial/industrial property studies, the vacant land studies and the attitudinal studies respectively. Appendices E, F and H contain the Case Study reports. Appendix G contains the Subdivision Plan and Chain of Title spread sheet for each of the 13 subdivisions studied.

[2]Appendix E: Underwood Case Studies, Appendix F: Amidon Case Studies and Appendix H: Study Area #4 Case Studies.

1.3 Overview of the Conclusions of the Report

There is consistency in the findings of the published literature and the New Hampshire specific research initiatives reported on here. Most importantly, there is no evidence to support the existence of consistent measurable effects of HVTL on real estate market values. The statistical literature finds effects in about half the studies and none in the other half. Where effects were found in the professional literature, they were small, almost always less than 6% and they decreased rapidly with distance from the HVTL.

In the 78 New Hampshire Case Studies, most of which involved properties encumbered by the ROW easement or adjacent to it, it was concluded that there were no sale price effects in 54 of the cases and in 12 of the cases the results were indeterminate. In the Subdivision Studies, effects were found in five of the 13 subdivisions studied. The New Hampshire Case Studies show that in the cases where there were effects, the appraisal evidence indicated a range of effects that averaged 8.7% and they decreased rapidly with distance. Where a sale price effect was observed, only one of the properties had a house that was more than 100 feet from the edge of the ROW. The Case Studies support the idea that it is very close proximity combined with clear visibility of the HVTL that may lead to market value effects. Encumbrance by the easement could also cause market value effects if the way in which improvements could be sited on the lot was compromised. But these conditions were infrequent. In the majority of cases, there were no sale price effects.

It must also be noted that the existence of market value effects does not imply economic damages to the property owner. The owner at the time of easement purchase would have been compensated for market value effects. Further, if there were market value effects, subsequent owners would have purchased the property at a discount, so they would have suffered no economic damage.

1.4 Introductory Note on the Tension between the Empirical Evidence and the Public Perception of Market Value Effects

Before examining the published literature and the recent New Hampshire studies, it is useful to acknowledge, and to try to understand, the basis for the apparent inconsistency between the empirical evidence and the public perception of real estate value effects. The empirical evidence described in the remainder of this report makes it clear that real estate value effects cannot be presumed and that while there will be effects in some cases, these cases are infrequent. On the other hand, the public's perception of HVTL often seems to be that negative effects of HVTL on the value of real estate are a self-evident fact.

Part of the problem stems from the fact that if you focus purely on HVTL, most people would expect the direction of the effect on market value to be negative. But it does not follow that there is a discernible effect on market value. The effect on market value, if any, depends on the weight given the HVTL effect relative to all the other positive and negative variables that shape a property purchase decision. All other things being equal, the property without the HVTL would generally be preferred, but all other things are never equal. The interpretation of the published research is that even though transmission

line issues have been a prominent concern in most of the communities studied, and even though the direction of effect on real estate value is generally negative, their presence is apparently not given sufficient weight by buyers and sellers of real estate to have had any consistent measurable effect on market value. We have intuition with respect to the direction of the effect but not the weight it is given by buyers and sellers of homes. Ultimately that must be inferred from market data.

In addition, there are different perspectives from which individuals approach these issues. The "Market Value" perspective investigates whether the price arrived at in a fair market sale[3] ("Fair Market Sale") is affected by an HVTL. This is an objective concept based on market data and is the perspective on which this report is based.

A second perspective can be referred to as the "Owner" perspective. This is the subjective perspective of the owner of an affected property who has an opinion of the personal implications of the HVTL. This might include a scenario where the removal of a tree has great personal significance or where a portion of a HVTL structure becoming visible causes tremendous harm in the subjective opinion of an individual property owner. In both scenarios, however, it's entirely possible that a prospective buyer, or, more generally, the market, would be oblivious to the change.

A third perspective is that of a non-owner who enjoys an affected resource (while hiking or driving for example) and feels that their use/enjoyment is impaired by the HVTL. This perspective can be referred to as the "Public" perspective.

Both the Owner and the Public perspectives are genuine and must be respected, but those coming from these perspectives often confuse the issue by claiming market value effects. In fact, they may claim market value effects that are of similar proportions to the effects they suffer from a subjective or public perspective, e.g. "the value of my property will be destroyed." The value of the property to them may be diminished, but whether the market value of the property has been affected is an empirical question that must be answered with market data. Based on the professional literature and the evidence presented below, it turns out that the subjective public and owner perspectives are frequently not reflective of what occurs in real estate markets.

[3] Fair market sale is shorthand for a sale consummated by a willing buyer and willing seller, at arm's length, both knowledgeable and typically motivated.

2 The Professional Literature

2.1 Introduction

2.1.1 Methodology

The most reliable evidence of the effect of HVTL on the market value of real estate compares Fair Market Sales of properties that lie in close proximity to an existing line to sales of properties without HVTL influence. There are three approaches based on accepted appraisal practice to performing this comparison. These approaches can be applied in different study formats to address the research questions at issue. The three approaches are identified first. This is followed by a discussion of the study formats that are relevant to this report.

Paired Data Analysis. The first approach attempts to match the characteristics of a subject property within a claimed area of impact (the "Subject Area") to the sale of a similar property outside the potential area of influence (the "Control Area"). For example, if a subject property, which lies immediately adjacent to a HVTL, sold for $149,000 and another property with the same value-determining characteristics as the subject property, except for the power line proximity, sold for $150,000, the conclusion could be drawn that the property value effects of the transmission line are insignificant.

Retrospective Appraisal Based on Control Properties. The second approach recognizes that a perfect match is unlikely and relies on standard residential appraisal sales comparison methodology. A subject property crossed by, abutting or proximate to a HVTL that has sold is retrospectively appraised (i.e., at the date of its historical sale) using comparable sales located outside of the HVTL area of influence. This recognizes that there are inevitably going to be differences among the Subject and Control Area properties and that these differences must be accounted for based on the appraiser's experience in the market in question. For example, if the subject sold for $149,000 and the value implied by several comparable sales was $165,000, there may have been an adverse influence of the high-voltage line on the value of the subject.

Multiple Regression Analysis of Large Numbers of Subject and Control Area Sales. The third approach, multiple regression analysis, uses statistical tools to try to isolate the effects of the HVTL from all the other determinants of value. This is only possible with a relatively large number of Subject Area and Control Area sales. If the sale, property, and neighborhood data exist to carry out this approach, it is well-suited to identifying the independent effect of the transmission line, holding the other value-determining factors constant. In addition, it is the least subjective of the three potential approaches and is the only approach to give explicit measures of reliability, which helps the user determine what weight to give the results.

Survey Research has also been used to probe the attitudes towards, and perceptions of, HVTL by both property owners and by real estate professionals (appraisers, realtors, lenders). Although these studies may give relevant insights into the workings of the market, it is generally accepted that stated

preference (what people say they would do) is no substitute for revealed preference (what people actually do as revealed in market transactions).

These approaches can be applied in different formats; three are relevant here-- statistical studies, case studies and subdivision studies. Most of the published professional literature is based on large scale statistical studies. These can determine whether there is a systematic measurable effect of HVTL on the market value of real estate. Their shortcoming is that they are giving an "average" result. The implication of the statistical analysis may be no effect, i.e. no consistent measurable effect, but that does not rule out the possibility of effect on some individual properties nor does it help identify the conditions under which individual properties might be affected.

This is where the case study approach has merit. In the case study format, the analyst uses a combination of field inspection, interviews and retrospective appraisal to look at individual transactions. Because the number of case studies is relatively small, it is more difficult to generalize from the results, but this approach has the virtue of potentially identifying circumstances where there is an effect or consequence that would not be detected in a statistical analysis.

A third format is the subdivision study which utilizes a paired sales approach. If the lots of a subdivision are generally similar in terms of size, view, vegetation, etc., but some are crossed by, or abut, an HVTL and some do not, the sale prices and chronology of sales associated with the two groups of lots can be compared and differences may be interpreted as the effects of the HVTL.

2.1.2 Organization of this Chapter

Historically, study of HVTL impact on property value has been focused on developed residential properties. These are usually in a suburban context where the density and homogeneity of development are such that there are enough sales of sufficiently similar properties that comparisons can be drawn between Subject Area and Control Area transactions. We begin, therefore, with a review of the published literature dealing with residential properties. This is followed by a discussion of the very limited literature on HVTL impacts on commercial/industrial properties. The literature dealing with HVTL effects on vacant land is then reviewed as are opinion studies based on survey research. The chapter concludes with a summary of the results of these studies.

2.2 Residential Property

The published literature dealing with the effects of HVTL on the market value of real estate is largely focused on improved residential properties. Typically, data is collected on a large number of home sales in urban or suburban locations. Characteristics of the homes (bedrooms, baths, garages, living space, etc.), the lot (size) and the neighborhood are controlled for statistically using multiple regression analysis. The sale data are then analyzed to determine whether the HVTL affected sale prices due to proximity of the lines, visibility of the lines or structures, encumbrance of the easement, or other characteristics of the lines. The methodology utilized in these studies is well-established and has changed little from the late 1980's to present.

There are extensive bibliographies summarizing the literature.[4] Some of this literature is over 30 years old, some deals with countries where the circumstances affecting HVTL and their consequences may be quite different from what might be expected in the United States and some does not measure up to the standards of current research methodology. For these reasons, the review here will discuss 11 studies that are most heavily referenced and cross-referenced by researchers in the field, that utilize accepted methodology, that deal with sales in the United States or Canada and that carry publication dates of 1988 or later. The 11 articles are identified and briefly described in Appendix A: Residential Property Studies. The findings of these studies are described below and are organized according to type of effect, i.e. proximity effects, visibility effects, encumbrance effects and others.

2.2.1 Proximity Effects

Five of the 11 studies found no effect on sale price associated with proximity to HVTL. Chalmers and Voorvaart (2009) found no proximity effects on sales studied in rural western Connecticut, in the suburbs of Hartford, Connecticut and Springfield, Massachusetts and in suburban neighborhoods south east of Boston. Kinnard, et al. (1988) came to the same conclusion based on the study of over 800 sales in Penobscot County, Maine. Similarly, Kinnard, et al. (1997) concluded no proximity effects of HVTL on residential sale prices based on analysis of over 4,000 sales in Las Vegas, Nevada. The same study team, Kinnard, et al. (1997), came to the same conclusion based on analysis of approximately 1,440 sales in St. Charles and St. Louis Counties, Missouri. Finally, Wolverton and Bottenmiller (2003) analyzed over 700 sales in Portland, Oregon, Seattle, Washington and Vancouver, Washington and found no effects on sale price as a result of proximity to HVTL.

Three of the 11 studies identified effects that were small. Ignelzi and Priestley (1991) concluded that the HVTL effects were less than 1% for most properties based on their work on over 1,800 sales in eight California neighborhoods. Hamilton and Carruthers (1993) studied five residential neighborhoods in Vancouver, British Columbia and concluded that properties within 120 meters may suffer a 2-3% discount relative to control properties but that this discount did not extend beyond 120 meters. Bottenmiller and Wolverton (2013) reported on their analysis of over 500 sales in both Portland, Oregon and Seattle, Washington and found a discount of 1.65% for abutting properties in Portland and a 2.43% discount for abutting properties in Seattle.

A ninth study, Colwell (1990), looked at 200 sales in Decatur, Illinois over the period 1968-1978. For sales early in the period, he identified a discount of about 6% for properties within 100 feet of the HVTL centerline and 3% for properties between 100 and 200 feet, but for sales towards the end of the study period, he found no such effect. Hamilton and Schwann (1995) looked at over 12,000 sales in four residential neighborhoods in Vancouver, British Columbia and concluded a 5.8% discount for properties abutting the HVTL easement and a 2.8% discount for properties not abutting, but within 200 meters of the HVTL.

Finally, Des Rosiers (2002) studied over 500 sales in the suburbs of Montreal, Quebec. For non-abutting properties, the negative effect of proximity reached a maximum of 5% in a zone 165-325 feet from the

[4] See Priestley (2009) or Jackson and Pitts (2010).

HVTL. From 325 to 500 feet the negative effect fell to 4% and disappeared beyond 500 feet. This study also looked in detail at sales of abutting properties and found that abutting properties with a front view of a structure and abutting properties mid-span (where the conductors were only 37 feet above ground level) were discounted between 5 and 10%. However, properties in between the structure-facing and mid-span properties had premiums of the same order of magnitude or even greater in some cases due to enhanced views and open space advantages.

The conclusions that can be drawn from the above are widely shared by the researchers who have carried out this research or who have reviewed the literature.

- About half of the studies find negative proximity effects, half find none.
- Where they are found, they tend to be small (generally 1-6%).
- Where they are found, they tend to decrease rapidly with distance from the HVTL. They are usually very small beyond 200 feet and seldom extend beyond 500 feet from the HVTL.

2.2.2 Visibility Effects

In addition to studying the effect of HVTL proximity on the sale price of a property, seven of the 11 studies reviewed here also examined the extent to which the HVTL were visible from the property. Visibility is defined in various ways. Approaches include definition of explicit criteria based on physical inspection of the property, categorical variables that indicated whether structures were visible or not, a count of how many structures were visible, measurement of the distance to the nearest structure (or nearest visible structure) or some combination of the above.

Once proximity was accounted for, no sale price effects were found in five of the seven studies that considered visibility. There were two exceptions. Des Rosiers (2002) found that for non-abutting properties with a view of structures, there was a 3-7% premium. He thinks this reflects the fact that these properties had more expansive view sheds and that the net effect of the better view even with the view of the structures was positive. For abutting properties, the effects varied according to the location of the property along the line. Hamilton and Schwann (1995) on the other hand found that for abutting properties, view of a structure implied a 5.7% discount relative to a similar property without a structure view. For non-abutting properties, structure views had no effect on sale price.

Despite the assumption of many that visibility would have an important role in property value effects, that is not borne out in the statistical studies.

- Despite frequent attempts to measure the effect of HVTL visibility on property value, once the effect of proximity has been accounted for, visibility generally has no additional, independent effect.

2.2.3 Encumbrance Effects

Seven of the 11 studies did not address the issue of the effect on property value when the HVTL easement actually encumbered the property because their sales included only abutting properties. Encumbrance was addressed by the remaining four studies with Chalmers and Voorvaart (2009), Colwell

(1990) and Ignelzi and Priestley (1991) finding statistically significant but small negative effects on property value while Hamilton and Carruthers (1993) found a 2.5% premium for encumbered properties relative to unencumbered properties within 120 meters of a HVTL. Again, Hamilton and Carruthers attribute the positive result to the enhanced view shed and open space offered by the HVTL ROW.

- Encumbrance frequently has no effect on property value. In cases where there is an effect, the effect is small and in some cases, may even be positive as the advantages of the ROW outweigh the disadvantages.

2.2.4 Other Issues Investigated

Appreciation

Bottenmiller and Wolverton (2013) and Wolverton and Bottenmiller (2003) explicitly addressed the question of whether properties abutting a HVTL corridor appreciated at a different rate compared to non-abutting properties. Their conclusion was that there was no difference in appreciation rates between abutting and non-abutting properties.

Higher-Valued versus Lower-Valued Properties

Bottenmiller and Wolverton (2013) and Des Rosiers (2002) both found some evidence of greater sensitivity to HVTL proximity for higher valued properties as compared to lower valued properties. Recall that Bottenmiller and Wolverton (2013) found that on average, abutting properties sold at a 2.4% discount relative to non-abutting properties in their Seattle sample. When the sample was split into the top quartile (average price $1,035,105) and the bottom three quartiles (average price $366,866), the higher priced abutting homes sold at a discount of 11.2% relative to the higher priced non-abutting homes. For the three lower quartiles, there was no difference between the abutting and non-abutting homes.

Chalmers and Voorvaart (2009) split their sample in half (above the median, below the median) but found no difference in the sensitivity of the two groups to the HVTL variables.

Before/After Construction

Almost all the statistical research that has been done on the effect of HVTL on residential property values is based on analysis of sales taking place along an existing HVTL ROW, and in most cases, one that has been in place for a considerable period of time. As such, the conclusions from that research must be interpreted to indicate the long term or “eventual” adjustment to a HVTL corridor. The question arises, therefore, whether we know anything about the shorter-term effects associated with the construction of a new corridor or upgrade of an existing corridor. This question is addressed by two of the studies.

Kinnard et al. (1997) analyzed sales over the period April 1, 1989 to March 31, 1996 occurring in Sun City, Nevada. The HVTL in question is a 138 kV line on 90 foot concrete structures that runs down the middle of an arterial street. The line was built during the study period with construction completed in August 1991. Thus, there are nine quarters of “before” or “during” construction sales and 19 quarters of

"after" construction sales. Analysis of the sales showed no effects of proximity to the line "before", "during" or "after" construction.

The second study relevant to this question is Ignelzi and Priestley (1991). Their study period spanned 14 years and in three of the eight California subdivisions studied, an existing 115 kV line on 60 foot steel lattice structures was replaced by 165 foot tubular steel structures carrying both 115 kV and 230 kV lines. This allowed the effects of the HVTL to be measured both before and after construction. The results vary by neighborhood but, on average, there was a negative effect on property values in the four years after construction between 4% and 9%. After year four, the negative effect disappeared. This study suggests that when construction occurs in an established neighborhood, there may be an adjustment period when values are affected but that this effect diminishes over time.

Voltage

Bottenmiller and Wolverton (2013) was the only study to give explicit consideration to the question of whether line voltage had any role in the sensitivity of property values to HVTL. Based on their analysis of Portland and Seattle sales, they find no evidence of differing sensitivity of sale prices of abutting relative to non-abutting properties based on line voltage.

Health concerns

Finally, publication of two epidemiological studies in 1993 together with preliminary release of the results in 1992 raised concerns about possible health consequences of EMF exposure.[5] Given the media attention these reports received, both Kinnard et al. (1997) and Des Rosiers (2002) tested to see if there was any differential sensitivity of residential property values to HVTL after the studies were published relative to the period before they were published. In both cases no differential sensitivity was observed.

2.3 Commercial/Industrial Property

The literature studying the effects of HVTL on commercial/industrial property is very limited. Chapman (1985) reports on his extensive personal experience as an appraiser in northern California, Nevada and Utah. Jackson, Pitts and Norwood (2012) undertake more conventional research methodologies in their empirical study of HVTL effects on commercial/industrial property in Wisconsin. Each is discussed below.

Chapman made it clear that analysis of any specific case requires a careful consideration of the line, the structures, the easement, and of the way in which they affect the use or utility of the property. His experience, based on a large number of assignments and over 100 interviews with market participants, was that properties could be heavily encumbered by a HVTL, but because of setback, coverage or floor area ratio restrictions, the HVTL, despite their conspicuous presence, frequently have no effect on what

[5] The two studies are (i) Feychting, Maria and Anders Ahlbom, "Magnetic Fields and Cancer in Children Residing Near Swedish High Voltage Power Lines," *American Journal of Epidemiology* (1993) 138 (9): 467-481; and (ii) Floderus, Brigitta, et al., "Occupational Exposure to Electromagnetic Fields in Relation to Leukemia and Brain Tumors: A Case-Control Study in Sweden," *Cancer Causes Control* (1993) 4: 465-476.

can be developed on the site and therefore, no effect on value. He offered several examples that illustrated that the HVTL affected the location of development on the site but not the ultimate build-out. He reported that he found no impact on value for typically shaped, level parcels encumbered with HVTL easements up to about 30% of the parcel's size in markets where coverage ratios were 50%. In cases where there was even larger encumbrance, the site plan may have been affected and the ultimate build-out may have been reduced. In these cases, there was a corresponding adjustment in value.

Beyond issues associated with the way in which the site could be developed, Chapman's opinion was that there were no concerns with aesthetics and he has never found any effects on rents or the marketability of commercial/industrial properties. Finally, he reported on his investigation of potential interference of the HVTL with electronic instruments. He found no evidence of problems with computers and, although electron microscopes must be carefully "tuned" to avoid interference, users reported that "within building" sources were a much bigger issue than external sources.

Jackson, Pitts and Norwood (2012) looked at large numbers of commercial/industrial sales in the Milwaukee area for evidence of HVTL impacts on the value of the properties. They first report a regression analysis of 123 sales which controls for year of sale, gross floor area, building age, square footage of office space, sprinkler system, number of dock high doors, location and a categorical variable indicating whether the property was within 500 ft of a HVTL. This model had reasonable explanatory power and the categorical variable for HVTL proximity indicated a 34.7% premium. The authors were careful to point out that this should not be interpreted as a causal relationship. More likely, they suggest that HVTL proximity is a proxy for other locational factors (transportation or utilities access perhaps) that enhance value. In any event, there is no indication of an adverse effect of HVTL on value.

Jackson, et al. also carry out sales comparison analyses of two small apartment complexes, an office building and two undeveloped office land parcels. In each case the subject sale was proximate to HVTL (defined to be within 500 feet) and the control sales had no HVTL influence. After the control sales were adjusted for any non-comparable attributes, the adjusted sale prices were compared to the subject sale and in no case was there any market evidence indicating a discount due to HVTL proximity. The authors also report that interviews with market participants were consistent with the market evidence. In no case did the market participants indicate that the HVTL had any effect on the sale price in the transaction.

Although the published research on HVTL effects on commercial/industrial property is very limited, the evidence is sufficiently consistent that some generalizations can safely be made. Commercial/industrial properties are often referred to as income properties since their value depends largely on the net income they can generate. There is no evidence of HVTL impacts on rents or marketability, so the basic question is whether the HVTL imposes any physical constraint on the size or character of the development possible on an impacted property. In appraisal terms, if the highest and best use of the property is not affected and if the development potential of the property is not constrained, even though there may be a significant encumbrance on the property, there is no reason to expect value to be affected.

2.4 Vacant Land

The potential effects of HVTL on the value of vacant land present an interesting area of study because, to the extent that effects exist, they should be easier to identify without the diluting effects of improvements.[6] There are 6 studies in the professional literature and these are summarized in Appendix C. Five of these are statistical studies using multiple regression analysis and one utilizes a combination of case study and subdivision study approaches.

2.4.1 Statistical Studies

The five statistical studies are diverse both with respect to geography and land use. The properties studied are in Saskatchewan, Montana, Wisconsin, Michigan and New York. The land uses include agriculture, forestry, recreation, wetlands and residential.

Four of these statistical studies found no effects of the HVTL on the sale price of the properties analyzed. Brown (1975) looks at sales of nearly 800 agricultural properties in Saskatchewan, Canada and concludes that the effect of HVTL on an agricultural property is apparently small enough that there is no apparent effect on market value. Jackson (2010) comes to the same conclusion based on the study of nearly 400 parcels in Wisconsin where the properties were classified according to land cover (open, wooded and wetlands). Mitchell (1996) studied the sales of 376 properties in the Hudson River Valley in New York which represented a mix of agricultural, residential, non-residential and planned unit development uses and found no HVTL effects. This study was unique in that it investigated sales that spanned a period before, during and after construction of the HVTL. Finally, Rigdon looked at the sales of 46 recreational properties in the Upper Peninsula of Michigan and found no effect of HVTL proximity on market value.

The only statistical study to identify effects of a HVTL on market value was Chalmers (2012a). As part of a larger study of HVTL effects on real estate markets in Montana, 183 sales of unimproved lots at Aspen Valley Ranches were analyzed. Aspen Valley Ranches is a 156 lot subdivision of 20 acre lots in central Montana. The subdivision is bisected by a double circuit 500 kV line on 185 foot self-supporting, steel lattice structures. Twenty-six lots are crossed by the easement; many others have views of the line but there are also many lots that are totally screened from the line by topography or vegetation. Over the study period from 1987 to 2011, the average sale price was about $30,000. The regression analysis identified a discount of about 15%, other things being equal, out to a distance of 1000 feet from the centerline (which is roughly the width of one lot). There were no statistically significant effects on sale price beyond 1000 feet. The sensitivity of market value to the HVTL in this case is not surprising. The structures on this line are large and in many cases, are the major differentiating feature of one lot from

[6] Theoretically, locational attributes of a property should be capitalized into the value of the land and not affect the value of the improvements. For example, suppose a subdivision has two categories of lots, which sell at $40,000 and $50,000 respectively. If each is improved with a $200,000 home, and the pricing of the lots is a fair reflection of their relative desirability in the eyes of the market, the improved properties should have values of $240,000 and $250,000. If the $40,000 lots were discounted due to some negative externality, the 20% effect ($10,000 on a base of $50,000) might be relatively easy to discern in a study of raw lot sales, but much harder to identify in a study of improved properties where the effect would only be 4% ($10,000 on a base of $250,000).

another. Second, for many lots there is little flexibility in selection of a building site so, depending on the location of the line, the HVTL could be the dominant feature of the view shed. Third, although these lots are relatively large, their use tends to be exclusively residential. Finally, there have been, and continue to be, many lots on the market from which the HVTL are not visible.

2.4.2 Case Studies

Chalmers (2012b) reports on a major study along 500 kV lines that cross over 500 miles of Montana from the Colstrip power plants to the Idaho border. Data were collected on the sale of all properties within 500 feet of the centerline over the period 2000 to 2011. A total of 49 transactions were identified that met a Fair Market Sale criterion and these were studied with a combination of physical inspection, interviews of transaction participants and retrospective appraisal techniques. The land uses on these properties included agricultural with varying degrees of recreational influence, residential subdivisions, large acreage rural residential tracts and rural recreational tracts/cabin sites. 48 of these transactions showed no evidence of the sale price being affected by the HVTL. Only a single property had an apparent market value effect due to the HVTL. That case was a property on a flat lot with a frontal view of a 185 foot, self-supporting steel lattice structure carrying double circuit 500 kV lines. The property had an extended marketing period and eventually sold at a discount of about 25%.

2.4.3 Subdivision Studies

The other component of the Montana studies, Chalmers (2012b), was an analysis of the prices and timing of lot sales in subdivisions crossed by HVTL. Of the six subdivisions for which sales data were available, three of the subdivisions showed no evidence of the HVTL affecting the sale price of lots. In the other three, 14 lots out of a total of 81 lots appeared to have had their sale price affected by the HVTL. In the places where effects occurred, they primarily involved encumbered or abutting lots with dominating views of the HVTL.

2.5 Attitudinal Studies

As analysis of HVTL ramped up in the 1980's and early 1990's, there was some emphasis on attitudinal studies of the way in which various stakeholders perceived transmission lines and their effects. Some of these were motivated as a supplement to recognized valuation methodologies, while it appears that others may have thought that surveys could be a valuation tool in their own right. The later position has been sufficiently discredited that there has been no published attitudinal research in the past 15 years or so dealing with perceptions of HVTL and their effects. In light of the literature surveyed above, it is interesting nevertheless to take a look at several of the prominent attitudinal studies. Six of these studies are summarized in Appendix D.

Four of these--Kinnard (1967), Kung and Seagle (1992), Priestley and Evans (1996) and Solum (1985) interviewed the owners of properties crossed by, or proximate to, HVTL. Delaney and Timmons (1992) surveyed appraisers and Kinnard (1967) also surveyed real estate professionals (realtors, appraisers, lenders and builders). Finally, Morgan, et al. (1985) give an interesting perspective on how the risks associated with HVTL were perceived by the public at large.

The thrust of the survey questioning of property owners centers on whether the respondents were aware of the HVTL at the time of purchase, on whether the HVTL was viewed as a negative influence on the property and on whether the lines had any effect on their purchase decision or on the price they paid for the property. Like the research reported on in the previous sections of this chapter, these studies report consistent findings.

- A very high proportion of the respondents were aware of the HVTL at the time of purchase.
- Between 50% and 90% (more generally 75%- 85%) of the property owners have a negative attitude towards the HVTL.
- The negative perceptions center on health effects, aesthetics and property value effects, generally in that order.
- Of those with negative attitudes towards the HVTL, the vast majority (over 70%) report that their purchase decision and the price paid was not affected by the lines.

A particularly interesting contrast exists between the property owner responses and the responses of real estate professionals. Kinnard (1967) reported that realtors and appraisers were most likely to believe that HVTL negatively affect crossed properties (90% and 79%, respectively,) while lenders and builders were somewhat less likely to believe there was a negative effect (69% and 61%). Delaney and Timmons (1992) studied only appraisers but come up with a very similar result. They reported that 84% of appraisers anticipated a negative effect and that their average estimate of the magnitude was -10.2 % with a fair number of appraisers offering estimates considerably higher. The proportion of property owners and appraisers who thought there was a negative effect is quite similar, but very few property owners felt that their individual transaction was affected. The appraisers, on the other hand, at least in the early 1990's, felt there was a significant value effect, despite the rather substantial and convincing empirical evidence to the contrary.

2.6 Conclusions

Over the past 20 years, the literature increasingly recognizes multiple regression analysis as a reliable technique to investigate whether high-voltage transmission lines impact property values and, if so, to quantify the effect. As explained above, multiple regression has the significant advantage of not relying on the subjective judgment of the researcher. Rather, it represents an objective reflection of the data together with measures of reliability that attach to the results. As a result, there have been a large number of studies undertaken since the mid-1980's using large databases and statistical tools to investigate the effect of transmission lines on the market value of residential properties. Eleven of these studies form the core of the published literature and were discussed above. The results of these studies can be summarized as follows:

- Over time, there is a consistent pattern with about half of the residential studies finding no evidence of negative property value effects and half finding some.
- When effects have been found, they tend to be small; almost always in the range of 1-6%.
- Where effects are found, they decrease rapidly as distance to the lines increases.

- Two of the studies investigated the behavior of the effect over time and found that, if there were effects, they tended to dissipate over time as well.
- There doesn't appear to have been any change in the reaction of markets to high-voltage transmission line proximity after the 1992 Swedish health effects studies.

These general conclusions have characterized the appraisal and economic literature throughout the last 30 years and there do not appear to be any new or different trends showing in the data.

3 Overview of the New Hampshire-Specific Research Initiatives

3.1 Applicability of the Professional Literature in the New Hampshire Context

The published literature that addresses HVTL impacts on property values has been consistent in its conclusions as was summarized in the previous chapter. This suggests that the results have general applicability and provide a solid basis for consideration of potential HVTL impacts on property values in New Hampshire. Nevertheless, there may be differences in land use patterns, topography, vegetation or the behavior of market participants specific to New Hampshire that could affect the applicability of the generally consistent results reported in the published studies. Some perspective on this can be gained by looking at selected studies in the published literature particularly germane to the New Hampshire context.

Two of the study areas examined by Chalmers and Voorvaart (2009) are cases in point. Their Study Area #1 analyzed four neighborhoods in the suburbs of Hartford, CT and Springfield, MA. Based on statistical analysis of residential property sales in those neighborhoods, they reached the conclusion of no statistically significant effect of HVTL proximity or visibility on the market value of residential properties. This conclusion would have applicability to suburban neighborhoods in southern New Hampshire around the Concord, Manchester and Nashua urban areas. They also concluded no property value effects due to HVTL proximity or visibility based on analysis of sales in three neighborhoods in the western Connecticut Lakes Region centered around New Milford, their Study Area #2. These conclusions would have applicability to central New Hampshire between the White Mountain National Forest and Concord.

Another case is the research carried out by Kinnard, Geckler and Mitchell (1988) in Penobscot County, Maine. They looked at over 800 residential property sales and almost 600 vacant land sales and found no market value effects associated with proximity to a 345 kV transmission line. Many of the sales came from the suburbs of Bangor (population around 30,000 today), but others came from rural areas of the County. Again, this study area has definite similarities to central New Hampshire south of the White Mountain National Forest.

All the research in this field is careful to acknowledge that, although supportable generalizations can be made based on the published research, application to specific properties, or to areas not previously studied, requires consideration of the particular characteristics of the properties or areas under consideration. Understanding this, three New Hampshire-specific initiatives were undertaken as part of this research project. These are referred to as the Case Studies, the Subdivision Studies and the Market Activity Research. Each is briefly introduced in the sections that follow.

3.2 The Case Studies

In a relatively homogeneous urban or suburban environment with an active housing market and good numbers of homes, some of which are potentially influenced by HVTL and others not, statistical analysis of large numbers of sales is a reliable way to determine whether HVTL are impacting market value. There are parts of southern New Hampshire that would meet these criteria, but much is already known

from existing studies, some of which, as noted above, have important commonality with southern New Hampshire. The larger issue is that there is little or no research directly applicable to the part of the State north of Concord. In these areas, development densities are relatively low which means there are not a sufficient number of property sales in the same general area in a given time frame to make reliable statistical analysis possible.

An alternative to statistical analysis is the case study approach, which relies on a detailed examination of an individual transaction potentially affected by a HVTL and draws a conclusion with respect to the effect of the HVTL on sale price and time on the market. A single case study is necessarily anecdotal, but when the results of many case studies are aggregated across different geographies and different physical relationships to the HVTL, useful generalizations can usually be drawn.

The case studies analyzed in this report are based on residential property sales that occurred along two major north/south transmission corridors, along several shorter corridors in the coastal area around Portsmouth and along four corridors in the southeastern region of the State. These will be referred to as Corridor #1, Corridor #2, Study Area #3 and Study Area #4.

Corridor #1 originates at Littleton, travels southwest of White Mountain National Forest and then continues roughly parallel to, and west of, I-93 ending at Pelham at the Massachusetts border. Corridor #2 originates at Dummer and then proceeds west to Northumberland, then south through Whitefield, Sugar Hill and Easton to Woodstock where it generally follows I-93 south to Concord before turning to the southeast and proceeding to Deerfield. Study Area #3 includes sales along short corridor segments in several towns in a 10 mile radius of Portsmouth. Study Area #4 includes two corridors in the town of Dover, one corridor in the town of Hooksett and one corridor in the town of Danville.

For Corridors #1 and #2, tax cards were reviewed for properties abutting or crossed by the HVTL ROW to identify sales that had occurred since the year 2010. These transactions were then vetted to determine that they were Fair Market Sales. This resulted in a total of 24 case studies in Corridor #1 and 28 in Corridor #2. For Study Area #3, recent sales of crossed or abutting properties were selected based on MLS data. This yielded a total of six case studies. MLS data was also used to identify 20 sales in Study Area #4. The case studies are structured around four components—the facts of the sale, the physical relationship of the HVTL to the property and the improvements on the property, interviews with participants in the sale and an appraisal of the property. The appraised value was as of the date of sale based on comparable sales with no HVTL influence. This value is then compared to the actual sale price as an indicator of HVTL effect. Based on the above, conclusions are drawn for each individual case study. Finally, the individual case study results are aggregated, and generalizations are drawn where appropriate.

3.3 The Subdivision Studies

The Subdivision Studies take a different approach. The influence of HVTL on real estate transactions should be most easy to identify in sales of raw land. HVTL are a locational factor that would potentially influence the value of an unimproved lot (as would any number of positive and negative locational

influences on the value of a specific parcel of land). Once the lot is improved with a house, the value of the house and the land are combined, and it becomes more difficult to identify the independent effect of the HVTL, if any.

Ten subdivisions were identified along Corridor #2 from the Town of Whitefield in the north to the Town of Deerfield in the south, and three subdivisions were identified in Study Area #3. In each case, some lots in the subdivision were either encumbered by the HVTL ROW or abutted the ROW and others were not. Title research was undertaken on a representative selection from each group of lots and the price and date of the original sale of the lot by the developer was identified. This provided the basis for an analysis of potential price effects as well as effects on the timing of the lot sales due to the HVTL corridor. The results for each subdivision were aggregated and generalizations drawn as appropriate.

3.4 The Market Activity Research

The final New Hampshire-specific research initiative looks at residential sales activity levels in 2013 and 2014 within one mile of Corridor #2. The sales are aggregated into three groups – properties crossed by or abutting Corridor #2 ROW, properties from one to 500 feet from the ROW and properties between 501 feet and one mile from the ROW. Various measures of market activity for each group are calculated on a quarterly basis including number of sales, days on market and ratio of sale price to list price. These measures provide an additional perspective on possible effects of the HVTL on the residential real estate market.

The Case Study research is described in chapter 4. The Subdivision Studies research is detailed in chapter 5 and the Market Activity research is summarized in chapter 6.

4 The Case Studies

4.1 Overview

The Case Study research involves detailed examination of recent sales of properties that are crossed by, abut or are close to an existing HVTL ROW.[7] Evidence relevant to the sale is collected and a conclusion is ultimately reached with respect to the effect, if any, of the HVTL on the sale price and the marketing time of the transaction.

The evidence is of four types:

a) First, it is necessary to understand the facts of the sale including the listing history and any previous sales of the property.
b) Second, there is a description of the physical relationship of the property to the HVTL and the ROW. This includes the location of the ROW on the property, the extent to which the property is encumbered by the ROW, distance from the house to the edge of the ROW, number of structures on the property, height and type of structures, distance from the house to the nearest structure, distance from the house to the most visible structure, visibility of the most visible structure, orientation of the house with respect to the HVTL and, in cases where view is an important attribute of the lot, impact of the HVTL on the view.
c) Third, interviews are held with participants to the transaction. These may include the listing broker, the buyer's broker, an appraiser who appraised the property at the time of the sale, and occasionally, the buyer or seller of the property. The interviews try to identify the strengths and weaknesses of the property as seen by the market participants and their evaluation of whether there was any effect of the HVTL on the price at which the property sold or the time the property was on the market.
d) Finally, the property is appraised effective as of the date of the sale under the hypothetical assumption that the property is unaffected by HVTL. This is achieved by using comparable sales that are not influenced by HVTL. The appraised value (absent the influence of HVTL) is then compared to the sale price. If the appraised value exceeds the sale price, it may indicate a negative effect of the HVTL on the transaction.

Each of these categories of evidence is considered collectively and an overall conclusion is reached as to whether the HVTL impacted the sale price or the marketing time of the transaction. While one cannot generalize from a single Case Study, the effort described below covers a total of 78 sales occurring

[7] Power lines of 69 kV or above are defined by the NH Public Utilities Commission to be transmission lines and lines less than 69 kV are defined to be distribution lines. This report is focused on the potential effect of transmission lines on real estate markets, but four of the 78 Case Studies and two of the 13 Subdivision Studies involve properties that abut, or are crossed by, a ROW containing 34.5 kV lines. When speaking generally about the research, we will continue to use the acronym HVTL but when discussing the particular cases with the 34.5 kV lines, they will be referred to as distribution lines.

across a diverse representation of New Hampshire's geography and development patterns and does provide the basis for generalized conclusions.

The methodology employed starts by selecting an HVTL corridor or corridors and then identifies all residential property sales that are encumbered by, abut or are close to the corridor. Since recent sales are more amenable to analysis, most recent sales are selected first and then the selection process proceeds backwards in time until a target number of sales have been identified. All the sales analyzed occurred during the years 2010-2018.

The Portsmouth area required an exception to this procedure because there was no single HVTL that was long enough or passed through enough developed areas to generate a sufficient number of sales of properties crossed by, or abutting, the corridor. There were, however, several short corridor segments along which sales have occurred so we proceeded as follows. All New Hampshire towns within 10 miles of the center of Portsmouth were identified. Of the 12 municipalities in this area, seven had sales of properties that were abutting, or encumbered by, HVTL corridors. This resulted in two recent sales from each of the following municipalities Dover, Durham, Greenland, Madbury, Newington, New Market and Portsmouth. Eight of these were subsequently abandoned due to the uniqueness of the property or failure to meet the Fair Market Sale criteria. This left a total of six Case Studies in Study Area #3. The three areas from which Case Study sales were drawn are described in more detail below:

Corridor #1: This corridor stretches from Littleton in the north to the Town of Pelham on the Massachusetts border. The ROW is typically 350 feet wide and contains a 450 kV DC line and two 230 kV lines. The 450 kV line is typically on 95 foot high steel lattice structures, while the 230 kV lines are typically on steel lattice structures about 65 feet high. Figure 4.1.1 shows a representative cross section of the corridor.

Figure 4.1.1 Photograph of Corridor #1 Cross Section

Corridor #2: This corridor extends from Dummer in the north to Deerfield in the southeast. It contains one, two or three 115 kV lines that are either on 55 foot wood H-frame structures or 75 foot steel poles. The ROW ranges from 150 feet to 375 feet in width. Figure 4.1.2 shows a representative cross section of the corridor.

Figure 4.1.2 Photograph of Corridor #2 cross section

Study Area #3: As explained above, in an attempt to increase representation in the coastal areas of southeast New Hampshire, power line corridors were examined in, and around, Portsmouth. The lines along which these properties are located include: 345 kV lines on 75 foot steel H-frame structures, 115 kV lines on 43 foot wood H-frame structures and 34.5 kV lines on 34 foot single wood poles. Representative cross sections of each are shown in Figures 4.1.3 – 4.1.5.

Figure 4.1.3 Photograph of Study Area #3 -- 345 kV Cross Section

Figure 4.1.4 Photograph of Study Area #3 -- 115 kV Cross Section

Figure 4.1.5 Photograph of Study Area #3 -- 34.5 kV Cross Section

Study Area #4: As explained above, in a continuing effort to increase the number of cases in the southeastern region of the state, four additional corridor locations were identified. Two were in the Town of Dover and one each in Hookset and Danville. The corridor in Dover along Falcon Drive and Back Road is line R169. It is a 115 kV line on laminated wood monopoles that range from 65 to 84 feet above ground in a ROW that is 125 feet wide. A cross section is shown in Figure 4.1.6.

Figure 4.1.6 Cross Section of Corridor in Dover along Falcon Drive and Back Road

The corridor in Dover along Gerrish Road and Toftree Lane contains the 307 line. It is a 115 kV line on steel monopoles that are 90 to 100 feet above ground. The width of the ROW varies but 150 feet is typical. Figure 4.1.7 shows a cross section of this line.

Figure 4.1.7 Cross Section of corridor in Dover along Gerrish Road and Toftree Lane

The corridor in Hooksett contains line D118. It is a 115 kV line on steel monopoles that are 70 to 79 feet above ground. The ROW is 220 feet wide but only about 100 feet are cleared. Figure 4.1.8 shows a cross section of this line.

Figure 4.1.8 Cross Section of the Hooksett Corridor

The corridor in Danville contains three lines. Line 363 is 345 kV with structure heights 84 to 93 feet. Line J147 is 115 kV with structure heights 61 to 66 feet. Line V103 is 115 kV with structure heights 65 to 89 feet. The ROW is 280 feet wide. Figure 4.1.9 shows a cross section of the corridor with the three lines.

Figure 4.1.9 Cross Section of the Danville Corridor

A total of 78 sales was identified in these four locations—24 in Corridor #1, 28 in Corridor #2, six in Study Area #3 and 20 in Study Area #4. Twenty-two of the Corridor #1 and all of the Corridor #2 Case Studies were carried out by BC Underwood, LLC with appraisal assistance from Mark Correnti. Two of the Corridor #1 and all of the Study Area #3 Case Studies were prepared by Amidon Appraisal Company with appraisal assistance from The Stanhope Group. The Underwood Case Studies and the Amidon Case Studies are attached to this Report as Appendices E and F, respectively. The Study Area #4 Case Studies were carried out by Chalmers & Associates with the assistance of JB Hall Appraisal, The Stanhope Group and Land Decision. The Study Area #4 Case Studies are in Appendix H.

Since each of the four study areas include different HVTL corridor configurations (ROW width, line voltage, structure type and height), the Case Study evidence from each is first considered individually. The chapter concludes with a summary of the generalizations that can be drawn from the study areas considered collectively.

4.2 Corridor #1 Case Studies

Corridor #1 is the widest corridor studied. Its width and the lines contained within the corridor vary, but typically it is 350 feet wide and contains three high voltage lines—a 450 kV DC line and two 230 kV lines. See Figure 4.1.1 above. It starts in Littleton, skirts the western edge of the White Mountain National Forest, and then proceeds to the southeast staying approximately five miles west of I-93 all the way to the Massachusetts border at the Town of Pelham.

The location and the results of the 24 Corridor #1 Case Studies are summarized in Table 4.2.1.

Table 4.2.1 Summary of the Corridor #1 Case Studies

Property Description						Encumbrance		Proximity			Visibility	Appraisal Evidence			Mkt Time		Interview Evidence		Conclusions	
Case Study #	Address	Town	Type	GLA (sq ft)	Lot Size (ac)	Encumb (%)	# of Struc on Prop	Dist House to ROW	Dist Nearest Struc	Dist Most Vis Struc	Most Vis Struc	App Value Absent HVTL	Sale Price	Prem(+) Disc (-)	Days on Mkt	Town Ave DOM	SP Effect	Mkt Time Effect	Sale Price Concl	Mkt Time Concl

Eighteen of the 24 cases (75%) concluded that the HVTL had no sale price effect and 20 (83%) concluded no marketing time effect. In the four cases with indicated sale price effects, the appraisal evidence indicated a range of effects between 1.6% and 10.3%. Each property is heavily encumbered, 46% to 77% of the lot area, and, most notably, each of the houses is located within 100 feet of the edge of the ROW. The 9 Autumn Street property (CS #A1) has some screening which acts to reduce the visibility of the structures, but the other three properties have clear views of the HVTL. These properties all had houses very close to the ROW, were heavily encumbered, and three of the four cases had clear views of the lines. Table 4.2.2 shows the Corridor #1 Case Study Results arrayed by structure visibility and proximity.

Table 4.2.2 Corridor #1 Sale Price Effects by Structure Visibility and Proximity

It is equally instructive to look at the characteristics of properties for which there was no apparent effect of the HVTL on the sale price. Looking at the top row of Table 4.2.2, there are six cases with no structure visibility and in no instance was it concluded that there was an effect of the HVTL on the sale price. Similarly, looking at the right two columns, there are 16 instances of sales where the house was 101 feet or more from the edge of the ROW and in no case was it concluded that there was a sale price effect.

In summary, sale price effects in the 24 Corridor #1 Case Studies were infrequent, and only occurred where there was close proximity, i.e. less than 100 feet from the house to the edge of the ROW combined with partial or, more often, clear HVTL visibility.

Marketing time effects were even less frequent. It was concluded that the HVTL extended the marketing time in only three cases. There were several comments by the brokers with reference to reduction in the number of interested buyers but rarely was there any material effect on the marketing period. Further, there were references to several buyers who saw the corridor as an asset to the property.

4.3 Corridor #2 Case Studies

Corridor #2 contains one or more 115 kV lines in a ROW that is usually between 150 feet and 225 feet in width. The structures are typically wood H-frame with heights of about 55 feet or steel poles with heights of about 75 feet. See Figure 4.1.2 above. It originates in the Town of Dummer in the north, proceeds generally west to Northumberland, then south through Franconia Notch generally following the I-93 corridor to Concord where it turns east and terminates in Deerfield. It should be noted that portions of this corridor are proposed to be the location of the southern 103 miles of the overhead Northern Pass HVTL. Since that project first received widespread publicity in 2010, and since all the Corridor #2 Case Studies involve properties that sold in 2010 or later, the Case Studies may also include any effects on the real estate market of public awareness of the proposed Northern Pass Project.

Table 4.3.1 summarizes the 28 Case Studies of properties abutting or crossed by Corridor #2 that sold during or subsequent to 2010.

Corridor #2 was similar to Corridor #1 in terms of the percentage of cases for which it was concluded that there was a negative effect of the HVTL on the sale price. Four of the 28 cases, about 14%, attributed a negative sale price effect to the HVTL. The difference from Corridor #1 is that there were eight cases, or about 29%, where the evidence was conflicting, and the final conclusion was indeterminate. This left 16 cases, about 57%, where it was concluded that there was no sale price effect. Most of the indeterminate cases reflected broker opinion that there had been a sale price effect, but the appraisal evidence did not support that opinion.

As was true for Corridor #1, the four properties that experienced quantifiable sale price effects were very close to the corridor (three of the four had houses within 30 feet of the ROW) and all four had significant HVTL visibility. Table 4.3.2 shows the Corridor #2 Case Study results arrayed by structure visibility and proximity.

Table 4.3.2 Corridor #2 Sale Price Effects by Structure Visibility and Proximity

		0 to 100 ft	101 to 200 ft	201 ft or more	ROW Totals
Not Visible	No:	0	0	5	5
	Indeterminate:	0	1	0	1
	Yes:	0 Total 0	0 Total 1	0 Total 5	0 Total 6
Partially Visible	No:	2	2	3	7
	Indeterminate:	2	2	2	6
	Yes:	0 Total 4	0 Total 4	0 Total 5	0 Total 13
Clearly Visible	No:	3	1	0	4
	Indeterminate:	0	1	0	1
	Yes:	3 Total 6	1 Total 3	0 Total 0	4 Total 9
Column Totals	No:	5	3	8	16
	Indeterminate:	2	4	2	8
	Yes:	3 Total 10	1 Total 8	0 Total 10	4 Total 28

This closely parallels the Corridor #1 Case study results. The top two rows contain a total of 19 cases in which the lines were not visible or only partially visible and in no instance was a negative effect on sale price concluded. Similarly, looking at the two columns to the right, there are 18 cases where the house is located 101 feet or more from the edge of the ROW and in only a single case is there determination of a price effect (and that house is only 106 feet from the ROW).

In summary, a conclusion of negative effect of the HVTL on sale price in the 28 Corridor #2 Case Studies was infrequent and only occurred where there was a combination of close proximity and clear HVTL visibility. Like Corridor #1, close proximity without visibility and visibility without close proximity did not result in sale price effects.

Marketing time effects were concluded affirmatively in five cases. In 17 cases it was concluded that the HVTL did not affect marketing time. In six cases marketing time effects were indeterminate.

4.4 Study Area #3 Case Studies

The third group of Case Studies came from several HVTL corridors in a relatively small area around Portsmouth as shown in Figures 4.1.3 – 4.1.5. The Case Studies are included in Appendix F and are summarized in Table 4.4.1.

Table 4.4.1 Summary of Study Area #3 Case Studies

Property Description						Encumbrance		Proximity			Visibility	Appraisal Evidence			Mkt Time		Interview Evidence		Conclusions	
Case Study #	Address	Town	Type	GLA (sq ft)	Lot Size (ac)	Encumb (%)	# of Struc on Prop	Dist House to ROW	Dist Nearest Struc	Dist Most Vis Struc	Most Vis Struc	App Value Absent HVTL	Sale Price	Prem(+) Disc (-)	Days on Mkt	Town Ave DOM	SP Effect	Mkt Time Effect	Sale Price Concl	Mkt Time Concl
A3	7 Pinewood Circle	Greenland	SFD	1,821	4.192	37.80%	0	114	309	309	Partial	$469,000	$459,900	-1.9%	30	95	None	None	None	None
A4	85 Ridgecrest Dr	Greenland	SFD	1,872	1.91	23.60%	3	0	71	71	Clear	$428,000	$391,935	-8.4%	117	93	None	None	Yes	None
A5	146 Durham Point Rd	Durham	SFD	4,187	13.4	4.70%	1	243	290	290	Partial	$635,000	$635,000	0.0%	71	87	None	None	None	None
A6	175 Odiorne Point Rd	Portsmouth	SFD	4,120	1.59	28.30%	1	175	234	234	Partial	$1,140,000	$1,090,000	-4.4%	319	63	None	None	Indeterminate	Indeterminate
A7	178 New Rd	Newmarket	SFD	1,400	2.21	19.00%	1	11	73	73	Clear	$229,000	$213,000	-7.0%	169	65	None	None	Yes	Yes
A8	229 Back Rd	Dover	SFD	996	1.1	49.10%	0	66	282	346	Clear	$179,000	$178,000	-0.6%	21	78	None	None	None	None

Of the six Case Studies, negative sale price effects were identified in two cases and negative effects on marketing time were identified in one case. Although the number of cases is small, it is useful to look at the results in the context of proximity and visibility measures as shown in Table 4.4.2.

Table 4.4.2 Study Area #3 Sale Price Effects by Structure Visibility and Proximity

		0 to 100 ft	101 to 200 ft	201 ft or more	ROW Totals
Not Visible	No:	0	0	0	0
	Indeterminate:	0	0	0	0
	Yes:	0 Total 0	0 Total 0	0 Total 0	0 Total 0
Partially Visible	No:	0	1	1	2
	Indeterminate:	0	1	0	1
	Yes:	0 Total 0	0 Total 2	0 Total 1	0 Total 3
Clearly Visible	No:	1	0	0	1
	Indeterminate:	0	0	0	0
	Yes:	2 Total 3	0 Total 0	0 Total 0	2 Total 3
Column Totals	No:	1	1	1	3
	Indeterminate:	0	1	0	1
	Yes:	2 Total 3	0 Total 2	0 Total 1	2 Total 6

The results are similar to those for Corridors #1 and #2. The two properties for which there was a conclusion of negative sale price effect had homes adjacent to the ROW in one case and 11 feet distant in the other, with clear visibility of the lines.

4.5 Study Area #4 Case Studies

The fourth group of case studies also came from the southeastern region of the State. The corridors along which sales were studied occurred in Dover (10 cases), Hooksett (6 cases) and Danville (4 cases). The HVTL corridors proximate to these cases are identified in figures 4.1.6 – 4.1.9. The Case Studies are included in Appendix H and are summarized in Table 4.5.1.

Table 4.5.1 Summary of Study Area #4 Case Studies

Of the 20 cases, adverse effects of the HVTL were identified in two cases and one case was indeterminate. In 17 cases it was concluded that the HVTL had no effect on sale price. In 19 cases it was concluded that the HVTL had no adverse effect on marketing time. When the cases are arrayed by distance of house from the ROW boundary and visibility of structures, we see the same pattern observed in the previous case study results.

Table 4.5.2 Study Area #4 Sale Price Effects by Structure Visibility and Proximity

		0 to 100 ft	101 to 200 ft	201 ft or more	ROW Totals

Looking at the 78 Case Studies collectively:

- Twelve cases identified a negative sale price effect, 54 cases concluded no sale price effect and in 12 cases, the sale price effect was indeterminate.
- Where sale price effects were found, the appraisal evidence indicated a range of 1.6% to 17.9% with an average of 8.7%.
- Sale price effects decrease very rapidly with distance. Only one of the 12 cases had a house located more than 100 feet from the edge of the ROW and seven were within 30 feet.
- With two exceptions, close proximity had to be combined with clear visibility of the HVTL for there to be a sale price effect.[8]
- Of those properties that combined very close proximity and clear visibility, nine of the 17 had a sale price effect (53%) and eight did not (47%).
- The cases with sale price effects not only had homes close to the ROW but they were often forced to be close to the ROW because the developable portion of the lot was constrained by the location of the ROW on the property.
- Marketing time effects were also infrequent. It was concluded in 60 of the 78 cases that there was no marketing time effect of the HVTL.

Review of the Case Studies suggests several possible explanations for the results. They include:

- The HVTL are often screened by topography or vegetation.
- Given typical lot shape and ROW location across the back of the lot, there is no sale price effect because the wooded acreage at the back of a lot has little utility or value.
- The case study interviews indicate that market participants see HVTL corridors as having positive attributes, associated with the open space, as well as negative attributes.
- The New Hampshire housing stock is generally quite heterogeneous, so you don't often have the "all other things being equal, I'll take the property without the HVTL" scenario. HVTL are just one of many property attributes that are weighed in making purchase decisions.

[8] This result is not inconsistent with the finding reported in Chapter 2 that visibility generally had no effect on market value once proximity was accounted for. Apparently, the combined effect of very close proximity and clear visibility is so infrequent that there is generally no consistent measurable effect of visibility in the statistical studies. That does not preclude the finding here that for a very small number of properties, the combined effect of very close proximity and clear HVTL visibility increases the likelihood of a sale price effect.

5 Subdivision Studies

5.1 Approach

The objective of the Subdivision Studies is to identify residential subdivisions that are representative of the diversity in land use and development patterns along HVTL corridors in New Hampshire. The criteria for subdivision selection are twofold. First, the lots need to be generally similar in terms of size, views, access, etc. Second, the subdivision needs to have some lots that are encumbered by, or abut, a HVTL corridor while others do not.

Based on these criteria, 10 subdivisions were selected from Corridor #2 and three from Study Area #3 around Portsmouth. Potential subdivisions were identified based on the number of similar sized lots combined with the location of the ROW relative to the subdivision. Since the objective was to get a geographically representative set of subdivisions, if a town had multiple candidate subdivisions, a single subdivision was chosen for analysis. The 13 subdivisions selected for analysis are listed in Table 5.1. The table also identifies the number of lots studied, the dates of the first and last lots sold and whether the subdivision contained single family detached dwellings ("SFD") or modular dwellings ("MOD").

Table 5.1 Summary of Subdivisions Studied

Town	Subdivision Name	Date of First Lot Sale	Date of Last Lot Sale	# of Lots Studied	Type
Whitefield	John Matthews SD	7/24/1986	5/22/1987	10	SFD
Sugar Hill	Nason Farm SD	11/2/1985	6/15/2003	7	SFD
Easton	Pepper Brook SD	9/6/1996	7/18/2001	16	SFD
Woodstock	Lost Valley SD	12/12/1970	9/14/1979	23	SFD
Campton	Central Park Estates SD	12/10/1991	5/9/2003	12	MOD
Holderness	Heritage Hill SD	1/19/1967	9/12/1986	21	SFD
Franklin	Ceres Timberland Properties SD	6/27/2001	5/23/2002	6	SFD & MOD
Canterbury	Bella Villa SD	6/30/1978	2/12/1987	8	SFD
Allenstown	Woodridge SD	2/24/2005	8/21/2013	6	SFD
Deerfield	Haynes Farm SD	2/13/1986	9/28/1990	17	SFD
Portsmouth	Tucker's Cove SD	1/4/1999	4/21/2004	18	SFD
Newington	Coleman Estates SD	10/27/1989	7/10/1992	6	SFD
Greenland	Woodland Grove SD	12/26/1995	11/16/2001	9	SFD

Having identified the candidate subdivisions, each was visited in the field to evaluate the similarity of the lots and to photograph representative lots. Tax maps were collected, and a determination was made of the number of lots to be studied in each subdivision. It was often the case that all lots in the subdivision were identified for analysis. In other cases, there were more control lots (not encumbered or abutting) in the subdivision than necessary for analysis, so lots most like the encumbered or abutting lots were chosen for analysis. The number of lots studied ranged from a low of six in the City of Franklin and the towns of Allenstown and Newington to a high of 23 in the Town of Woodstock.

Current tax cards were collected for all the lots to be studied and spreadsheets created for each subdivision which identified the lot by map and lot number, size of lot, date of improvements, current owner and book/page and date reference for the deed transfer to the current owner. The chain of title was then established for each lot back to the original sale of the lot by the developer from records maintained in the deed registry for the county in which the subdivision is located. The chain of title information for each lot was entered onto the subdivision spreadsheet along with the date and consideration associated with each ownership transfer. The subdivision plan and chain of title spreadsheet for each subdivision is in Appendix G.

A screen on the name of the seller and buyer was then applied and sales which appeared not to meet the Fair Market Sale criterion were set aside. The remaining sales were then entered on a summary table for each subdivision which listed the lots chronologically by the date of the lot sale together with the sale price, the size of the lot and the relationship of the lot to the HVTL. If the lot was encumbered, the acreage encumbered and the percent of the lot represented by that acreage was shown. It was then possible to analyze the sale prices of the encumbered or abutting lots relative to the unaffected lots. It was also possible to analyze the timing associated with the sale of the two categories of lots. Conclusions were drawn with respect to the effect, if any, of the HVTL on the prices and timing of lot sales in the subdivision. It was also possible in some cases to offer explanations for the presence or absence of HVTL effects.

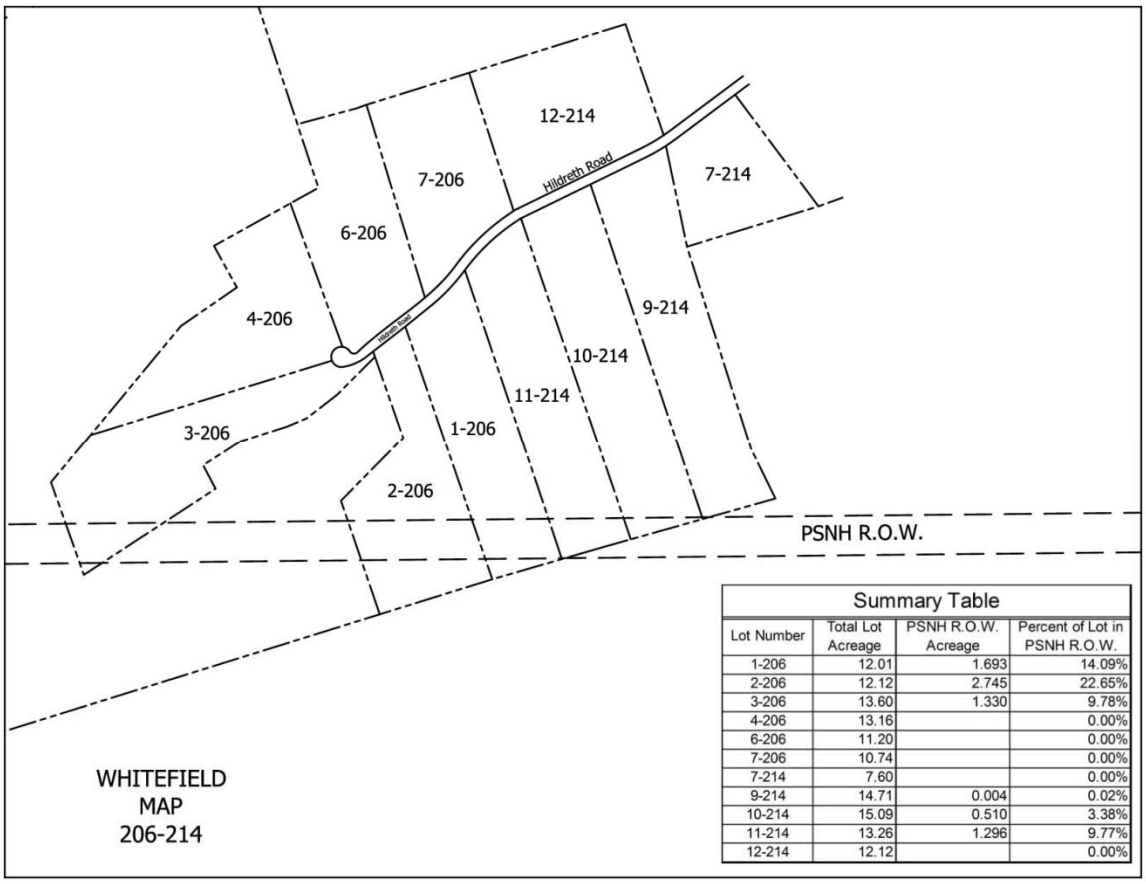
The studies of 10 subdivisions located along Corridor #2 are presented in Section 5.2 followed by the studies of the three subdivisions in Study Area #3 in Section 5.3. The chapter concludes with a summary of the findings together with conclusions that can be drawn from the research.

5.2 Corridor #2 Subdivision Studies

5.2.1 Whitefield Subdivision Study

The Whitefield Subdivision was developed by John Matthews and approved by the Whitefield Planning Board on November 2, 1982. The subdivision plan is in Appendix G. The subdivision is located about four miles northeast of Whitefield with access from State Route 116. It contains 10 lots of similar size ranging from 10 to 15 acres and one additional, a-typically sized lot (7.6 acres) which was not studied. Of the 10 studied, the smallest lot is 10.74 acres and the largest is 15.09 acres. The subdivision is accessed by a private cul-de-sac (Hildreth Road) so the lots were not able to be examined or photographed from the ground. Google Earth shows that they are heavily wooded and that the improvements tend to be on the third of the lot fronting Hildreth Road. Figure 5.2.1.1 shows the subdivision as it is represented on the Town of Whitefield tax maps 206 and 214.

Figure 5.2.1.1 John Matthews Subdivision, Town of Whitefield, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	PSNH R.O.W. Acreage	Percent of Lot in PSNH R.O.W.
1-206	12.01	1.693	14.09%
2-206	12.12	2.745	22.65%
3-206	13.60	1.330	9.78%
4-206	13.16		0.00%
6-206	11.20		0.00%
7-206	10.74		0.00%
7-214	7.60		0.00%
9-214	14.71	0.004	0.02%
10-214	15.09	0.510	3.38%
11-214	13.26	1.296	9.77%
12-214	12.12		0.00%

As shown in the figure, the subdivision is crossed by a PSNH ROW. The ROW is 190 feet wide, containing a 115 kV transmission line supported by wood, H-frame structures that are approximately 55 feet tall.[9] The ROW encumbers six of the 10 lots studied. Two of the six have very minor encumbrance, less than 4% of the lot area; two have encumbrance of about 10%; and two are more heavily encumbered, 14% and 23% respectively. Of the four with a larger encumbrance, all have at least one structure on the property. Figure 5.2.1.1 also contains a table showing lot acreages and the extent to which lots are encumbered by the ROW.

Tax cards were collected for each of these 10 lots and from the tax card it was possible to identify the current owner and the book and page of the transfer to the current owner together with the name of the grantor and the consideration. This information was used to trace the chain of title back to the original sale of the lot by the developer. The spreadsheet summarizing the chain of title for each lot is in Appendix G. The original sales of the lots were then arranged in chronological order in Summary Table 5.2.1.1 which facilitates analysis of both price effects and timing effects.

[9] All structure heights in this and subsequent sections are approximate.

Table 5.2.1.1 Whitefield Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Whitefield	214	9	7/24/1986	$10,000	14.71	.004/.02%	Very small portion of 190' ROW crosses back corner of lot
Whitefield	214	12	7/26/1986	$12,500	12.12	None	
Whitefield	214	10	8/23/1986	$12,750	15.09	.510/3.38%	Small portion of 190' ROW crosses back of lot.
Whitefield	214	11	9/2/1986	$12,250	13.26	1.296/9.77%	Portion of 190' ROW crosses back of lot. One 55' H-Frame structure (115 kV) on property.
Whitefield	206	3	9/19/1986	$12,750	13.6	1.330/9.78%	190' ROW cuts through back of lot. Two 55' H-Frame structures (115 kV) on property boundaries.
Whitefield	206	4	10/25/1986	$11,250	13.16	None	
Whitefield	206	6	10/25/1986	$11,250	11.21	None	
Whitefield	206	7	11/18/1986	$12,000	10.74	None	
Whitefield	206	1	11/26/1986	$11,990	12.01	1.693/14.09%	190' ROW cuts through back of lot. One 55' H-Frame structure (115 kV) located on property
Whitefield	206	2	5/22/1987	$13,500	12.12	2.745/22.65%	190' ROW cuts through middle of lot. One 55'H-Frame structure (115 kV) on property.

Looking at price first, the lowest price, $10,000, was for the first lot sold and the highest, $13,500, was for the last lot sold. The other eight lots all sold in the $11,000 to $13,000 range. The overall mean was $12,024 with the six encumbered lots selling for slightly more on average, $12,207, compared to the four unencumbered lots which sold for an average price of $11,750. The sale of the 10 lots was very quick. The first of the 10 lots sold on July 24, 1986 and the last on May 22, 1987, a total of about 10 months. In fact, nine of the 10 sold in a four month period following the first sale. There was no difference on average in the absorption period of the encumbered and unencumbered lots—the average for both was 2.5 months following the first sale.

The conclusion here is straightforward. There is no apparent effect of the HVTL on either the prices at which the lots sold or on the timing associated with their sales. One suspects that the rear acreage of these lots played little role in the use and utility of the properties and that the HVTL were, therefore, of no consequence. This interpretation is supported by inspection of current assessment practices in the town. The one acre site for residential properties is valued at $35,000 while additional acres of the property are valued at $108 per acre for unmanaged timber.[10]

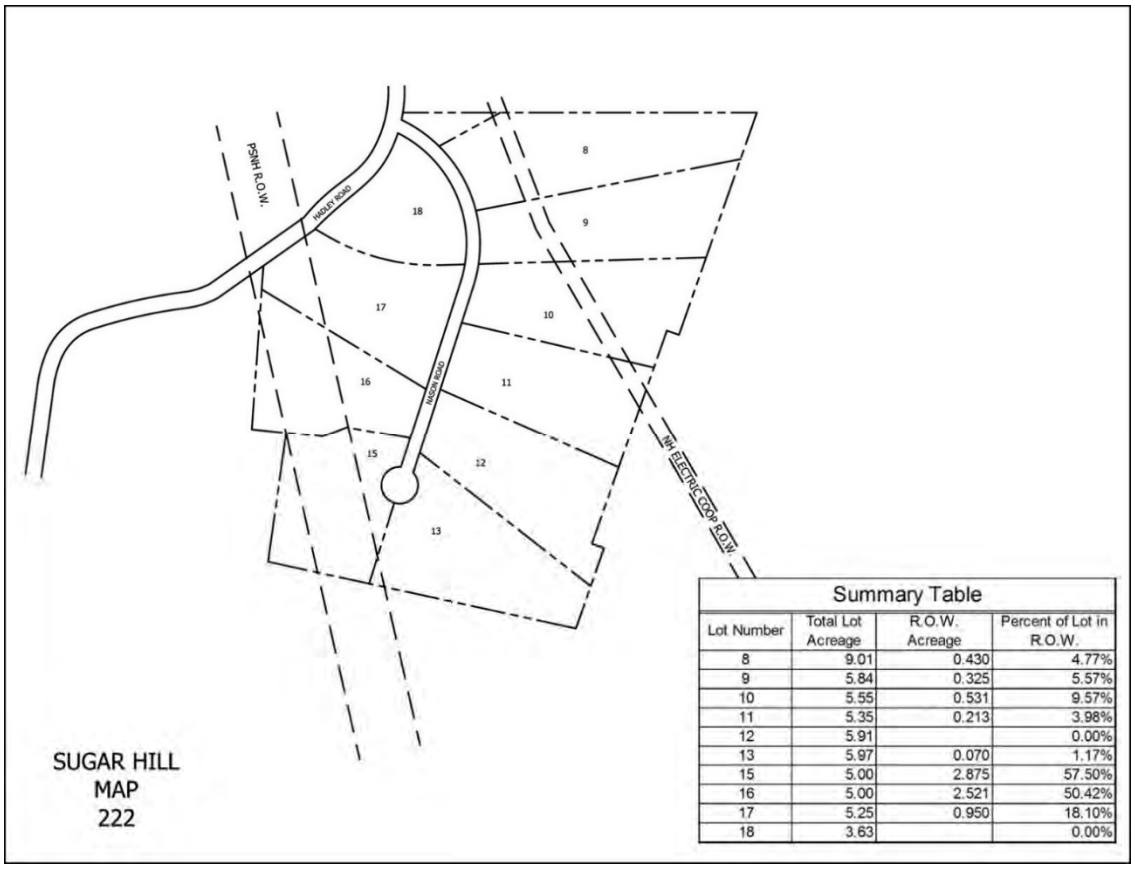
5.2.2 Sugar Hill Subdivision Study

The Sugar Hill Subdivision was originally planned by Philip Strumsacker and was approved by the Town of Sugar Hill Planning Board on July 2, 1985. The subdivision plan is in Appendix G. The subdivision has a total of 22 lots and is located about a mile southeast of Sugar Hill with access from Hadley Road. The

[10] Based on tax cards collected in 2014 and 2015.

lots vary in size but are typically between five and six acres. Some of the lots are accessed directly from Hadley Road with the others accessed from the Nason Road cul-de-sac. The lots are heavily wooded with the exception of lots 17 and 18 which appear to be the location of the original farmstead and have considerable open ground. In this study, the 10 lots serviced by the Nason Road cul-de-sac are analyzed since that is the section of the subdivision most affected by the HVTL. Figure 5.2.2.1 shows the portion of the subdivision studied here as it is represented on the Town of Sugar Hill tax map 222.

Figure 5.2.2.1 Portion of Nason Farm Subdivision, Town of Sugar Hill, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	R.O.W. Acreage	Percent of Lot in R.O.W.
8	9.01	0.430	4.77%
9	5.84	0.325	5.57%
10	5.55	0.531	9.57%
11	5.35	0.213	3.98%
12	5.91		0.00%
13	5.97	0.070	1.17%
15	5.00	2.875	57.50%
16	5.00	2.521	50.42%
17	5.25	0.950	18.10%
18	3.63		0.00%

As shown in Figure 5.2.2.1, the lots studied here are crossed by a 225 foot wide PSNH ROW which contains a 115 kV transmission line supported on 55 foot wood H-frame structures. The ROW encumbers four of the lots. There is a nominal encumbrance on lot 13, lot 17 has an 18.1% encumbrance and lots 15 and 16 are encumbered 57.5% and 50.4% respectively. Further, lot 15 is severed almost exactly through the middle of the lot which leaves a one acre remnant that is developable. The encumbrance on lot 16 takes the back half of the lot which leaves a two acre remnant fronting on the cul-de-sac.

There is a second easement that affects these lots. The New Hampshire Electric Coop has a 50 foot ROW carrying a 12 kV line on 35 foot tall wood pole structures that crosses lots 8,9,10 and 11. The extent of the encumbrance on these lots varies in the range of 4% – 10%.

The title research on these 10 lots is detailed on the spreadsheet contained in Appendix G. Several of the original lot sales contained preexisting improvements so could not be used. That left seven

transactions which are summarized chronologically in Table 5.2.2.1. Lot 16 sold twice prior to being improved and both sales are included in the table. Unfortunately, the sales occur over an 18 year period which makes the analysis very difficult, but there are two groups of three sales each that occurred in sufficiently similar time frames as to warrant discussion.

Table 5.2.2.1 Sugar Hill Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Sugar Hill	222	13	11/2/1985	$22,898	5.97	.07/1.17%	225' ROW cuts across rear corner of lot
Sugar Hill	222	15	7/16/1986	$12,500	5	2.875/57.5%	225' ROW crosses through middle of lot. One 55' H-frame structure (115 kV) on lot.
Sugar Hill	222	12	5/23/1987	$30,260	5.91		
Sugar Hill	222	16	6/1/1998	$22,050	5	2.521/50.42%	225' ROW crosses through back half of lot. Two 55' H-frame structures (115 kV) on lot.
Sugar Hill	222	16	6/6/2001	$15,000	5	2.521/50.42%	225' ROW crosses through back half of lot. Two 55' H-frame structures (115 kV) on lot.
Sugar Hill	222	11	2/8/2003	$15,000	5.35	.213/3.98%	50' ROW crosses back corner of lot
Sugar Hill	222	9	6/15/2003	$15,000	5.84	.325/5.57%	50' ROW crosses through front half of lot.

The first group consists of three sales that took place between November 1985 and May 1987. The sales include lot 12 which is unencumbered, lot 13 which is only affected by a .07 acre encumbrance on the rear corner of the lot and lot 15 which has a 57.5% encumbrance with the ROW splitting the lot into two unencumbered parcels of about one acre each. Figure 5.2.2.2 shows in more detail how the ROW affects Lot 15. It leaves only a very awkwardly shaped parcel of a little over an acre (21.75% of the total lot area) on which improvements could realistically be developed.

Figure 5.2.2.2 Effect of the ROW on Lot 15

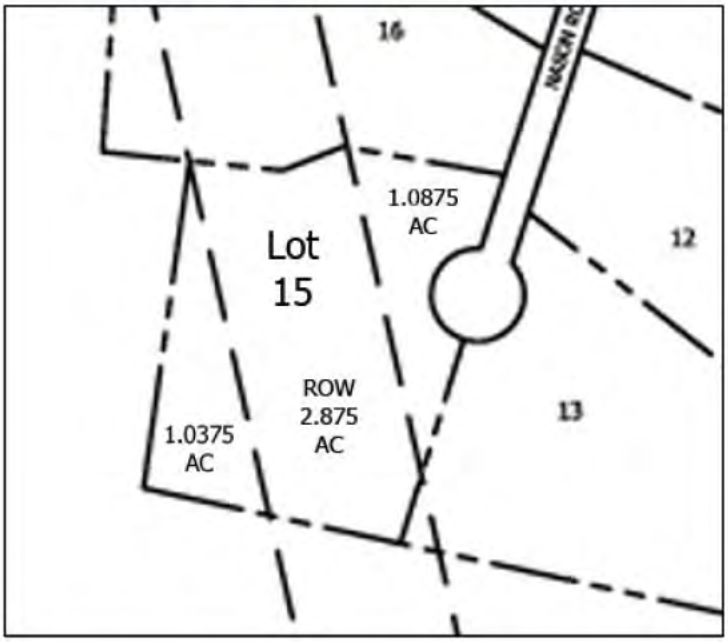


Figure 5.2.2.3 is a photograph of lot 15 showing the small development site at the front of the parcel backed up against the HVTL easement.

Figure 5.2.2.3 Photograph of Lot 15 (encumbered) as Improved (taken 7/15/2014)

The average sale price of lots 12 and 13 was $26,500. Lot 15 on the other hand, the heavily encumbered lot, sold for $12,500. The ratio of its sale price to the average price of lots 12 and 13 (47.0%) is in the same approximate proportion as the percent of the lot unencumbered (42.5%).

The second group of sales took place over the period June 2001 to June 2003. Lots 9, 11 and 16 all sold over this period and they all sold for exactly the same price -- $15,000. But lots 9 and 11 have minor encumbrances of 4%-5% due to the distribution line easement, while lot 16 has an encumbrance of 50.4% due to the HVTL easement. Further, lot 16 sold at the beginning of this two year period and it was a period of generally increasing real estate prices[11]. Figure 5.2.2.4 shows a photograph of Lot 16 as improved.

Figure 5.2.2.4 Photograph of Lot 16 (encumbered) as Improved (taken 7/15/2014)

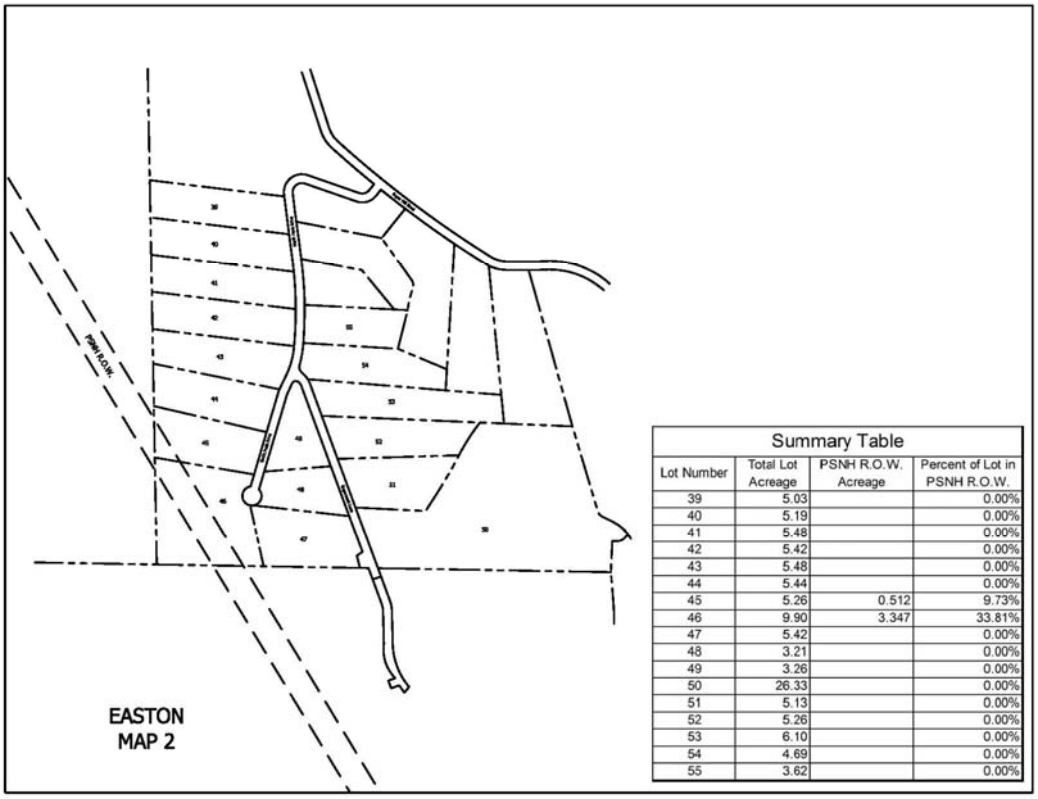
There does not seem to be a timing issue associated with the more heavily encumbered lots. Lot 15 was the second lot to sell while lot 16 was the first of the group of three to sell in the early 2000's. The implications with respect to pricing are interesting. Where the improvements are located towards the front of the lot and the easement only affects the rear wooded portion of the lot, the evidence of Lot 16 suggests no price effect. On the other hand, for lot 15 where the only buildable portion of the site was severely constrained by the ROW forcing an unobstructed view of the transmission line and one of the structures from the home site, there was a reduction in the sale price roughly in proportion to the degree of encumbrance.

[11]"All-Transactions House Price Index for New Hampshire", US Federal Housing Finance Agency, 11/25/2014.

5.2.3 Easton Subdivision Study

The Pepper Brook Subdivision was developed by David Shepard and approved by the Easton Planning Board on April 21, 1994. The subdivision plan is in Appendix G. The subdivision consists of 26 lots most of which are a little more than 5 acres. The subdivision is heavily wooded. The subdivision is accessed from Sugar Hill Road, a little less than 2 miles north of the Easton town center. Figure 5.2.3.1 shows the subdivision as it is represented on the Town of Easton Tax Map 2.

Figure 5.2.3.1 Pepper Brook Subdivision, Town of Easton, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	PSNH R.O.W. Acreage	Percent of Lot in PSNH R.O.W.
39	5.03		0.00%
40	5.19		0.00%
41	5.48		0.00%
42	5.42		0.00%
43	5.48		0.00%
44	5.44		0.00%
45	5.26	0.512	9.73%
46	9.90	3.347	33.81%
47	5.42		0.00%
48	3.21		0.00%
49	3.26		0.00%
50	26.33		0.00%
51	5.13		0.00%
52	5.26		0.00%
53	6.10		0.00%
54	4.69		0.00%
55	3.62		0.00%

As shown on Figure 5.2.3.1, a 225 foot ROW containing a 115 kV transmission line on wood pole structures about 55 feet tall crosses the southwest corner of the subdivision. Two lots are encumbered, one about 10% and one nearly 34%. The title research identified 16 useable lot sales. The spreadsheet detailing the title research is in Appendix G. The 16 sales are arranged chronologically in Table 5.2.3.1.

Table 5.2.3.1 Easton Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Easton	2	54	9/6/1996	$20,000	4.69	0	
Easton	2	45	11/17/1997	$29,500	5.26	.512/9.73%	225' ROW crosses back corner of lot.
Easton	2	48	4/15/1998	$30,000	3.21	0	
Easton	2	44	5/11/1998	$21,800	5.44	0	
Easton	2	39	9/3/1998	$32,500	5.03	0	
Easton	2	43	11/6/1998	$30,000	5.48	0	
Easton	2	41	11/16/1998	$30,000	5.48	0	
Easton	2	47	12/10/1998	$30,000	5.42	0	
Easton	2	40	2/22/1999	$30,000	5.19	0	
Easton	2	46	3/3/1999	$28,500	9.9	3.347/33.81%	225' ROW bisects the lot. Two wood 55' H-frame structures on lot.
Easton	2	53	4/12/2000	$35,000	6.1	0	
Easton	2	42	7/5/2000	$32,000	5.42	0	
Easton	2	55	4/23/2001	$39,500	3.62	0	
Easton	2	51	6/22/2001	$39,500	5.13	0	
Easton	2	49	6/22/2001	$39,500	3.26	0	
Easton	2	52	7/18/2001	$39,000	5.26	0	

After an initial sale in 1996, nine lots sold rapidly from November 1997 to March 1999. The less encumbered lot (lot 45) sold at the beginning of that period and the heavily encumbered lot (lot 46) sold at the end of that period. A year passed with no sales and then the remaining six lots sold over the period April 2000 to July 2001. The predominant sale price through 1999 was $30,000. From 2000 forward, $39,000 was the predominant price.

Lot 45 suffered no adverse timing effects and its sale price was consistent with the sale prices of unencumbered lots. The other encumbered lot (lot 46) had a small price effect even though the development options for that lot are severely constrained by the location of the ROW. The unencumbered triangle at the rear of the lot is approximately 2.8 acres and the developable portion at the front of the lot is about 4.1 acres. This is smaller than the lots typical of this subdivision, yet it sold for 95% ($28,500) of the prevailing price at that time of $30,000.

Figure 5.2.3.2 shows a photograph of Lot 48 as improved which gives a feel for the character of the subdivision.

Figure 5.2.3.2 Photograph of Lot 48 (unencumbered) as Improved (taken 7/15/2014)

Review of current tax cards for the lots in the Pepper Brook Subdivision indicates a value of $112,500 for the one acre residential site and $3,000 per acre for all additional land in the ownership. The excess acreage adds incremental value at the rate of 2.7% per acre relative to the site value implying that the rear of the property has a barely discernible effect on the value of the lot.

5.2.4 Woodstock Subdivision Study

The Woodstock Subdivision was developed by Thomas Kneeland, Frederick O'Neill and David Sweeney and was approved by the Woodstock Planning Board on October 25, 1970. The subdivision plan is in Appendix G. The subdivision is located a little less than two miles west of Lincoln with access from Lost River Road (Route 112). The original subdivision plan shows 58 lots, but some were subsequently combined, and the current Woodstock tax map shows 54 lots. With a couple of exceptions, the lots are of similar size ranging from 1 to 2 acres. Figure 5.2.4.1 shows the subdivision as it is represented on the Town of Woodstock Tax Map 104.

Figure 5.2.4.1 Woodstock Subdivision, Town of Woodstock, New Hampshire

48	1.159		0.00%
49	1.514		0.00%

As shown in the figure, the subdivision is crossed by a PSNH ROW on its west border. The ROW is 225 feet wide, containing a 115 kV transmission line supported by wood, H-frame structures that are approximately 55 feet tall. The ROW encumbers eight of the lots. Two of the eight have very minor encumbrance while the others are heavily encumbered. Figure 5.2.4.1 contains a table showing lot acreages and the extent to which lots are encumbered by the ROW.

Tax cards for each of the lots were collected to identify current owners. This provided the starting point from which to work the chain of title back to the original lot sale by the developer. The spreadsheet summarizing the chain of title for each lot is in Appendix G and it describes a complicated history. Shortly after the subdivision was approved, the Lost Valley Corporation was created and some of the lots were transferred to the Corporation and subsequently deeded out of the Corporation, others are deeded individually by the developers. In addition, there are many transfers among the developers, their spouses and related trusts. Finally, New England Merchants National Bank (the "Bank") filed suit in late 1979 against the developers and the Bank ended up with 11 lots which were sold over subsequent years. A further complication is that the encumbered lots 22, 24 and 25 in Figure 5.2.4.1 involve combinations and realignments of lots in the original subdivision plan.

Two categories of sales of the unimproved lots were identified. From 1970 to 1979 there were 23 sales by the developer or developer entities. From late 1979 forward, there were sales by the Bank and a few additional developer sales. The Bank sales do not meet the criteria of a Fair Market Sale, so the analysis

focused on the developer sales that took place over the 1970 to 1979 time period. Table 5.2.4.1 shows these 23 sales listed in chronological order.

Table 5.2.4.1 Woodstock Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Woodstock	104	14	12/12/1970	$4,500	1.3	0	
Woodstock	104	26	9/28/1972	$8,500	0.99	0

Woodstock	104	31	10/3/1974	$4,500	1.13	0	
Woodstock	104	39	10/23/1074	$4,500	1.28	0	
Woodstock	104	28	1/5/1976	$4,500	2.01	1.069/53.29%	225' ROW crosses back of lot.
Woodstock	104	12	5/11/1976	$6,000	1.94	.838/43.28%	225' ROW crosses back of lot
Woodstock	104	46*	11/13/1977	$7,500	1.5	1.042/69.64%	225' ROW crosses back of lot.
Woodstock	Sub Plan	47**	11/13/1977	$4,500	1.42	.704/49.58%	225' ROW crosses back of lot.
Woodstock	104	43***	3/25/1978	$5,300	1.14	0	
Woodstock	104	44***	3/25/1978	$5,300	1.44	0	
Woodstock	104	45	6/30/1979	$5,500	1.24	0	
Woodstock	104	27	9/14/1979	$5,500	1.69	.666/39.38%	225' ROW crosses back of lot.

*Lot 46 (as shown on the original subdivision plan in Appendix G) is now lot 25 but it was 14,000 sq. ft. smaller than lot 25 as it exists today. As shown in Table 5.2.4.1, it sold for $7,500 on 11/13/77.
** Lot 24 is a consolidation of two of the original lots—lots 47 and 48. The lot 48 portion remains the same, but the lot 47 portion is reduced relative to its original size by about 14,000sq.ft. Lot 47 sold for $4,500 on 11/13/77.
***Lots 43 and 44 were sold together for $10,600. They are shown in the table as each having been sold for $5,300 as there is no basis for allocating the purchase price otherwise.

As shown in the table, five lots sold in the early 1970's and then 10 sold in 1974, all of which were unencumbered. Four encumbered lots then sold in 1976 and 1977 followed by three unencumbered and one encumbered in 1978 and 1979. On average, the unencumbered lots sold in 4.5 years from 1970 and the encumbered lots 7.0 years.

There doesn't appear to be any price differentiation between the encumbered and unencumbered lots. The encumbered lots averaged $5,600 and the unencumbered lots $5,055. Since there was a slight

upward trend in prices over the period, the fact that the encumbered lots sold later accounts for most of the difference in the average price. The encumbered lots were also larger on average—1.71 ac. compared to 1.22 ac. for the unencumbered lots—but the increase in size of .49 ac. was smaller than the average area encumbered of .86 ac. This means that the unencumbered portion of these lots averaged only .85 ac., quite a bit smaller than the totally unencumbered lots.

Figure 5.2.4.2 and Figure 5.2.4.3 are photographs of two of the most heavily encumbered lots—lots 22 and 25. Lot 22 is a combination of two lots, lots 49 and 51 on the original subdivision plan, that were sold together by the New England Merchants National Bank on 12/31/1985 for $14,000. Because this was a bank sale, it is not analyzed in Table 5.2.4.1. Lot 25, which was originally sold as lot 46 in the subdivision plan as explained in the footnote to Table 5.2.4.1, was 70% encumbered with less than .5 ac. unencumbered and available for development. Despite the constrained development area and the fact that the conductors are visible above the tree line from the street, this lot sold for $7,500 on 11/13/1977.

Figure 5.2.4.2 Photograph of Lot 22 (encumbered) as improved (taken7/15/2014)

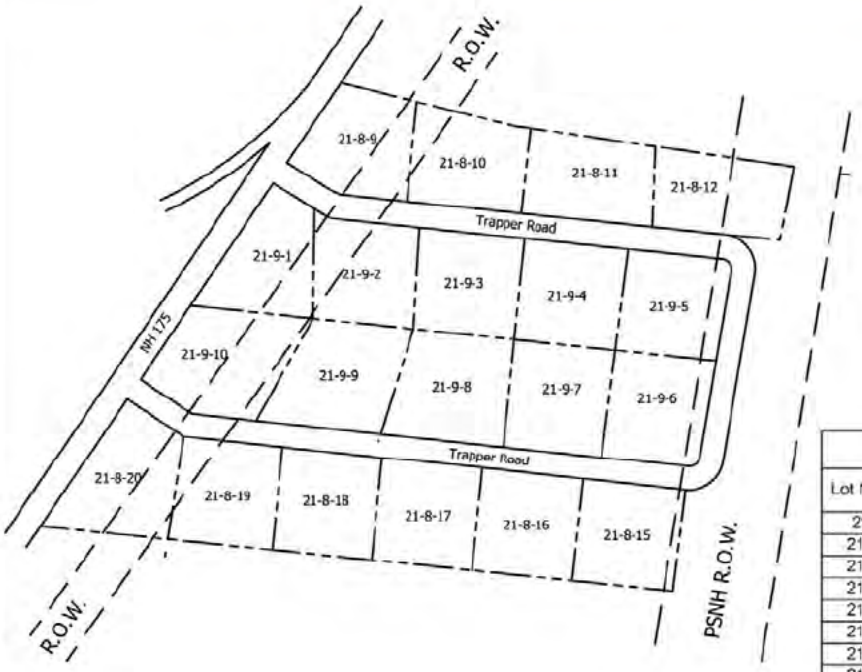
Figure 5.2.4.3 Photograph of Lot 25 (encumbered) as Improved (taken 7/15/2014)

Review of current tax cards for the lots in the Woodstock Subdivision indicates a value of $85,000 for the residential site and $3,000 an acre for all additional land in the ownership. The excess acreage adds incremental value at the rate of 3.53% per acre relative to the site value, implying that the rear of the property has little effect on the value of the lot.

5.2.5 Campton Subdivision Study

The Central Park Estates Subdivision was developed by Frederick E. Brown and approved by the Campton Planning Board on April 10, 1980. The subdivision plan is in Appendix G. The subdivision consists of 20 lots most of which are exactly one acre although a few are slightly larger. All of the residential improvements in the subdivision are modular homes and the lots are heavily wooded. The subdivision is accessed from State Route 175 about 5.5 miles south of the Campton town center. Figure 5.2.5.1 shows the subdivision as it is represented on the Town of Campton tax maps 21-08 and 21-09.

Figure 5.2.5.1 Central Park Estates Subdivision, Town of Campton, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	R.O.W. Acreage	Percent of Lot in R.O.W.
21-8-9	1.02	0.332	32.69%
21-8-10	1.00	0.142	14.20%
21-8-11	1.00		0.00%
21-8-12	1.00	0.435	43.49%
21-8-15	1.00	0.073	7.29%
21-8-16	1.00		0.00%
21-8-17	1.00		0.00%
21-8-18	1.00		0.00%
21-8-19	1.00	0.143	14.30%
21-8-20	1.14	0.367	32.17%
21-9-1	1.00	0.216	21.55%
21-9-2	1.00	0.275	27.52%
21-9-3	1.00		0.00%
21-9-4	1.00		0.00%
21-9-5	1.00	0.150	14.95%
21-9-6	1.00	0.154	15.30%
21-9-7	1.01		0.00%
21-9-8	1.14		0.00%
21-9-9	1.15		0.00%
21-9-10	1.22	0.519	42.54%

As shown on Figure 5.2.5.1, the subdivision is crossed by two power line easements. The larger of the two on the right side of the subdivision is a 225 foot wide PSNH ROW containing a 115 kV line supported on 55 foot tall, wood, H-frame structures. The second is a 100 foot wide ROW containing a 34 kV line supported on 35 foot wood poles. In total, 11 lots are encumbered and nine are not. The extent of the encumbrance ranges from a low of 7% to a high of 43% with a fairly even distribution over this range.

Although there are 20 lots in the subdivision, the title research identified only 12 useable lot sales. This is because there was a bulk sale of 10 lots in 2001 and most of those were subsequently sold with modular homes included in the sale. The spreadsheet detailing the title research is in Appendix G. The 12 useable sales are arranged chronologically in Table 5.2.5.1.

Table 5.2.5.1 Campton Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Campton	21/08	9	12/10/1991	$20,000	1.02	.332/32.69%	100' ROW cuts across rear corner of lot
Campton	21/09	2	2/18/1993	$6,000	1	.275/27.52%	100' ROW cuts through middle of lot. One wood pole structure on lot
Campton	21/09	9	9/27/1993	$5,000	1.15		
Campton	21/08	11	8/15/1995	$7,500	1		
Campton	21/08	12	8/15/1995	$7,500	1	.435/43.49%	Portion of 225' ROW runs alongside of lot.
Campton	21/09	3	8/28/1998	$11,000	1		
Campton	21/09	8	10/31/2000	$22,400	1.14		
Campton	21/09	5	5/24/2001	$20,000	1	.15/14.95%	Portion of 225' ROW runs alongside of lot
Campton	21/09	7	11/30/2001	$30,000	1.01		
Campton	21/09	6	5/31/2002	$33,000	1	.154/15.30%	Portion of 225' ROW runs alongside of lot
Campton	21/08	15	8/14/2002	$34,900	1	.073/7.29%	Portion of 225' ROW runs alongside of lot
Campton	21/08	19	5/9/2003	$40,000	1	.143/14.3%	100' ROW cuts across corner of lot

These sales took place over a 12 year period from late 1991 to the middle of 2003. The first lot sold had about a third of the lot encumbered and sold for considerably more than others in the early 1990's. In the period February 1993 to August 1995 there were four sales. Two of these were heavily encumbered, 28% and 43%, respectively and the other two were not encumbered. They all sold for similar prices although the two encumbered lots sold for an average of $6,750 while the two unencumbered lots sold for an average of $6,250. A photograph of one of the encumbered lots, map 21/08, lot 12 is shown in figure 5.2.5.2. The orientation of the unit and the heavy screening suggests little or no effect of the HVTL on the use or utility of the property.

Figure 5.2.5.2 Photograph of Map 21/08, lot 12 (encumbered) as Improved (taken 7/14/2014)

A second cluster of six sales took place over the period October 2000 to May 2003. Four of these lots were encumbered in the range of 7-15% and two were unencumbered. The encumbered lots sold at an average price of $31,975 while the unencumbered lots sold at an average price of $26,200. Figure 5.2.5.3 shows a recent photograph of one of the encumbered lots in this group. Again, orientation of the improvements to the street combined with vegetative screening may explain the apparent absence of any price effect due to the HVTL.

Figure 5.2.5.3 Photograph of Map 21/09, Lot 6 (encumbered) as Improved (taken 7/14/2014)

Analysis of the Central Park Estates Subdivision in the Town of Campton suggests no price or timing effects due to the HVTL. The sales of the encumbered lots were interspersed with the sale of unencumbered lots very evenly over the 12 year period. Further, the encumbered lots sold at prices that were as good as, or better than, the unencumbered lots.

5.2.6 Holderness Subdivision Study

The Heritage Hill Subdivision was first mapped in 1965 and the initial phase was approved by the Holderness Planning Board in 1968 and the second phase in 1974. The sales history of the subdivision stretches over 20 years from 1967 to 1986 under three different developer groups. The initial developers were Walter and Dagmar Davis. They sold their interest in 1972 to Daniel Ryder and Glen Kiedaisch. In 1976, Glen Kiedaisch sold his half interest to William J. Crane, William F. Crane and Francis Crane. The Phase II subdivision plan is attached in Appendix G.

The subdivision is located about 1.5 miles east of Plymouth with access from State Route 175. The lots studied include the lots on both sides of Hob Knob Lane, on both sides of Trivett Lane and the lots enclosed by the Heritage Road Circle. The lots range from one to over three acres. Figure 5.2.6.1 shows the lots as they are represented on the Town of Holderness tax map 224.[12]

[12] Lot 55 results from the combination of lots 55and 56. For purposes of comparability to the other lot sales, this sale at $16,000 for the two lots is treated as sales of the two individual lots at $8,000 each.

Figure 5.2.6.1 Portion of Heritage Hill Subdivision, Town of Holderness

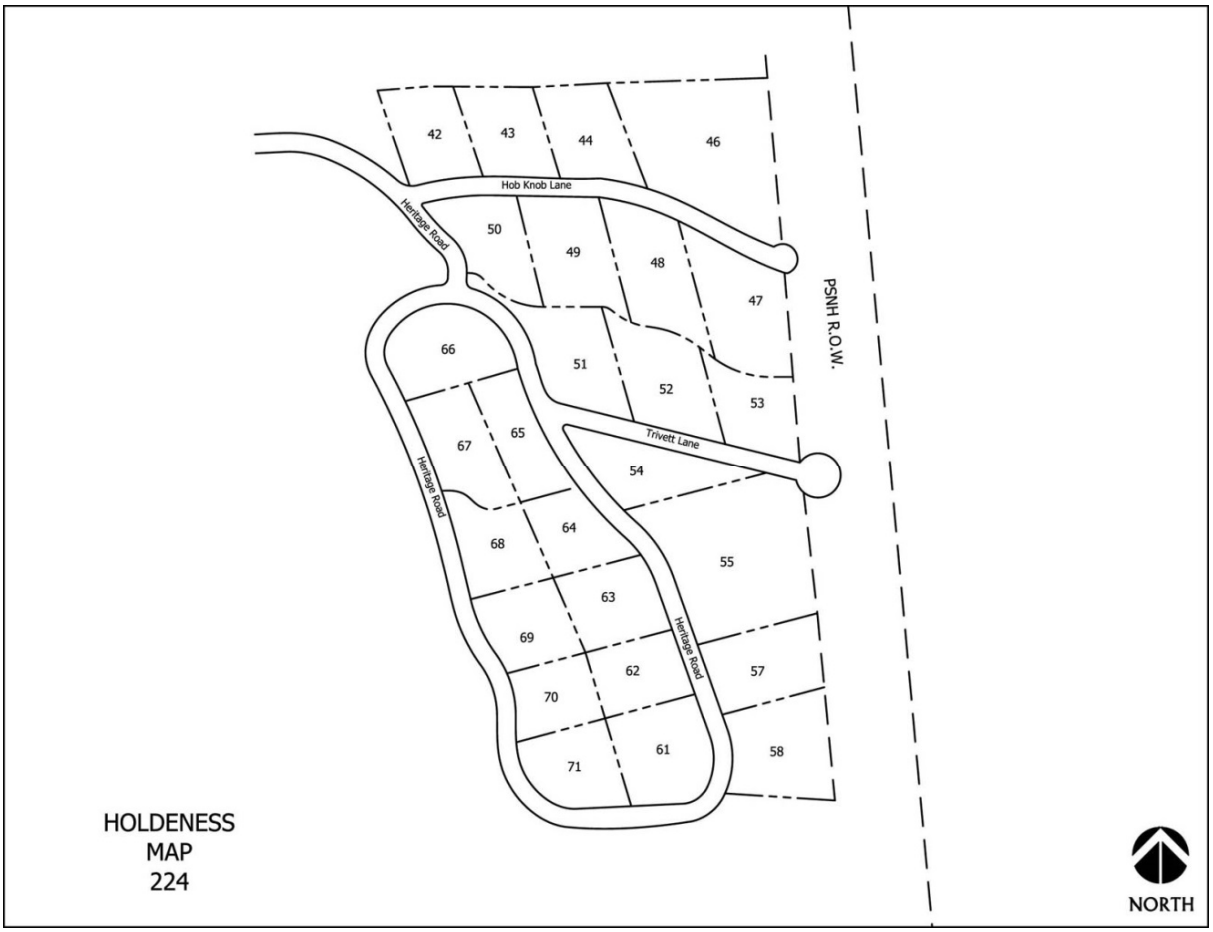


Figure 5.2.6.1 shows that six of the lots studied abut a PSNH ROW. The ROW is 225 feet wide and contains a 115 kV line supported on wood H-frame structures with a typical height of 55 feet. Title research was carried out on 22 lots and the spreadsheet summarizing that work is contained in Appendix G. The sales of the lots are arranged chronologically in Table 5.2.6.1.

Table 5.2.6.1 Holderness Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Holderness	224	50	1/19/1967	$1,000	1.3	None

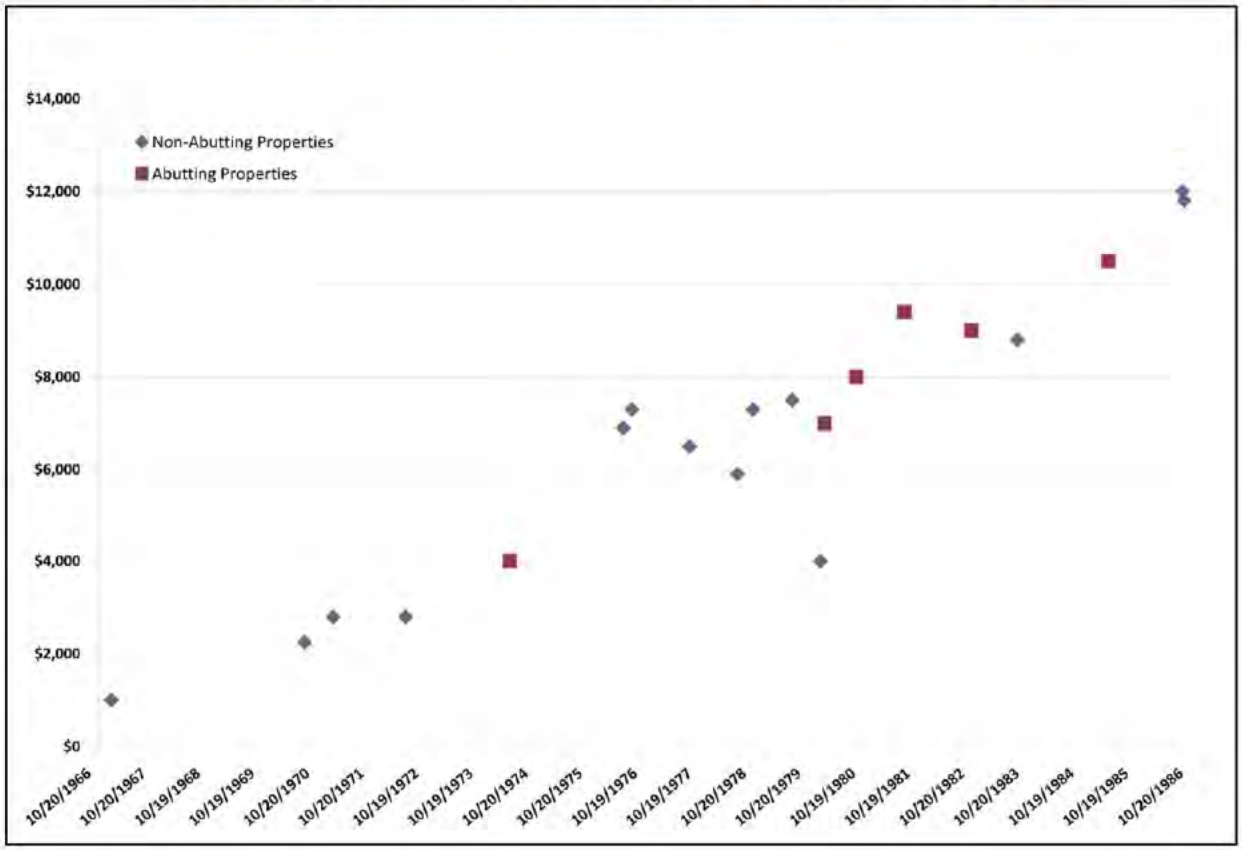
Holderness	224	53	4/25/1985	$10,500	1.18	None	abuts 225' PSNH row
Holderness	224	65	9/2/1986	$12,000	1.13	None	
Holderness	224	68	9/12/1986	$11,810	1.21	None	

As noted earlier, the sale of these lots stretched over 20 years under three different developer groups. The first group (1967 to June 1972) sold four lots over the six year period. The second group (May 1974 to July 1979) sold seven lots over the 6 ½ year period. Sales accelerated somewhat under the third group (January 1980 to September 1986) with the remaining 10 lots sold in a little over seven years. The summary table suggests that the abutting lots may have sold a little slower on average than the non-abutting lots. The average number of years after the first sale was 11.5 years for the non-abutting properties and 13.4 years for the abutting properties.

It is difficult to analyze the lot prices because of the long period over which sales took place. Market conditions obviously changed greatly over that 20 year period and there is no reliable way to adjust for those changes. Figure 5.2.6.2 plots the prices paid over time and the overall, steady upward trend appears to apply equally to the abutting and non-abutting lots.

Figure 5.2.6.2 Lot Prices Over Time for Abutting and Non-Abutting Lots



The photographs that follow help explain the apparent absence of any price effect associated with the abutting lots. Figures 5.2.6.3 and 5.2.6.4 show two non-abutting lots while Figures 5.2.6.5 and 5.2.6.6 show two abutting lots. Given the siting of the homes on the lots and the vegetative cover, there does not appear to be any significant difference in the use or utility of the two sets of lots.

Figure 5.2.6.4 Photograph of Lot 71 (non-abutting) as Improved (taken 7/14/2014)

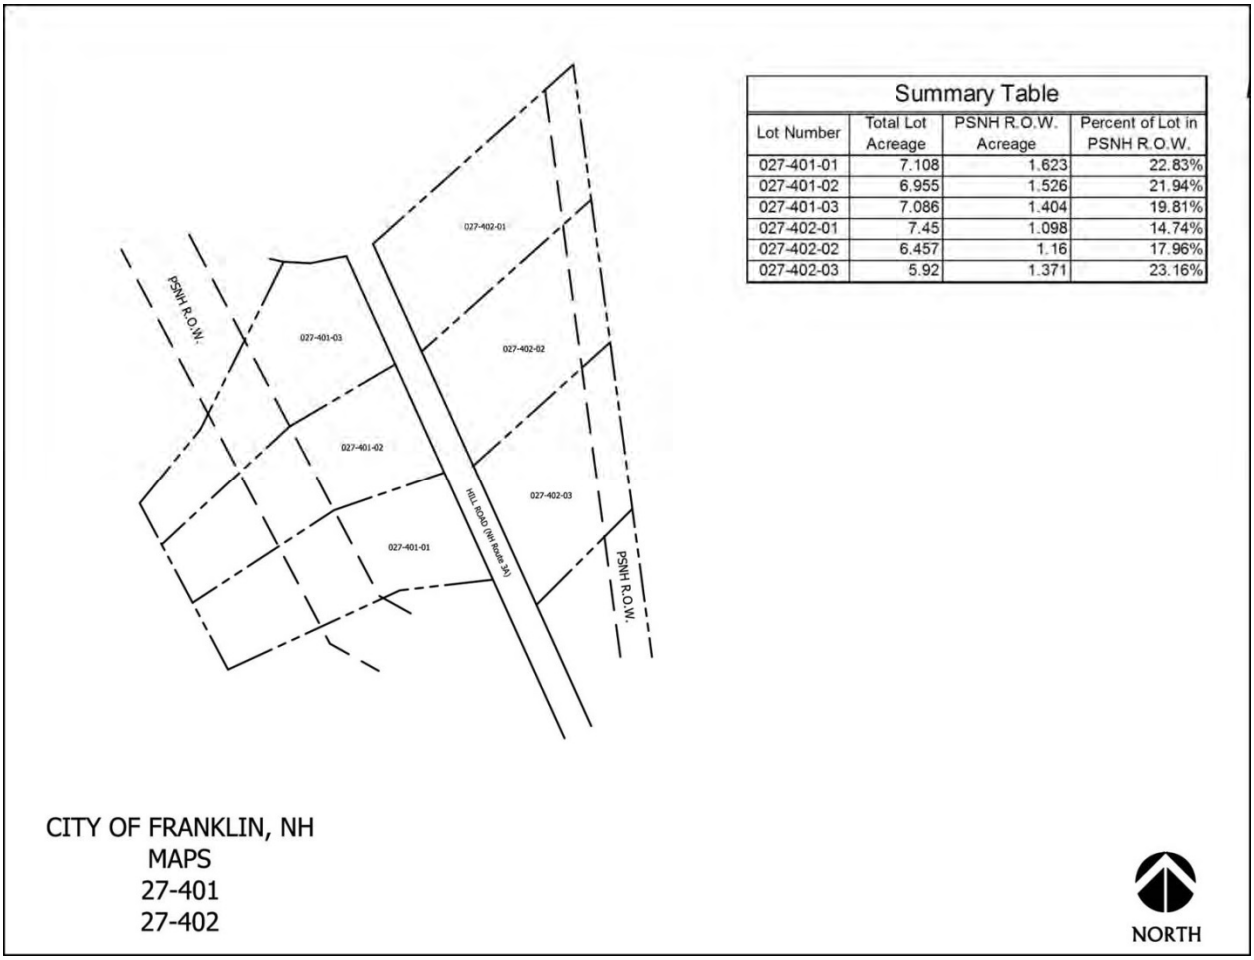
Figure 5.2.6.5 Photograph of Lot 47 (abutting) as Improved (taken 7/14/2014)

Figure 5.2.6.6 Photograph of Lot 53 (abutting) as Improved (taken 7/14/2014)

5.2.7 Franklin Subdivision Study

The Ceres Timberland Properties Subdivision is a small six lot subdivision approved by the Franklin Planning Board on September 22, 2001. The subdivision plan is in Appendix G. It straddles Route 3A about five miles north of the City of Franklin. The lots are of similar size, six to seven acres, and have direct access from Route 3A (Hill Road). Figure 5.2.7.1 shows the subdivision as it is represented on the Town of Franklin tax maps 27-401 and 27-402.

Figure 5.2.7.1 Ceres Timberland Properties Subdivision, Town of Franklin, New Hampshire



As shown on Figure 5.2.7.1, The Subdivision is crossed by two PSNH ROWs. One is 225 feet wide and contains a 115 kV line on 55 foot tall wood H-frame structures. This line cuts through the midsection of the three lots on the west side of Hill Road. The other ROW is 112 feet wide and is no longer in use. The line in this corridor was a 69 kV line on wood H-frame structures. It was de-energized in the mid-1980's. This unused ROW is along the rear border of the three lots on the east side of Hill Road and amounts to open space with substantial areas of re-vegetation similar to the adjoining lands.

The original sales of the six lots are arranged chronologically in Table 5.2.7.1. The spreadsheet detailing the title research is in Appendix G.

Table 5.2.7.1 Franklin Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Franklin	27-402	2	6/27/2001	$27,500	6.46	1.16/18%	unused 112' ROW forms the rear border of the lot
Franklin	27-402	1	7/27/2001	$25,000	7.45	1.098/15%	unused 112' ROW forms the rear border of the lot
Franklin	27-402	3	10/27/2001	$24,000	5.92	1.371/23%	unused 112' ROW forms the rear border of the lot
Franklin	27-401	3	3/5/2002	$25,000	7.09	1.404/20%	225' ROW cuts through middle of lot.
Franklin	27-401	1	3/21/2002	$25,000	7.11	1.623/23%	225' ROW cuts through middle of lot. One 55' H-frame structure on lot
Franklin	27-401	2	5/23/2002	$25,000	6.95	1.526/22%	225' ROW cuts through middle of lot. One 55' H-frame structure on lot

The three lots with the unused ROW sold between June and October of 2001 while the three lots bisected by the larger ROW with the 115 kV line sold between March and May of 2002. This suggests the market may have had some preference for the lots with the smaller, unused ROW forming the rear border of the property relative to the lots with the larger, active ROW bisecting the property. It does not suggest, however, any significant market resistance to the lots with the larger ROW. This is corroborated by the fact that the six lots sold for nearly the same price. The first sale was a little higher and the third a little lower and the other four all sold for $25,000.

Figures 5.2.7.2 and 5.2.7.3 give some insight with respect to the apparent insensitivity of market value to the presence of large electric transmission rights of way.

Figure 5.2.7.2 Photograph of Map 27-402 Lot 3 (encumbered by unused ROW) as Improved (taken 7/14/2014)

Figure 5.2.7.3 Photograph of Map 27-401 Lot 2(encumbered) as Improved (taken 7/14/2014)

Figure 5.2.7.2 shows a lot on the east side of Hill Road crossed in the rear by the smaller, unused ROW while Figure 5.2.7.3 shows a lot on the west side of Hill Road crossed by the larger ROW. In both cases,

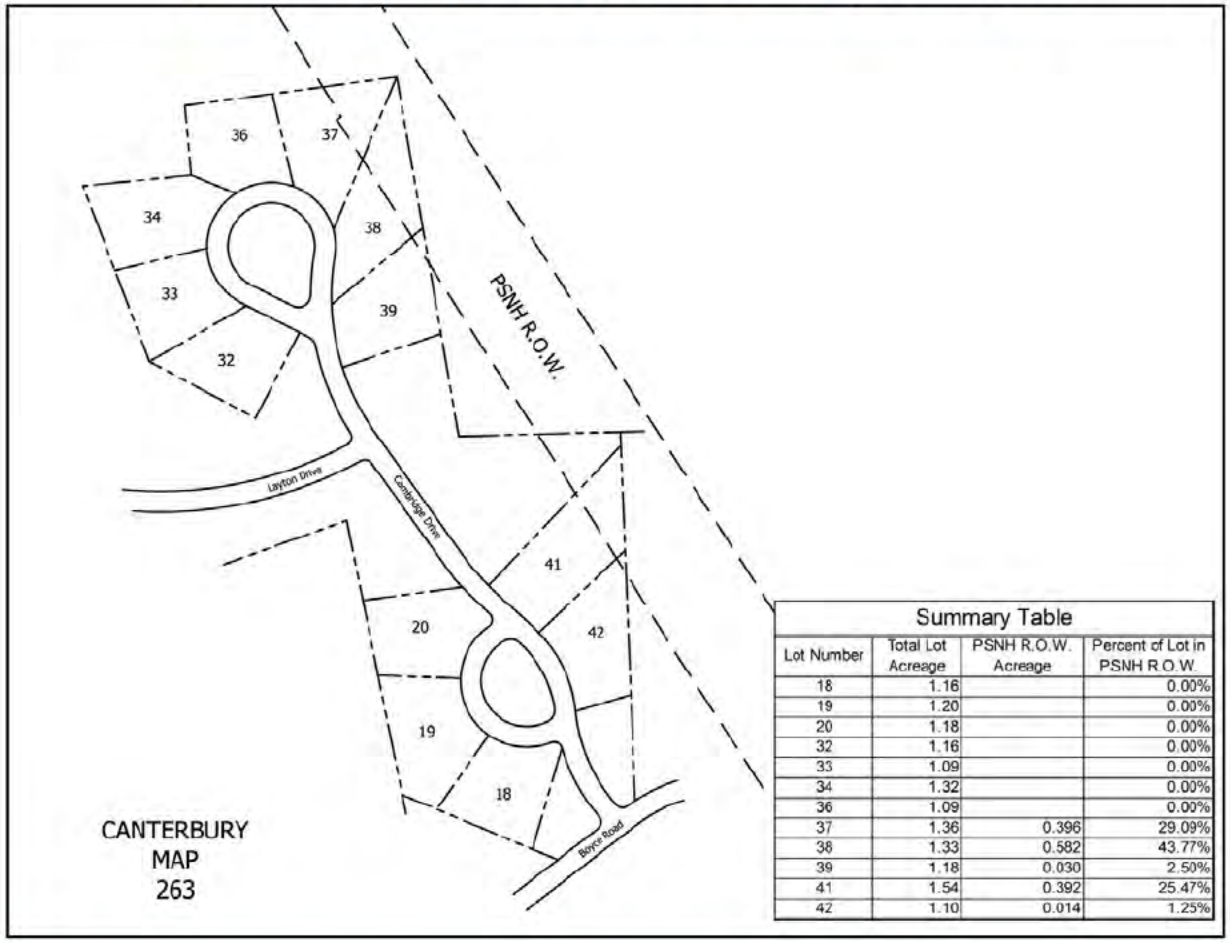
the improvements are located to the front of the lot. Further, the vegetation is sufficiently tall, dense and close to the improvements that there is no visual access to the middle or rear of the lot which carries the implication that the rear of the lot has very little to do with the use or utility of the property. Finally, it is worth noting that overhead distribution lines often dwarf any visual effect of the HVTL.

Review of current tax cards for this subdivision indicates that the assessor assigns $40,000 to the residential site and $1,100 to each additional acre. This means that excess acreage adds incremental value at the rate of 2.75% per acre relative to the site value implying the rear of these lots has a barely discernible effect on the value of the property.

5.2.8 Canterbury Subdivision Study

The Bella Villa Subdivision was developed by Sylvester DeMaggio and was approved by the Canterbury Planning Board. The plan was recorded on May 19, 1976. The subdivision plan is in Appendix G. The subdivision is located two miles northeast of Penacook just on the east side of I-93. The subdivision is accessed from Boyce Road. The original subdivision plan shows 20 lots as does Canterbury Tax Map 263. The lots are arranged in three clusters and the two eastern clusters containing 12 lots are analyzed here. The lots are uniform in size ranging from 1.0 to 1.5 ac. Figure 5.2.8.1 shows the subdivision as it is represented on the Town of Canterbury Tax Map 263.

Figure 5.2.8.1 Bella Villa Subdivision, Town of Canterbury, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	PSNH R.O.W. Acreage	Percent of Lot in PSNH R.O.W.
18	1.16		0.00%
19	1.20		0.00%
20	1.18		0.00%
32	1.16		0.00%
33	1.09		0.00%
34	1.32		0.00%
36	1.09		0.00%
37	1.36	0.396	29.09%
38	1.33	0.582	43.77%
39	1.18	0.030	2.50%
41	1.54	0.392	25.47%
42	1.10	0.014	1.25%

As shown in the figure, the subdivision is crossed by a PSNH ROW on its east border. The ROW is 250 feet wide and contains two 115 kV transmission lines. One is supported by wood, H-frame structures that are approximately 45 feet tall. The second is now on monopoles about 75 feet in height but, at the time of the sales studied here, it would have been on wood H-frame structures. The ROW encumbers five of the 12 lots. Two of the five have very minor encumbrance while the others range from 25% to 45%. Figure 5.2.8.1 contains a table showing lot acreages and the extent to which lots are encumbered by the ROW.

The spreadsheet summarizing the chain of title for each lot is in Appendix G. Apparently, Sylvester DeMaggio sold 19 of the 20 lots to Castlewood Homes, Inc. on October 14, 1976 just five months after the subdivision plan was recorded. A year later on October 5, 1977, Castlewood Homes sold 18 lots to Luke Smith. Luke Smith and related parties then appear to have marketed the lots over the next 10 years. Table 5.2.8.1 summarizes the eight Fair Market Sales involving the lots analyzed.

Table 5.2.8.1 Canterbury Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Canterbury	263	41	6/30/1978	$11,500	1.54	.392/25.47%	250' ROW crosses back of lot.
Canterbury	263	33	1/28/1984	$12,000	1.09	0	
Canterbury	263	34	8/3/1984	$12,200	1.32	0	
Canterbury	263	38	2/5/1985	$13,500	1.33	.582/43.77%	250' ROW crosses back of lot.
Canterbury	263	36	2/22/1985	$13,500	1.09	0	
Canterbury	263	32	3/6/1985	$6,100	1.16	0	
Canterbury	263	39	3/25/1985	13,500	1.18	.030/2.50%	250' ROW crosses back of lot.
Canterbury	263	20	02/12/1987	$13,500	1.18	0	

There do not appear to be any timing or price effects on the encumbered relative to the unencumbered lots. The only anomaly is the very low price paid for Lot 32, an unencumbered lot. Since there is no obvious explanation, it is likely that there were atypical motivations in the transaction, i.e. this was probably not a Fair Market Sale. The encumbered lots were a little larger on average (1.35 acres) than the unencumbered lots (1.17 acres) and the difference (.18 acres) was a little less than the average area encumbered (.33 acres).

Figures 5.2.8.2 and 5.2.8.3 show current photographs of two of the encumbered lots, Lot 37 which is 29.07% encumbered and Lot 42 which is 1.25% encumbered.

Figure 5.2.8.2 Photograph of Lot 37 (encumbered) as Improved (taken 7/14/2014)

Figure 5.2.8.3 Photograph of Lot 42 (encumbered) as Improved (taken 7/14/2014)

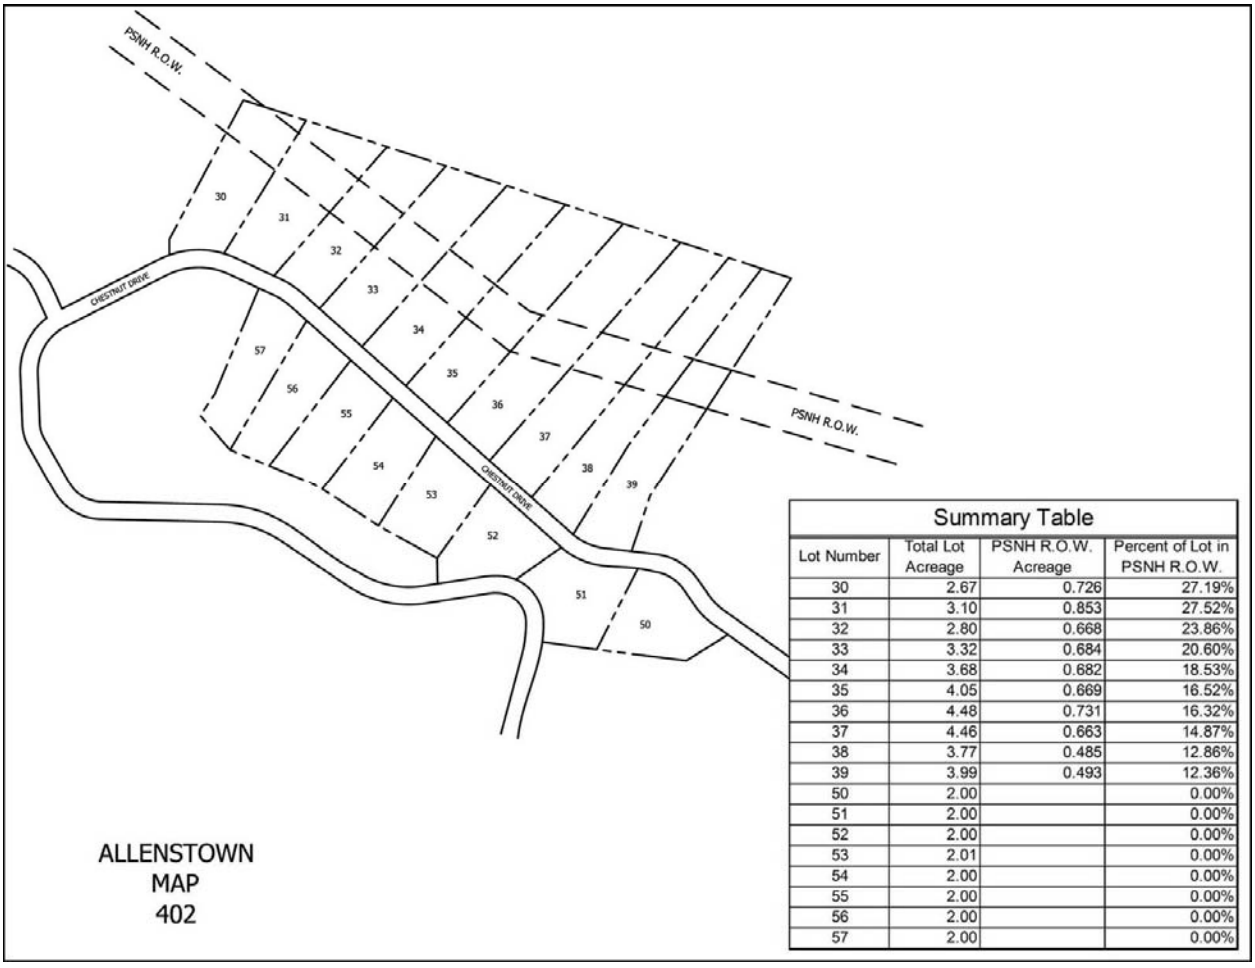
Review of current tax cards for the Bella Villa Subdivision showed that the home sites were assessed at $75,000 and that additional acreage was valued at $3,000 per acre. Valuing the excess acreage at 4% per acre relative to the site value reinforces the fact that the excess acreage at the rear of the lot has a relatively small impact on the overall value of the property.

5.2.9 Allenstown Subdivision Study

The Woodridge Estates Subdivision was approved by the Allenstown Planning Board on August 16, 2003. The subdivision plan is in Appendix G. The portion of the subdivision studied here consists of 18 lots. The lots on the south side of Chestnut Drive are two acres while the lots on the north side range from about three acres to 4.5 acres. The development area of the lots on the north side is constrained by a PSNH easement and by extensive wetlands as shown on the subdivision plan in Appendix G. The implication is that the developable portion of the lots on the north side of Chestnut Drive is in fact smaller than on the south side running about 1.73 acres on average.

The subdivision is located about 2.5 miles east of Allenstown and is accessed by Deerfield Road. Figure 5.2.9.1 shows the subdivision as it is represented on the Town of Allenstown Tax Map 402.

Figure 5.2.9.1 Woodridge Estates Subdivision, Town of Allenstown, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	PSNH R.O.W. Acreage	Percent of Lot in PSNH R.O.W.
30	2.67	0.726	27.19%
31	3.10	0.853	27.52%
32	2.80	0.668	23.86%
33	3.32	0.684	20.60%
34	3.68	0.682	18.53%
35	4.05	0.669	16.52%
36	4.48	0.731	16.32%
37	4.46	0.663	14.87%
38	3.77	0.485	12.86%
39	3.99	0.493	12.36%
50	2.00		0.00%
51	2.00		0.00%
52	2.00		0.00%
53	2.01		0.00%
54	2.00		0.00%
55	2.00		0.00%
56	2.00		0.00%
57	2.00		0.00%

As shown on Figure 5.2.9.1, a 150 foot wide transmission line easement crosses the lots on the north side of Chestnut Drive. The title research identified six useable lot sales. The spreadsheet detailing the title research is in Appendix G. The six sales are arranged chronologically in Table 5.2.9.1.

Table 5.2.9.1 Allenstown Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Allenstown	402	54	2/24/2005	$100,000	2.00	none	
Allenstown	402	37	6/16/2005	$100,000	4.46	.663/14.87%	Center of lot crossed by 150' ROW.
Allenstown	402	31	10/21/2005	$110,000	3.1	.853/27.52%	Back of lot crossed by 150' ROW.
Allenstown	402	50	9/14/2006	$104,500	2	none	
Allenstown	402	56	6/15/2007	$105,000	2	none	
Allenstown	402	39	8/21/2013	$65,000	3.99	.493/12.36%	Middle of lot crossed by 150' ROW.

Five lots sold in the 2 ½ year period from February 2005 to June 2007. Two of the lots sold were crossed by the HVTL and three were not, and there was no material difference in the prices at which the two groups sold.

Lot 36 is a heavily encumbered lot and is shown in the photograph below.

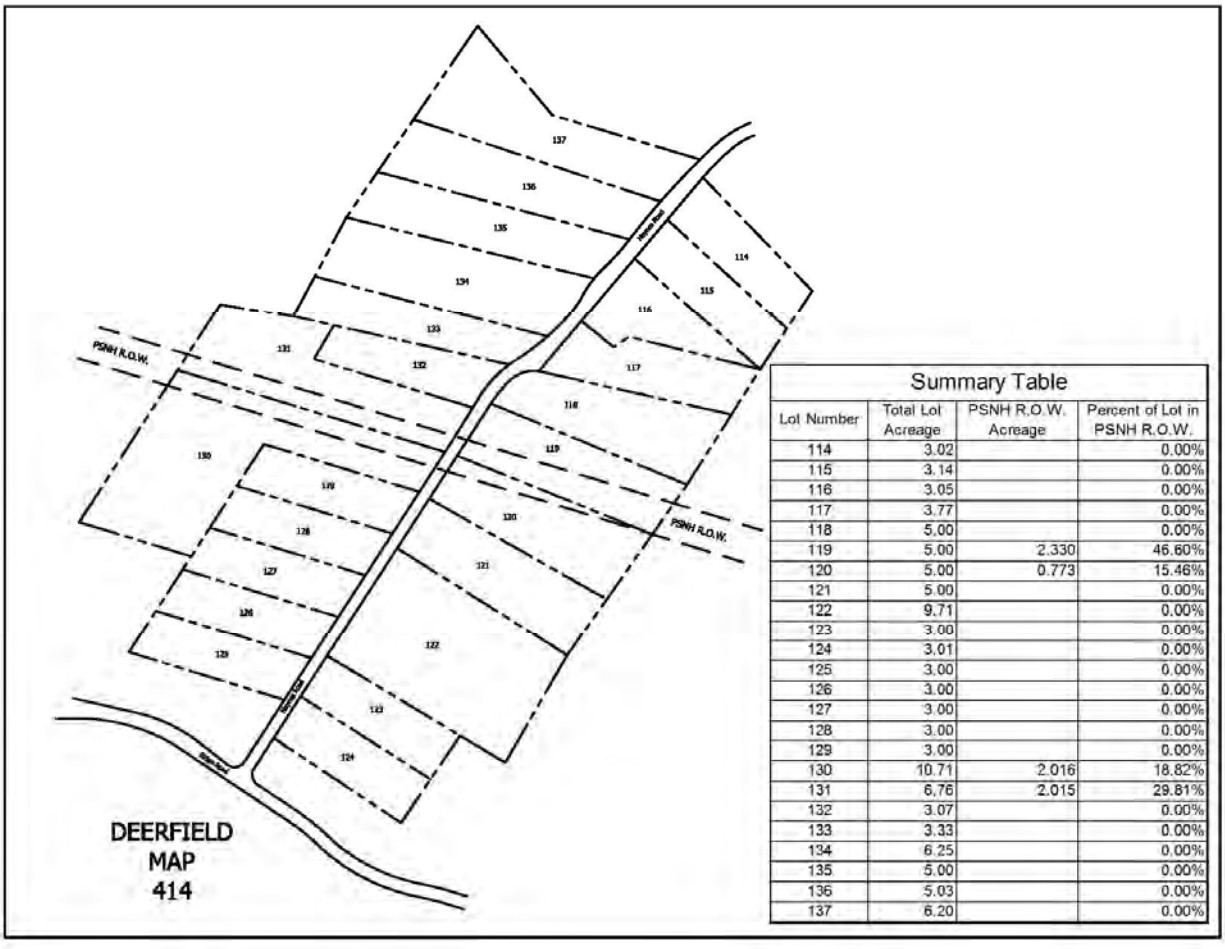
Figure 5.2.9.2 Photograph of Lot 36 (encumbered) as Improved (taken 7/15/2014)

Review of current tax cards for the lots in the Woodridge Estates Subdivision indicates a base value of $65,500 for two acre home sites with an additional $2,500 per acre for all additional land in the ownership. The excess acreage adds incremental value at the rate of 3.8% per acre relative to the site value, implying that the rear of the property has a barely discernible effect on the value of the lot.

5.2.10 Deerfield Subdivision Study

The Haynes Farm Subdivision was developed in the mid-1980's. Several developers were involved over the course of the development but most of the lots were established in a plan approved by the Deerfield Planning Board on December 18, 1985. That subdivision plan as well as one earlier and four subsequent, smaller subdivisions are in Appendix G. The portion of the subdivision north of Ridge Road consists of about 30 lots most of which range in size from three to five acres. The lots tend to be long with narrow street frontage on Haynes Road and are heavily wooded. The portion of the subdivision studied lies on either side of Haynes Road. It is located about three miles west of the Deerfield town center and is accessed by Ridge Road. Figure 5.2.10.1 shows the subdivision as it is represented on the Town of Deerfield Tax Map 414.

Figure 5.2.10.1 Haynes Farm Subdivision, Town of Deerfield, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	PSNH R.O.W. Acreage	Percent of Lot in PSNH R.O.W.
114	3.02		0.00%
115	3.14		0.00%

137	6.20		0.00%

As shown on Figure 5.2.10.1, a 150 foot wide transmission line easement crosses the middle of the subdivision. Four lots are encumbered. Three of the four have about0020two acres in the ROW. The

title research identified 17 useable lot sales. The spreadsheet detailing the title research is in Appendix G. The 17 sales are arranged chronologically in Table 5.2.10.1.

Table 5.2.10.1 Deerfield Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Deerfield	414	131	2/13/1986	$25,000	6.76	2.015/29.81%	Half of the 150' ROW is the south border of the lot.
Deerfield	414	132	3/13/1986	$29,000	3.07	None	
Deerfield	414	129	3/13/1986	$29,000	3	None	
Deerfield	414	128	3/13/1986	$29,000	3	None	
Deerfield	414	127	3/13/1986	$29,000	3	None	
Deerfield	414	126	3/13/1986	$29,000	3	None	
Deerfield	414	125	3/13/1986	$29,000	3	None	
Deerfield	414	130	3/18/1986	$25,000	10.71	2.016/18.82%	Half of the 150' Row is the north border of the lot.
Deerfield	414	136	11/7/1986	$42,500	5.03	None	
Deerfield	414	137	11/7/1986	$47,000	6.2	None	
Deerfield	414	135	11/26/1986	$40,500	5	None	
Deerfield	414	133	12/16/1986	$28,700	3.33	None	
Deerfield	414	116	10/13/1987	$44,000	3.05	None	
Deerfield	414	117	10/13/1987	$44,000	3.77	None	
Deerfield	414	114	1/26/1988	$47,500	3.02	None	
Deerfield	414	119	8/8/1988	$37,000	5	2.33/46.60%	150' Row is south border of lot.
Deerfield	414	115	9/28/1990	$33,000	3.14	None	

Eight lots sold in February and March of 1986 including two of the heavily encumbered lots. The other six lots were part of a bulk sale to Applevale, Inc., a home builder. Applevale paid $29,000 for each of the six lots, all of which were three acres. Lot 131 was larger, 6.76 acres, but the ROW encumbered 30% of the lot including a significant reduction in the developable portion of the lot fronting on Haynes Road. It was purchased for $25,000, a 14% discount relative to the price paid by Applevale, but a modest allowance given the impact of the ROW on the development area of the lot. Lot 130 was also larger, 10.71 acres, and also sold for $25,000 with the same implications of the ROW for the development area of the lot as was the case for Lot 131.[13]

After a pause in sales, over the 13 month period from November 1986 through January 1988, another seven lots sold, all unencumbered, at prices in the $40,000's except for lot 133. There were two sales in late 1988 and 1990 at significantly lower prices. A heavily encumbered lot (119) sold in late 1998 for $37,000 while an unencumbered lot (115) sold for $33,000 in 1990. Given the extended time periods, it

[13] The bulk sale to Applevale may reflect a discount. If the two encumbered lots that sold contemporaneously are compared to the six bulk sale lots, the implied HVTL effect is 14%. To the extent that the bulk sale lots were discounted, the implied HVTL effect would be larger.

is not possible to determine whether Lot 119 was discounted, but if it was, the amount was minor compared to the fact that nearly half of the lot is in the ROW.

In summary, the pricing effects seem to be limited to a possible 14% discount on Lots 130 and 131 both of which experienced substantial effects on the development area of the properties due to the narrowing of their unencumbered frontage on Haynes Road. There does not appear to be any effect of the HVTL on the timing of lot sales.

Figure 5.2.10.2 shows a photograph of Lot 130 as improved taken from Haynes Road.

Figure 5.2.10.2 Photograph of Lot 130 (encumbered) as Improved (taken 7/15/2014)

Review of current tax cards for the lots in the Haynes Farm Subdivision indicates a value of $96,000 for three acre home sites with an additional $2,500 per acre for all additional land in the ownership. The excess acreage adds incremental value at the rate of 2.6% per acre relative to the site value implying that the rear of the property adds little to the overall value of the property.

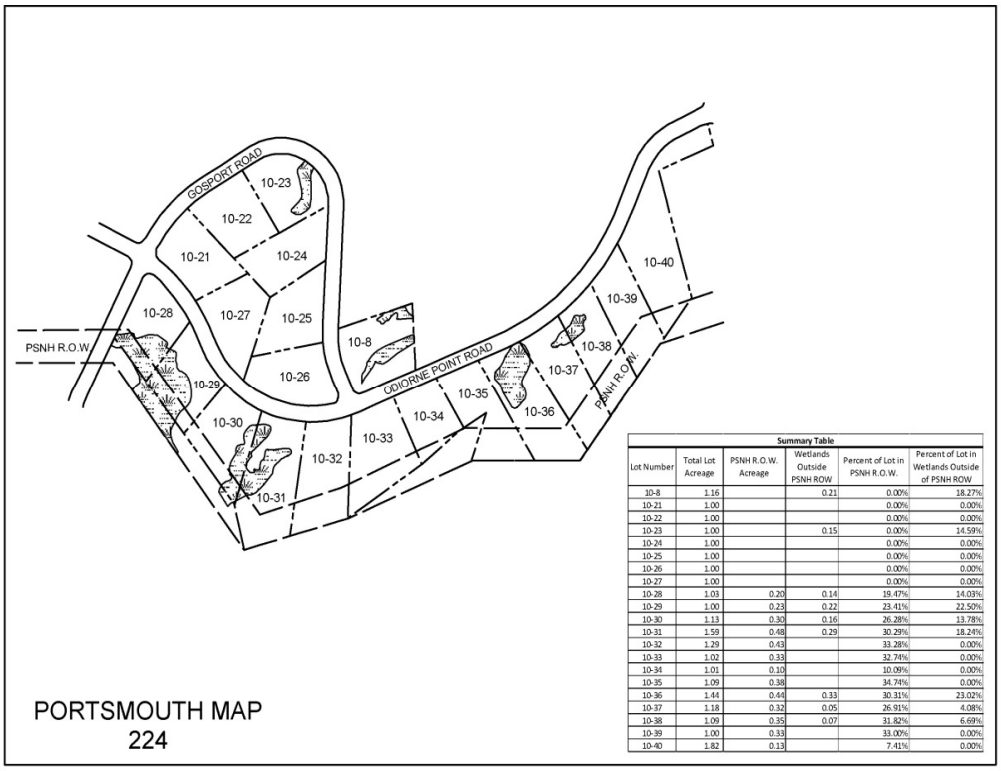
5.3 Study Area #3 Subdivision Studies

5.3.1 Portsmouth Subdivision Study

The Tucker's Cove Subdivision Plan was approved by the City of Portsmouth Planning Board on August 13, 1996. The subdivision includes 49 lots with considerable frontage on Tucker's Cove and Sagamore Creek which bound the subdivision on the northeast. The subdivision is a little less than two miles southeast of the Portsmouth City Center and is accessed from Elwyn Road. Most of the lots fall into the range of 1 to 1.5 acres. Figure 5.3.1.1 shows the portion of the subdivision studied here as it is shown on Portsmouth City Tax Map 224. Only the southwestern portion of the subdivision has been studied here as the northeastern portion includes lots with water frontage or significantly greater water

influence. As shown in the Figure, a 100 foot wide PSNH ROW crosses all of the lots on the south side of Odiorne Point Road. The ROW contains a single 34.5 kV distribution line on 34 foot tall wood poles. The encumbrance varies but generally is in the 20% to 35% range. In addition, several of the lots have wetlands which affect the location and extent to which the lot can be developed. In total there are 18 useable lot sales. The spreadsheet detailing the title research is in Appendix G. The sales are arranged chronologically in Table 5.3.1.1.

Figure 5.3.1.1 Tucker's Cove Subdivision, City of Portsmouth, New Hampshire



Summary Table

Lot Number	Total Lot Acreage	PSNH R.O.W. Acreage	Wetlands Outside PSNH ROW	Percent of Lot in PSNH R.O.W.	Percent of Lot in Wetlands Outside of PSNH ROW
10-8	1.16		0.21	0.00%	18.27%
10-21	1.00			0.00%	0.00%
10-22	1.00			0.00%	0.00%

10-30	1.13	0.30	0.16	26.28%	13.78%
10-31	1.59	0.48	0.29	30.29%	18.24%
10-32	1.29	0.43		33.28%	0.00%
10-33	1.02	0.33		32.74%	0.00%
10-34	1.01	0.10		10.09%	0.00%
10-35	1.09	0.38		34.74%	0.00%
10-36	1.44	0.44	0.33	30.31%	23.02%
10-37	1.18	0.32	0.05	26.91%	4.08%
10-38	1.09	0.35	0.07	31.82%	6.69%
10-39	1.00	0.33		33.00%	0.00%
10-40	1.82	0.13		7.41%	0.00%

The sales took place fairly evenly over the period from 1999 to early 2004. Looking at similar time periods when there were both encumbered and unencumbered sales, three comparison periods can be identified in Table 5.3.3.1. -- the six sales that took place in 1999, the two sales in 2000 and the ten sales that took place from 2001 on.

In the first period, the two encumbered lots sold at an average price of about $100,000 while the four unencumbered lots sold for an average of about $150,000. This implies a $50,000 or 33% discount from the unencumbered average. But looking back at the subdivision map, the unencumbered lots (lots 22, 23, 24, 25) are relatively unaffected by wetlands, while the two encumbered lots (lots 30 and 31) have significant wetlands. A conclusion with respect to the effect of the lines must account, therefore, for the possible effect of the wetlands.

Looking at Table 5.3.1.1, the effect of the wetlands can be inferred from the sale of six lots in a 14 month period from September 28, 2001 to December 3, 2002.

Table 5.3.1.1 Portsmouth Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Wetlands outside ROW (ac/%)
Portsmouth	224	25	1/4/1999	$150,000	1		
Portsmouth	224	22	3/10/1999	$140,000	1		
Portsmouth	224	30	4/30/1999	$97,900	1.13	.3/26.28%	.16/13.78%
Portsmouth	224	23	6/8/1999	$150,000	1		.15/14.59%
Portsmouth	224	24	9/14/1999	$165,000	1		
Portsmouth	224	31	10/8/1999	$104,533	1.59	.48/30.29%	.29/18.24%
Portsmouth	224	32	3/30/2000	$125,000	1.29	.43/33.28%	
Portsmouth	224	8	5/12/2000	$160,000	1.16		.21/18.27%
Portsmouth	224	26	3/30/2001	$180,000	1		
Portsmouth	224	28	9/28/2001	$160,000	1.03	.20/19.47%	.14/14.03%
Portsmouth	224	34	10/1/2001	$225,000	1.01	.10/10.09%	
Portsmouth	224	37	7/8/2002	$230,000	1.18	.32/26.91%	.05/4.08%
Portsmouth	224	33	7/30/2002	$235,000	1.02	.33/32.74%	
Portsmouth	224	29	9/9/2002	$150,000	1	.23/23.41%	0.22/22.5%
Portsmouth	224	38	12/3/2002	$238,933	1.09	.35/31.82%	.07/6.69%
Portsmouth	224	39	5/15/2003	$235,000	1	0.33/33.00%	
Portsmouth	224	40	8/8/2003	$230,000	1.82	.13/7.41%	
Portsmouth	224	36	4/21/2004	$225,000	1.44	.44/30.31%	.33/23.02%

All six of these lots are similarly affected by the ROW but lots 28 and 29 have significant wetlands while the other four (lots 33, 34, 37, 38) have little or no wetlands. Further, the two wetlands affected lots sold for an average of $155,000 while the lots free of wetlands issues sold for $232,000, a $77,000 discount or 33%. Going back to the difference observed in the sale price of lots 30 and 31 relative to lots 22, 23, 24 and 25, it appears that the entire 33% discount could be attributable to the wetlands, not the distribution lines.

This result is, however, inconsistent with a pair of sales in 2000. Lot 32 with ROW encumbrance and no wetlands sold for $35,000 less (22%) than lot 8 which had no encumbrance but did have 18% of the lot in wetlands.

From 2001 on, there was only a single sale of an unencumbered lot at $180,000 while the nine encumbered lots averaged $214,000 over the remainder of the period. This represents a premium of $34,000 or 19% over the sale price of the unencumbered lots. There are no subsequent sales of unencumbered lots after March 30, 2001 for purposes of comparison, but it is clear from the data that only 6 months or so after the sale of unencumbered lot 26 for $180,000, the encumbered lots were generally selling at around $230,000 except for the two wetlands affected lots (28 and 29). As a result, over the entire 1999 to 2004 period, the encumbered lots sold for an average of $188,000 while the unencumbered lots averaged $157,500. Some of this 20% difference is attributable to increases in real estate prices over the period. It's possible that there was some effect of the distribution lines on the

sale prices of these lots, but most of the apparent effects early in the sales period appear to be due to wetlands effects. Subsequently, the encumbered lots sold at very strong prices in spite of their substantial encumbrance.

The timing of the lot sales does indicate a preference for the unencumbered lots. They sold out in an average of a little less than a year, while the encumbered lots averaged about three years on the market. It must be noted, however, that the lots on the north side of Odiorne (the unencumbered lots) had fewer wetland issues and also may have benefitted from greater proximity to the waterfront and the water front access easements.

Figures 5.3.1.2 and 5.3.1.3 show photographs of an encumbered and unencumbered lot respectively.

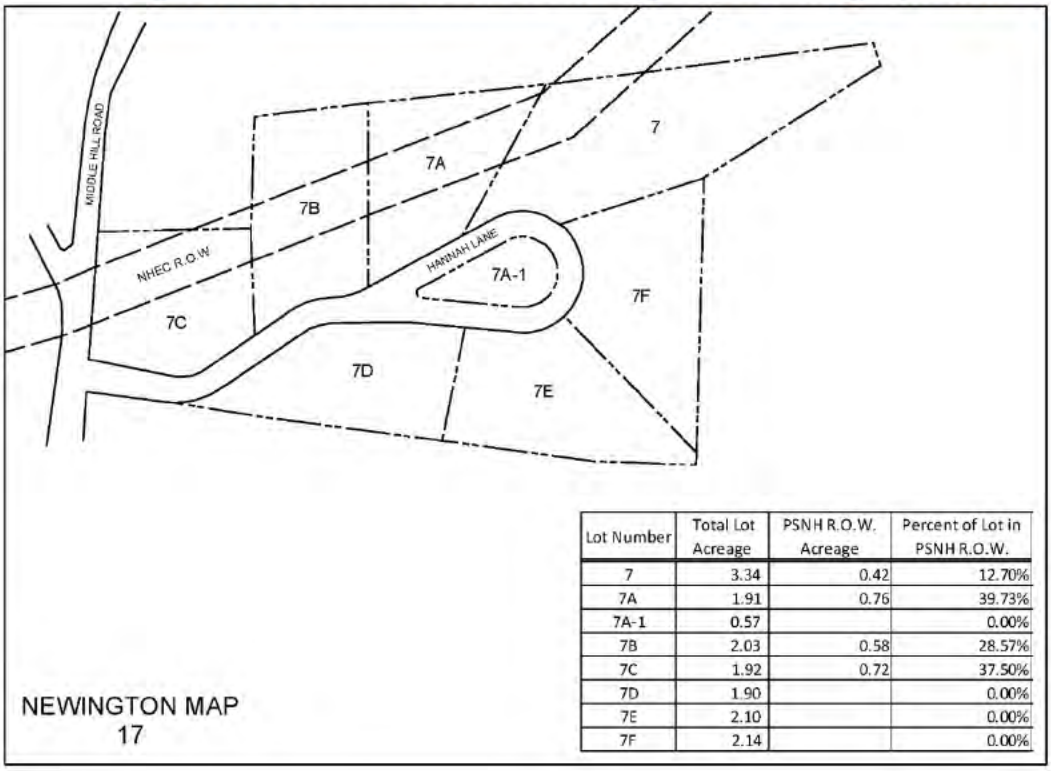
Figure 5.3.1.2 Photograph of Lot 10-24 (unencumbered) as Improved (taken 3/13/15)

Figure 5.3.1.3 Photograph of lot 10-39 (encumbered) as Improved (taken 3/13/15

5.3.2 Newington Subdivision Study

The Coleman Estates Subdivision was approved by the Newington Planning Board on May 5, 1988. Sales took place from late 1989 to July 1992. The subdivision is located about one quarter of a mile northeast of the Newington town center and is accessed from Nimble Hill Road. It consists of seven lots most of which are about two acres in size. Figure 5.3.2.1 shows the subdivision as it is shown on the Town of Newington Tax Map 17.

Figure 5.3.2.1 Coleman Estates Subdivision, Town of Newington, New Hampshire



Lot Number	Total Lot Acreage	PSNH R.O.W. Acreage	Percent of Lot in PSNH R.O.W.
7	3.34	0.42	12.70%
7A	1.91	0.76	39.73%
7A-1	0.57		0.00%
7B	2.03	0.58	28.57%
7C	1.92	0.72	37.50%
7D	1.90		0.00%
7E	2.10		0.00%
7F	2.14		0.00%

As shown in the Figure, a 100 foot wide PSNH ROW crosses four of the lots in the subdivision. The ROW contains a 34.5 kV distribution line on 34 foot wood poles. Lot 7 is about 13% encumbered while lots 7A, 7B and 7C are encumbered in the 30% to 40% range. In fact, because the ROW passes through the midsection of these three lots, the effective decrease in the development area is even larger. The title research identified six useable lot sales. The spreadsheet detailing the title research is in Appendix G. The six sales are arranged chronologically in Table 5.3.2.1.

Table 5.3.2.1 Newington Subdivision Study Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	ROW Encumbrance (ac/%)	Description of ROW location
Newington	17	7F	10/27/1989	$72,000	2.14		
Newington	17	7A	5/1/1990	$37,500	1.91	.76/39.73%	ROW bisects lot
Newington	17	7	5/3/1990	$48,000	3.34	.42/12.70%	ROW crosses back corner of lot
Newington	17	7B	5/3/1990	$37,047	2.03	.58/28.57%	ROW bisects lot
Newington	17	7D	5/4/1990	$52,500	1.9		
Newington	17	7E	7/10/1992	$76,000	2.1		

With one exception, the sales all took place in an eight month window from October 1989 to May 1990. There doesn't appear to be any pattern in the timing of the sale of the encumbered lots relative to the

unencumbered lots. One of the unencumbered lots sold first followed by the three encumbered lots with the two remaining unencumbered lots selling last. The average price for the encumbered lots was $40,800 while the unencumbered lots sold for $66,800 on average. This was a discount of about 39% compared to the significant reduction in developable acreage for these lots.

Figures 5.3.2.2 and 5.3.2.3 show photographs of an encumbered and unencumbered lot respectively.

Figure 5.3.2.2 Photograph of Lot 7E (unencumbered) as Improved (taken 3/13/15)

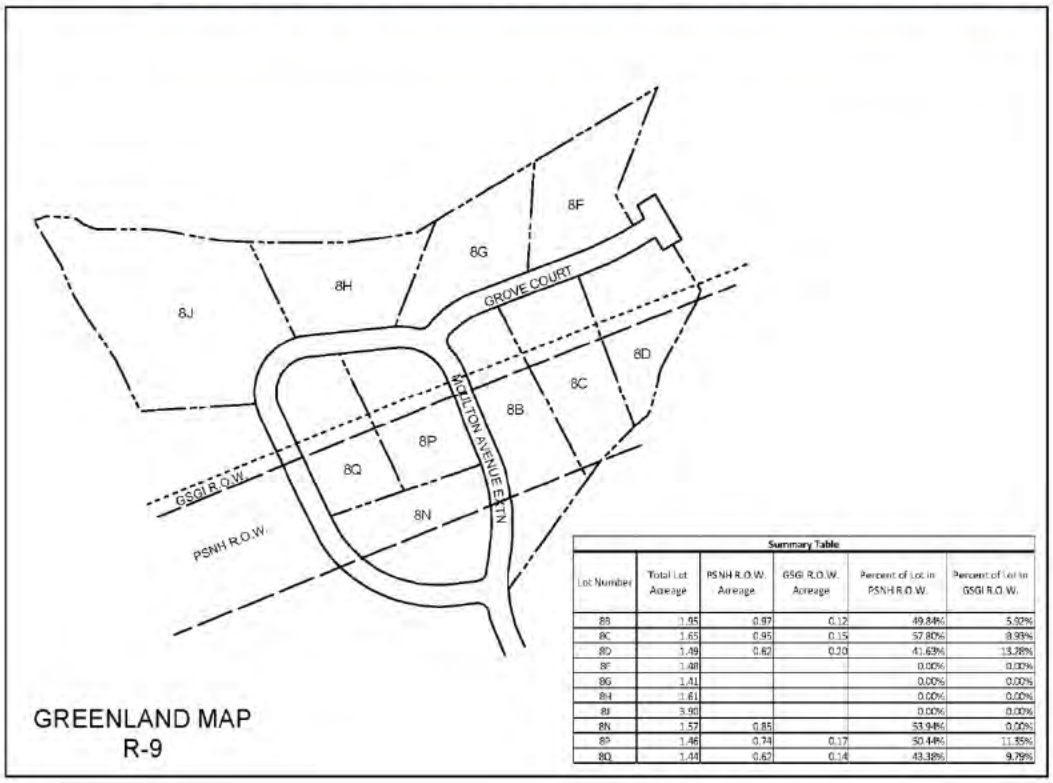
Figure 5.3.2.3 Photograph of Lot 7A (encumbered) as improved (taken 3/13/15)

5.3.3 Greenland Subdivision Study

The Woodland Grove Subdivision was approved by the Greenland Planning Board on June 9, 1987. The sale history of the lots studied stretches over the period December 1995 to November 2001. The developer was Hartmann Construction Corp. The subdivision plan is attached in Appendix G.

The subdivision is located a little less than one mile southeast of the Greenland Town Center. It is accessed from Post Road, State Highway 151. As shown on Figure 5.3.3.1, there are 10 lots studied as they are represented on the Town of Greenland Tax Map R9. Most of the lots are about 1.5 acres and as shown on the Figure, six of the 10 are heavily encumbered by a PSNH ROW. The ROW is 265 feet wide and contains 3 lines. There are two 115 kV lines, both on 43 foot tall wood H-Frame structures, and a 34.5 kV line on 34 foot tall wood poles. In addition, the ROW is bordered on the north by a 30 foot wide Granite State Gas pipeline ROW. The combined effect of the two utility easements is to encumber between one-half and two-thirds of the six affected lots.

Figure 5.3.3.1 Woodland Grove Subdivision, Town of Greenland, New Hampshire



Title research was carried out on the 10 lots and the spreadsheet summarizing that work is contained in Appendix G. The sales of the lots are arranged chronologically in Table 5.3.3.1. The sale of Lot 8G is not included as the title research indicated that it was not a Fair Market Sale. The table shows the unencumbered acreage for each of the remaining nine lots as well as the number of structures on each lot.

Table 5.3.3.1 Greenland Subdivision Summary

Town	Map	Lot	Purchase Date	Price	Size (ac)	PSNH Encum-brance (ac/%)	Gas PL Encum-brance (ac/%)	Unencum-bered (ac/%)	Structures on lot
Greenland	R9	8N	12/26/1995	$65,000	1.57	.85/53.94%		.72/45.86%	0
Greenland	R9	8J	12/17/1997	$85,000	3.9			3.9/100%	
Greenland	R9	8F	4/27/1998	$79,000	1.48			1.48/100%	
Greenland	R9	8P	8/7/1998	$60,000	1.46	.74/50.44%	.17/11.35%	.55/37.67%	3
Greenland	R9	8H	9/22/1998	$88,000	1.61			1.69/100%	
Greenland	R9	8Q	3/31/2000	$80,000	1.44	.62/43.38%	.14/9.79%	.68/47.22%	1
Greenland	R9	8D	8/16/2000	$80,000	1.49	.62/41.63%	.20/13.28%	.67/44.97%	4
Greenland	R9	8C	5/29/2001	$90,000	1.65	.95/57.80%	.15/8.93%	.55/33.33%	1
Greenland	R9	8B	11/16/2001	$80,000	1.95	.97/49.84%	.12/5.92%	.86/44.10%	0

After an initial sale in late 1995, four of the lots sold in a condensed time frame from December 1997 to September 1998. The remaining four sold over a two year period in the years 2000 and 2001. In the first period, three of the lots were unencumbered while one was 63.2% encumbered and had three structures on the property. Of the 1.46 acres of the encumbered lot, only .55 acres were outside the ROW and developable. It sold for $60,000 while the 3 unencumbered lots sold for an average of $84,000, a discount approaching 30% but not nearly in proportion to the extent of the encumbrance. The last four lots to sell were encumbered in the range of 52.8% to 66.7% and three of the four had structures on the property. They sold for an average of $82,500. Overall, the encumbered lots sold at an average price of $75,800 while the unencumbered lots sold for $84,000 on average, approximately a 10% difference. For the encumbered lots, the average size of the developable acreage was .67 acres while for the unencumbered lots the average size was 2.33 acres, approximately a 71% difference.

The encumbered lots appear to have faced some market resistance. Measuring from the first sale in late 1995, the unencumbered lots averaged 28 months to sell while the encumbered lots averaged 46 months, an 18 month difference in favor of the unencumbered lots.

Figures 5.3.3.2 and 5.3.3.3 show photographs of a representative encumbered and unencumbered lot respectively.

Figure 5.3.3.2 Photograph of Lot 8G (unencumbered) as Improved (taken 3/13/15)

Figure 5.3.3.3 Photograph of Lot 8D (encumbered) as Improved (taken 3/13/15)

5.4 Subdivision Studies: Summary and Conclusions

5.4.1 Summary of Findings

The objective of the Subdivision Studies is to identify residential subdivisions that are representative of the diversity in land use and development patterns across New Hampshire with some lots that are encumbered by, or abut, a HVTL ROW while others do not. Since these are unimproved lots, if there are effects of the ROW on the marketability of the lots, it should be possible to discern differences in the pricing of the two groups of lots or in the rate at which the two groups of lots sold.

In fact, if there are effects, they should be easiest to detect in the context of the Subdivision Studies. First, the effect is not diluted by the value of the improvements. Since improvements commonly account for 60 to 75% of the total value of a residential property, locational factors could have a significant effect on the value of the site but the relative effect on the value of the improved property would be much smaller and perhaps difficult to detect. Second, a key to locational factors affecting site value is the availability of substitutes, some with the locational factor, and some without it. In the context of HVTL, this is much more likely at the point of lot sales than after homes have been built. In the subdivisions studied here, as the subdivision was developed, there were lots encumbered or abutting the HVTL and there were other similar lots without the HVTL influence that provided a good substitute for someone looking to avoid the HVTL. Once homes are built, you are less likely to have close substitutes with and without the HVTL and so the effect, if any, is harder to identify.

5.4.1.1 Findings from the Corridor #2 Subdivision Studies

The findings for each of the 10 subdivisions along Corridor #2 are summarized in Table 5.4.1.1. It was possible to identify a total of 126 sales by the developers of these subdivisions and 47 of these sales involved encumbered or abutting lots. Five of the 10 subdivisions had some sales after the year 2000 while the others were fairly evenly divided between the 1970's, 80's and 90's. The extent of the encumbrance varied but there were several instances of lots encumbered in the 30% to 70% range. Findings with respect to pricing are discussed first followed by discussion of timing effects.

Table 5.4.1.1 Summary of findings: Corridor #2 Subdivision Studies

Town	Subdivision Name	Date of First Lot Sale	Date of Last Lot Sale	# of Lots Studied	Type	Typical Lot Size	# of Encumb or Abutting Lots	Range of Encumb	Location of ROW on Lot	Evidence of Timing Effects	Evidence of Price Effects	Assessor Site Value	Assessor Excess Land Value/AC	Ration of Excess Value/AC to Site Value
Whitefield	John Matthews SD	7/24/1986	5/22/1987	10	SFD	12 AC	6	0.02% to 22.65%	In almost every case, the ROW was at the rear of large, heavily wooded lots.	No	No	$35,000	$108	0.31%
Sugar Hill	Nasson Farm SD	11/2/1985	6/15/2003	7	SFD	5 AC	6	1.17% to 57.5%	Generally at the rear of wooded lots.	No	Yes. One lot that is severed leaving only a 1AC portion that was developable at the front of lot sold for 47% of comparable lots.	$64,000	$1,500	2.34%
Easton	Pepper Brook SD	9/6/1996	7/18/2001	16	SFD	5.5 AC	2	9.73% to 33.81%	One lot bisected with 33.81% encumbered and building area compromised. The other crossed at rear of lot.	No	Yes, bisected lot appears to have suffered a 5% discount relative to lots with fewer developmental constraints.	$112,500	$3,000	2.67%
Woodstock	Lost Valley SD	12/12/1970	9/14/1979	23	SFD	1.25 AC	5	39.38% to 69.64%	The ROW crosses the rear of wooded lots but the encumbrance is substantial and the lots are small.	Yes, encumbered lots averaged 7 years to sell while unencumbered sold in an average of 4.5 years.	No observable price effects. The encumbered lots had smaller development area than the unencumbered lots. They are larger on average by .49 AC compared to average encumbrance of .86 AC.	$85,000	$3,000	3.53%
Campton	Central Park Estates SD	12/10/1991	5/9/2003	12	MH	1.0 AC	7	7.29% to 43.49%	There are two ROW. Both run along the sides of lots. Lots are wooded but small and the encumbrance on many is significant.	No	No evidence of price effects. Encumbered lots sold at prices as good, or better, than unencumbered lots.	$43,560	$2,500	5.74%
Holderness	Heritage Hill SD	1/19/1967	9/12/1986	21	SFD	1.5 AC	6	No Encumbered Lots	ROW borders the subdivision. There are 6 abutting lots.	Yes, average sale time for abutting lots was 13.4 years. For non-abutting the average was 11.5 years.	No evidence of price effects. Abutting lots are about .85 AC larger than non-abutting lots.	$45,500	$5,600	12.31%
Franklin	Ceres Timberland Properties SD	6/27/2001	5/23/2002	6	SFD & MH	7 AC	6	15% to 23%	Lots are heavily wooded. The 225' ROW cuts through the middle of 3 lots. An abandoned 112' ROW borders the other 3 lots.	Yes, all 6 sold in 11 months, although the lots bordered by the inactive ROW sold before lots bisected by the 225' active ROW.	No	$40,000	$1,100	2.75%
Canterbury	Bella Villa SD	6/30/1978	2/12/1987	8	SFD	1.25 AC	3	2.50% to 43.77%	Lots are heavily wooded. A 250' ROW crosses back of three lots.	No	No evidence of price effects. The encumbered lots were .18 AC larger than the unencumbered lots. This is smaller than the average area encumbered of .33 AC.	$75,000	$3,000	4.00%
Allenstown	Woodridge SD	2/24/2005	8/21/2013	6	SFD	2-4.5 AC	3	12.36% to 27.52%	Lots are long, narrow, and heavily wooded. 150' ROW significantly reduces development area.	No	No	$65,000	$2,500	3.85%
Deerfield	Haynes Farm SD	2/13/1986	9/28/1990	17	SFD	3 AC	3	18.82% to 46.60%	Lots are long and narrow. 150' ROW significantly narrows the developmental area fronting Haynes Road.	No	Yes, two heavily encumbered lots with significant reduction in site development area sold for 14% less than unencumbered lots.	$96,000	$2,500	2.60%

- Price Effects

Of the 47 lots either encumbered by, or abutting, Corridor #2, four showed evidence of price effects. In one case the effect was small, 5% for one sale in Easton. For two sales in Deerfield there were sale price effects estimated at 14% and the lots were encumbered 19% and 30% respectively. The only other sale showing a price effect was in Sugar Hill where there was a 47% discount. This was a five acre lot with almost three acres encumbered across the middle of the lot, leaving only a one acre development site between the ROW and the street access. Similarly, the street access of the two Deerfield lots was very narrow (200 feet) and the ROW took 75 feet leaving a very constrained area in which to site improvements. The other 43 sales showed no price effects despite the fact that many were heavily encumbered. Overall, price effects were rare. In the three cases where there was a significant effect, development of the lots was severely compromised by the HVTL. Further, in every case, the percentage discount was less than the percentage of the lot encumbered.

- Timing Effects

In seven of the subdivisions, the encumbered or abutting lots sold at the same rate, or in some cases faster, than the control lots. In the other three subdivisions, the average for the encumbered lots was longer. In the City of Franklin, the difference was only a matter of a few months as all of the sales took place in 11 months. In Holderness the sales period stretched over a very long period and the encumbered lots averaged 13.4 years while the control lots sold in an average of 11.5 years. The only subdivision where there was a large difference was in the Town of Woodstock where the average marketing time for the encumbered lots was seven years and 4.5 years for the unencumbered lots.

- Lot Size

There were three subdivisions (in the Towns of Woodstock, Holderness and Canterbury) where there was no evidence of price effects, but where the encumbered or abutting lots were larger on average than lots not crossed by, or adjacent to, the corridor. In the Town of Woodstock, the HVTL crosses the back of several lots and the encumbered lots are .49 acres larger on average than the unencumbered lots. The average encumbrance is .86 acres, so while the total lot size is larger, the unencumbered portion is smaller by .36 acres yet there was no evidence of price effects. In the Town of Canterbury, the HVTL also crossed the back of several lots. There the average area encumbered, .33 acres, was greater than the increased size of the encumbered lots, .18 acres, so the unencumbered portion of both groups of lots was similar and, again, there was no evidence of price effects.

The subdivision in the Town of Holderness had no encumbered lots but several lots were adjacent to the HVTL and they were about .85 acres larger than the average of the non-abutting lots, 1.28 acres.

5.4.1.2 Findings from the Study Area #3 Subdivision Studies

The 10 subdivisions that were studied along Corridor #2 provided evidence from 10 New Hampshire towns stretching from Whitefield in the north to Deerfield in the south. The sales included in these studies occurred over a substantial period of time and represent many of the State's population centers with the exception of the southeastern, coastal portion of the State. To represent that area of the State,

three subdivisions were found within a 10 mile radius of the center of Portsmouth. There were 33 lot sales in the three subdivisions identified for study and 21 of these lots were encumbered by a ROW. The time periods involved included the early 1990's, the late 1990's and the early 2000's. Table 5.4.1.2 summarizes the findings for the three Study Area #3 subdivisions.

Table 5.4.1.2 Summary of Findings: Study Area #3 Subdivision Studies

Town	Subdivision Name	Date of First Lot Sale	Date of Last Lot Sale	# of Lots Studied	Type	Typical Lot Size	# of Encumbered or Abutting Lots	Range of Encumbrance	Location of ROW on Lot	Evidence of Timing Effects	Evidence of Price Effects
Portsmouth	Tucker's Cove	1/4/1999	4/21/2004	18	SFD	1AC	12	7.4% - 33.3%	PSNH ROW crosses the rear of the lots. In addition, wetlands occupy an additional 15% to 20% of the area outside the PSNH ROW of many of the encumbered lots	Yes. The lots all sold in a little over five years. The lots encumbered by the PSNH ROW were on the market an average of three years, while the unencumbered lots averaged one year on the market.	Indeterminate. There was a possible price effect due to the HVTL, but there is good evidence that the effect was in response to the wetlands on the properties. Over the five years as a whole, the encumbered properties sold for about 20% more on average than the unencumbered properties due to the fact that they sold later and this was a period of rising prices.
Newington	Coleman Estates	10/27/1989	7/10/1992	6	SFD	2 AC	3	12.7% - 39.7%	ROW bisects lots leaving a development area at the front of the lots of about one-third the original lot size.	No	Yes. The encumbered lots sold for about 39% less than the unencumbered lots, but their development area was much smaller than the unencumbered lots.
Greenland	Woodland Grove	12/26/1995	11/16/2001	9	SFD	1.5 AC	6	41.6% - 57 8%	One-half to two-thirds of lot encumbered by PSNH ROW and gas pipeline ROW.	Yes. All but one lot sold in four year period but unencumbered lots sold in about half the time as the encumbered lots.	Yes. Over the entire period, the encumbered lots sold for about 10% less than the unencumbered lots, but their development area average only .67 acres compared to an average of 2 33 acres for the unencumbered, a 71% difference.

- Price Effects

The Greenland and Newington Subdivisions were similar in that there were negative price effects for the encumbered lots although the price effects were small compared to the reduction in the development area of the affected properties. For Woodland Grove in Greenland, there was a 10% discount in price, but the development area of the encumbered lots was 71% less on average than the unencumbered lots. For the Coleman Estates Subdivision in Newington there was a 39% discount in price, but the development area of the encumbered lots was significantly less than the unencumbered lots. For Tucker's Cove in the City of Portsmouth, the price effect was indeterminate. Most of the price effect appeared to be due to wetlands on the properties and not the lines. In fact, the encumbered properties ended up for selling for 20% more on average than the unencumbered properties due in part to the fact that they sold later in a period of rising real estate prices.

Overall, the lots in Study Area #3 were smaller (1 to 2 acres), were of greater value and did not have acreage in addition to the home site (what we called excess acreage) which was characteristic of many of the subdivisions studied in Corridor #2.

- Timing Effects

There were timing effects observed at two of the three subdivisions studied. In both the Greenland and Portsmouth subdivisions, the heavily encumbered lots sold less quickly than the unencumbered lots. There were no timing effects observed at the Newington subdivision.

- Lot Size Effects

Despite the large encumbrances on the affected lots in each of the three subdivisions, there was no significant difference in the size of the encumbered versus the unencumbered lots. This results in the portion of the encumbered lots available for development being much smaller for the encumbered than the unencumbered lots.

5.4.2 Conclusions from the Subdivision Studies

Investigation of the lot sale history at 10 New Hampshire subdivisions along Study Corridor #2 indicates a general lack of marketability issues associated with lots encumbered by, or abutting, a HVTL ROW. Timing issues were apparent in only three of the ten subdivisions and two of those were minor. Price effects were similarly infrequent. In the sale of 47 lots encumbered by, or abutting, a HVTL ROW, there was an apparent price effect in only four cases. It should be reiterated that these conclusions are in some cases based on a small number of sales and there could have been other factors that influenced these transactions that have not been identified here. Nevertheless, the general absence of timing and pricing effects evident here indicates that there is no consistent measurable effect of the HVTL on the marketability of affected lots. This suggests two questions. Why weren't these lot sales more sensitive to the HVTL and can any generalizations be drawn from the small number of cases in which effects were found?

The lots in the 10 subdivisions were generally in excess of one acre. Four subdivisions were in the 1 to 1.5 acre range, two in the 2 to 4.5 acre range and four in the 5 to 12 acre range. A typical lot was a five

acre elongated rectangle with relatively narrow frontage and substantial depth. The improvements were almost uniformly oriented to the frontage and set back from the frontage no more than 200 feet. The backs of the lots were heavily vegetated, and the vegetation was seldom more than 50 to 100 feet from the back of the house. Further, the satellite imagery shows no evidence of access to, or utilization of, the rear of the lot. The "excess" acreage to the rear of the lot appears to add little utility or value to the property as a whole. A property's value appears to depend on the acre or so devoted to the home site with little utility or value going to the remaining acreage.

The extremely low value, and by implication, lack of use and utility, of the rear acreage is corroborated by looking at the way land is valued in the tax assessment process. In New Hampshire, the assessment process is carried out at the town level and there is considerable variation in terms of format and practice, but Table 5.4.2.1 shows a consistent pattern. Excess land (per acre) is typically valued between 2% and 4% of site value.

Table 5.4.2.1 Relative Value of Excess Acreage Compared to Site Value[14]

Town	Assessor Site Value	Assessor Excess Land Value/Acre	Excess Land/Site Value
Whitefield	$35,000	$108	0.30%
Sugar Hill	$64,000	$1,500	2.34%
Easton	$112,500	$3,000	2.67%
Woodstock	$85,000	$3,000	3.53%
Campton	$43,560	$2,500	5.74%
Holderness	$45,500	$5,600	12.31%
Franklin	$40,000	$1,100	2.75%
Canterbury	$75,000	d$3,000	4.00%
Allenstown	$65,500	$2,500	3.82%
Deerfield	$96,000	$2,500	2.60%

This helps explain the absence of price and timing effects in the Corridor #2 subdivision lot sales. The used and value generating portion of the lot is the small enclave at the front of the lot where the residence is developed. The rear of the lot plays little role in the value calculation and the presence, therefore, of a HVTL ROW in the rear portion of the lot apparently has little impact on the marketability of the lot.

In each of the four lots where there was a price effect, the lot was bisected and the development area of the remaining portion of the lot between the HVTL and the lot frontage was constrained and awkwardly

[14] Based on 2014 and 2015 tax cards. Site value may be based on one, two, three, or five acre sites depending on the town.

shaped compared to other lots in the subdivision. Despite the seriousness of the impact, in three of these four cases, the discount was 14% or less.

The findings for the three subdivisions in Study Area #3 appear to reflect the reality in the southeast area of the State of smaller lots, higher land prices and a general lack of lower valued, "excess" land. In the Greenland and Newington subdivisions, the development area of the encumbered lots was significantly smaller than the unencumbered lots and sold for 10% to 30% less. The affected lots in the Portsmouth Subdivision were more like the Corridor #2 lots. The encumbrance was smaller, 10% to 25%, and was at the back of the lot. These lots were also affected by wetlands which appear to have affected their value.

Consistent with the Corridor #2 findings, it appears that there have to be constraints on the development options for a site before HVTL become a price issue. Or, put another way, the encumbrance has to impinge on the portions of the lot important to the siting of the home for there to be an impact on value.

With respect to marketing time, there was no effect discerned in eight of the 13 subdivisions studied. In the five cases where there was an effect, two were small (Holderness and Franklin) and the other three had lots that were heavily encumbered by the HVTL ROW (Woodstock, Greenland) or by a combination of the ROW and wetlands (Portsmouth).

6 Real Estate Market Activity Research

6.1 Methodology

The previous chapters presented detailed information on individual transactions or groups of transactions which involved properties either encumbered by, or abutting, a HVTL in New Hampshire. These sales were evaluated relative to the sales of similar properties that were not affected by a HVTL. The studies of these transactions are able to address both potential effects on the sale price of the affected properties and the time required to sell the property relative to unaffected properties.

Additional evidence on these questions was pursued by analyzing recent Multiple Listing Service ("MLS") data. MLS data was collected for all residential property sales within one mile of the Corridor #2 ROW beginning on January 1, 2013 and continuing to December 31, 2014. Data were first collected for all sales occurring in towns for which some portion of the town falls within the one mile criterion of the research. The location of the property sold was then determined and straight line distance to the ROW was measured from satellite imagery. In some cases, it was not possible to identify the location of the property from the MLS data and in those cases the sale was not analyzed. It was possible to determine the location for approximately 95% of the properties.

The sales were then categorized by distance into three groups—encumbered or abutting, 1 foot to 500 feet and 501 feet to one mile. Table 6.1 shows the number of sales analyzed for each of these three locations for 8 full quarters starting in the first quarter of 2013.

Table 6.1 Number of Residential Transactions by Distance Zone

	Number of Residential Transactions by Distance Zone[15]		
	Abutting/ Encumbered	1-500 Feet	More than 500 Feet
2013 Q1	4	4	40
2013 Q2	10	8	66
2013 Q3	9	8	76
2013 Q4	5	11	60
2014 Q1	3	4	32
2014 Q2	3	12	65
2014 Q3	2	15	103
2014 Q4	6	9	95

The sales of encumbered properties average about five per quarter, properties located 1 foot to 500 feet about nine per quarter and properties located 501 feet to one mile about 67 per quarter.

[15] The following property types are included: Single-Family Residential, Condo, Multi-Family, and Mobile/Manufactured Housing.

There are two measures of market activity that can potentially shed light on pricing and timing issues. The MLS data describe both the listing price of the property and the sale price. The ratio of the sale price to the listing price ("SP/LP") is taken as an indication of the strength of the market with significant shortfalls of sale prices relative to listing prices indicative of buyer resistance. Second, the MLS data describe the days the property was on the market ("DOM") under the current listing and again, relatively high DOM would be an indication of buyer resistance. Both measures are examined below.

6.2 Relationship of Sales Price to List Price by Location of Property

It must be recognized that some properties were listed several times with successively lower list prices implying a larger discount from the original listing price than indicated by the ratio of the sale price to the list price under the current listing. Nevertheless, real estate professionals routinely look at the SP/LP ratio as an indicator of market strength with a high ratio indicating an active market with strong demand and a low ratio associated with a slow market with weak demand.

Figure 6.1 shows quarterly averages for the SP/LP data for the three groups of locations for 2013 and 2014.

Figure 6.1 Average Sale Price to List Price Ratio

The figure shows that the sales of the encumbered properties tend to have the same or higher SP/LP ratio than either of the other two location groups. The proximate properties have a more mixed relationship to the more distant properties, lower in some quarters, similar in several and higher in

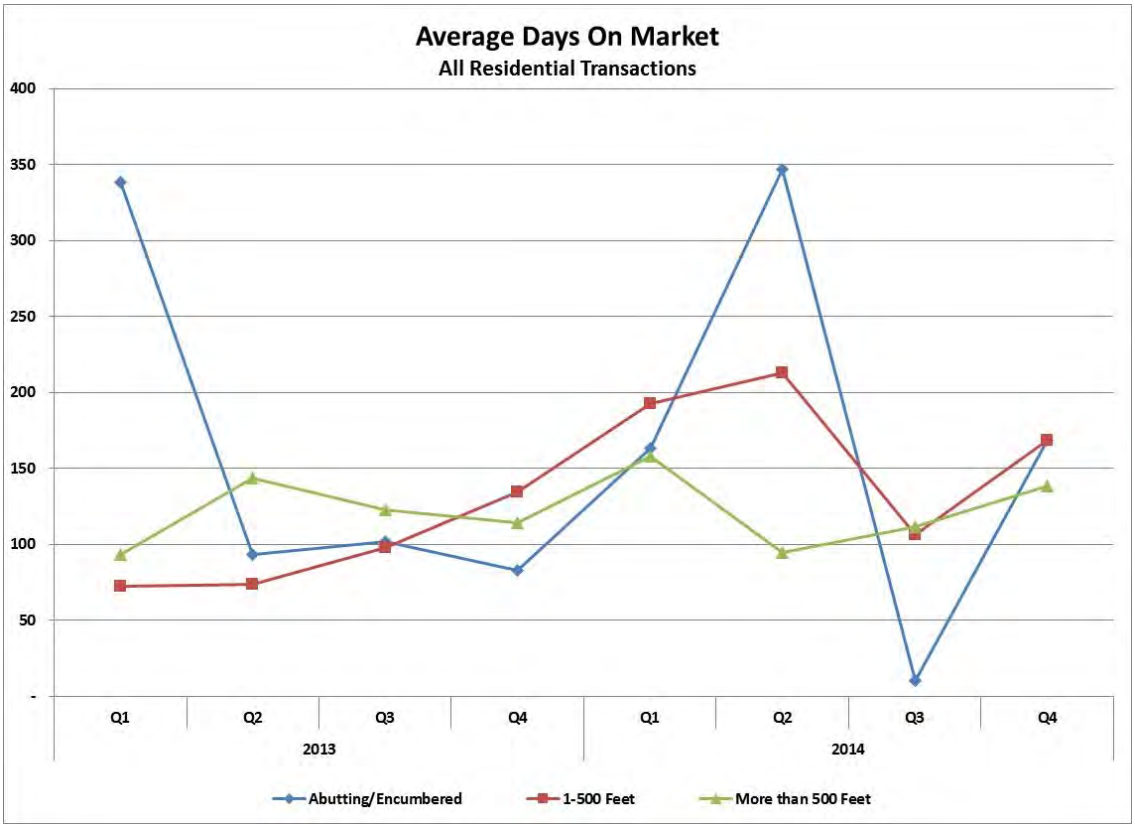
others. The number of observations in each quarter is small so not too much should be read into these results, but there is no indication of any systematic market disadvantage of the encumbered properties or the proximate properties relative to the more distant group.

6.3 Days on Market by Location of Property

As with the SP/LP ratio, DOM describes the market experience of the property under its current listing. In the case of properties that have been listed more than once, DOM underestimates marketing time. Nevertheless, DOM is recognized as a good indicator of market strength with low DOM implying an active market with strong demand and a high DOM indicating a slow market with weak demand.

Figure 6.2 shows quarterly averages for DOM for the three groups of locations for 2013 and 2014.

Figure 6.2 Average Days on Market



In six of the eight quarters, average DOM was the same or lower for the abutting/encumbered properties compared to the other two groups. In the other 3 quarters, DOM was higher for the encumbered properties. No analysis has been carried out on these individual sales except to note that the averages for the abutting/encumbered properties for both Q1 in 2013 and Q2 in 2014 were very much influenced by a single transaction (in Q1, 2013 a single property was on the market for 468 days and in Q2, 2014, a single property was on the market for 649 days). The proximate properties have lower DOM than the more distant properties about half the time and higher DOM about half the time. Again, caution must be used in drawing conclusions based on relatively small numbers of observations,

but there appears to be no systematic tendency for the DOM of the abutting, encumbered or proximate properties to be greater than for properties at a greater distance from the HVTL.

7 Summary and Conclusions

7.1 The Published Literature

7.1.1 Residential Property

There is an extensive published literature addressing the effects of HVTL on the market value of residential properties. Chapter 2 of this report focused on the most widely quoted of these studies that are relatively recent and deal with study areas in the United States and Canada. These studies all rely on the statistical analysis of the sales of large numbers of residential properties located at different distances from a HVTL corridor. Attributes of the house and lot are controlled for statistically so that possible effects of HVTL (proximity, visibility and encumbrance) can be examined. The results of these studies of improved residential properties have been remarkably consistent over time and in different geographies.

- About half of the studies found negative proximity effects, half find none.
- Where they are found, they are small, usually in the 1%-6% range.
- Where they are found, they decrease rapidly with distance from the HVTL.
- Two of the studies found that where there were effects, they decreased over time as well.
- Once proximity has been accounted for, visibility generally has no additional independent effect.
- Encumbrance frequently has no effect on market value. When there is an effect, it is small.
- There is mixed evidence on whether higher value properties are more vulnerable to HVTL effects.

1.1.1 Commercial/Industrial Property

The professional literature on commercial/industrial property is much more limited but the evidence is sufficiently consistent that some generalizations can be made.

- There is no evidence of effects on marketability or rents.
- Effects only occur if the HVTL constrain the size of the development possible on an affected site.

7.1.2 Vacant Land

There are six prominent studies of vacant land in the published literature. Five of these are statistical and one uses a Subdivision Study approach.

- Four of the statistical studies found no effect of the HVTL on market value.
- One statistical study found a 15% effect on the value of 20 acre lots within 1,000 feet (approximate width of one lot) of double circuit 500 kV lines on 185 foot steel lattice structures. The HVTL were in most cases the principal differentiating feature of the lots and there were many lots on the market from which the HVTL were not visible.
- The six subdivision studies showed half of the subdivisions with no effect on lot sale prices. In the other three subdivisions, effects primarily involved lots immediately adjacent to, or crossed by, the HVTL Corridor. In one of these, the two affected lots were larger but there was no sale

price effect. In another, there was a single lot that sold for 50% less than adjacent lots and the HVTL proximity was a significant contributing factor. In the third case, there was a 30% effect on heavily encumbered lots with an extremely intrusive three line HVTL corridor.

7.1.3 Conclusions

These general conclusions have characterized the published literature throughout the past 30 years and there do not appear to be any new or different trends showing in the data. It should be noted that two of the studies have particular relevance to New Hampshire. Chalmers and Voorvaart (2009) looked at Springfield, Massachusetts and Hartford, Connecticut suburbs and found no effects of proximity or visibility on the market value of residential properties. Likewise, Kinnard et al. (1988) came to the same conclusion based on a large number of residential and vacant land sales in Penobscot, Maine.

7.2 The New Hampshire Case Studies

7.2.1 Corridor #1 Case Studies

Eighteen of the twenty-four cases concluded no sale price effect and twenty concluded no marketing time effect. In the four cases with indicated sale price effects, each is very heavily encumbered, 46% to 77%, and, most notably, each of the houses is located within 100 feet of the edge of the HVTL ROW.

It is equally instructive to look at the characteristics of properties for which there was no apparent effect of the HVTL on the sale price. There are six cases with no HVTL visibility and in no instance was it concluded that there was an effect of the HVTL on the sale price. Similarly, there are 16 sales where the house was 101 feet or more from the edge of the HVTL ROW and in no case was it concluded that there was a sale price effect.

In summary, sale price effects in the 24 Corridor #1 Case Studies were infrequent and only occurred where there was close proximity, i.e. less than 100 feet from the house to the edge of the ROW combined with partial or, more often, clear HVTL visibility.

Marketing time effects were even less frequent. It was concluded that the HVTL may have extended the marketing time in only three cases. There were several comments by brokers with reference to a reduction in the number of interested buyers due to the HVTL, but rarely did there appear to be any material effect on the marketing period. Further, there were references to several buyers who saw the corridor as an asset to the property.

7.2.2 Corridor #2 Case Studies

The Corridor #2 Case Study results were similar to the Corridor #1 results. Four of the 28 cases attributed an adverse sale price effect to the HVTL. The difference from Corridor #1 is that there were eight cases where the evidence was conflicting, and the final conclusion was indeterminate. This left 16 cases where it was concluded that there was no sale price effect. Most of the indeterminate cases reflected broker opinion that there had been a sale price effect, but the appraisal evidence did not support that opinion.

The conditions under which effects did not occur were also similar to the Corridor #1 Case study results. There were 19 cases in which the lines were not visible or only partially visible and in no instance was an adverse effect on sale price concluded. Similarly, there were 18 cases where the house was located 101 feet or more from the edge of the HVTL ROW and in only a single case was there a price effect.

In summary, conclusions of negative effect of the HVTL on sale price in the 28 Corridor #2 Case Studies were infrequent and only occurred where there was a combination of close proximity and clear HVTL visibility. Like Corridor #1, close proximity without visibility or visibility without close proximity did not result in sale price effects.

Marketing time effects were concluded affirmatively in five cases. In 17 cases it was concluded that the HVTL did not affect marketing time. In six cases marketing time effects were indeterminate.

7.2.3 Study Area #3 Case Studies

Of the six Case Studies in Study Area #3, sale price effects were concluded affirmatively in two cases and indeterminate in one other. Effects on marketing time were concluded affirmatively in one case and indeterminate in one other.

The results are similar to those for Corridors #1 and #2. The only properties for which there was a conclusion of sale price effect had homes adjacent to the ROW in one case and 11 feet distant in the other, with clear visibility of the lines.

7.2.4 Study Area #4 Case Studies

There were 20 Case Studies in Study Area #4. Sale price effects were concluded to have occurred in two cases, not to have occurred in 17 and one case was judged indeterminate. Both cases where adverse sale price effects were concluded to have occurred had houses within 100 feet of the ROW with structures clearly visible in one case and partially visible in the other.

7.2.5 Overall conclusions from the New Hampshire Case Studies

Looking at the 78 Case Studies collectively:

- Twelve cases out of 78 identified a negative sale price effect, 54 cases concluded no sale price effect and in 12 cases, the sale price effect was indeterminate.
- Where sale price effects were found, they were highly variable in the range of 1.6% to almost 18% based on the appraisal evidence.
- Sale price effects decrease very rapidly with distance. Only one of the 12 cases had a house located more than 100 feet from the edge of the ROW and seven were within 30 feet.
- With only two exceptions, close proximity had to be combined with clear visibility of the HVTL for there to be a sale price effect.
- Of those properties that combined very close proximity and clear visibility, nine of the 17 had a sale price effect and eight did not.

- The cases with sale price effects not only had homes close to the ROW but they were often forced to be close to the ROW because the developable portion of the lot was constrained by the location of the ROW on the property.
- Marketing time effects were also infrequent. It was concluded in 60 of the 78 cases that there was no marketing time effect of the HVTL.

7.3 The New Hampshire Subdivision Studies

7.3.1 Corridor #2 Subdivision Studies

Lot sales were studied in 10 subdivisions that were crossed by, or adjacent to, Corridor #2. Of a total of 126 lots, 47 sales involved lots that were crossed by, or abutted, the HVTL ROW. The pricing and timing of the sale of the affected lots were then compared to the market experience of the lots not crossed by, or abutting, the ROW.

- Price effects were rare. Only four of the 47 sales showed any evidence of price effects. In the three cases where there was a significant price effect, the development area of the lot was severely constrained by the location of the HVTL ROW.
- Timing effects were also infrequent. In seven of the 10 subdivisions, the encumbered or abutting lots sold at the same rate, or in some cases faster than the control lots. There was only a single subdivision where the average marketing time was significantly longer for the encumbered or abutting lots compared to the unencumbered lots.

7.3.2 Study Area #3 Subdivision Studies

In order to increase the geographic representativeness of the New Hampshire studies, three subdivisions were selected for analysis in an area in, and around, Portsmouth. There were 33 lot sales in the three subdivisions identified for study and 21 of these lots were encumbered by a power line ROW.

- There were price effects in two of the three subdivisions although the effects were small compared to the decrease in the development area of the affected properties. The price discounts ranged between 10% and 40% but the reduction in the development area of the affected lots was significant.
- There were also marketing period effects in two of the three subdivisions. The heavily encumbered lots sold less quickly than the unencumbered lots.
- Average lot size was very similar for the encumbered and the unencumbered lots with the result that the portion of the encumbered lots available for development was very much smaller than for the unencumbered lots.

7.3.3 Conclusions from the Subdivision Studies

A total of 13 New Hampshire subdivisions was studied to see how sale prices and marketing times of lots encumbered by, or abutting, a HVTL ROW compared to otherwise similar lots that were unencumbered by the ROW.

Subdivision Studies offer the most straightforward context in which to try to identify market effects of HVTL. Since the presence of HVTL is a locational factor, like having a golf course view (in the case of a positive externality) or being located close to an airport (in the case of a negative externality), its effect on value (positive or negative) will be capitalized into the value of the land. Thus, if there is an effect of HVTL on market value, it should show up in the sale prices of the unimproved lots. Second, to the extent there is an effect of the HVTL, it will be easier to identify without the confounding effect of the value of the improvements.

- The most important conclusion from the Subdivision Studies was that, despite very large areas of encumbrance ranging as high as 40% to 70% of the lot area, in seven of the 13 subdivisions there was no apparent effect of the HVTL on the prices at which lots sold. In eight of the 13 subdivisions there was no apparent effect of the HVTL on the marketing time associated with the sale of encumbered or abutting lots.
- Where there were effects, it was generally the case that there were serious constraints imposed by the HVTL ROW on the development area of the lot. Further, the discount in price tended to be small compared to the proportion of the lot encumbered. Specifically, in the Greenland and Newington areas, the development area of the encumbered lots tended to be significantly smaller than the unencumbered lots but sold for only 10% to 40% less.
- The three subdivisions in Study Area #3 compared to the 10 Subdivisions in Corridor #2 tended to be smaller, higher valued and characterized by less "excess land". This resulted in a more frequent price effect when there was very large encumbrance than was the case with the Corridor #2 subdivisions. Apparently, the larger Corridor #2 lots with lower valued "excess land" were more likely to be able to absorb the HVTL ROW encumbrance with no decrease in sale price.

It must also be remembered, as was pointed out in Chapter 1, that although heavily encumbered lots may sometimes experience a reduction in value, the owner of the property at the time the easement was purchased was compensated for any reduction in value so there was no economic damage at that time. Further, if there was a market value effect, subsequent buyers of the lots would have purchased at a discount, so they suffered no economic damage.

7.4 The Market Activity Analysis

A final initiative undertaken in this research was to analyze indicators of market strength available in MLS data for properties in different locations relative to an HVTL corridor. All properties reported as sold by the MLS for calendar years 2013 and 2014 that were located within 1 mile of HVTL Corridor #2 were identified. These sales were placed in one of three categories based on their location relative to the HVTL—abutting/encumbered, one foot to 500 feet or 501 feet to one mile. Two indicators of market strength were then compared for the three groups of sales—the ratio of sale price to list price (SP/LP) and days on market (DOM).

Although the number of observations in the abutting/encumbered and one foot to 500 feet zones were small causing considerable variability from quarter to quarter, the SP/LP ratio for the

abutting/encumbered properties tended to be the same or higher than for the other two location groups. The proximate properties had a more mixed relationship to the more distant properties, lower in some quarters, similar in several and higher in one. Again, not too much should be read into these results given the small number of quarterly observations, but there does not appear to be any systematic market resistance to the abutting/encumbered or proximate properties relative to the more distant group.

DOM describes the market experience of a property under its current listing. It is recognized as a good indicator of market strength with low DOM implying an active market with strong demand and a high DOM indicating a slow market with weak demand. DOM was generally lower for the abutting/encumbered properties relative to the other two groups. The proximate properties had a lower DOM than the more distant properties about half the time and a higher DOM half the time. Again, one must be cautious in drawing conclusions based on the small number of observations, but there appears to be no systematic tendency here for the DOM of the abutting/encumbered or proximate properties to be greater than for properties at a greater distance from the HVTL.

7.5 Overall Conclusions

7.5.1 There Is No Evidence of Consistent Measurable Effects of HVTL on the Market Value of Residential Real Estate

- Half of the large statistical studies in the professional literature conclude no effect.
- The two large statistical studies most relevant to New Hampshire (Chalmers and Voorvaart (2009) and Kinnard et al. (1988)) conclude no effect.
- New Hampshire Case Studies of 78 recent residential property sales in which the property either abutted or was crossed by an HVTL ROW concluded in 69% of the cases that there was no effect of the HVTL on sale price.
- New Hampshire Subdivision Studies of raw lot sales concluded no price effect for the encumbered or abutting lots in seven of the 13 subdivisions studied.
- Analysis of MLS data on sale price to list price ratios and days on market indicated no marketing disadvantage to encumbered or abutting properties.

Likewise, there is no evidence of consistent measurable effects of HVTL on the market value of commercial/Industrial properties or on vacant land.

7.5.2 Explanation of the General Absence of Market Value Effects

The behavior of real estate market participants is a function of a very large number of considerations that influence different people in different ways. Therefore, the most accurate method of assessing effects is to observe the result of the interactions of all the participants as they are revealed in actual transactions. Nevertheless, based on the perspective gained from the Case Study and Subdivision Study research, we are able to identify considerations that may be responsible for the absence of market value effects.

- HVTL corridors are often screened by vegetation or topography.
- Despite significant encumbrance, HVTL corridors often only affect the rear of lots that contribute little utility or value to the property.
- The character and condition of the improvements to the property (house, yard, etc.) tend to dominate the attributes of the lot in determining the market value of the property.
- With many of the larger rural acreages, other lot characteristics (access, views, vegetation, water, etc.) dominate the HVTL effects.
- HVTL effects are most likely in the situation where there are similar properties except for the HVTL. This condition seldom holds in New Hampshire due to variability of terrain and the generally heterogeneous housing stock, i.e. the HVTL are seldom the principal differentiating factor between properties.
- The HVTL corridors have positive attributes associated with open space as well as negative attributes.

The conclusion is that even though the presence of a HVTL corridor is generally perceived to be a negative attribute of a property, the weight attached to this particular attribute compared to all the other considerations that go into market decisions is apparently too small to have any consistent measurable effect on the market value of the real estate.

7.5.3 Where There Are Market Value Effects, They Are Small

Where market value effects are found, they are small. This is especially true relative to the extensive encumbrance of most of the lots, the proximity of the houses to the ROW and frequently, the presence of structures actually located on the properties.

- In those cases where the large statistical studies found market value effects, they were typically in the range of 1-6%.
- In the 78 New Hampshire Case Studies, there were only five sales where the appraisal evidence suggested that the sale prices may have been affected by more than 10%
- Similarly, with the New Hampshire Subdivision Studies, there were very few lot sales for which it was concluded that the sale price was affected by more than 10%.
- Where there was an effect, it was generally the case that the lot was sufficiently encumbered by the HVTL ROW that siting of the house was constrained and not able to avoid being close to the corridor or to avoid the visual intrusion of the structures.

7.5.4 Where There Are Market Value Effects, They Decrease Rapidly with Distance.

The evidence suggests that where there are market value effects, they dissipate very quickly as distance to the corridor increases.

- When market value effects were found in the large statistical studies, they usually had disappeared once the distance from the property to the HVTL ROW exceeded 500 feet.

- The New Hampshire Case Studies appeared even more sensitive to distance. There was only a single home further than 100 feet from the ROW boundary that showed a market value effect, and most were within 30 feet of the ROW.
- Although the New Hampshire Subdivision Studies deal with sales of unimproved lots, significant market value effects were associated with cases where the HVTL ROW constrained the lot so as to force subsequent improvements to be close to the ROW boundary.

Appendix A: Residential Property Studies

Author	Bottenmiller, S.C. and Wolverton, M.L. (2013)
Title	The Price Effect of HVTLs on Abutting Homes
Source	*The Appraisal journal*
Publication Date	Winter 2013
Studied Geography	Portland, Oregon area and Seattle, Washington area.
Studied Transmission Lines	No information on ROW width, structure types and sizes or line voltages except to indicate that there were in several cases multiple lines in the corridor.
Additional Data Description	Identification of about 150 abutting sales in each area and then select at least two, and sometimes three, non-abutting sales as similar as possible to each of the abutting sales.
Studied Voltage	115 kV, 230 kV, 345 kV and 500 kV.
Number of Observations	538 sales in the Portland area and 568 sales in the Seattle area.
Studied Time Period	2005 through first half of 2007.
HVTL Measurements	Sales were coded as abutting (treatment) or non-abutting (control).
Methodology	Statistical analysis. Log-linear regression model with adjusted R^2=92.9% for Portland study area and 93.5% for Seattle study area.
Independent Variables	Abuts HVTL or not, sale quarter, living area, garage, lot size, slope, view, landscape quality, bedrooms, bathrooms, pool, barn, home quality, roof, cell tower visible.
Dependent Variables	Natural log of price.
Summary/Result	1. <u>Proximity</u> This study measures the effect of proximity with a single variable that indicates whether the property abuts a HVTL ROW or does not abut a HVTL ROW. For both study areas, the effect of abutting a HVTL was statistically significant, but very small. For an average price home in the Portland area the effect of abutting was -1.65% and in the Seattle area it was -2.43%. 2. <u>Visibility</u> Not investigated. 3. <u>Encumbrance</u> The treatment properties abutted the HVTL ROW but none were crossed. 4. <u>Other Issues Investigated</u> a. Effect of home value When the Seattle data are divided into "higher priced homes" (top quartile of sales with mean price of $1,035,105) and "more typically priced homes" (bottom three quartiles of sales with a mean price of $366,866), the higher priced homes that abut the HVTL ROW sell at a discount of 11.23% relative to the non-abutting homes. For the more typically priced homes there is no difference in pricing of the abutting relative to the non-abutting homes. b. Effect of HVTL on appreciation There was considerable appreciation in both study areas over the study period, but no difference in appreciation of abutting versus non-abutting homes. c. Effect of line voltage There was no apparent effect of line voltage on the market experience of abutting versus non-abutting homes.

Author	Chalmers, James A., and Frank A. Voorvaart (2009)
Title	High-Voltage Transmission Lines: Proximity, Visibility, and Encumbrance Effects
Source	*The Appraisal Journal*
Publication Date	Summer 2009
Studied Geography	Connecticut and Massachusetts.
Studied Transmission Lines	345 kV lines supported by steel structures, steel lattice structures, or wooden H-frames; some lines were co-located with a second 345 kV line or a 115 kV line. Structure height varied with steel poles measuring 130 feet; easement width varied.
Additional Data Description	Sale transaction data was collected for nine individual sub-areas; however, for analysis purposes, these areas were aggregated into four study areas.
Studied Voltage	345 kV.
Number of Observations	1,286 sale transactions.
Studied Time Period	Jan 1, 1998 to Dec 31, 2007.
HVTL Measurements	Continuous distances as measured from the street curb opposite the front door of the property to the centerline of the transmission line; additional model was specified using distance zones: (1) 0-75 meters; (2) 75-150 meters; (3) more than 150 meters. Field data was collected by appraisers on visibility of the three nearest transmission line structures, latitude and longitude coordinates, and size of encumbrance (by the HVTL easement).
Methodology	Statistical Analysis: Log-log regression model with adjusted R^2 between 88% and 94%.
Independent Variables	Livable area; lot size; age at the time of sale; number of bathrooms; basement area; binary variables for; deck, garage, porch, central air conditioning, sale year, study sub-areas; size of easement; tower visibility; distance variables.
Dependent Variables	Natural log of sale price.
Summary/Result	1. <u>Proximity</u> No evidence of systematic effects due to proximity to the 345 kV lines in either the continuous distance models or the models where distance was indicated categorically in zones. 2. <u>Visibility</u> No evidence of systematic effects due to visibility of the HVTL structures. 3. <u>Encumbrance</u> Encumbrance of the property by the HVTL easement did appear to have a small negative effect on value, although with varied statistical significance. For example, in the western Connecticut study area, a property of about an acre with a value of $300,000 would experience a discount of about $3,000 due to an encumbrance of 12,000 square feet. 4. <u>Other Issues Investigated</u> a. Effect of home value The data were divided into two equal groups—those above the median value and those below the median. The results for these sub-samples did not differ from the aggregated sample suggesting that home value was not playing a role in determining sensitivity of property value to the HVTL.

Author	Colwell, Peter F. (1990)
Title	Power Lines and Land Value
Source	*Journal of Real Estate Research*
Publication Date	Spring 1990
Studied Geography	Holiday Hills and Windsor Village, Decatur, Illinois.
Studied Transmission Lines	Double-circuit 138 kV lines on lattice steel structures; transmission line corridor consists of a 50 foot easement.
Additional Data Description	The study is a follow-up analysis of a 1979 Colwell and Foley study and uses the same data set as the previous study.
Studied Voltage	138 kV.
Number of Observations	200 sale transactions of properties within 400 feet of the centerline of the transmission line corridor.
Studied Time Period	Jan 1, 1968 to Oct 31, 1978.
HVTL Measurements	Continuous distance to transmission center line from center of property. Distance to nearest structure. Categorical variable indicating whether the property is encumbered by the HVTL easement.
Methodology	Statistical Analysis: Log-log regression model with R^2 of 77%.
Independent Variables	Distance to transmission lines and towers; easement on property; time; lot size; building size; number of bathrooms; basement; garage size; and deck and neighborhood binary variables.
Dependent Variables	Natural log of sale price.
Summary/Result	1. <u>Proximity</u> For observations toward the beginning of the study period, there was a negative proximity effect of about 6% at 100 feet from the center of the property to the center of the easement and 3% at 200 feet. But by the end of the study period, these effects had disappeared. The author offers no explanation for the change in result over the study period. Given that the HVTL had been in place for many years, this may indicate attitudinal shifts in the market over the period 1968-1978, changes in market conditions, changes in vegetative screening or some other explanation not yet identified. 2. <u>Visibility</u> Visibility effects were not tested directly, but a variable measuring distance to the nearest structure was included in the models but had no statistically consistent effect on price. 3. <u>Encumbrance</u> Encumbrance was entered as a categorical variable and indicated a systematic negative effect on sale price.

Author	Des Rosiers, Francois (2002)
Title	Power Lines, Visual Encumbrance and House Values: A Micro-Spatial Approach to Impact Measurement
Source	Accepted for Publication in the *Journal of Real Estate Research*
Publication Date	January 2002
Studied Geography	Three residential neighborhoods in the city of Brossard, Greater Montreal area, Canada.
Studied Transmission Lines	A 2 mile, 200 feet wide 315 kV high voltage transmission line corridor with "Improved Visual Appearance" steel transmission line structures reaching, in most cases, between 155 and 175 feet in height.
Additional Data Description	
Studied Voltage	315 kV.
Number of Observations	507 sale transactions.
Studied Time Period	Feb 1991 to Nov 1996.
HVTL Measurements	Sales were categorized by distance from the easement, distance from the line, distance from the structures, view of the structures (limited, moderate or pronounced, and rear, side or front views) and view of the transmission line itself. For properties abutting the easement, lot position relative to the structures is also recorded (facing structure, located one, two, or three lots from structure, mid-span).
Methodology	Statistical Analysis: Log-linear and linear regression models with adjusted R-Squared between 86% and 97% (depending on model specification).
Independent Variables	Age; lot size; living area; basement area; type of siding, house style, landscaping, cabinetry, kitchen features, and flooring; central air conditioning; swimming pool; number of garage places; neighborhood location; property tax rate; service area; date of sale.
Dependent Variables	Sale price and natural log of sale price (for log-linear model).
Summary/Result	1. <u>Proximity</u> Properties adjacent to the easement and facing a structure experience an average decrease in value of 9.6%. In the study area where the setback between the HVTL and the easement boundary is 50 feet, the effect averages 14% while for the area with a setback of 150 feet there is no decrease in value. Interestingly, for adjacent lots between the structure facing lot and the mid-span lot, the effects are positive ranging in value from 8.7% to 15.7%. The author attributes this to the benefits of enlarged visual field and increased privacy. At mid-span, the effect turns negative again ranging from -4.7% to -7.7% which the author attributes to the reduced height of the conductors (37 feet versus 63 feet at the structures). For non-adjacent properties, and holding visibility constant, negative effects of proximity are a maximum of -5% in a zone 165 to 325 feet from the HVTL, decline to -4% from 325 to 500 feet and disappear beyond 500 feet. 2. <u>Visibility</u> For non-adjacent properties, a view of the HVTL structures translates in most cases into higher values. The author attributes this to an enlarged view shed. These effects range on average from 3% to 7%. 3. <u>Encumbrance</u> No encumbered properties. 4. <u>Other Issues Investigated</u>

	a. Effect of home value There was some suggestion of greater sensitivity of sale price to the HVTL variables for higher valued properties. b. Effect of the Swedish Health Effects Studies No evidence of increased sensitivity to the HVTL variables in 1993 and 1994 following publication of the Swedish health effects studies in 1993.

Author	Hamilton, S.W. and Cameron Carruthers (1993)
Title	The Effects of Transmission Lines on Property Values in Residential Areas
Source	Research Paper
Publication Date	April 1993
Studied Geography	Five residential neighborhoods in Vancouver, British Columbia, Canada.
Studied Transmission Lines	Two neighborhoods with two 500 kV and one 230 kV lines on separate lattice steel structures in a 140 meter right of way; one neighborhood with a 60 kV line on wood poles; one neighborhood with two 230kV lines on lattice steel structures; and one neighborhood with unknown voltage.
Additional Data Description	Of the 15,663 transactions, 171 properties were partially within the right-of-way, and 289 properties were adjacent to, but not partially within the right-of-way. Further, 1,353 properties were within 120 meters of the transmission line.
Studied Voltage	500 kV, 230 kV, and 60 kV.
Number of Observations	15,663 sale transactions.
Studied Time Period	Jan 1, 1985 to Dec 31, 1991.
HVTL Measurements	Continuous distance and distance zones from the centerline of the transmission line corridor; 0-120 meters, 120-170 meters, 170-220 meters, 220-270 meters, and greater than 270 meters (as control group). Categorical variables for abutting properties and for properties encumbered by the HVTL easement. Number of structures visible is also included.
Methodology	Statistical Analysis: Log-log regression models with either continuous or zone distance with adjusted R^2 of 84%.
Independent Variables	Age of improvements; lot area; number of rooms, bedrooms, and bathrooms (full and partial); floor area; number of fireplaces; number of rooms in basement; binary variables for: pool, garage, time of sale, neighborhood, within or adjacent to right-of-way; distance variables; visibility (and number) of transmission line structures.
Dependent Variables	Natural log of sale price.
Summary/Result	1. <u>Proximity</u> Properties within 120 meters of the HVTL appear to sell at an average 2-3% discount as compared to control area properties. Overall, a systematic, statistically significant negative price effect is limited to the 0 to 120 meter zone. Adjacent properties are not differentially affected relative to non-adjacent properties within the 120 meter zone. 2. <u>Visibility</u> Neither the categorical variables, lines or structures visible, nor the number of structures visible had any apparent effect on price. 3. <u>Encumbrance</u> The categorical variable for properties crossed by the HVTL easement had a small positive sign indicating a 2.5% advantage over unencumbered properties in the 120 meter zone. The authors attribute this to the enhanced view shed associated with the open space of the ROW.

Author	Hamilton, S.W. and Gregory M. Schwann (1995)
Title	Do High Voltage Electric Transmission Lines Affect Property Value?
Source	*Land Economics*
Publication Date	November 1995
Studied Geography	Four residential neighborhoods in Vancouver, British Columbia, Canada.
Studied Transmission Lines	Two neighborhoods have a 140 meter right of way with two 500 kV lines and one 230 kV line on steel structures; one neighborhood has two transmission lines of unknown voltage on steel structures; and one neighborhood has one 60 kV line on wood poles.
Additional Data Description	The final sample include 12,907 sales transactions of single detached properties of which 2,364 properties were within 200 meters of the transmission line and 426 were adjacent to, or partially within, the transmission line right-of-way.
Studied Voltage	500 kV, 230 kV, and 60 kV.
Number of Observations	12,907 sale transactions.
Studied Time Period	Jan 1, 1985 to Dec 31, 1991.
HVTL Measurements	Distance was measured as a continuous variable from the property to the centerline of the right-of-way. Categorical variables were used to indicate properties adjacent to the ROW or crossed by the ROW. Number of structures visible was recorded as was a variable to indicate if any part of the HVTL was visible.
Methodology	Statistical Analysis: Box-Cox/translog model with maximum likelihood estimation.
Independent Variables	Distance to center of right-of-way; number of towers visible; binary variables for: abutting or within right-of-way, line visibility, garage, pool, public sewage, curb or corner lot; age at time of sale; number of fireplaces, basement rooms, bedrooms, and bathrooms; size of lot.
Dependent Variables	Box-Cox transformed sale price.
Summary/Result	1. <u>Proximity</u> Adjacent properties suffer a -5.8% decrease in value relative to other properties within 100 meters. Non-adjacent properties within 100 meters suffer a -2.8% decrease in value relative to properties between 100 and 200 meters. 2. <u>Visibility</u> For adjacent properties there is a -5.7% effect due to structure visibility relative to adjacent properties from which no structures are visible. For non-adjacent properties, there is no effect due to structure visibility. For adjacent properties with towers visible, there is a combined effect of -6.3% relative to a non-adjacent property within 100 meters with no structure visible. 3. <u>Encumbrance</u> No encumbered properties.

Author	Ignelzi, Patrice C. and Thomas Priestley (1991)
Title	A Statistical Analysis of Transmission Line Impacts on Residential Property Values in Six Neighborhoods
Source	Southern California Edison – Environmental Affairs
Publication Date	May 1991
Studied Geography	Eight residential subdivisions in Vallejo and Fairfield, Solano County, Northern CA.
Studied Transmission Lines	Two neighborhoods are crossed by 115 kV lines; one neighborhood is crossed by a 230 kV line; three neighborhoods are crossed by a 115 kV line and a 230 kV line upgraded during the study period from a 115 kV line on 60 foot steel lattice structures to 115 kV and 230 kV lines on 165 foot tubular steel structures. Two of those three neighborhoods were fully developed prior to the upgrade. The remaining two studied neighborhoods are comparison areas without any transmission lines. All transmission lined are either on 165 foot tubular steel structures or 60 foot lattice steel structures.
Additional Data Description	A comprehensive database that includes property and neighborhood specific data, area-wide macroeconomic variables, and transmission line related variables.
Studied Voltage	230 kV and 115 kV.
Number of Observations	1,816 property sales.
Studied Time Period	1976 to 1989.
HVTL Measurements	Five distance zones: (1) 0-300 feet; (2) 301-600 feet; (3) 601-900 feet; (4) 901-1,500 feet; and (5) over 1,500 feet. Categorical variables to indicate whether properties are adjacent or crossed. Size of easement. Number of structures visible and whether ROW is landscaped.
Methodology	Statistical Analysis: Lin-log regression model with an adjusted R-Squared of 84%.
Independent Variables	Lot size; interior square footage; age of house; binary variables for: pool, flag lot, cul-de-sac lot, panoramic views, property located to non right-of-way open space; slop of the street; subdivision and neighborhood quality; number of building permits issued 6-18 months before sale; yearly price trend; property adjacent to right-of-way; property crossed by right-of-way; easement size; distance to right-of-way; number of transmission towers visible; property in neighborhood with landscaped right-of-way.
Dependent Variables	Sale price adjusted to 1982 values.
Summary/Result	1. <u>Proximity</u> HVTL effects of existing lines were less than 1% of sales price for most properties. 2. <u>Visibility</u> Tower and Line visibility appears to have no effect on sales price. 3. <u>Encumbrance</u> Encumbrance has a negative effect on sale price estimated to be about $0.45 per square foot measured in 1982 dollars. 4. <u>Other issues Investigated</u> a. Effect of HVTL Construction Construction of an upgrade in a developed neighborhood has a significant adverse effect lowering property values by 4-9% on average. This effect diminishes over time and largely disappears after four years. b. Effect of ROW landscaping The net effect of integrating the ROW into subdivision landscaping appears to increase average property sale prices by 2-5%.

Author	Kinnard William N., Mary Beth Geckler, and Phillip S. Mitchell (1988)
Title	Effects of Proximity to High-Voltage Electric Transmission Lines on Sales Prices and Market Values of Vacant Land and Single-Family Residential Property: January 1978-June 1988
Source	Real Estate Counseling Group of Connecticut, Inc.
Publication Date	1988
Studied Geography	Penobscot County, Maine.
Studied Transmission Lines	345 kV line; 10 years after construction.
Additional Data Description	
Studied Voltage	345 kV.
Number of Observations	828 sales of single-family residential properties and 582 sales of vacant land suitable for residential development.
Studied Time Period	1/1/1978 to 6/30/1988.
HVTL Measurements	Distance zones: • Centerline to 300 feet; • 301 to 2,000 feet; • 2,001 to 4,000 feet; and • 4,001 feet or more.
Methodology	Statistical Analysis: Linear regression model with R-Squared of 57%.
Independent Variables	Selected property descriptors from tax cards and MLS.
Dependent Variables	Sale price.
Summary/Result	1. Proximity No evidence of statistically significant negative effects on value of proximity to HVTL. 2. Visibility 3. Encumbrance 4. Other Issues investigated No effects on days on market.

Author	Kinnard, William N., Mary Beth Geckler and Jake W. DeLottie (1997)
Title	Post-1992 Evidence of EMF Impacts on Nearby Residential Property Values: Price Effects from Publication of and Widespread Publicity About the Floderus and Ahlborn-Feychting Studies in Sweden (Nevada Study)
Source	Real Estate Counseling Group of Connecticut, Inc.
Publication Date	April 1997
Studied Geography	Sun City, Las Vegas, Nevada.
Studied Transmission Lines	138 kV line with 3 double circuits on 90 foot concrete Structures. Line is in the middle of an arterial street and is visible throughout Sun City. The line was completed in August 1991.
Additional Data Description	Studied time period includes data for 9 quarters prior to the release of the Swedish health studies, and 19 quarters after the release of the Swedish health studies. Similarly, the study period contains a period before and during construction of the HVTL and a post-construction period.
Studied Voltage	138 kV.
Number of Observations	4,269 sale transactions.
Studied Time Period	Apr 1, 1989 to Mar 31, 1996.
HVTL Measurements	Sales were categorized by distance zones: (1) 0-200 feet; (2) 201-400 feet; (3) 401-800 feet; (4) 801-1,320 feet; (5) 1,321-2,640 feet; and (6) greater than 2,641 feet. Distance zone (6) served as the Control Area. Before/after construction.
Methodology	Statistical Analysis: Log-log regression model with adjusted R^2 of 92%.
Independent Variables	Age; living area; lot size; garage; number of baths; type of heating; number of stories; and frame type; time of sale variables; basement; distance zone; visibility of structures; "before/after" publication of the Swedish health studies; distance variables.
Dependent Variables	Natural log of sale price.
Summary/Result	1. <u>Proximity</u> Two different distance zone models were specified. Even though one model showed a small effect on value (approximately 1%) of homes in the 0-200 feet zone, the effect was not consistent (the effect was statistically insignificant in an alternative model specification). Overall, the authors concluded that proximity (to the HVTL) had no systematic effect on sale price. 2. <u>Visibility</u> Not studied. 3. <u>Encumbrance</u> None of the properties were crossed by the easement. 4. <u>Other Issues Investigated</u> a. Effect of HVTL Construction There was no apparent change in the sensitivity of sale price in the before construction period relative to the post construction period. b. Effect of Swedish Health Effects Studies There was no apparent change in sensitivity of sale price subsequent to publication of the Swedish Health Effects Studies.

Author	Kinnard, William N., Mary Beth Geckler and Jake W. DeLottie (1997)
Title	Post-1992 Evidence of EMF Impacts on Nearby Residential Property Values: Price Effects from Publication of and Widespread Publicity About the Floderus and Ahlborn-Feychting Studies in Sweden (Missouri Study)
Source	Real Estate Counseling Group of Connecticut, Inc.
Publication Date	April 1997
Studied Geography	Portions of St. Louis and St. Charles Counties, Missouri.
Studied Transmission Lines	Four study areas were centered around electrical substations. A fifth study area surrounded a 138 kV line on 90 foot steel structures. These facilities were only visible to portions of the study areas and all were built before Jan 1, 1990.
Additional Data Description	
Studied Voltage	138 kV.
Number of Observations	1,377 sale transactions.
Studied Time Period	Jan 1, 1990 to June 30, 1996.
HVTL Measurements	Sales were categorized by distance zones: (1) 0-200 feet; (2) 201-400 feet; (3) 401-800 feet; (4) 801-1,320 feet; and (5) 1,321 feet or greater. Sale properties were also categorized by whether HVTL or substations were visible.
Methodology	Statistical Analysis: Log-log regression model with R^2 between 72% and 96% (depending on study area).
Independent Variables	Age; living area; lot size; garage; number of baths; type of heating; number of stories; and frame type; time of sale variables; basement; distance zone; visibility of structures; "before/after" publication of the Swedish health studies; distance variables.
Dependent Variables	Natural log of sale price. (Nearly identical results were obtained when the dependent variable was price per living area square foot.)
Summary/Result	1. <u>Proximity</u> No consistent pattern of negative impacts on sale price associated with proximity to the HVTL. 2. <u>Visibility</u> No pattern of visibility effects on sales price. 3. <u>Encumbrance</u> Not studied. 4. <u>Other Issues Investigated</u> a. Effect of Swedish Health Effects Studies No increased sensitivity of sales price to HVTL variables after publication of the Swedish health effects studies in 1993.

Author	Wolverton, Marvin L., and Steven C. Bottemiller (2003)
Title	Further Analysis of Transmission Line Impact on Residential Property Values
Source	*The Appraisal Journal*
Publication Date	July 2003
Studied Geography	Portland, Oregon; Seattle, Washington, and Vancouver, Washington.
Studied Transmission Lines	16 high voltage transmission lines varying between 115 kV and 500 kV. One line with concrete structures, one line with H-frame wood structures, and 14 lines with lattice steel structures; either the structures or the conductors were clearly visible from the subject properties.
Additional Data Description	300 sales transactions abutted an HVTL, while 412 sales transactions served as control area sales (i.e., these sales did not abut an HVTL).
Studied Voltage	500 kV to 115 kV.
Number of Observations	712 sales transactions.
Studied Time Period	1989 to 1992.
HVTL Measurements	Sales were characterized as either subject (abutting the transmission line) or control (not abutting a transmission line right-of-way).
Methodology	Statistical Analysis: Both log-linear and linear regression models with adjusted R^2 of 85%.
Independent Variables	Date of sale; site and site improvement variables; location variables; building improvement variables; abutting transmission line variable.
Dependent Variables	Sales price and natural log of sale price (for log-linear model).
Summary/Result	1. <u>Proximity</u> No evidence of any impact of the HVTL on abutting properties relative to non-abutting properties. 2. <u>Visibility</u> Not studied. 3. <u>Encumbrance</u> No encumbered properties. 4. <u>Other Issues Investigated</u> a. Effect of HVTL on Appreciation No evidence of differential appreciation rates over time for properties abutting HVTL ROW as compared to non-abutting properties.

Appendix B: Commercial Industrial Studies

Author	Chapman, D. (2005)
Title	Transmission Lines & Industrial Property Value
Source	*Right of Way*
Publication Date	November/December 2005
Studied Geography	California, Nevada, Utah
Studied Transmission Lines	Various
Additional Data Description	
Studied Voltage	Various
Number of Observations	NA
Studied Time Period	2000-2005
HVTL Measurements	NA
Methodology	This represents a description of several engagements involving industrial properties crossed by, or adjacent to, HVTL. The author reports that he has carried out over 100 interviews with buyers, sellers, tenants, property managers and brokers in connection with these studies. He also reports on matched-pairs analysis for several of the properties.
Independent Variabl	NA
Dependent Variables	Sales price, rents, marketing time
Summary/Result	His overall conclusion is that there will be no effect of the HVTL on the value of the property provided the HVTL (lines, structures and easement) don't affect the highest and best use of the property. Since building codes and user requirements affect setbacks and coverage ratios, there can often be substantial encumbrance on an industrial site (say 30%) and no effect on the development potential of the site and hence no effect on value. As the encumbrance goes above 30%, the site plan may have to adjust to the encumbrance with some small impact on the value of the site up to the point where the development of the site has to be curtailed with corresponding decreases in site value. He has not seen any cases where marketing of the developed space or rents were affected by proximity to the HVTL. Visual or aesthetic concerns appear not to be an issue. Finally, he investigated issues around interference with electronic instruments caused by the HVTL. With electron microscopes, location and tuning of the instruments could be affected by the lines, but users reported that "inside the building" sources were a larger concern.

Author	Jackson, T.O., Pitts, J. and Norwood, S. (2012)
Title	The Effects of High Voltage Electric Transmission Lines on Commercial and Industrial Properties
Source	Paper presented at American Real Estate Society Meeting, St. Petersburg, FL
Publication Date	April 19,2012
Studied Geography	Wisconsin
Studied Transmission Lines	Various
Additional Data Description	
Studied Voltage	138 kV and higher
Number of Observations	106 to 123 depending on the regression model. In addition there were 5 paired sales analyses: two small apartment complexes, one office building and two parcels of vacant land slated for office development.
Studied Time Period	The regression analysis covered the period 2005 – 2010. The paired sales analyses considered transactions from 2000 – 2010.
HVTL Measurements	A categorical variable was used to indicate "proximate" (within 500 feet of a 138 kV line or greater) or "control" (beyond 500 feet of a HVTL).
Methodology	Regression in both linear and log-linear format.
Independent Variables	Year of sale, gross floor area, age, office build-out, sprinkler system, dock high doors, county in the greater Milwaukee area, proximate to HVTL.
Dependent Variables	Sale price and natural log of sale price
Summary/Result	1. <u>Regression results</u> The regression results showed a large positive effect of HVTL proximity ranging from 19 to 35%. The authors don't suggest causality but suggest that the HVTL are likely a proxy for some other variables influencing the value of the properties studied. Their conclusion was that at least the HVTL were not associated with any negative effects. 2. <u>Paired Sales</u> The five studies the authors refer to as paired sales in fact used multiple sales comparables, adjusted as appropriate, plus some interviews with transaction participants. In each case (two apartment complexes, one office building and two office land tracts), there was no evidence of the transaction being affected by the HVTL.

Appendix C: Vacant Land Studies

Author	Brown, D.J.A. (1975)
Title	The Effect of Power Line Structures and Easements on Farm Land Values
Source	*Right of Way*
Publication Date	December 1975/January 1979
Studied Geography	Saskatchewan, Canada
Studied Transmission Lines	Predominantly 138 kV lines on H-frame wood structures.
Additional Data Description	Quarter section sales (136 to 199 acres) and half section sales (200 to 350 acres.
Number of Observations	411 quarter section sales and 377 half section sales
Studied Time Period	1965 to 1970
HVTL Measurements	Number of HVTL crossing the property
Methodology	Multiple regression and paired sales
Independent Variables	Non-arable acres/total acres, weighted productivity index, miles to shipping point, number of HVTL
Dependent Variables	Selling price per cultivated acre adjusted for waste land, pasture land or improvements.
Summary/Result	1. <u>Regression Analysis</u> The HVTL variable was not significant for either the quarter section or the half section sale samples. The author concluded that HVTL structures and easements do not have a big enough adverse effect on entire parcels of land to be reflected in the selling price of such parcels. 2. <u>Paired Sales Analysis</u> Given the large number of sales and their relative homogeneity, the author found 32 pairs of quarter section sales and 16 pairs of half section sales for which one of the pair was crossed by a HVTL, the other was not crossed. In both cases, the encumbered parcels sold for more than the unencumbered parcels indicating no adverse effect of the HVTL on market value. Although the effect is apparently so small it doesn't show up in market value, the author does identify several components that may contribute to an operating loss.

Author	Chalmers, J. A, (2012a)
Title	Transmission Lines and rural Property Values
Source	*Right of Way*
Publication Date	May/June 2012
Studied Geography	Central Montana
Studied Transmission Lines	Double Circuit 500 kV line on 185 foot, self-supporting steel lattice structures
Additional Data Description	The study area is a large rural subdivision, Aspen Valley Ranches, consisting of 156 twenty acre lots located about 23 miles south of Helena Montana. The 500 kV line bisects the subdivision with 26 lots crossed by the easement, many other lots with views of the line but many also completely shielded from the line by topography or vegetation.
Number of Observations	183 transactions (several of the lots sold more than once over the study period)
Studied Time Period	1987 to 2011
HVTL Measurements	Distance measured from the center of the lot to the easement boundary, area encumbered by the easement and a visual intrusion variable based on field inspection and measured as a categorical variable from 0-3, i.e. not intrusive at all to highly intrusive.
Methodology	Log-linear regression.
Independent Variables	Year of sale, HVTL visual intrusion, presence of riparian habitat, lot quality, encumbered area, distance to HVTL and quality of access to the lot.
Dependent Variables	Natural log of sale price.
Summary/Result	The distance and visual intrusion variables measure many of the same things and didn't have enough independent effects to be used together in the regression equation. Therefore, a distance model and a visual intrusion model were estimated. The distance model showed discounts of about 15% for lots within 1000 feet of the HVTL relative to lots beyond 1000 feet. Since the 20 acre lots averaged 660 by 1320 feet, this implies that lots on either side of the line were likely affected but the results probably didn't extend beyond that. The visual intrusion models showed discounts of about 10% for lots where the HVTL were highly intrusive. The other visual intrusion variables were not significant. The fact of a 10 to 15% effect on lot sales price is not surprising.

	• Even though the lots are relatively large, the combination of topography and location of access roads means that there is little flexibility with respect to the location of the building site for many of the lots. Given the location of the building site and that of the 185 foot, double circuit structures, there were many cases where the HVTL was the dominant characteristic of the viewshed. • Although some lots had a few acres of grazing potential, the use of most of the lots was purely residential. • There were always plenty of substitutes available in the market - some affected by the lines, some not. Finally, since the transaction data base included the original sales by the developer, the relative desirability of the lots was studied by regressing the year of sale on the same set of independent variables, i.e. did the higher quality lots sell first, the HVTL lots later, etc. The result was that not one of the independent variables was correlated with date of sale. The implication is that the pricing of the lots must have been a fair reflection of the market's evaluation of the relative strengths and weaknesses of the individual lots. For example, the 15% HVTL discount was apparently sufficient to make the market indifferent between the less than 1,000 feet and greater than 1,000 feet lots and hence there was no difference in the rate at which they sold.

Author	Chalmers, J.A. (2012b)
Title	High-Voltage Transmission Lines and Rural, Western Real Estate Values
Source	*The Appraisal Journal*
Publication Date	Winter 2012
Studied Geography	Montana
Studied Transmission Lines	500 kV lines from the Colstrip Power Plants west to the Idaho border. About half of the line is parallel, single circuit 500 kV lines on 120 to 130 foot guyed steel lattice structures and half is double circuit 500 kV lines on 185 foot self-supporting steel lattice structures.
Additional Data Description	The study examined the universe of sales occurring over the period 2000 to 2011 for properties within 500 feet of the centerline of the HVTL.
Number of Observations	49 individual transactions and 7 subdivisions representing about 140 lot sales.
Studied Time Period	2000 to 2011
HVTL Measurements	Location of the HVTL relative to the property, effects on use or utility of the property, interviews with transaction participants.
Methodology	The 49 individual transactions were studied using a case study approach based on description of the property, location of the HVTL, implications for use or utility of the property, interviews with transaction participants and retrospective appraisal of the property based on sale comparables unaffected by a HVTL. The 7 subdivision studies looked at the timing and pricing of lot sales given the location of the lots relative to the HVTL.
Independent Variables	NA
Dependent Variables	NA
Summary/Result	1. <u>49 individual transactions</u> • Production Agriculture – 19 transactions. No evidence of price effects due to HVTL. Productivity and operating costs are the dominant consideration.. • Agricultural Lands with recreational influence – 4 transactions. No evidence of price effects due to the HVTL. The parcels are large, uses diverse and general absence of perfect substitutes unaffected by HVTL. • Agricultural lands with High Amenity Recreation and Natural Features – 3 Transactions. No apparent HVTL effects. Very large parcels, highly unique, HVTL not even a consideration. • Rural Residential Subdivisions – Lot size less than 5 Acres – 2 transactions. No effect of the HVTL. • Rural residential Subdivision – Lot size greater than 5 acres – 3 transactions. One case where the HVTL were highly intrusive and

	marketing time was long and the lot ultimately sold at a 20 to 25% discount. No effect in the other two cases. • Large Acreage Rural Residential Tracts – 4 transactions. No apparent effect of HVTL on marketing time or price. • Rural Recreational Tracts/Cabin Sites – 14 transactions. No effect due to the HVTL with some ambiguity in 2 of the 14 sales. 2. 7 Subdivision Studies • There was a single subdivision, Brown's Estates, where a 350 foot corridor with three HVTL and no screening was the undisputed dominant feature of eleven lots. There were both price and marketing time effects. • In three other subdivisions, there were very limited price effects. In one case, a single abutting lot was discounted; in another, two encumbered lots sold for the same price as the other lots in the subdivision, but they were larger. In the third, a lot was discounted in full for the extent of its encumbrance. • Of the remaining 3 subdivisions, one had insufficient data to evaluate price effects and the other two had no price effects. • In total, of the 140 or so lots in the studied subdivisions, 12 showed price effects, 2 lots sold for the same price but were larger and one was fully discounted for the extent of the easement on the property. • With the exception of Brown's Estates, marketing time effects were rare. 3. <u>Summary</u> Overall, price and marketing time effects of the HVTL were rare. Where there were effects, the contributing factors seemed to be small lots with little flexibility in the siting of improvements, anticipated use limited to residential and a good supply of equally desirable substitute properties without the influence of the HVTL.

Title	Electric Transmission Lines: Is there an Impact of Rural Land Values?
Source	*Right of Way*
Publication Date	November/December 2010
Studied Geography	Wisconsin
Studied Transmission Lines	115 kV to 345 kV with the majority 345 kV
Additional Data Description	Online sales all had easements on the property. Once the Online sales were selected, for each online sale, local appraisers found 3 to 4 offline sales that were similar in all respects except for the HVTL.
Number of Observations	88 online sales and 297 offline sales
Studied Time Period	2002 – 2008
HVTL Measurements	Online parcels were crossed by a HVTL. Offline properties were at least ¼ mile fro a HVTL.
Methodology	Regression
Independent Variables	Location, land cover (wooded, open, wetlands), purchaser (public, private)
Dependent Variables	Price per acre
Summary/Result	No statistically significant effect on sale price associated with the HVTL easement.

Author	Mitchell, P. and Kinnard, W. N. Jr. (1996)
Title	Statistical Analysis of High-Voltage Overhead Transmission Line Construction on the Value of Vacant Land
Source	*Valuation*
Publication Date	June 1996
Studied Geography	Hamptonburgh and Wawayanda, Orange County, NY
Studied Transmission Lines	Marcy South 345 kV line.
Additional Data Description	The study period covers the before, during and after construction periods. The final announcement and filing of route maps was in September, 1985. Construction was largely in 1987 with construction completed in August 1987.
Number of Observations	376 vacant land sales
Studied Time Period	January 1, 1983 to December 31, 1987
HVTL Measurements	Distance of property from centerline (0-300 feet, 301-2000 feet and 2001-4000 feet)
Methodology	Regression
Independent Variables	School district, Land use (single family, PUD, Nonresidential and agricultural), size, distance zones to HVTL, time, pre-filing date/post filing date
Dependent Variables	Inflation adjusted sale price per acre
Summary/Result	Announcement and construction of the Marcy 345 kV line apparently had no effect on the market value of adjacent vacant land.

Author	Rigdon, G.J. (1991)
Title	138 kV Transmission Lines and the Value of Recreational Land
Source	*Right of Way*
Publication Date	December, 1991
Studied Geography	Marquette County, Michigan
Studied Transmission Lines	138 kV
Additional Data Description	Recreational parcels ranging from 10 to 160 acres.
Number of Observations	46 transaction
Studied Time Period	January 31, 1986 to January 30, 1991
HVTL Measurements	Distance to the HVTL
Methodology	Regression
Independent Variables	Size, topography, distance to county road, distance to HVTL
Dependent Variables	Sale price per acre
Summary/Result	No effect on sale price of proximity to the HVTL.

Title	High Voltage Transmission Lines: Do They Affect Residential Property Value?
Source	*Journal of Real Estate Research*. 7(3): 315-329
Study Area	United States
HVTL	NA
Data	Random sample of 500 appraisers holding the RM designation from the Appraisal Institute. 219 useable responses giving a RR of 43.8%.
Summary/Results	• 84.0% of respondents indicated that market value of residential property is negatively affected by proximity to HVTL. Proximity defined as properties crossed, abutting or from which HVTL are visible. • Mean value decrease was 10.2%. • Concerns cited included visual (93.9%), Health (58.9%), noise (43.1%) and safety (28.6%).

Author	Kinnard, W.N. Jr. (1967)
Title	Tower Lines and Residential Property Values
Source	*The Appraisal Journal.* April: 269-284
Study Area	Hartford, Connecticut
HVTL	Not indicated.
Data	791 homes in 17 subdivisions in the Greater Hartford area were the basis for the study. Each of these subdivisions was either crossed or abutting a HVTL. Home owners over the period 1954-1964 were sent surveys. 45.0% response rate. Responses were categorized both in terms of distance from the HVTL—crossed, abutting, within 200 feet, more than 200 feet and depending on whether significant improvements had been made to the property over the study period. In addition, assessors (84), appraisers (26), builders (31), lenders (85) and realtors (45) with experience in this market were surveyed.
Summary/Results	• Home owner results 1. 79.9% aware of the HVTL at time of purchase 2. 76.3 % no effect of HVTL on purchase decision or price 3. 79.9% would buy in this location again 4. 80.7% have made home improvements 5. No response differences associated with home locations • Market Professional Results 1. HVTL affect market values of crossed lots: realtors (89.7%), appraisers (78.9%), Lenders (69.4%), builders (61.5%). • The authors comment on the inconsistency between the attitudes of the home owners and the real estate professionals.

Title	Resident Perceptions of a Nearby Electric Transmission Line
Source	*Journal of Environmental Psychology.* 16: 65-74.
Study Area	City of Vallejo, Solano County, California. Two subdivisions—one developed just before the line upgrade, the other developed just after the line upgrade.
HVTL	115 kV line on 60 foot steel lattice structures upgraded to 115 kV and double circuit 230 kV on 120 to 160 foot steel poles in a 100 foot ROW.
Data	Survey responses from 266 residents of the two subdivisions (response rate of 60%) three years after the HVTL upgrade. Respondents were asked about perceived HVTL impacts, line visibility, ROW use, evaluation of design and attitudes in opposition to the upgrade. In addition the researchers established distance measures and objective measures of visibility.
Summary/Results	• 87% of respondents see the HVTL as a negative influence on the attractiveness of their neighborhood. • Health and safety was perceived as the most significant negative impact, 3 times more negative than aesthetics and 6 times more negative than impacts on property values. • None of the perceived impact responses were correlated with distance to, or visibility of, the HVTL. • 40% of the respondents overestimated the visibility of the line. • 60% of the residents living in the neighborhood prior to the upgrade strongly opposed the upgrade. Those opposed were more like to exaggerate visibility of the line. • Generally, the respondents favored the tubular steel structures to the steel lattice structures two to one and 75% viewed the landscaping of the ROW positively. • Respondents who used the ROW perceived fewer negative impacts.

Author	Solum, C.L. (1985)
Title	Transmission Line Easement Effects on Rural land in Northwest Wisconsin
Source	*Right of Way*. April: 14-18
Study Area	Rural Wisconsin
HVTL	69 kV to 161 kV.
Data	180 responses (43% response rate) from individuals with properties crossed by a HVTL. There were 127 agricultural properties, 43 recreational (wooded) properties and 10 rural residential properties. Interviews were also completed with buyers and sellers of 23 encumbered properties.
Summary/Results	• For the agricultural properties, 56% said no effect on value or use, 35% said the HVTL represented an inconvenience and only 2 responses out of 127 thought resale value might be affected. • For the recreation properties, the most frequent concern (30%) was loss of timber value from clearing of the ROW, next (22%) was a concern that future resale value would be affected and 14% saw the HVTL as having no effect on the property. • For residential property, the most frequent concern (58.5%) was aesthetic followed by loss of building sites and potential loss of resale value (41.2%). • The interviews of participants in transactions of encumbered properties failed to indicate a single case in which the presence of the HVTL had any effect on the sale price.

CASE STUDIES OF 50 RECENT RESIDENTIAL PROPERTY SALES ALONG NEW HAMPSHIRE TRANSMISSION LINES

Prepared for:

George Dana Bisbee, Esquire
Devine, Millimet & Branch, P.A.
111 Amherst Street
Manchester, New Hampshire

Date of Report:

May 29, 2015
Revised April 23, 2018

bc underwood llc
real estate counseling & appraisal

Preface to the Revised Report

revision date: April 23, 2018

Case Studies #9, #33, #35, #48, and #50 have all been updated by replacing selected comparable sales because one or more of the comparable sales in the retrospective appraisals could not be judged independent of the high voltage transmission line influence. The narrative and summary tables have been adjusted accordingly.

In addition, as a result of the revisions, Case Study #33 had an appraised value revised from $117,000 to $121,000 and Case Study #35 had an appraised value revised from $118,000 to $129,000. There were no other revised values for the remaining 48 case studies.

Scope of Work & Methodology

The research and analysis were conducted as follows:

1. Two HVTL corridors were identified for the study.

   Corridor 1
   The first HVTL corridor is mostly 350 feet wide from Littleton to Hudson, New Hampshire. It was chosen because it includes a 450 kV DC and two (except in Hudson) 230 kV AC transmission lines with structures ranging in height from 50 to 130 feet.

   Corridor 2
   The second HVTL corridor is generally 150 feet wide. It was chosen because it crosses the state from northern New Hampshire in Dummer to Deerfield. This corridor is also the proposed location of the Northern Pass Transmission (NPT) project. This corridor includes one or more 115 kV transmission lines with structures ranging in height from 55 to 95 feet.

2. 50 sales of properties were identified for Case Studies. The primary case study data was researched for the period of 2000 to 2014. The initial research included a long time span since the number of sold parcels that abutted or were traversed by the ROW were unknown and a sufficient number of transactions were required for the study. Once it was determined that there were a sufficient number of transactions on both Corridor 1 (530) and Corridor 2 (550), the time span for the sold properties was further refined to property sale dates from 2010 to 2014. This resulted in 110 potential case study properties for Corridor 1 and 153 for Corridor 2. Raw land sales along with non-arm's length transactions were eliminated from the data set. In the end, 22 properties were studied for Corridor 1 and 28 properties were studied for Corridor 2; in total 50 case studies were developed.

The following methodology was utilized in determining the properties for inclusion in the study:

a. Parcels that abut or are traversed by the HVTL ROW were identified by reviewing the tax maps in each municipality. In total, more than 2,000 parcels were identified for both corridors.

b. From the list of parcels that abut or are traversed by the HVTL ROW, tax assessment cards were reviewed to determine if the property had sold from 2000 to present. If the property transferred, a copy of the tax assessment card was acquired.

c. The tax assessment cards were then cataloged in a spreadsheet and sorted by sale date to determine the number of potential properties within a given time period.

d. Raw land and non-arm's length transactions were eliminated from the data set. In the initial review of the tax assessment cards, it was possible to eliminate some parcels due to

foreclosure sales, family transactions, and other obvious non-arm's length transactions.

e. The data set was further sorted by those properties that sold in arm's length transactions from 2010 to 2014. This date range was selected in an attempt to avoid most of the depressed real estate market conditions of the recession pre-2010. This resulted in a total of 22 case study properties for Corridor 1 and 28 case study properties for Corridor 2.

3. 50 properties met the search criteria for the study. In order to determine if there was an impact of the HVTL on the sales transaction of the property, an individual appraisal report was prepared for each property. The following is a summary of the hypothetical conditions and methodology for each appraisal report.

   a. The appraisals were prepared assuming that the subject property was not influenced by the presence of a HVTL. This hypothetical appraisal condition was necessary to provide a market value estimate that was not influenced by a HVTL.

   b. The effective dates of the appraisal reports were based on the sale date of the property being analyzed. All of the appraisal reports were completed using a retrospective date of valuation.

   c. Interviews were conducted with a person involved in the transaction. There were two instances where interviews were not conducted due to the unavailability of a person involved with the transaction. Photographs contained in the appraisal reports were taken from the Multiple Listing Service (MLS) and were relied upon as part of the appraisal process. The interviews, MLS data, registry data, and municipal tax assessment records were the basis of each appraisal report. The photographs relied upon from MLS are the best representations of the property's condition at the time of sale.

   d. Comparable sales were researched for each property. MLS data was utilized for comparable sale data. The sale data was confirmed for each transaction. In addition, appraisers who were involved in the transaction at the time of sale were interviewed for factual data regarding the property for the purposes of accurately describing the improvements since interior inspections were not conducted as part of the appraisal process.

   e. An exterior inspection of each property was conducted on January 13 and 14, 2015. It should be noted that the case study properties were inspected with no foliage so that any view of the HVTL was as unobstructed as possible given the season.

4. Individual case studies were prepared for each of the 50 properties included in the study. The purpose of the case study was to determine if there was any impact on the transaction from the HVTL. The following is a summary of the methodology and analysis found in the case studies.

a. Identify the subject property and its physical relationship to the HVTL.

b. Review the property's sales price and compare it to an appraised value utilizing the hypothetical condition that it is not influenced by the HVTL.

c. Interview a person knowledgeable with the transaction. With two exceptions, at least one person was interviewed; mostly the listing broker. In some cases, an owner of the property was interviewed. The interviews included inquiry into the marketing efforts of the property, visibility of the HVTL from inside the house and outside, and any other details regarding the transaction that influenced the sale price including those factors that may have been related to the HVTL.

d. Review the property tax assessment card for any details related to the HVTL.

e. Based on the evidence collected from the interview, sales transaction, appraisal, and property inspection, arrive at a conclusion regarding whether the property's marketing time or sale price was influenced by the presence of the HVTL.

Case Studies & Exhibits Summary

Property Identification & Description

Each parcel has been identified primarily from the data found on the municipal tax assessment card and tax map. A source deed for each property was obtained from the registry of deeds and reviewed. Land area and building size calculations were taken from the municipal tax assessment cards and compared with data found on MLS. When conflicting data occurred, the municipal tax assessment records were relied upon.

Physical Relationship of Transmission Lines to the Property

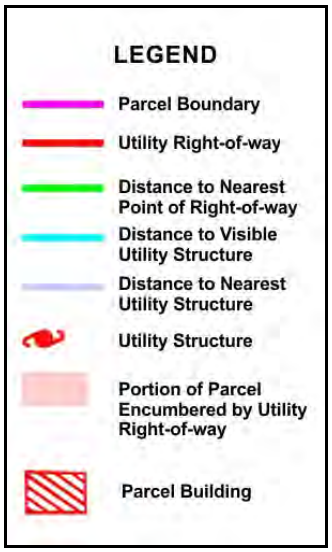
The transmission corridor was described using information provided by National Grid for Corridor 1 and Eversource Energy for Corridor 2. An exterior inspection of each subject property was performed. The property inspections were relied upon to assist in determining the visibility of the HVTL from the property. Three categories of visibility are defined. They are:

- Not Visible - structures or conductors cannot be seen.
- Partially Visible - structures or conductors are partially obstructed; but neither are clearly visible.
- Clearly Visible - unobstructed view of the conductors and/or an unobstructed view of all of that portion of the structure to which the conductors are attached.

In order to estimate various distances from the property to the ROW and structures, exhibits were prepared by White Mountain Survey & Engineering, Inc. (WMS) of Ossipee, New Hampshire. WMS relied upon tax assessment cards, municipal tax maps and in some instances copies of portions of boundary surveys that were provided to them. It should be noted that where there was a survey plan available that displayed encumbered ROW calculations, the

survey plan was relied upon. The information was supplemented with aerial imagery obtained from NH GRANIT (New Hampshire's statewide GIS clearinghouse).

NH GRANIT reports that this image data layer consists of 1' resolution color photographs collected in 2010 and 2011. Parcel tax maps were then re-scaled and superimposed onto the aerial imagery referenced above using best fit methods by selecting objects and land features common to both the aerial imagery and the tax map or boundary surveys. In some instances, when a larger community had a Geographic Information System available, that parcel information was used instead of the tax map in an effort to create the most accurate exhibit possible without the benefit of on-site mapping.



Exhibits Legend

The location of the utility corridor is based primarily upon the location depicted on the individual tax maps. In a few instances, the obvious limits of the cleared ROW visible in the aerial imagery were used. Parcel areas cited on the exhibits are solely per the individual property assessment cards. While efforts were made to create the most accurate exhibit possible, using the information made available to WMS, supplemented by the referenced aerial imagery, the ultimate accuracy of each exhibit will vary depending on the accuracy of the base information and the interpretation of the selected objects used to best fit the aerial imagery and the base information. The exhibits were prepared for illustrative purposes only.

Property Sale Data

The property sale data was taken from the municipal tax assessment card, MLS, and the deed. The sales transaction was confirmed with at least one person involved with the sale.

Interview Data

With two exceptions, each case study includes an interview with at least one person involved in the transaction. The interviews were conducted by telephone. The purpose of the interviews was to confirm the sale and its transactional details along with evidence gathering regarding the influence of the HVTL on the marketing period and sale price of the property. Each interview was different in that some people recalled more details regarding the transaction and what could be seen in terms of the HVTL from inside the house.

Appraised Value on Data of Sale Absent Influence of HVTL

Individual appraisal reports were prepared for each case study property by using comparable sales not influenced by a HVTL. The appraisal report was prepared under the hypothetical condition that the HVTL did not exist. All appraisal reports had effective dates of sale based on the property's sale date being analyzed. The resultant market value estimate was then compared to the actual sale price. The difference between the two numbers provides an indication as to whether the transaction was influenced by the HVTL.

Mark Correnti, SRA was retained to prepare the 50 case study appraisal reports. One appraiser was utilized so that consistent and methodical adjustments could be made throughout the entire process of appraising 50 properties. Nearly all of the local market segments and micro economies were represented in the data set from the rural North Country to densely populated

Southern New Hampshire and most places in between. Mr. Correnti was primarily responsible for the preparation of the case study appraisal reports. He was responsible for interviewing a person knowledgeable with the transaction in addition to obtaining factual information from appraisers who may have had first hand knowledge of the condition of the improvements at the time of the transaction. Correnti researched cost and sale data and was the principal author of all 50 case study appraisal reports. Correnti prepared the appraisal reports under Brian C. Underwood's, CRE supervision.

Property Assessment Related to HVTL

The tax assessment cards for all 50 properties were reviewed to determine if there were any comments or adjustments made related to the HVTL or presence of the ROW. In those cases where comments or adjustments were made, they are noted in the case studies.

Conclusions

Consideration was given to the physical relationship of the HVTL to the property, the interview(s), the appraisal absent HVTL, the marketing period, and facts of the sale. Conclusions were drawn with regard to the sale price and the marketing period.

The aforementioned components were reconciled to arrive at a conclusion regarding the adverse influences on value and marketing period. After reconciling all of the evidence for the case study, a conclusion was drawn that indicated one of the following:

- There was no effect.
- There was a possible effect.
- There was an effect.

The following page includes a summary of the salient facts and conclusions for each of the case studies. In summary, the case studies conclude the following:

	Adverse Influence on Sale Price	% of Total	Adverse Influence on Marketing Period	% of Total
None	34	68.0%	36	72.0%
Possible	9	18.0%	7	14.0%
Yes	7	14.0%	7	14.0%

CASE STUDY #1

Property Identification & Description

Address: 1314 Monroe Road
Town of Littleton
Grafton County, New Hampshire

Identification: Tax Map 40, Lot 3
Source Deed: Book 3699, Page 734

Land Area: 47.14 acres with 2,694 feet on the Connecticut River. The land is sloping from the road down to the river front. It is covered with a mature tree stand. 45.14 acres of the total are in Current Use.

Improvements: Single family home containing 2,132 ft^2 with 3 bedrooms & 2.5 bathrooms. The ranch style house was build circa 2001 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 400 foot wide right of way with 75 and 98 foot structures runs through the parcel between the house and the river. 11.12 acres are encumbered by the easement according to the tax card. Based on CAD measurements, the encumbered area calculates to 9.0 acres.

Number of Structures On Site: 7
ROW Encumbered Acreage: 9.0 acres or 19.1%
Distance from House to ROW: 675 feet
Distance to Nearest Structure: 805 feet
Distance to Most Visible Structure: 950 feet
HVTL Visibility from House: Partially Visible. Top sections of the lines and structures are barely visible, if at all from the rear of the house. The primary view is from the rear of the house across the Connecticut River Valley. The corridor runs along the Connecticut River. The HVTL is clearly visible along the waterfrontage and must be crossed in order to get to the property's riverfront, some of which is directly underneath the transmission lines.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: May 10, 2010
Conditions of Sale: Arm's Length
Marketing Period: 237 days
Average DOM for Town: 142 days
Marketing History: The property was originally listed for sale at $750,000 in July 2009. The listing expired in December 2009 at a reduced price of $625,000. The property was then re-listed in January 2010 with another broker for $599,000 and sold five months later.

Sale Price: $400,000

Interview Data

Conducted by: Brian C. Underwood, CRE

Transaction Interview: According to the listing broker, in January 2010 the property was listed for $599,000 after several unsuccessful listing attempts at unrealistic higher asking prices. Potential buyers were unaffected by the HVTL corridor running along the river through the property. There were no concessions or extraordinary considerations included in the sale price. Once the property was appropriately priced, it sold withing a reasonable time period. There was no effect on the marketing period or price from the HVTL according to the listing broker.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: The subject property is unique in that it has frontage along the Connecticut River along with 47.14 acres of land of which 45.14 acres are in Current Use. The improvements are not atypical in the marketplace.

Sale Data: Five comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $340,883 to $419,486. All five sales have been given equal weight in the final reconciliation.

Appraised Value: $375,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value was $418,800. The easement encumbers 11.12 acres of which all are in Current Use. Therefore, there is no adjustment in the assessment data related to the ROW.

Assessment Card Notes: Easement.

Conclusions

Improvements & Visibility

This large Connecticut River waterfront property is crossed by a 450 kV transmission line. There is a single family home on the property located approximately 675 feet from the ROW. The HVTL structures are barely visible from the rear of the house and are not visible from the front of the house. The HVTL structures and lines are most prominent at the property's riverfront.

Interview

The property sold in May of 2010 and the listing broker indicated that the existence of the corridor had no effect on the transaction in terms of price or marketing period. Once the property was appropriately priced for the market, it was his opinion that the property sold in a reasonable marketing time.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $375,000, 5.8% below the sale price of $400,000. The marketing period was 237 days which is 66.9% higher than the average days on market for all other property in the town during the same period. Given that the subject property sold in May 2010, the real estate market was still in a recession with varying marketing times depending on property type and price.

Summary

While there is some limited view of the HVTL from the house at a distance of over 800 feet, the interview with the listing broker and the appraisal evidence suggest that the HVTL had no effect on the sale price or the marketing period associated with this transaction.

CASE STUDY #2

Property Identification & Description

Address: 2477 Lime Kiln Road
Town of Haverhill
Grafton County, New Hampshire

Identification: Tax Map 413, Lot 66
Source Deed: Book 3877, Page 548

Land Area: 9.7 acres according to the deed and recorded plan. The tax assessment card indicates a total of 8.44 acres. The land is level. The site is mostly open space with some mature trees behind the house.

Improvements: Single family modular home containing 870 ft^2 with 2 bedrooms & 2 bathrooms. The ranch style house was built circa 2007 and is in average condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 50 and 105 foot structures runs through the parcel behind the house. According to the tax assessment card, 7.44 acres are encumbered by the HVTL easement. Based on CAD measurements, the encumbered area calculates to 6.0 acres.

Number of Structures on Site: 5
ROW Encumbered Acreage: 6.0 acres or 71.1%
Distance from House to ROW: 153 feet
Distance to Nearest Structure: 395 feet
Distance to Most Visible Structure: 395 feet
HVTL Visibility from House: Clearly Visible. The structures are visible from the side and rear of the house. The primary view is from the side and rear of the house to cleared areas surrounding the house.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: April 30, 2012
Conditions of Sale: Arm's Length
Marketing Period: 131 days
Average DOM for Town: 198 days
Marketing History: The property was originally listed for sale on January 29, 2010 for $129,000 and the listing expired at $120,000 a year later. It was relisted with a different broker on October 23, 2011 for $109,900 and under agreement for $107,000 on April 30, 2012 with a $2,500 seller concession to the buyer at closing.
Sale Price: $107,000

Interview Data

Conducted by: Brian C. Underwood, CRE

Transaction Interview: According to the current owner of the property, they paid market value for the property. When asked about the HVTL, the owner simply responded: "They were here." The HVTL had little or no factor in their purchase decision. At least three structures can be seen from the inside of the home. The ROW is utilized by the owners for recreational purposes; specifically hunting. The buyer indicated that it was a tough property to sell because of a prior murder that occurred on the property (not in the house).

According to the listing broker, the property sold at market value without any impact from the HVTL. There were some potential buyers who were not interested in the property due to the property's murder stigma. The broker indicated that while there may be a set of buyers not willing to purchase property that is in close proximity to HVTLs, there is a subset of buyers who have no reservations. In addition, some of this subset of buyers views the HVTL as a benefit for privacy and recreational purposes.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A small starter modular starter home on 9.7 acres most of which is encumbered by a HVTL corridor.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $94,073 to $109,242. Two of the three sales had a tight range of value from $108,300 to $109,242 and given more weight in the final reconciliation.

Appraised Value: $108,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $109,600.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family home site is crossed by a 450 kV transmission line. There is a small modular home on the property located approximately 153 feet from the ROW. The HVTL structures are clearly visible from the side and rear of the house due to a portion of the site void of trees. There is a mature tree stand at the rear of the house. At least three structures are visible from inside the home. The HVTL structures and lines are most prominent from the side and rear in addition to being visible on the approach to the front of the house.

Interview

The owner of the property indicated that they paid market value. They utilize the ROW for recreational purposes. The listing broker was also interviewed and indicated that there were buyers not interested in the property due the murder stigma associated with it. The broker also indicated that there are a subset of buyers in the marketplace who do not consider the HVTL a detriment.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $108,000, 0.9% above the sale price of $107,000. The marketing period was 131 days which is 33.8% lower than the average days on market for all other property in the town during the same period.

Summary

There is no evidence that the sale price or marketing period of the subject property was adversely impacted by the presence of the HVTL. Even though several HVTL structures are clearly visible from the house and the yard, the interview with the current owner of the property and the listing broker indicated that they did not impact the sale price or marketing period. The interviews along with the appraisal evidence all indicate that there is no impact on the transaction from the HVTL.

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the property sold at market value without any impact from the HVTL. The

broker indicated that while there may be a set of buyers not willing to purchase property that is in close proximity to HVTLs, there is a subset of buyers who have no reservations. In addition, some of this subset of buyers views the HVTL corridor as a benefit for privacy and recreational purposes. The broker also indicated that the lengthy marketing period was attributable to market conditions at the time and the seller's unwillingness to lower the price. The broker indicated that the HVTL may have impacted the marketing period, but in the end, it did not impact the selling price or market value.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A double wide mobile home on 1.31 acres of which 0.31 acre is encumbered by a HVTL corridor.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $103,755 to $120,530. Sale #2 required the least amount of overall adjustments and also fell in the middle of the range of the other two comparable sales at $111,780.

Appraised Value: $112,000

Property Assessment Related to HVTL

Overview: The 2011 assessed value of the subject property was $115,200.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family home site is crossed by a 450 kV transmission line. There is a small double wide home on the property located approximately 101 feet from the ROW. The HVTL structures are clearly visible from all sides of the house due to the open fields surrounding the home. At least six structures are visible from inside the home. The HVTL structures and lines are most prominent from the side and rear in addition to being visible on the approach to the front of the house.

Interview

The listing broker indicated that there may have been some impact on the marketing period due to the HVTL; however the lengthy marketing period was at least partially attributed to the overall market conditions at the time back in 2010 when the market was at or near bottom and seller unwillingness to reduce the price. The broker indicated that the property sold at market value.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $112,000, 4.7% below the sale price of $117,300. The marketing period was 566 days which is 193.3% higher than the average days on market for all other property in the town during the same period. The higher than normal marketing period can be partially attributed to the recessionary influences in the marketplace and the seller's unwillingness to lower the price.

Summary

The evidence suggests a possible effect of the HVTL on the marketing period but no effect on the sale price in this transaction.

CASE STUDY #4

Property Identification & Description

Address: 208 Atwell Hill Road
Town of Wentworth
Grafton County, New Hampshire

Identification: Tax Map 4, Lot 1, Sublot 4
Source Deed: Book 3976, Page 595

Land Area: 2.02 acres according to the tax assessment card. The land is mostly level with the rear slightly sloping downward. A portion of the property is open, the rear boundary along the ROW has mature trees.

Improvements: A one story, single family log home containing 864 ft^2 with 1 bedrooms & 1 bathroom. The mobile home was built circa 1978 and is in average condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 68, 74, and 90 foot structures runs along the rear boundary of the parcel.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0 acres or 0%
Distance from House to ROW: 253 feet
Distance to Nearest Structure: 320 feet
Distance to Most Visible Structure: 320 feet
HVTL Visibility from House: Partially Visible. There are three structures that are partially visible from the rear of the house through the trees. The primary view is from the side and rear of the house to cleared areas surrounding the house. The HVTL is visible from the side meadow.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: April 30, 2013
Conditions of Sale: Arm's Length
Marketing Period: 50 days
Average DOM for Town: 160 days
Marketing History: The property was originally listed for sale on January 27, 2013 for $129,900 and closed 50 days later for $126,000 with $6,000 cash concession to the buyer.
Sale Price: $126,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the presence of the HVTL had "...nothing to do with nothing." The HVTL runs up through the valley and is used for multiple recreation

uses. The broker indicated it is more of a plus than a detriment and indicated that they wished they had 20 more of them to sell. The listing broker stated the HVTL structures and lines can be seen from the house if you look for them and when the leaves are off the trees. There were no potential buyers that rejected the property due to the HVTL. The broker concluded that the market value of the property was not influenced whatsoever by the HVTL.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A small log cabin on 2.02 acres that abuts the ROW corridor.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $93,220 to $142,038. Sale #2 required the least amount of overall adjustments and also fell in the middle of the range of the other two comparable sales at $130,717.

Appraised Value: $130,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $127,500.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family home site abuts a 450 kV transmission line. There is a small log cabin home on the property located 253 feet from the ROW. The HVTL structures are only partially visible from the house due to the rear tree line. Three structures are partially visible from inside the home when the leaves are off the trees. The HVTL structures and lines are most prominent from outside the house in the yard looking back through a small cut in the trees.

Interview

The listing broker was rather emphatic in her opinion regarding the impact of the HVTL in the area and on the subject property. The broker indicated that there no influence on the marketing period or sale price.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $130,000, 3.1% above the sale price of $126,000. The marketing period was 50 days which is 68.8% lower than the average days on market for all other property in the town during the same period. The lower than normal marketing period supports the broker's comments that the broker wished they had 20 more properties like the subject to sell.

Summary

There is no evidence that the sale price or marketing period of the subject property was adversely impacted by the presence of the ROW. Even though several HVTL structures are partially visible from the house and the yard within 260 feet, the interview with the listing

broker indicated that they did not impact the sale price or marketing period. The interview along with the appraisal evidence all indicate that there was no impact on the transaction from the HVTL.

CASE STUDY #5

Property Identification & Description

Address: 287 Mt. Moosilauke Highway
Town of Wentworth
Grafton County, New Hampshire

Identification: Tax Map 11, Lot 1, Sublot 12B
Source Deed: Book 3681, Page 608

Land Area: 30.0 acres according to the tax assessment card. The land is level and sloping with significant long mountain views. A portion of the property is open grass, the rear boundary along the ROW has mature trees.

Improvements: A 1¾ story, single family log home containing 1,779 ft^2 with 3 bedrooms & 3 bathrooms. The log home was built circa 2003 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61 and 100 foot structures runs along the rear of the parcel. According to the tax assessment card, the HVTL corridor encumbers 6.0 acres. Based on CAD measurements, the encumbered area calculates to 5.0 acres.

Number of Structures on Site: 4
ROW Encumbered Acreage: 5.0 acres or 16.7%
Distance from House to ROW: 413 feet
Distance to Nearest Structure: 515 feet
Distance to Most Visible Structure: 515 feet
HVTL Visibility from House: Partially Visible. Depending on the time of year and the room in the house, partial views of the structures and lines are visible. The primary view is from the side and rear of the house to expansive mountain views across the Baker River Valley.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: February 5, 2010
Conditions of Sale: Arm's Length
Marketing Period: 130 days
Average DOM for Town: 101 days
Marketing History: The property was originally listed for sale on August 28, 2009 for $299,900.
Sale Price: $225,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the presence of the HVTL had "...nothing to do with nothing." The HVTL runs up

through the valley and used for multiple recreation uses. The broker indicated it is more of a plus than a detriment and indicated that the broker wished they had 20 more of them to sell. The listing broker stated the HVTL structures and lines can be partially seen from the house. There were no potential buyers that rejected the property due to the HVTL. The broker concluded that the market value of the property was not influenced whatsoever by the HVTL.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A log cabin on 30.0 acres that the ROW traverses along the rear of the property.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $217,123 to $273,500. Sales #1 and #2 had a tight range of value from $217,123 to $219,480. Sale #3 fell above the range. There is a lack of good comparable sale data in the area.

Appraised Value: $220,000

Property Assessment Related to HVTL

Overview: The 2011 assessed value of the subject property was $252,100.

Assessment Card Notes: 6.0 acres (referred to as Power Lines) have been assessed for a total of $2,100 or $350 per acre. The remaining 23 acres of backland are assessed at $24,300 or $1,057 per acre. Despite the HVTL structures being clearly visible from the house, the first acre has been adjusted upward by 75% for a view.

Conclusions

Improvements & Visibility

This single family log home site is traversed by a 450 kV transmission line. There is a log cabin home on the property located 413 feet from the ROW. The HVTL structures are partially visible from the house due to the topography and rear tree line. Most of the four structures are at least partially visible from inside the home. The HVTL structures and lines are partially visible outside the house on the deck and in the yard looking across the valley.

Interview

The listing broker was rather emphatic in her opinion regarding the impact of the HVTL in the area and on the subject property. The broker indicated that there no influence on the marketing period or sale price.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $220,000, 2.3% below the sale price of $225,000. The marketing period was 130 days which is 28.7% higher than the average days on market for all other property in the town during the same period. The higher than normal marketing period can partially be attributed to the market conditions in 2010 during a period of recession and minimal sales activity.

Summary

There is no evidence that the sale price or marketing period of the subject property was adversely impacted by the presence of the HVTL. Even though several HVTL structures are partially visible from the house and the yard within 515 feet, the interview with the listing broker indicated that they did not impact the sale price or marketing period. The interview along with the appraisal evidence all indicate that there is no impact on the transaction from the HVTL.

CASE STUDY #6

Property Identification & Description

Address: 88 Sculptured Rocks Road
Town of Groton
Grafton County, New Hampshire

Identification: Tax Map 5, Lot 22
Source Deed: Book 3957, Page 996

Land Area: 0.90 acre according to the tax assessment card. The land is level with no views. Most of the property is open grass, the rear boundary along the ROW has mature trees.

Improvements: A 1½ story, single family cape home containing 1,367 ft^2 with 2 bedrooms & 1 bathroom. The home was built circa 1850 and is in average condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 50, 65, and 105 foot structures runs along the rear of the parcel. According to the tax assessment card, the ROW touches the right rear corner of the lot.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0 or 0%
Distance from House to ROW: 177 feet
Distance to Nearest Structure: 272 feet
Distance to Most Visible Structure: 272 feet
HVTL Visibility from House: Partially Visible. Depending on the time of year and the room in the house, partial views of the structures and lines are visible. The primary view is from the side and rear of the house to rear of the yard and tree line.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: February 20, 2013
Conditions of Sale: Arm's Length
Marketing Period: 238 days
Average DOM for Town: 192 days
Marketing History: The property was originally listed for sale on April 24, 2012 for $165,000.
Sale Price: $125,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the marketing period was not impacted by the HVTL. The house has a less than desirable second floor layout that turned a number of buyers away. The HVTL is difficult to see from inside the home. The property was shown a lot but the HVTL was

not a factor. The property sold at market value without any impact from the HVTL.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A small cape house on 0.90 acre that the ROW intersects at the right rear corner of the site.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $102,350 to $137,950. Sales #1 and #2 had a tight range of value from $102,350 to $117,362. Sale #3 fell above the range but was given equal weight. There is a lack of good comparable sale data in the area.

Appraised Value: $120,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $116,500 within 2.9% of the selling price.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family cape home site is intersected by a 450 kV transmission line. The house located approximately 177 feet from the ROW. The HVTL structures are partially visible from the house due to the rear tree line. Three structures are at least partially visible from inside the home through the trees. The HVTL structures and lines are partially visible outside the house on the deck and in the yard looking toward the road. They are also partially visible through the trees at the rear of the property.

Interview

The listing broker indicated that there was no impact on the marketing period or sale price. Factors related to the second floor were from the floor plan of the house rather than the HVTL.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $120,000, 4.2% below the sale price of $125,000. The marketing period was 238 days which is 24.0% higher than the average days on market for all other property in the town during the same period. The higher than normal marketing period can be attributed to the floor plan of the house.

Summary

There is no evidence that the sale price or marketing period of the subject property was adversely impacted by the presence of the HVTL. Even though HVTL structures are partially visible from the house and the yard within 280 feet, the interview with the listing broker indicated that they did not impact the sale price or marketing period. The interview along with the appraisal evidence all indicate that there is no impact on the transaction from the HVTL.

CASE STUDY #7

Property Identification & Description

Address: 816 Murray Hill Road
Town of Hill
Merrimack County, New Hampshire

Identification: Tax Map R3, Lot 53
Source Deed: Book 3336, Page 966

Land Area: 33.3 acres according to the tax assessment card. The land is rolling and sloping with some long mountain views. A portion of the property is open fields, the side and rear boundary along the ROW has mature trees.

Improvements: A 1¾ story, single family cape home containing 2,872 ft^2 with 4 bedrooms & 2½ bathrooms. The home was built circa 1850 and is in good condition due to recent renovations.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61, 68, and 95 foot structures runs along the rear of the parcel. According to the recorded plan, the HVTL corridor encumbers 5.2 acres along the easterly boundary. Based on CAD measurements, the encumbered area calculates to 4.0 acres. The recorded plan has been relied upon.

Number of Structures on Site: 4
ROW Encumbered Acreage: 5.2 acres or 15.6%
Distance from House to ROW: 448 feet
Distance to Nearest Structure: 565 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: August 10, 2012
Conditions of Sale: Arm's Length
Marketing Period: 828 days
Average DOM for Town: 231 days
Marketing History: The property was originally listed for sale on April 10, 2010 for $489,000. There were $5,000 paid towards closing costs by the seller. According to the listing broker, the property was over improved for the local market in Hill where properties rarely sell over $250,000. The owner moved from the property and subsequently passed away leaving the property to his heir. The estate, over time, continued to lower the price until a buyer was found. The broker indicated that it was a market transaction and not a distressed sale. The broker also

indicated that given the market conditions of 2010, the market was dead with little or no sales activity.

Sale Price: $365,000

Interview Data

Conducted by: Brian C. Underwood, CRE

Transaction Interview: According to the listing broker, the HVTL cannot be seen from any part of the property including the open fields. The HVTL can be seen at the edge of the right of way along the tree line far from the fields and house. The marketing period and sale price were not influenced whatsoever by the HVTL. (See comments in marketing history.)

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A cape style farmhouse on 33.3 acres that the ROW traverses along the rear and side of the property.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $366,600 to $402,740. Sales #2 and #3 had a tight range of value from $387,616 to $402,740. Sale #1 fell above the range. There is a lack of good comparable sale data in the area.

Appraised Value: $390,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $456,500.

Assessment Card Notes: There is a note on the card for “power line bisects Cass Mill Road Frontage”. A majority of the property is in current use (not reflected in the assessed value stated above).

Conclusions

Improvements & Visibility

This single family cape farmhouse site is traversed by a 450 kV transmission line. There is a farmhouse on the property located approximately 448 feet from the ROW. The HVTL structures are not visible from the inside or outside the house.

Interview

The listing broker indicated that there was no impact on the marketing period or sale price. Factors related to the sale price and marketing period were related to the slow real estate market and the upper price limit for properties in Hill.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $390,000, 6.4% above the sale price of $365,000. The marketing period was 828 days which is 258.4% higher than the average days on market for all other property in the town during the same period. The higher than normal marketing period can be attributed to poor market conditions and a property with a price at the upper end of the range for Hill.

Summary

The HVTL structures are not visible from the house or the yard and are more than 560 feet away from the house. Furthermore, the interview with the listing broker indicated that the HVTL did not impact the sale price or marketing period. The appraisal is 6.4% higher than the sale price; however, sales of comparable properties in the Hill area are difficult to find. Based on the aforementioned and given the limitations of the appraisal evidence, the appraisal evidence was given little weight relative to the absence of visual intrusion and the interview evidence leading to a conclusion of no effect of the HVTL on either the marketing period or the sale price.

CASE STUDY #8

Property Identification & Description

Address: 81 West Shore Drive
Town of Andover
Merrimack County, New Hampshire

Identification: Tax Map 17, Lot 323-30
Source Deed: Book 3220, Page 300

Land Area: 5.9 acres according to the tax assessment card. The land is mostly sloping with no view. Most of the property is heavily wooded. The rear boundary along the ROW has mature trees.

Improvements: A 1¾ story, single family log home containing 1,530 ft^2 with 2 bedrooms & 1½ bathrooms. The log home was built circa 1991 and is in average condition and partially finished but habitable.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61, 68, and 110 foot structures runs through the rear of the parcel.

Number of Structures on Site: 0
ROW Encumbered Acreage: 1.5 acres or 25.4%
Distance from House to ROW: 781 feet
Distance to Nearest Structure: 850 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House: Not Visible. There is a mature tree stand between the house and the HVTL corridor.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: October 15, 2010
Conditions of Sale: Arm's Length
Marketing Period: 175 days
Average DOM for Town: 89 days
Marketing History: The property was originally listed for sale on March 3, 2010 for $175,900 and closed 175 days later on October 15, 2010 for $143,000.
Sale Price: $143,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the presence of the HVTL did not impact the sale price or the marketing period of the property. It was discussed with the buyer but more from a disclosure point of view.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A log cabin on 5.9 acres that the HVTL corridor traverses along the rear of the property. The sale price of the property was impacted by the overall condition of the house and $18,000 of unfinished items.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $147,250 to $162,587. All three had a tight range of value and Sale #2 at $152,282 required the least amount of net adjustments at 2.4%. There is a lack of good comparable sale data in the area.

Appraised Value: $152,000

Property Assessment Related to HVTL

Overview: The 2011 assessed value of the subject property was $189,900.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family log home site is traversed by a 450 kV transmission line. There is a log cabin home on the property located approximately 781 feet from the ROW. The HVTL structures are not visible from the house or outside due to the topography and trees.

Interview

The listing broker indicated that there was no impact on the marketing period or sale price. The broker indicated that there were unfinished items in the house that may have deterred some buyers.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $152,000, 5.9% above the sale price of $143,000. The marketing period was 175 days which is 96.6% higher than the average days on market for all other property in the town during the same period. The higher than normal marketing period can be attributed to the overall condition of the house and the cost to cure.

Summary

There is no evidence that the sale price or marketing period of the subject property was adversely impacted by the presence of the ROW. The HVTL structures are not visible from the house or yard and are 850 feet away. The interview along with the appraisal evidence all indicate that there is no impact on value from the HVTL. The broker did indicate some market resistance but attributed that to the overall condition of the house and unfinished items at the time of sale.

CASE STUDY #9

Property Identification & Description

Address: 45 West Shore Drive
Town of Andover
Merrimack County, New Hampshire

Identification: Tax Map 10, Lot 329-550
Source Deed: Book 3145, Page 1850

Land Area: 7.4 acres according to the tax assessment card. The land is sloping with a view across the street to Highland Lake. Most of the property to the rear is heavily wooded. The rear boundary along the ROW has mature trees.

Improvements: A 1¼ story, single family salt box containing 1,512 ft^2 with 2 bedrooms & 1½ bathrooms. The home was built circa 1984 and is in average condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61, 68, and 110 foot structures crosses through the rear corner of the parcel.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.01 acre or 0.1%
Distance from House to ROW: 910 feet
Distance to Nearest Structure: 975 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House: Not Visible. There is a mature tree stand between the house and the ROW.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: July 27, 2009
Conditions of Sale: Arm's Length
Marketing Period: 33 days
Average DOM for Town: 76 days
Marketing History: The property was originally listed for sale on May 13, 2009 for $265,000.
Sale Price: $230,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the selling broker, the presence of the HVTL did not impact the sale price or the marketing period of the property. It was discussed with the buyer but more from a disclosure point of view. "Out of sight, out of mind."

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A salt box on 7.4 acres that the ROW traverses along the rear corner of the property.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $202,218 to $219,974. Sales #1 and #2 had a tight range of value from $202,218 to $202,826. Sale #2 required the least amount of net adjustments at 7.8%.

Appraised Value: $203,000

Property Assessment Related to HVTL

Overview: The 2011 assessed value of the subject property was $227,300.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family home site is traversed by a 450 kV transmission line. There is a salt box home on the property located approximately 910 feet from the ROW. The HVTL structures are not visible from the house or outside due to the topography and trees.

Interview

The listing broker indicated that there was no impact on the marketing period or sale price.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $203,000, 13.3% below the sale price of $230,000. The marketing period was 33 days which is 56.6% lower than the average days on market for all other property in the town during the same period.

Summary

There is no evidence that the sale price or marketing period of the subject property was adversely impacted by the presence of the ROW. The HVTL structures are not visible from the house or yard and are more than 970 feet away. The interview along with the appraisal evidence all indicate that there is no impact on value from the HVTL.

Property Identification & Description

Address: 548 Raccoon Hill Road
Town of Salisbury
Merrimack County, New Hampshire

Identification: Tax Map 233, Lot 12
Source Deed: Book 3280, Page 699

Land Area: 4.9 acres according to the tax assessment card. The land is mostly sloping with filtered mountain views. A portion of the property is open grass, the rear boundary along the ROW has mature trees that have been selectively cut in recent years.

Improvements: A 1½ story, single family cape home containing 768 ft^2 with 2 bedrooms & 1 bathroom. The home was built circa 1984 and is in average condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61 and 90 foot structures runs through the rear of the parcel.

Number of Structures on Site: 0
ROW Encumbered Acreage: 1.0 acres or 20.4%
Distance from House to ROW: 953 feet
Distance to Nearest Structure: 1,045 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: October 28, 2011
Conditions of Sale: Arm's Length
Marketing Period: 29 days
Average DOM for Town: 82 days
Marketing History: The property was originally listed for sale on August 15, 2011 for $139,000.
Sale Price: $136,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: No interview was conducted. Neither the listing nor selling broker could be contacted.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A small cape on 4.9 acres that the ROW traverses along the rear of the property.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $114,461 to $143,011. All three sales were reliable indicators of value.

Appraised Value: $130,000

Property Assessment Related to HVTL

Overview: The 2011 assessed value of the subject property was $141,100.

Assessment Card Notes: 2.9 acres (referred to as PLE Power Line Easement) have been assessed for a total of $3,300 or $1,138 per acre.

Conclusions

Improvements & Visibility

This single family home site is traversed by a 450 kV transmission line. There is a small cape home on the property located approximately 953 feet from the ROW. The HVTL structures are not visible from the house or yard due to the topography and rear tree line.

Interview

No interviews were conducted due to the inability to contact the listing or selling broker or the owner.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $130,000, 4.6% below the sale price of $136,000. The marketing period was 29 days which is 64.6% lower than the average days on market for all other property in the town during the same period.

Summary

There is no evidence that the sale price or marketing period of the subject property was adversely impacted by the presence of the ROW. The HVTL structures are not visible from the house or yard and are more than 970 feet away. Based upon the physical relationship of the HVTL to the property, the marketing period, and appraised value of the property, there is no evidence that the property was adversely affected by the HVTL.

CASE STUDY #11

Property Identification & Description

Address: 419 Raccoon Hill Road
Town of Salisbury
Merrimack County, New Hampshire

Identification: Tax Map 235, Lot 6
Source Deed: Book 3228, Page 1463

Land Area: 2.5 acres according to the tax assessment card. The land is mostly level with no views. A portion of the property is open grass, the rear boundary along the ROW has mature trees.

Improvements: A 1 story, single family ranch home containing 1,344 ft^2 with 3 bedrooms & 2 bathrooms. The home was built circa 2005 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61 and 90 foot structures runs along the rear boundary of the parcel.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0 acres or 0%
Distance from House to ROW: 160 feet
Distance to Nearest Structure: 239
Distance to Nearest Visible Structure: n/a
HVTL Visibility from House: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: November 30, 2010
Conditions of Sale: Arm's Length
Marketing Period: 15 days
Average DOOM for Town: 126 days
Marketing History: The property was originally listed for sale on October 15, 2010 for $159,900.
Sale Price: $160,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the presence of the HVTL had no impact on the marketing time or sale price of the property. The HVTL cannot be seen from the house or anywhere outside of the house.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A small ranch on 2.5 acres that the ROW abuts along the rear of the property.

Sale Data: Four comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $163,902 to $180,167. All four sales were reliable indicators of value.

Appraised Value: $170,000

Property Assessment Related to HVTL

Overview: The 2011 assessed value of the subject property was $197,800.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family ranch home site abuts a 450 kV transmission line and is located approximately 160 feet from the ROW. The HVTL structures are not visible from the house or the yard due to the topography and rear tree line despite being within 240 feet of the house.

Interview

The listing broker indicated that there was no impact on the marketing period or sale price.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $170,000 5.9% above the sale price of $160,000. The appraised value is slightly above the sale price of the property suggesting that there may be some impact on value from the HVTL. The appraisal utilized four comparable sales and a cost approach that were reconciled to $170,000. There was sufficient and reliable data available for the appraisal report. The marketing period was 15 days which is 88.1% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house or yard even though they are within 240 feet. Furthermore, interview evidence supports a conclusion of no impact of the HVTL on the sale price or marketing period and the marketing period was very short relative to the town average. Nevertheless, the appraisal evidence is reliable and suggests a possible impact of the HVTL on the sale price. Considering the aforementioned, it is concluded that there was a possible impact of the HVTL on the sale price but no adverse impact on the marketing period.

CASE STUDY #12

Property Identification & Description

Address: 1143 Long Street
Town of Webster
Merrimack County, New Hampshire

Identification: Tax Map 3, Lot 26
Source Deed: Book 3316, Page 1158

Land Area: 26.69 acres according to the tax assessment card. The land is mostly level with no views. A portion of the property is open grass and dirt to the ROW with no screening from landscaping or trees. The ROW bisects the entire length of the parcel.

Improvements: A 1½ story, single family home containing 1,370 ft^2 with 2 bedrooms & 1 bathroom. The log home was built circa 1975 and is in fair condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61, 68, and 90 foot structures runs along the entire length of the parcel.

Number of Structures on Site: 15
ROW Encumbered Acreage: 19.0 acres or 71.2%
Distance from House to ROW: 19 feet
Distance to Nearest Structure: 190 feet
Distance to Most Visible Structure: 190 feet
HVTL Viewshed from House: Clearly Visible. The house stands in a large clearing in close proximity to the HVTL corridor. The house has nearly 180 degree views of the HVTL. The HVTL structures are prominent in the viewshed of the house and yard.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: May 24, 2012
Conditions of Sale: Arm's Length
Marketing Period: 587 days
Average DOM for Town: 80 days
Marketing History: The property was originally listed for sale on May 19, 2010 for $224,900.
Sale Price: $157,500

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the presence of the HVTL impacted the selling price by approximately $10,000 (6.3%). However, the broker went on to say that there

were other factors that made selling the property challenging including the condition of the house and the fact that the property requires flood insurance due to the close proximity of a brook. Most potential buyers were interested in the property because of its overall size. Some turned away due to a combination of the condition of the house, flood zone and HVTL. In the end, the buyer of the property viewed the HVTL as a privacy buffer and intended to use the corridor for a place for his dogs. It was the broker's understanding that the buyer intended to use part of the property as a kennel.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A small home on 26.69 acres of which the ROW encumbers approximately 19.0 acres.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $145,210 to $168,401. Sales #2 and #3 had a tight range of value from $166,600 to $168,401. Sale #1 fell below the range. There is a lack of good comparable sale data in the area.

Appraised Value: $160,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $226,300.

Assessment Card Notes: Both land assessment lines have a note of "PL". 21.69 acres (which may be the amount the town has considered the easement) is assessed for $25,500 or $1,176 per acre.

Conclusions

Improvements & Visibility

This single family home site is encumbered along the entire length of the site by the HVTL ROW. There is a small home on the property located approximately 19 feet from the ROW. The HVTL structures are visible and prominent from the house due to the topography and open characteristics (no trees) of the site. The structures located on the site are visible from inside the home and outside.

Interview

The listing broker indicated that in her opinion, the sale price was adversely impacted by 10% or $16,000. However, there were also other detrimental factors related to the property that impacted the sale price. The property required flood insurance due to a nearby brook and the house was in below average condition. In the end, the buyer of the property viewed the ROW as a positive attribute for his dogs and kennel business.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $160,000 1.6% above the sale price of $157,500. Given the unique characteristics of the subject property, the sale data is weak; therefore, less weight has been given to the appraisal evidence. The marketing period was 587 days which is 633.8% higher than the average days on market for all other property in the town during the same period. The lengthy marketing period can be attributed to the house condition, flood insurance requirement, and the HVTL.

Summary

The house is located immediately adjacent to the ROW and the HVTL structures are fully visible from the house and yard. The interview suggests a 10% effect on sale price due to the HVTL. The marketing period was unusually long, attributable in part to the HVTL and in part to other issues with the property including the condition and the requirement of flood insurance. The appraisal evidence suggested a small adverse effect but is not given much weight due to the uniqueness of the property and the absence of good comparable sale data. Based on the aforementioned, it is concluded that the sale price was adversely affected by the HVTL and that there was an adverse effect on the marketing period as well.

CASE STUDY #13

Property Identification & Description

Address: 894 Hopkinton Road
Town of Hopkinton
Merrimack County, New Hampshire

Identification: Tax Map 258, Lot 22
Source Deed: Book 3320, Page 1038

Land Area: 5.088 acres according to the tax assessment card. The land is mostly level with some water views of Whitter Pond. Most of the property is open grass lawn an fields surrounding the house.

Improvements: A 1½ story, single family cape home containing 1,602 ft^2 with 3 bedrooms & 2 bathrooms. The cape home was built circa 1880 and is in average condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 68, 102, and 130 foot structures runs across a small point of land at the intersection of Hopkinton and Currier Road.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.10 acre or 2.0%
Distance from House to ROW: 63 feet
Distance to Nearest Structure: 168 feet
Distance to Most Visible Structure: 338 feet
HVTL Visibility from House: Partially Visible. According to the selling broker, you would have to "work to see the HVTL from inside the house".
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: June 15, 2012
Conditions of Sale: Arm's Length
Marketing Period: 123 days
Average DOM for Town: 114 days
Marketing History: The property was originally listed for sale on February 9, 2012 for $235,000.
Sale Price: $180,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the selling broker, the presence of the HVTL did not impact the buyer's decision or offer for the property. There were other extenuating circumstances to the sale of the house that included a highly motivated seller and the fact that the house needed some work.

These two factors are why the property sold at a substantial discount from the asking price. The presence of the HVTL did not significantly impact the marketing period of the property.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A cape and barn on 5.088 acres that the ROW traverses along a small corner of the side yard.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $169,634 to $176,760. Sales #1 and #2 had a tight range of value from $176,347 to $176,760. Sale #3 fell slightly below the range.

Appraised Value: $175,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $233,500.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family cape home site is traversed across a small corner of the property by a 450 kV transmission line. There is a cape home on the property located approximately 63 feet from the ROW. The HVTL structures are partially visible from the house due to the topography and the lack of significant trees and clearly visible from the yard. A few structures are at least partially visible from inside the home from various rooms if one were to look for them but they are not prominent from inside the house.

Interview

The listing broker indicated that there were other factors related to the sale other than the presence of the HVTL that had an influence on the sale price due to the overall condition of the house and a motivated seller.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $175,000, 2.9% below the sale price of $180,000. The marketing period was 123 days which is 7.9% higher than the average days on market for all other property in the town during the same period.

Summary

Even though the HVTL structures are partially visible from the house and clearly visible from the yard, the appraisal evidence along with the interview and the marketing period all indicate that there was no impact on the transaction from the HVTL. Based on the aforementioned, it is concluded that the HVTL did not affect the sale price or the time this property was on the market.

CASE STUDY #14

Property Identification & Description

Address: 74 Horizon Drive
Town of Goffstown
Hillsborough County, New Hampshire

Identification: Tax Map 8, Lot 48, Sublot 29
Source Deed: Book 8418, Page 2703

Land Area: 4.97 acres according to the tax assessment card. The land is rolling with some limited mountain views through the HVTL.

Improvements: A 2 story, single family colonial home containing 2,208 ft^2 with 3 bedrooms & 2½ bathrooms. The colonial home was built circa 2004 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61, 68, and 95 foot structures runs the length of the parcel.

Number of Structures on Site: 2
ROW Encumbered Acreage: 2.3 acres or 46.3%
Distance from House to ROW: 24 feet
Distance to Nearest Structure: 165 feet
Distance to Most Visible Structure: 165 feet
HVTL Visibility from House: Partially Visible. According to the listing broker, only during the winter months was it possible to see filtered views of the HVTL through the trees. The HVTL is visible from outside the house but not prominent due to landscaping and trees.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: April 20, 2012
Conditions of Sale: Arm's Length
Marketing Period: 112 days
Average DOM for Town: 75 days
Marketing History: The property was originally listed for sale on December 1, 2011 for $279,900.
Sale Price: $273,500

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the presence of the HVTL did not impact the marketing time for the property. The broker indicated that the HVTL may have had an impact on the sale price and it was her opinion that the property may have sold in the high $200,000s. The broker

indicated that there were no views of the HVTL from inside the house except during the winter months when the HVTL may be visible looking through the trees. The HVTL is not prominent from inside the house. The listing broker also indicated that the buyers were excited about the recreational opportunities that the HVTL corridor provided. The broker indicated that some potential buyers were turned away by the HVTL due to health concerns, but also indicated that while there may be a group of buyers that would not purchase property next to a HVTL, there is a subset of buyers who view the HVTL as an amenity.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A colonial home on 4.97 acres that the ROW traverses the entire length of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $276,450 to $296,419. All three sales have a relatively tight range of value and all required minimal net adjustments.

Appraised Value: $285,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $278,500.

Assessment Card Notes: There is a separate land assessment line for the power line easement. 3.97 acres have been assessed at $11,400 or $2,872 per acre. There is also a note "-10% Util Easement".

Conclusions

Improvements & Visibility

This single family colonial home site is traversed across the entire length of the property by a 450 kV transmission line. There is a colonial home on the property located approximately 24 feet from ROW. The HVTL structures are partially visible from the house due to the landscaping and trees. The HVTL structures and lines are clearly visible outside the house.

Interview

The listing broker indicated that the sale price was impacted based on her opinion that the property should have sold in the high $200,000s. While some potential buyers were turned away by the ROW, the buyer viewed the ROW as an amenity for recreational opportunities.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $285,000, 4.0% above the sale price of $273,500. The marketing period was 112 days which is 49.3% higher than the average days on market for all other property in the town during the same period.

Summary

Based on the broker's opinion, the marketing period, and appraised value, it is concluded that both the sale price and the marketing period were adversely impacted by the HVTL.

CASE STUDY #15

Property Identification & Description

Address: 21 Bixby Farm Lane
Town of Bedford
Hillsborough County, New Hampshire

Identification: Tax Map 34, Lot 40, Sublot 5
Source Deed: Book 8562, Page 720

Land Area: 2.6 acres according to the tax assessment card. The land is mostly level with no views. A portion of the property is open grass.
Improvements: A 2 story, single family home containing 2,180 ft^2 with 4 bedrooms & 3 bathrooms. The home was built circa 2013 and is in new condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 68, 77, and 85 foot structures runs along the middle and rear of the parcel.
Number of Structures on Site: 1
ROW Encumbered Acreage: 2.0 acres or 76.9%
Distance from House to ROW: 60 feet
Distance to Nearest Structure: 357 feet
Distance to Most Visible Structure: 357 feet
HVTL Visibility from House: Clearly Visible. There is no screening between the rear of the house and the HVTL.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: May 20, 2013
Conditions of Sale: Arm's Length
Marketing Period: 1 day
Average DOM for Town: 78 days
Marketing History: The property was originally listed for sale on March 22, 2013 for $349,900.
Sale Price: $365,000 (builder added options)

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker and builder of the house, the day he put the property on the market, he had 11 showings in two hours which resulted in one contract. Given the presence of the HVTL, he chose to accept the offer on the first marketing day because he had concern that of the 11 buyers only one made an offer. The other potential buyers all rejected the property due to the prominent HVTL in the backyard. In the builder/broker's

opinion, the house should have sold for $400,000 without any HVTL influence.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A house on 2.6 acres that the ROW traverses close to the house over the backyard.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $387,230 to $412,380. Sales #2 and #3 had a tight range of value from $408,160 to $412,380. Sale #1 fell below the range. All three sales were given equal weight.

Appraised Value: $400,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $359,970 (as complete).

Assessment Card Notes: There is a reference to an easement on the land line valuations.

Conclusions

Improvements & Visibility
This single family home site is traversed by a 450 kV transmission line. There is a 2 story home on the property located approximately 60 feet from the ROW. The HVTL structures are visible from the house due to the topography, open backyard, and close proximity to the house. At least one structure is visible from inside the home.

Interview
The listing broker who was also the builder, indicated that the sale price was impacted by the HVTL based on his opinion that the house should have sold for $400,000. Of 11 potential buyers who viewed the property the first day it was listed, only one made an offer. The builder was concerned about holding the property if only 1 out of 11 were willing to make an offer.

Appraised Value / Sale Price / Marketing Period
The appraised value of the property, absent HVTL influence, was $400,000, 8.8% above the sale price of $365,000. The marketing period was 1 day which is 98.7% lower than the average days on market for all other property in the town during the same period. It is possible that given the number of showings the first day the property was listed that it did not receive adequate exposure to the market and a higher price may have been paid. Regardless, the builder was unwilling to take that risk.

Summary
The marketing period was shorter than normal because the builder was unwilling to take the risk of holding the property due to many first day potential buyers not making offers. The builder thought that the sale price was adversely affected by the HVTL and this was supported by the appraisal evidence. Based on the aforementioned, it is concluded that the HVTL had an adverse effect on the sale price but the marketing period was unaffected.

CASE STUDY #16

Property Identification & Description

Address: 8 John Goffe Drive
Town of Bedford
Hillsborough County, New Hampshire

Identification: Tax Map 21, Lot 8, Sublot 3 (primary site)
Tax Map 21, Lot 9, Sublot 7 (landlocked)

Source Deed: Book 8555, Page 2599

Land Area: 2.65 acres according to the tax assessment cards. The land is mostly level with no views. A portion of the property is open fields in the rear. 1.3 acres is landlocked due to the ROW crossing the middle of the property.

Improvements: A 2 story, single family home containing 2,360 ft^2 with 4 bedrooms & 2½ bathrooms. The home was built circa 1972 and is in average to good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61 and 110 foot structures traversing between the two parcels.

Number of Structures On Site: 0

ROW Encumbered Acres: 1.2 acres or 45.3%

Distance from House to ROW: 164 feet

Distance to Nearest Structure: 242 feet

Distance to Nearest Visible Structure: 242 feet

HVTL Visibility from House: Partially Visible.

HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: May 2, 2013

Conditions of Sale: Arm's Length

Marketing Period: 2 days

Average DOM for Town: 78 days

Marketing History: The property was originally listed for sale on March 19, 2013 for $339,500.

Sale Price: $345,000

Interview Data

Conducted by: Brian C. Underwood, CRE

Transaction Interview: According to the selling broker, the buyer of the property considered the HVTL an attribute for recreational (horse back riding) purposes. The buyer did not care about the HVTL otherwise and it was not a consideration in the purchase decision. The HVTL may be partially visible from the house, but it is not prominent.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 2 story house on 2.65 acres that the ROW traverses across the middle of the rear yard / field.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $331,912 to $349,918. All three sales were given equal weight.

Appraised Value: $340,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $350,100.

Assessment Card Notes: There is a reference to an easement (ROW/LL) on the landlocked parcel's tax card. 1.3 acres is assessed for $8,500 or $6,538 per acre.

Conclusions

Improvements & Visibility

This single family home site is traversed by a 450 kV transmission line. There is a 2 story home on the property located approximately 164 feet from the ROW. The HVTL structures are partially visible from the house but not prominent due to the topography, open backyard, and landscaping. At least one structure is partially visible from inside the home. The HVTL structures and lines are clearly visible outside the house and in the back yard that is underneath the HVTL.

Interview

The listing broker indicated that there was no impact on the marketing period or sale price. The buyer purchased the property for equestrian purposes.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $340,000, 1.5% below the sale price of $345,000. The marketing period was 2 days which is 97.4% lower than the average days on market for all other property in the town during the same period.

Summary

Even though the HVTL structures are partially visible from the house and clearly visible from the yard, the interview evidence along with the appraisal evidence and marketing period all indicate that there is no impact on the transaction from the HVTL. Based on the aforementioned, it is concluded that the HVTL had no impact on the sale price and no impact on the marketing period.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 68, 77, and 85 foot structures runs along the rear corner of the parcel.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.2 acre or 13.2%
Distance from House to ROW: 260 feet
Distance to Nearest Structure: 300 feet
Distance to Most Visible Structure: 300 feet
HVTL Visibility from House: Partially Visible. There is a mature stand of trees between the house and the HVTL.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: October 12, 2012
Conditions of Sale: Arm's Length
Marketing Period: 1 day
Average DOM for Town: 89 days
Marketing History: The property was originally listed for sale on August 14, 2012 for $425,000.
Sale Price: $430,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker and builder of the house, the day he listed the property on the market, he had multiple showings that resulted in an offer slightly above the asking price. The HVTL had no impact on the marketing period or sale price of the property since it is only partially visible from the house or yard.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A house on 1.51 acres that the ROW traverses the rear corner farthest from the house.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $408,836 to $426,227. Sales #2 and #3 had a tight range of value from $419,690 to $426,227. Sale #1 fell below the range.

Appraised Value: $420,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $401,000.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family home site is traversed by a 450 kV transmission line. There is a 2 story home on the property located approximately 260 feet from the ROW. The HVTL structures are partially visible from the house due to the topography and trees. The HVTL structures and lines are partially visible outside the house.

Interview

The listing broker who was also the builder, indicated that the sale price was not impacted by the HVTL since the offer accepted was over the asking price. The broker indicated there was no impact on the marketing period of sale price.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $420,000, 2.4% below the sale price of $430,000. The marketing period was 1 day which is 98.9% lower than the average days on market for all other property in the town during the same period.

Summary

The marketing period was shorter than normal due to overall interest in the property and an offer that exceeded the asking price. Based on the builder's opinion, the one day marketing period and the appraised value, it is concluded that the HVTL had no effect on the sale price and no effect on the marketing period of this transaction.

CASE STUDY #18

Property Identification & Description

Address: 1 Southgate Drive
Town of Bedford
Hillsborough County, New Hampshire

Identification: Tax Map 25, Lot 92, Sublot 3
Source Deed: Book 8463, Page 538

Land Area: 1.0 acre according to the tax assessment card. The land is level with no views. Most of the site has lawn and mature landscaping.

Improvements: A 1½ story, single family home containing 2,049 ft^2 with 4 bedrooms & 3 bathrooms. The home was built circa 1970 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61 and 110 foot structures runs along the side of the property across the street (Back River Road) in clear view. The ROW barely encumbers the property due to the road separating the corridor and the property.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.02 acre or 2.0%
Distance from House to ROW: 49 feet
Distance to Nearest Structure: 110 feet
Distance to Most Visible Structure: 110 feet
HVTL Visibility from House: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: August 24, 2012
Conditions of Sale: Arm's Length
Marketing Period: 48 days
Average DOM for Town: 92 days
Marketing History: The property was originally listed for sale on April 14, 2012 for $399,900.
Sale Price: $349,900

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the house had floor plan issues for most buyers. However, the HVTL did not have any impact on the marketing period or sale price of the house. The broker indicated that the HVTL is not visible from the house which appears contrary to the visual inspection. Most potential buyers who looked at the property were concerned about the floor plan.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A house on 1.0 acre that the ROW is across the street along the side yard of the property in clear view.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $336,770 to $366,461. Sales #2 and #3 had a tight range of value from $360,851 to $366,461. Sale #1 fell below the range.

Appraised Value: $360,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $290,700 within 16.9% of the selling price. The property appears to be underassessed.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family home site is located across the street from a 450 kV transmission line. There is a 1½ story home on the property located approximately 49 feet from the ROW. The HVTL structures are clearly visible from the house due to the landscaping and configuration of the house on the lot. The HVTL structures and lines are clearly visible outside the house. The HVTL is not visible from the house, an exterior inspection suggested otherwise.

Interview

The listing broker indicated that the sale price or marketing period was not impacted by the HVTL. Other factors related to the floor plan were objectionable to some buyers.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $360,000, 2.8% above the sale price of $349,900. The marketing period was 48 days which is 47.8% lower than the average days on market for all other property in the town during the same period.

Summary

The reduction in sale price relative to the asking price was most likely impacted by the floor plan of the house. Based on the interview, marketing period, and appraised value, it is concluded that neither the sale price nor the marketing period was affected by the HVTL.

CASE STUDY #19

Property Identification & Description

Address: 19 Bixby Farm Lane
Town of Bedford
Hillsborough County, New Hampshire

Identification: Tax Map 34, Lot 40, Sublot 6
Source Deed: Book 8440, Page 2070

Land Area: 2.72 acres according to the tax assessment card. The land is rolling with no views. A portion of the property is open grass with some mature trees in the rear yard.

Improvements: A 2 story, single family home containing 1,921 ft^2 with 3 bedrooms & 2½ bathrooms. The home was built circa 2011 and is in new condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 68, 77, and 85 foot structures traverses the middle and rear of the parcel.

Number of Structures on Site: 2
ROW Encumbered Acreage: 2.0 acres or 73.5%
Distance from House to ROW: 88 feet
Distance to Nearest Structure: 260 feet
Distance to Most Visible Structure: 260 feet
HVTL Viewshed from House: Partially Visible. There are some mature trees between the rear of the house and the HVTL.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: June 25, 2012
Conditions of Sale: Arm's Length
Marketing Period: 36 days
Average DOM for Town: 94 days
Marketing History: The property was originally listed for sale on March 29, 2012 for $339,900.
Sale Price: $344,400 (builder added options)

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the builder of the house was motivated to sell the house. The broker stated that the house sold below market value because of the seller's motivations and not because of the HVTL. The HVTL did not impact the marketing time or the sale price of the property. The broker indicated that this house was the lowest price house in the subdivision. The listing broker also indicated that information was obtained

regarding the HVTL from PSNH to provide potential buyers. The HVTL were visible from the outside of the house through the trees. The broker indicated the HVTL was not visible from inside of the house although a site inspection subsequently indicated otherwise.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 2 story house on 2.72 acres that the ROW traverses over the backyard.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $317,670 to $366,937. Sales #2 and #3 had a tight range of value from $353,240 to $366,937. Sale #1 fell below the range.

Appraised Value: $350,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $342,600.

Assessment Card Notes: There is a reference to an easement on the land line valuations. 1.22 acres is assessed at $5,200 or $4,262 per acre.

Conclusions

Improvements & Visibility

This single family home site is traversed by a 450 kV transmission line. There is a 2 story home on the property located approximately 88 feet from the ROW. The HVTL structures are partially visible from the house due to the topography, mature stand of trees, and location of the house based on an exterior inspection. The HVTL structures and lines are visible outside the house and in the back yard that is underneath the HVTL.

Interview

The listing broker, indicated that the sale price or marketing period was not impacted by the HVTL. The builder was motivated to sell the house which resulted in the lowest price point in the new subdivision.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $350,000, 1.6% above the sale price of $344,400. The marketing period was 36 days which is 61.7% lower than the average days on market for all other property in the town during the same period.

Summary

Based on the interview, marketing period, and appraisal evidence, it is concluded that neither the sale price nor the marketing period were affected by the HVTL.

Property Identification & Description

Address: 54 Pilgrim Drive
Town of Bedford
Hillsborough County, New Hampshire

Identification: Tax Map 13, Lot 5, Sublot 10
Source Deed: Book 8261, Page 572

Land Area: 1.84 acres according to the tax assessment card. The land is level with no views. A portion of the property is open grass with some mature trees surrounding the rear yard.

Improvements: A 2 story, single family home containing 2,434 ft^2 with 4 bedrooms & 3 bathrooms. The home was built circa 1983 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line with two 230 kV transmission lines in a 350 foot wide right of way with 61, 63, and 85 foot structures traverses the rear of the parcel.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.01 acre or 0.5%
Distance from House to ROW: 423 feet
Distance to Nearest Structure: 485 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House: Not Visible. There are mature trees and landscaping between the rear of the house and the HVTL.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: November 5, 2010
Conditions of Sale: Arm's Length
Marketing Period: 25 days
Average DOM for Town: 75 days
Marketing History: The property was originally listed for sale on September 2, 2010 for $389,900.
Sale Price: $381,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was no impact on the marketing period or sale price of the property. The HVTL is not visible from the house or yard.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 2 story house on 1.84 acres that the ROW traverses at the rear of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $379,930 to $394,455. Sales #1 and #2 had a tight range of value from $379,930 to $379,950. Sale #3 fell above the range.

Appraised Value: $382,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $347,400.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This single family home site is traversed by a 450 kV transmission line. There is a 2 story home on the property located approximately 423 feet from the ROW. The HVTL structures are not visible from the house due to the topography, mature stand of trees, and location of the house. The HVTL structures and lines are not visible outside the house.

Interview

The listing broker stated that the marketing period or sale price was not impacted whatsoever by the HVTL.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $382,000, 0.3% above the sale price of $381,000. The marketing period was 25 days which is 66.7% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house or yard and are more than 480 feet away. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that the HVTL had no effect on the sale price or the marketing period in this transaction.

CASE STUDY #21

Property Identification & Description

Address: 7 Hawkview Road
Town of Hudson
Hillsborough County, New Hampshire

Identification: Tax Map 187, Lot 20
Source Deed: Book 8453, Page 689

Land Area: 1.22 acres according to the tax assessment card. The land is mostly level with no views. A portion of the property is open grass with some mature trees surrounding the rear yard.

Improvements: A 2 story, single family home containing 1,954 ft^2 with 3 bedrooms & 2½ bathrooms. The home was built circa 1988 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line in a 270 foot wide right of way with 100 foot structures abuts the side of the parcel.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0 acres or 0%
Distance from House to ROW: 25 feet
Distance to Nearest Structure: 274 feet
Distances to Most Visible Structure: 274 feet
HVTL Visibility from House: Partially Visible. There are mature trees and landscaping between the rear of the house and the ROW.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: July 27, 2012
Conditions of Sale: Arm's Length
Marketing Period: 76 days
Average DOM for Town: 77 days
Marketing History: The property was originally listed for sale on March 22, 2012 for $273,900.
Sale Price: $275,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the selling broker, the property sold at market value. Contrary to what was observed during the site inspection, the broker said that the HVTL was not visible from inside the house or in the yard. The buyer of the property did not consider the HVTL an issue.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 2 story house on 1.22 acres that the ROW abuts along the side of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $274,205 to $284,250. All three sales had a tight range of value and were given equal weight.

Appraised Value: $278,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $265,200.

Assessment Card Notes: "PSNH Easement" with no adjustment.

Conclusions

Improvements & Visibility

This single family home site abuts a 450 kV transmission line. There is a 2 story home on the property located approximately 25 feet from the ROW. The HVTL structures are partially visible from the house due to the close proximity and location of the house. The HVTL structures and lines are partially visible outside the house.

Interview

The listing broker, indicated that the sale price or marketing period was not impacted by the HVTL. The broker indicated that the buyer did not consider the HVTL an issue.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $278,000, 1.1% above the sale price of $275,000. The marketing period was 76 days which is 1.3% lower than the average days on market for all other property in the town during the same period.

Summary

Despite being only 25 feet to the ROW, based on the interview, the marketing period, and the appraisal evidence it is concluded that the HVTL had no effect on the sale price or the marketing period for this transaction.

Source Deed: Book 8447, Page 2204

Land Area: 1.12 acres according to the tax assessment card. The land is mostly level with no views. A portion of the property is open grass with some mature trees surrounding the rear yard.

Improvements: A 1¾ story, single family duplex condex containing 1,926 ft^2 with 3 bedrooms & 1½ bathrooms. The condex was built circa 1986 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 450 kV DC transmission line in a 270 foot wide right of way with 105 foot structures traverse the middle and rear of the parcel.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0.7 acre or 62.5%
Distance from House to ROW: 240 feet
Distance to Nearest Structure: 480 feet
Distance to Most Visible Structure: 480 feet
HVTL Visibility from House: Partially Visible. There are mature trees between the rear of the house and the HVTL.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: July 13, 2012
Conditions of Sale: Arm's Length
Marketing Period: 17 days
Average DOM for Town: 79 days
Marketing History: The property was originally listed for sale on April 16, 2012 for $214,900.
Sale Price: $213,900

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the property sold at market value. The HVTL was not visible from inside the condex or from the yard (exterior inspection proved otherwise as noted below). The buyer of the property did not consider the HVTL an issue.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1¾ story condex on 1.12 acres that the ROW traverses across the middle and rear of the parcel.

Sale Data: Four comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $188,374 to $205,200. All four sales had a tight range of value and were given equal weight.

Appraised Value: $200,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $179,700.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This condex site abuts a 450 kV transmission line. There is a 1¾ story condex on the property located approximately 240 feet from the ROW. The HVTL structures are partially visible from the condex due to the topography, mature stand of trees, and location of the condex. The HVTL structures and lines are partially visible outside the house.

Interview

The listing broker, indicated that the HVTL did not impact the sale price or the marketing period. It was also indicated that the buyer did not consider the HVTL an issue.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $200,000, 6.9% below the sale price of $213,900. The marketing period was 17 days which is 78.5% lower than the average days on market for all other property in the town during the same period.

Summary

Based on the interview, the marketing period, and the appraisal evidence, it is concluded that there was no adverse effect of the HVTL on the sale price or the marketing period in this transaction.

CASE STUDY #23

Property Identification & Description

Address: 224 Portland Street
Town of Lancaster
Coös County, New Hampshire

Identification: Tax Map R17, Lot 27 & 28
Source Deed: Book 1369, Page 527

Land Area: 24.01 acres according to the tax assessment card. There are two parcels of record, the primary house lot (20.87 acres of which 19.37 acres are in current use) where the HVTL traverses along the rear boundary line. This parcel is separated by the HVTL and the N.H. Railroad. The smaller parcel (3.14 acres (all in current use)) is land locked between the railroad and the Israel River. The land is sloping with expansive views of the Presidential Mountain Range (from the house site). A portion of the property is open grass with some mature trees surrounding the rear yard. The land is sloping but closer to the HVTL, there is a steep drop off.

Improvements: A one story, single family home containing 1,400 ft^2 with 2 bedrooms & 1 bathroom. The house was built circa 1989 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 150 foot wide right of way with 52 foot structures traverses the rear of the parcel.
Number of Structures on Site: 1
ROW Encumbered Acreage: 2.5 acres or 10.4%
Distance from House to ROW: 655 feet
Distances to Nearest Structure: 743 feet
Distances to Most Visible Structure: n/a
HVTL Visibility from House: Not Visible due to the topography and tree line.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: January 14, 2013
Conditions of Sale: Arm's Length
Marketing Period: 397 days
Average DOM for Town: 218 days
Marketing History: The property was originally listed for sale on October 14, 2011 for $359,000.
Sale Price: $317,500

Interview Data

Conducted by: Brian C. Underwood, CRE

Transaction Interview: According to the listing broker, the property's marketing period was typical of those in the region due to the depressed real estate market. There were two mills and two factories in the area that closed which impacted the local economy. The sellers were retiring which was their motivation for selling. The property was appraised for $329,000 as part of the transaction according to the listing broker. The HVTL and the proposed Northern Pass did not impact the marketing period or the sale price. The buyers were aware of the existing HVTL and the proposed NPT.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1 story house on 24.01 acres that the ROW traverses across the rear of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $275,737 to $316,042. All three sales had a reasonably tight range of value and were given equal weight.

Appraised Value: $290,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $341,500 (not considering current use).

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This house site is traversed along the rear by a 115 kV transmission line. There is a 1 story house on the property located approximately 655 feet from the ROW. The HVTL structures are not visible from the house due to the topography, mature stand of trees, and location of the house. The HVTL structures and lines are not visible outside the house.

Interview

The listing broker stated that the marketing period or sale price was not impacted by the HVTL. The marketing period was nearly twice the town average at the time, but it was the broker's opinion that there was wide variability in marketing time due to the generally soft market conditions in the North Country at the time and that 400 days wasn't unusual.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $290,000, 9.5% below the sale price of $317,500. The marketing period was 397 days which is 82.1% higher than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house or yard and are more than 740 feet away. Based upon the physical relationship of the HVTL to the property, the interview evidence, and the appraised value of the property, it is concluded that neither the sale price nor the marketing period in this transaction were adversely affected by the HVTL.

CASE STUDY #24

Property Identification & Description

Address: 2220 N.H. Route 117
Town of Sugar Hill
Grafton County, New Hampshire

Identification: Tax Map 216, Lot 6.1
Source Deed: Book 3837, Page 386

Land Area: 10.12 acres according to the tax assessment card. There are 8.62 acres in current use. The land is sloping to steep with expansive views of Mt. Lafayette, Mt. Liberty and Cannon Mountain. A portion of the property is open grass and fields with mature trees surrounding the rear and side yards.

Improvements: A 1¾ story, single family home containing 1,701 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 1999 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 55 foot structures abut the rear of the parcel.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0 acres or 0%
Distance from House to ROW: 369 feet
Distance to Nearest Structure: 435 feet
Distance to Most Visible Structure: 435 feet
HVTL Visibility from House: Partially Visible. The HVTL is not in the main viewshed. The wires are barely visible from the house, but no structures are in view.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: November 18, 2011
Conditions of Sale: Arm's Length
Marketing Period: 197 days
Average DOM for Town: 329 days
Marketing History: The property was originally listed for sale on February 25, 2011 for $339,000.
Sale Price: $235,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the sale price was indicative of market conditions at the time. The presence of the existing HVTL did not impact the marketing period or the sale price of the property.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1¾ story house on 10.12 acres that the ROW abuts the rear of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $246,490 to $296,815. Two of the three sales had a tight range of value from $246,490 to $249,750. The third sale fell above the range but also was the least comparable of the three.

Appraised Value: $250,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $256,800.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This house site abuts a 115 kV transmission line. There is a 1¾ story house on the property located approximately 369 feet from the ROW. The HVTL structures are partially visible from the house due to the topography, mature stand of trees, and location of the house. Only a portion of the wires are visible from the yard.

Interview

The listing broker stated that the marketing period or sale price was not impacted by the HVTL. The marketing period was impacted by local economic influences and general market conditions in the North Country.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $250,000, 6.0% above the sale price of $235,000. Comparable sale data in the North Country is limited and can result in less reliable appraisals because of the lack of data. The marketing period was 197 days which is 40.1% lower than the average days on market for all other property in the town during the same period.

Summary

The broker interview indicates no impact on sale price or marketing period while the appraisal evidence suggests an impact on value of 6.0%. The HVTL structures are partially visible from the house and yard and are more than 430 feet away.

The appraisal evidence contradicts the interview and marketing period data but it must be recognized that the lack of comparable sale data in the North Country reduces the reliance that can be placed on the appraisal evidence. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that there was a possible adverse effect of the HVTL on the sale price in the transaction, but no effect on the marketing period.

CASE STUDY #25

Property Identification & Description

Address: 216 Hadley Road
Town of Sugar Hill
Grafton County, New Hampshire

Identification: Tax Map 222, Lot 20
Source Deed: Book 3906, Page 33

Land Area: 6.84 acres according to the tax assessment card. The land is sloping. The property has good views of the surrounding conservation land. A portion of the property is open grass and fields with mature trees surrounding the house.

Improvements: A 1½ story, single family home containing 2,081 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 1999 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 55 foot structures traverse the side of the parcel.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0.3 acre or 4.4%
Distance from House to ROW: 257 feet
Distance to Nearest Structure: 320 feet
Distance to Most Visible Structure: 320 feet
HVTL Visibility from House:: Partially Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: August 1, 2012
Conditions of Sale: Arm's Length
Marketing Period: 328 days
Average DOM for Town: 161 days
Marketing History: The property was originally listed for sale on July 14, 2011 for $395,000.
Sale Price: $340,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the sale price was impacted by the proposed NPT project. The broker indicated that the marketing time was longer than normal due to certain buyers not willing to accept the ROW traversing the side property boundary. The broker indicated that the property was listed for sale prior to her listing, but no records on MLS could be found for prior listings of the property. The broker also indicated that

the buyer of the property did not care about the HVTL and viewed the right of way as an attribute for the cross country skiing. The buyer reportedly was not concerned about the proposed NPT project.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1½ story house on 6.84 acres that the ROW traverses along the side of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $315,674 to $332,141. All three sales had a reasonably tight range of value and were given equal weight.

Appraised Value: $325,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $328,500.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

This house site is traversed by a 115 kV transmission line. There is a 1½ story house on the property located approximately 257 feet from the ROW. The HVTL structures are partially visible from the house due to the topography and location of the house. Only a portion of the wires are partially visible from the yard.

Interview

The listing broker stated that the marketing period and sale price were impacted by the proposed NPT project. However, the impact was not quantified. The buyer of the property was not concerned with the NPT project and viewed the ROW as an amenity for cross country ski access.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $325,000, 4.6% below the sale price of $340,000. The marketing period was 328 days which is 103.7% higher than the average days on market for all other property in the town during the same period.

Summary

While the HVTL is partially visible, it is not prominent and is more than 310 feet away from the house. Both the broker interview and the extended days on market relative to the town average suggest a marketing period effect. With respect to sale price, the broker stated that there was an adverse effect of the HVTL while the appraisal evidence suggested otherwise. Based on the aforementioned, it is concluded that there was an adverse effect of the HVTL on the marketing period and a possible effect on the sale price.

CASE STUDY #26

Property Identification & Description

Address: 354 Garnet Hill Road
Town of Sugar Hill
Grafton County, New Hampshire

Identification: Tax Map 210, Lot 9.1
Source Deed: Book 3934, Page 944

Land Area: 14.5 acres according to the tax assessment card. Of the total, approximately 6.0 acres are wetland and 7.5 acres are encumbered by the HVTL. The land is sloping down to a level area. The property has some distant mountain views. A portion of the property is open grass and fields with mature trees surrounding the house.

Improvements: A 1½ story, single family home containing 1,164 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 2002 and is in good condition.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 55 foot structures traverse the entire side boundary of the parcel.
Number of Structures On Site: 3
ROW Encumbered Acreage: 6.0 acres or 41.4%
Distance from House to ROW: 199 feet
Distance to Nearest Structure: 350 feet
Distances to Most Visible Structure: 350 feet
HVTL Visibility from House:: Partially Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: November 26, 2012
Conditions of Sale: Arm's Length
Marketing Period: 161 days
Average DOM for Town: 135 days
Marketing History: The property was originally listed for sale on June 6, 2012 for $249,000.
Sale Price: $225,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the transaction was arm's length. The broker's opinion was that the sale price was impacted by the presence of the HVTL. They indicated that contrary to MLS data, the property was originally listed just below $300,000 and that there were a number of potential buyers who were not interested once they understood the issue with the existing HVTL and the

proposed NPT project. The broker also stated that the discount for properties potentially impacted by NPT ranges from 20% to 30%.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1½ story house on 14.5 acres that the ROW traverses along the side of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $207,374 to $232,550. All three sales had a reasonably tight range of value and were given equal weight.

Appraised Value: $219,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $310,800.

Assessment Card Notes: Easement with 7.5 acres classified as unproductive in the land line valuation section. The 7.5 acres is assessed for $24,900 or $3,320 per acre.

Conclusions

Improvements & Visibility

This house site is traversed by a 115 kV transmission line. There is a 1½ story house on the property located approximately 199 feet from the ROW. The HVTL structures are partially visible from inside and outside the house.

Interview

The listing broker stated that the marketing period and sale price were impacted by the proposed NPT project. In general, the broker provided an impact on value from the proposed NPT project of 20% to 30%.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $219,000, 2.7% below the sale price of $225,000. The marketing period was 161 days which is 19.3% higher than the average days on market for all other property in the town during the same period.

Summary

The broker's generalized opinions on the impact from the proposed NPT project of 20% to 30% are not supported by the appraisal evidence. Nevertheless, given the strength of the broker's position in addition to at least some reaction to the HVTL issue by potential buyers, it is possible that there was an adverse effect on the sale price and marketing period.

CASE STUDY #27

Property Identification & Description

Address: 798 NH Route 18
Town of Sugar Hill
Grafton County, New Hampshire

Identification: Tax Map 205, Lot 9
Source Deed: Book 4001, Page 795

Land Area: 2.18 acres according to the tax assessment card. The land is mostly level. The property has some filtered distant mountain views. A portion of the property is open grass with some mature trees surrounding the house.

Improvements: A 1 story, single family home containing 664 ft^2 with 1 bedroom & 1 bathroom. The house was built circa 2009 and was partially incomplete on the interior at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 265 foot wide right of way with 56 foot structures traverses the parcel. Based on the CAD measurements, the encumbered area calculates to 0.6 acre.

Number of Structures on Site: 3
ROW Encumbered Acreage: 0.6 acre or 27.5%
Distance from House to ROW: 132 feet
Distance to Nearest Structure: 150 feet
Distance to Most Visible Structure: 150 feet
HVTL Visibility from House: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: August 6, 2013
Conditions of Sale: Arm's Length
Marketing Period: 300 days
Average DOM for Town: 181 days
Marketing History: The property was originally listed for sale on September 12, 2012 for $89,500.
Sale Price: $67,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: No interview was conducted. Neither the listing nor selling broker could be contacted.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1 story house on 2.18 acres that the ROW traverses across the middle of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $50,150 to $66,000. Sale #3 was given most weight in the final reconciliation since it was the most recent sale and most comparable of the three.

Appraised Value: $66,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $61,300.

Assessment Card Notes: Easement noted for both land valuation lines on the card. The 2.18 acres is assessed for $21,500 or $9,862 per acre.

Conclusions

Improvements & Visibility

This very small house (664 ft^2) site is traversed by a 115 kV transmission line. There is a one story house on the property located approximately 132 feet from the ROW. The HVTL structures are clearly visible from the house due to the topography, lack of trees, and close proximity of the HVTL to the house.

Interview

No interviews were conducted due to the inability to contact the listing or selling broker.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $66,000, 1.5% below the sale price of $67,000. The marketing period was 300 days which is 65.7% higher than the average days on market for all other property in the town during the same period.

Summary

The appraisal evidence indicates that there is no impact on sale price from the HVTL, but there was a possible adverse effect on marketing time.

CASE STUDY #28

Property Identification & Description

Address: 150 Sundance Road
Town of Woodstock
Grafton County, New Hampshire

Identification: Tax Map 201, Lot 1
Source Deed: Book 3943, Page 194

Land Area: 1.81 acres according to the tax assessment card. The land is level to sloping. The property is surrounded by mature trees.

Improvements: A 2 story, single family home containing 1,464 ft^2 with 2 bedrooms & 2 bathrooms. The house was built circa 2002 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 48 foot structures traverses the parcel. According to the tax assessment card, the easement encumbers 1.0 acres of land with approximately 0.81 acre outside of the right of way.

Number of Structures on Site: 0
ROW Encumbered Acreage: 1.0 acre or 55.2%
Distance from House to ROW: 24 feet
Distance to Nearest Structure: 165 feet
Distance to Most Visible Structure: 165 feet
HVTL Visibility from House:: Partially Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: December 24, 2012
Conditions of Sale: Arm's Length
Marketing Period: 47 days
Average DOM for Town: 99 days
Marketing History: The property was originally listed for sale on October 7, 2012 for $265,000.
Sale Price: $230,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the sale price was indicative of market value; however the broker indicated that the buyer was an engineer and aware of the proposed NPT project and the selling price was "somewhat impacted" by NPT in the price offered. Another factor impacting the sale price was that the house was only two bedrooms although it had a three bedroom septic system. The HVTL cannot be seen from

inside the house except when the leaves are off the trees, it is partially visible.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 2 story house on 1.81 acres crossed by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $186,851 to $229,735. Sales #2 and #3 were given most weight in the final reconciliation since they provided a tight range of value form $224,970 to $229,735.

Appraised Value: $225,000

Property Assessment Related to HVTL

Overview: The 2010 assessed value of the subject property was $233,610.

Assessment Card Notes: "Powerline Easement" noted for 1.0 acre with a -5% adjustment made. The total assessment of the land is $83,200.

Conclusions

Improvements & Visibility

This house site is traversed by a 115 kV transmission line. There is a 2 story house on the property located approximately 95 feet from the ROW. The HVTL structures are partially visible from the house and yard due to mature trees.

Interview

The listing broker stated that the sale price was somewhat impacted by the HVTL.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $225,000, 2.2% below the sale price of $230,000. The marketing period was 47 days which is 52.5% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are partially visible from the house and yard. The broker interview indicated some adverse effect of the HVTL on the sale price but this was unsubstantiated by the appraisal evidence. Based on the proximity of the HVTL ROW to the house and the broker's opinion, it is concluded that there was a possible adverse effect on the sale price but no effect on the marketing period.

Property Identification & Description

Address: 261 Daniel Webster Highway
Town of Woodstock
Grafton County, New Hampshire

Identification: Tax Map 111, Lot 13
Source Deed: Book 3922, Page 370

Land Area: 5.7 acres according to the tax assessment card. The land is mostly level. The property is surrounded by mature trees on three sides, but open on the ROW side.

Improvements: A 1 story, mobile home containing 924 ft^2 with 3 bedrooms & 1 bathroom. The mobile home was built circa 1983 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 57 to 66 foot structures.
Number of Structures on Site: 4
ROW Encumbered Acreage: 4.2 acres or 73.7%
Distance from House to ROW: 16 feet
Distance to Nearest Structure: 25 feet
Distance to Most Visible Structure: 25 feet
HVTL Visibility from House:: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: October 5, 2012
Conditions of Sale: Arm's Length
Marketing Period: 45 days
Average DOM for Town: 189 days
Marketing History: The property was originally listed for sale on June 28, 2012 for $89,000.
Sale Price: $87,500

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the sale price was indicative of market value and the HVTL did not impact the marketing period or the sale price. The property sold to a second home buyer. They viewed the HVTL ROW as access to the river and for recreation. The HVTL was clearly visible from the house and the yard.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1 story mobile home on 5.7 acres that the ROW traverses the length of the parcel.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $80,036 to $88,080. Sales #1 and #2 were given most weight in the final reconciliation since they were the most recent sales and provided a tight range of value form $80,036 to $82,480.

Appraised Value: $80,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $82,730.

Assessment Card Notes: "Powerline Easement" noted for 1.0 acre with a -10% adjustment made. The total assessment of the land is $58,800 or $10,316 per acre.

Conclusions

Improvements & Visibility

This mobile home site is traversed by a 115 kV transmission line. There is a one story mobile home on the property located approximately 16 feet from the ROW. The HVTL structures are clearly visible from the house and yard due to their proximity and to the lack of trees on the HVTL side of the property.

Interview

The listing broker indicated that there was no impact on the marketing period or sale price. The second home buyer purchased the property for access to the river and for recreational purposes.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $80,000, 9.4% below the sale price of $87,500. The marketing period was 45 days which is 76.2% lower than the average days on market for all other property in the town during the same period.

Summary

Even though the HVTL structures are visible from the house and the yard and very close, the interview along with the appraisal evidence and the short marketing period all lead to the conclusion of no adverse impact of the HVTL on either the sale price or the marketing period.

CASE STUDY #30

Property Identification & Description

Address: 321 Lost River Road
Town of Woodstock
Grafton County, New Hampshire

Identification: Tax Map 109, Lot 1
Source Deed: Book 3702, Page 157

Land Area: 3.0 acres according to the tax assessment card. The land is mostly level but slopes down to the river. The property is surrounded by mature trees on all sides.

Improvements: A 1 story, home containing 1,024 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 2003 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 55 foot structures. The parcel is long and narrow running along the Lost River. The house is located at one end of the parcel and the ROW crosses a small section at the opposite end.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.1 acre or 3.3%
Distance from House to ROW: 1,057 feet
Distance to Nearest Structure: 1,220 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: May 14, 2010
Conditions of Sale: Arm's Length
Marketing Period: 30 days
Average DOM for Town: 168 days
Marketing History: The property was originally listed for sale on May 13, 2009 for $259,000.
Sale Price: $245,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the sale price was indicative of market value and the HVTL had no impact on the marketing time or sale price of the property since it was not visible from the house and the section of land it crossed at the opposite end of the property was so small that it was undevelopable.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1 story home on 3.0 acres that the ROW traverses at the opposite end from the house.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $239,891 to $303,500. Sale #1 was given most weight in the final reconciliation since it was more similar in age.

Appraised Value: $250,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $223,420.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The house site is traversed by a 115 kV transmission line. There is a one story home on the property located approximately 1,057 feet from the ROW. The HVTL structures are not visible from the house or the yard due to a mature tree stand and the overall distance from the house to the HVTL.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $250,000, 2.0% above the sale price of $245,000. The marketing period was 30 days which is 82.1% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house or yard and are more than 1,000 feet away. Based upon the physical relationship of the HVTL to the property, the interview evidence, the short marketing period, and the appraised value of the property, it is concluded that there was no adverse effect of the HVTL on the sale price or marketing period in this transaction.

CASE STUDY #31

Property Identification & Description

Address: 1710 N.H. Route 175
Town of Thornton
Grafton County, New Hampshire

Identification: Tax Map 16, Lot 7, Sublot 4
Source Deed: Book 4016, Page 546

Land Area: 1.25 acres according to the tax assessment card. The land is level. The property is surrounded by some mature trees on three sides.

Improvements: A 1½ story, home containing 1,152 ft^2 with 4 bedrooms & 2 bathrooms. The house was built circa 1975 and in fair condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 52 to 61 foot structures.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0.04 acre or 3.2%
Distance from House to ROW: 28 feet
Distance to Nearest Structure: 118 feet
Distance to Most Visible Structure: 360 feet
HVTL Visibility from House:: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: September 30, 2013
Conditions of Sale: Arm's Length
Marketing Period: 475 days
Average DOM for Town: 160 days
Marketing History: The property was originally listed for sale on June 12, 2012 for $130,000. It was reduced to $125,000 on October 29, 2012.
Sale Price: $115,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the sale price was impacted by the proposed NPT project more so than the existing HVTL. The property's marketing period was adversely impacted and over the course of its marketing period, the broker indicated that they lost 10 serious buyers who would have purchased the property. The broker indicated that the property was purchased by a Washington, DC buyer as an investment property. The house is currently rented. The broker indicated that it was a lot of house for the money and that even though

there were deferred maintenance issues with the house, the house, in its condition at the time of sale should have sold for $140,000 without the influence of the NPT.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1½ story home on 1.25 acres that the ROW diagonally traverses the corner closest to the house.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $123,820 to $154,675. Sale #1 was given most weight in the final reconciliation since it was most similar to the subject property.

Appraised Value: $140,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $162,900.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The house site is traversed by a 115 kV transmission line. There is a 1½ story home on the property located approximately 28 feet from the ROW. The HVTL structures are visible from the house and the yard.

Interview

The listing broker indicated that the proposed NPT project was more of a deterrent to potential buyers than the existing ROW. There were approximately 10 potential buyers who walked away due to the NPT project. Ultimately, the property was purchased as a rental property by an out of state investor. The broker opined that the property should have sold for $140,000 without any NPT influence.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $140,000, 17.9% above the sale price of $115,000. The marketing period was 475 days which is 196.9% higher than the average days on market for all other property in the town during the same period.

Summary

Both the interview evidence and the appraisal evidence point to an adverse effect on the sale price in this transaction. Further, the marketing period was longer than normal because of concern about the NPT project in the local marketplace. It is concluded that both the sale price and the marketing period were adversely affected by the HVTL ROW.

CASE STUDY #32

Property Identification & Description

Address: 173 Sunrise Hill Road
Town of Thornton
Grafton County, New Hampshire

Identification: Tax Map 11, Lot 5, Sublot 3
Source Deed: Book 3682, Page 22

Land Area: 1.44 acres according to the tax assessment card. The land is rolling. The property is surrounded by some mature trees.

Improvements: A 1½ story, log home containing 1,056 ft^2 with 2 bedrooms & 1 bathroom. The house was built circa 1994 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 48 to 52 foot structures.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0.1 acres or 6.9%
Distance from House to ROW: 106 feet
Distance to Nearest Structure: 296 feet
Distance to Most Visible Structure: 296 feet
HVTL Visibility from House:: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: February 19, 2010
Conditions of Sale: Arm's Length
Marketing Period: 255 days
Average DOM for Town: 149 days
Marketing History: The property was originally listed for sale on May 19, 2009 for $164,500.
Sale Price: $148,500

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the sale price and marketing period was impacted by the existing HVTL. In addition, log homes were not as popular then. The HVTL can be clearly seen from inside the house and the exposure to the ROW was an objection for some potential buyers due to the lack of privacy and the viewshed from the front of the house across the HVTL.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A 1½ story log home on 1.44 acres that is partially crossed by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $165,976 to $171,940. Sale #1 was given most weight in the final reconciliation since it was located nearby in the same neighborhood.

Appraised Value: $168,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $174,100.

Assessment Card Notes: "View of Powerline Only"

Conclusions

Improvements & Visibility

The site is partially crossed by a 115 kV transmission line. There is a 1½ story log home on the property located approximately 106 feet from the ROW. The HVTL structures are visible from the house and the yard due to open landscape in front of the house.

Interview

The listing broker indicated that the HVTL impacted both the marketing period and sale price. There were a number of potential buyers who rejected the property due to the close proximity of the ROW and view of the HVTL from the house and yard.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $168,000, 11.6% above the sale price of $148,500. The marketing period was 255 days which is 71.1% higher than the average days on market for all other property in the town during the same period.

Summary

Based on the visibility of the HVTL from the home, the interview evidence, and the appraisal evidence, it is concluded that the HVTL had an adverse effect on both the sale price and the marketing period in this transaction.

CASE STUDY #33

Property Identification & Description

Address: 47 Trapper Road
Town of Campton
Grafton County, New Hampshire

Identification: Tax Map 21, Lot 9, Sublot 6
Source Deed: Book 4005, Page 62

Land Area: 1.0 acre according to the tax assessment card. The land is level. The property is surrounded by mature trees.
Improvements: A 1 story, double wide mobile home containing 1,620 ft^2 with 3 bedrooms & 2 bathrooms. The double wide was built circa 2002 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 43 foot structures. The parcel is crossed by the ROW along the side boundary line. The location of the structures are on the opposite side of Trapper Road which is located in between the house and the ROW.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0 acres or 0%
Distance from House to ROW: 143 feet
Distances to Nearest Structure: 285 feet
Distance to Most Visible Structure: 285 feet
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: August 15, 2013
Conditions of Sale: Arm's Length
Marketing Period: 212 days
Average DOM for Town: 180 days
Marketing History: The property was originally listed for sale on December 11, 2012 for $129,900.
Sale Price: $117,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, neither the marketing period nor sale price was not impacted by the HVTL. Due to existing screening, it is difficult to see the HVTL from outside of the house and not visible from inside the house. No potential buyers expressed concern for the HVTL.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A double wide mobile home on 1.0 acre that abuts the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $120,350 to $123,050. All three were given equal weight in the final reconciliation.

Appraised Value: $121,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $134,200.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is crossed a 115 kV transmission line ROW. There is a double wide mobile home on the property located approximately 143 feet from the ROW. The HVTL structures are not visible from the house due mature trees and landscaping that buffer the house and are only partially visible from the yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $121,000, 3.4% higher than the sale price of $117,000. The marketing period was 212 days which is 17.8% higher than the average days on market for all other property in the town during the same period.

Summary

Based upon the physical relationship of the HVTL to the property, the interview evidence, the marketing period, and the appraised value of the property, it is concluded that there was no adverse effect of the HVTL on either the sale price or the marketing period in this transaction.

CASE STUDY #34

Property Identification & Description

Address: 723 N.H. Route 175
Town of Campton
Grafton County, New Hampshire

Identification: Tax Map 10, Lot 15, Sublot 3
Source Deed: Book 3692, Page 93

Land Area: 1.4 acres according to the tax assessment card. The land is level. The property is surrounded by mature trees.
Improvements: A 2 story, home containing 1,380 ft^2 with 2 bedrooms & 2 bathrooms. The house was built circa 1940 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 52 to 62 foot structures. The rear corner of the parcel is crossed by the ROW.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0.03 acre or 2.1%
Distance from House to ROW: 103 feet
Distance to Nearest Structure: 238 feet
Distance to Most Visible Structure: 238 feet
HVTL Visibility from House:: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: April 6, 2010
Conditions of Sale: Arm's Length
Marketing Period: 36 days
Average DOM for Town: 163
Marketing History: The property was originally listed for sale on January 7, 2010, for $149,900.
Sale Price: $141,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the marketing period or sale price was not impacted by the HVTL. Due to existing screening, it is difficult to see the HVTL from outside of the house and was not visible from inside the house (this is contrary to the exterior inspection of the property). The property sold in a short period of time in an arm's length transaction.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 1.4 acres that is traversed by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $147,519 to $154,105 Sales #1 and #2 were given most weight in the final reconciliation since they were both two bedroom homes with similar functional utility.

Appraised Value: $150,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $158,600.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 2 story home on the property located approximately 103 feet from the ROW. The HVTL structures are visible from the house and the yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $150,000, 6.0% above the sale price of $141,000. The marketing period was 36 days which is 77.9% lower than the average days on market for all other property in the town during the same period. The property sold in 2010 when sale data was limited due to the poor real estate market conditions. This can result in a less reliable appraisal due to a lack of good comparable sales.

Summary

The HVTL structures are visible from the house and the yard. The marketing period was significantly shorter than typical. The interview with the listing broker further indicates that there was no adverse impact on the marketing period or sale price. Yet the appraisal evidence suggests a possible adverse effect of the HVTL on the sale price. Based on the aforementioned, it is concluded that there was a possible adverse effect of the HVTL on the sale price in this transaction but no effect on the marketing period.

CASE STUDY #35

Property Identification & Description

Address: 74 Trapper Road
Town of Campton
Grafton County, New Hampshire

Identification: Tax Map 21, Lot 8, Sublot 12
Source Deed: Book 3707, Page 466

Land Area: 1.0 acre according to the tax assessment card. The land is level. The property is surrounded by mature trees.
Improvements: A 1 story, double wide mobile home containing 1,140 ft^2 with 2 bedrooms & 2 bathrooms. The double wide was built circa 1997 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 43 foot structures. The parcel is traversed by the ROW along the side boundary.
Number of Structures on Site: 0
ROW Encumbered Acreage: 0.4 acre or 40.0%
Distance from House to ROW: 24 feet
Distance to Nearest Structure: 223 feet
Distance to Most Visible Structure: 223 feet
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: June 11, 2010
Conditions of Sale: Arm's Length
Marketing Period: 80 days
Average DOM for Town: 160 days
Marketing History: The property was originally listed for sale on February 9, 2010 for $119,900.
Sale Price: $118,500

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the broker of record, the marketing period or sale price was not impacted by the HVTL. Due to existing screening, it is difficult to see the HVTL from outside of the house and not visible from inside the house.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A double wide mobile home on 1.0 acre that is traversed by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $107,361 to $129,724 Sale #2 was given most weight in the final reconciliation since it required the least amount of overall adjustment and was located in the same neighborhood.

Appraised Value: $129,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $128,400.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a double wide mobile home on the property located approximately 151 feet from the ROW. The HVTL structures are not visible from the house due mature trees and landscaping that buffer the house and are only partially visible from the yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $129,000, 8.9% higher than the sale price of $118,500. The marketing period was 80 days which is 50.0% lower than the average days on market for all other property in the town during the same period.

Summary

Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that neither the sale price nor the marketing period were adversely affected by the HVTL.

CASE STUDY #36

Property Identification & Description

Address: 313 Mount Prospect Road
Town of Holderness
Grafton County, New Hampshire

Identification: Tax Map 213, Lot 35
Source Deed: Book 3973, Page 181

Land Area: 6.43 acres according to the tax assessment card. The land is level and rolling. The property is surrounded by mature trees and open fields.

Improvements: A 1½ story, single family home containing 2,846 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 1790 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 43 foot structures. The parcel abuts the ROW along the side of the property farthest from the house.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0 acres or 0%
Distance from House to ROW: 244 feet
Distance to Nearest Structure: 320 feet
Distance to Most Visible Structure: 429 feet
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: April 24, 2013
Conditions of Sale: Arm's Length
Marketing Period: 336 days
Average DOM for Town: 156 days
Marketing History: The property was originally listed for sale on May 7, 2012 for $389,000.
Sale Price: $327,500

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there were two offers within close range of one another. Over the course of the nearly year long marketing period, the broker indicated that several potential buyers were lost due to the HVTL. The purchase price was not impacted by the HVTL as neither buyer's offer considered a discount for the HVTL. The broker indicated the transaction was arm's length and at market value. The broker indicated that there were other challenges with the sale unrelated to the HVTL.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 6.43 acres that abuts the side of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $325,478 to $346,980 Most weight was given to Sale #2 since its most similar in size.

Appraised Value: $334,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $295,950.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 244 feet from the ROW. The HVTL structures are not visible from the house and partially visible from outside the house in the rear open yard areas due to mature trees.

Interview

The listing broker indicated that the HVTL had an adverse impact on the marketing period, but not the sale price of the property. There were competing offers for the property; neither of which included any discount for the HVTL. The marketing period was impacted by other circumstances related to the house and not the HVTL.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $334,000, 1.9% above the sale price of $327,500. The marketing period was 336 days which is 115.4% higher than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house and only partially visible from the yard and are more than 300 feet away. The interview and the extended marketing period relative to the town average both suggest an adverse effect of the HVTL on the time the property was on the market. But the appraisal and the interview do not suggest an adverse impact on the sale price. Based on the aforementioned, it is concluded that the sale price was not adversely affected by the HVTL but that there was an adverse effect on the marketing period.

CASE STUDY #37

Property Identification & Description

Address: 81 Sargent Road
Town of Holderness
Grafton County, New Hampshire

Identification: Tax Map 227, Lot 36
Source Deed: Book 4014, Page 849

Land Area: 5.001 acres according to the tax assessment card. The land is level and rolling. The property is surrounded by mature trees and open lawn.

Improvements: A 1½ story, single family home containing 6,083 ft^2 with 5 bedrooms & 3 bathrooms. The house was built circa 2008 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 43 foot structures. The parcel is traversed by the HVTL along the rear of the property farthest from the house.

Number of Structures on Site: 1
ROW Encumbered Acreage: 1.8 acres or 36%
Distance from House to ROW: 133 feet
Distance to Nearest Structure: 200 feet
Distance to Most Visible Structure: 200 feet
HVTL Visibility from House:: Partially Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: September 27, 2013
Conditions of Sale: Arm's Length
Marketing Period: 883 days (on and off the market)
Average DOM for Town: 194 days
Marketing History: The property was broker owned and listed several times on MLS. At the time of sale, it was not listed on MLS and sold by the owner/broker to a friend. Originally listed in June 2010 for $1,095,000 and subsequently reduced to $800,000. In June 2012, it was relisted for $745,000. The listing expired in December 2012. The property sold privately.
Sale Price: $760,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker who was also the owner of the property, there were three separate purchase and sale agreements that fell through because of the HVTL. The property was listed on and off for more than two

years and ultimately sold to a friend who approached the owner about purchasing the property at the right price. The buyer of the property, a local doctor, had no concerns with the HVTL in the rear of the property. The house was custom and included a $100,000 geothermal heating system. It was improved above and beyond the local neighborhood. The broker/owner indicated that the property's marketing period was impacted by the HVTL. The broker also indicated that absent the HVTL, the property should have sold in the $900,000s.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 5.001 acres that is traversed along the rear of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $718,517 to $838,470. Most weight was given to Sales #1 and #2 since they were similarly located.

Appraised Value: $740,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $687,750.

Assessment Card Notes: There is a note for topography and restrictions with a -10% adjustment to the residual portion of the land assessment.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 133 feet from the ROW. The HVTL is partially visible from the house and yard due to mature trees.

Interview

The listing broker who is also the seller of the property indicated that three separate purchase and sale contracts fell through because of the HVTL. In the end, a local doctor who did not have a concern regarding the HVTL purchased the property. The interview evidence indicated that the property had superadequacies for the local market including $100,000 for a geothermal heating system. The broker/seller's opinion is that the property should have sold in $900,000s.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $740,000, 2.7% below the sale price of $760,000. The marketing period was 883 days which is 355.2% higher than the average days on market for all other property in the town during the same period.

Summary

Considering that the house was over-improved for the neighborhood and that the listing broker was also the owner of the house, there appears to be a bias toward a higher value opinion than supported by the market. The appraisal evidence suggests that the marketing period was

impacted by an asking price that far exceeded market value. Had the property been priced differently, the marketing period may have been considerably shorter.

The appraisal evidence suggests that the sale price was not adversely affected by the HVTL but the interview evidence indicated that several sales were lost due to the HVTL. Based on the aforementioned, it is concluded that there was a possible adverse effect on the sale price and a possible adverse effect on the marketing period due to the HVTL.

CASE STUDY #38

Property Identification & Description

Address: 849 N.H. Route 132
Town of New Hampton
Belknap County, New Hampshire

Identification: Tax Map R20, Lot 11
Source Deed: Book 2853, Page 967

Land Area: 1.02 acres according to the tax assessment card. The land is mostly level. The property is mostly open with limited screening.

Improvements: A 1½ story, single family home containing 1,350 ft^2 with 3 bedrooms & 1½ bathrooms. The house was built circa 1987 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 43 to 48 foot structures. The parcel is traversed by the ROW along the rear of the property.

Number of Structure on Site: 0
ROW Encumbered Acreage: 0.6 acre or 58.8%
Distance from House to ROW: 131 feet
Distance to Nearest Structure: 260 feet
Distance to Most Visible Structure: 288 feet
HVTL Visibility from House:: Partially Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: June 7, 2013
Conditions of Sale: Arm's Length
Marketing Period: 38 days
Average DOM for Town: 138 days
Marketing History: The property was originally listed for $164,500 on March 23, 2013.
Sale Price: $164,500

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the marketing period and sale price were not impacted from the HVTL. The property had a short marketing period of just 38 days and sold at full price. The broker indicated that they had previously sold the property and there were no issues from the HVTL at that time.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 1.02 acres that is traversed along the rear of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $153,404 to $169,882. Most weight was given to Sales #1 and #2.

Appraised Value: $157,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $161,700.

Assessment Card Notes: There is a note for powerline in the land valuation section. There appears to be an -8% adjustment to the primary acre.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 131 feet from the ROW. The HVTL structures are partially visible from the house and from the yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property. This is the second time the broker had sold the property and there was no impact from the prior sale.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $157,000, 4.8% below the sale price of $164,500. The marketing period was 38 days which is 72.5% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are partially visible from the house and yard. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that the HVTL had no adverse effect on the sale price or the marketing period in this transaction.

CASE STUDY #39

Property Identification & Description

Address: 696 Coolidge Woods Road
Town of New Hampton
Belknap County, New Hampshire

Identification: Tax Map R1, Lot 28
Source Deed: Book 2752, Page 776

Land Area: 5.4 acres according to the tax assessment card. The land is mostly sloping. The property is surrounded by mature trees.

Improvements: A 1½ story, single family home containing 1,264 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 2005 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: Two 115 kV AC transmission lines in a 225 foot wide right of way with 55 and 75 foot structures. The parcel is traversed diagonally across the front corner by the ROW.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.6 acre or 11.1%
Distance from House to ROW: 194 feet
Distance to Nearest Structure: 434 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: January 27, 2012
Conditions of Sale: Arm's Length
Marketing Period: 226 days
Average DOM for Town: 157 days
Marketing History: The property was originally listed for $225,000 on April 30, 2011.
Sale Price: $200,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the property was priced to sell given the HVTL and potential buyers concerned about NPT. The property was priced on the low side and sold below market value in her opinion due to the HVTL. The broker indicated that the impact on value was $25,000 to $35,000. The marketing period was also impacted. The broker indicated that the property was shown frequently and many potential buyers walked due to NPT.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 5.4 acres that is diagonally traversed along the front corner.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $193,496 to $208,222. Most weight was given to Sales #2 and #3 because they required the least amount of overall adjustment.

Appraised Value: $200,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $232,900.

Assessment Card Notes: There is a note for powerline in the land valuation section. There appears to be no adjustment for the notation.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 194 feet from the ROW. The HVTL is not visible from the house or yard.

Interview

The listing broker indicated that the HVTL had an impact on the sale price that ranged from 12.5% to 17.5%. The broker indicated there were some potential buyers who rejected the property due to the HVTL and that the property was priced on the low side and sold below market value.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $200,000, the same as the sale price of $200,000. The marketing period was 226 days which is 43.9% higher than the average days on market for all other property in the town during the same period.

Summary

The broker interview along with the marketing period evidence suggest an impact on the transaction from the HVTL. However, this is not consistent with the appraisal evidence or the fact that the HVTL are not visible from the house or yard. Based on the aforementioned, it is concluded that there was a possible adverse effect of the HVTL on the sale price and a possible adverse effect on the marketing period.

CASE STUDY #40

Property Identification & Description

Address: 226 Salisbury Road
City of Franklin
Merrimack County, New Hampshire

Identification: Tax Map 82, Lot 8
Source Deed: Book 3445, Page 2483

Land Area: 5.24 acres according to the tax assessment card. The land is level. The property is surrounded by mature trees.

Improvements: A 1½ story, home containing 1,469 ft^2 with 3 bedrooms & 1½ bathrooms. The house was built circa 1998 and was in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 300 foot wide right of way with 61 to 88 foot structures. The parcel is traversed by the ROW along the side boundary line.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0.4 acre or 7.6%
Distance from House to ROW: 256 feet
Distance to Nearest Structure: 308 feet
Distance to Most Visible Structure: 308 feet
HVTL Visibility from House: Not Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: June 27, 2014
Conditions of Sale: Arm's Length
Marketing Period: 21 days
Average DOM for City: 115 days
Marketing History: The property was originally listed for sale on April 25, 2014 for $175,900.
Sale Price: $176,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the selling broker, the marketing period or sale price was not impacted by the HVTL. Due to existing screening, it is difficult to see the HVTL from outside of the house and it is not visible from inside the house. The buyer of the property had no concern for the HVTL. The property sold in a short period of time in an arm's length transaction with seller concessions typical in the marketplace for Franklin.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 5.24 acres that is traversed by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $162,670 to $176,860 Sales #2 and #3 were given most weight in the final reconciliation ($173,857 & $176,860) since they were most similar to the subject property.

Appraised Value: $174,000

Property Assessment Related to HVTL

Overview: The 2014 assessed value of the subject property was $154,000.

Assessment Card Notes: "Powerlines".

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story home on the property located approximately 256 feet from the ROW. The HVTL structures are not visible from the house and only partially visible from the yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $174,000, 1.1% lower than the sale price of $176,000. The marketing period was 21 days which is 81.7% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house and only partially visible from the yard. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that neither the sale price nor the marketing period were adversely affected by the HVTL.

CASE STUDY #41

Property Identification & Description

Address: 76 Lark Street
City of Franklin
Merrimack County, New Hampshire

Identification: Tax Map 76, Lot 40
Source Deed: Book 3268, Page 978

Land Area: 1.01 acres according to the tax assessment card. The land is level. The property is surrounded by mature trees.

Improvements: A 1 story, double wide mobile home containing 1,040 ft^2 with 2 bedrooms & 2 bathrooms. The house was built circa 1987 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 200 foot wide right of way with 52 foot structures.
Number of Structures on Site: 1
ROW Encumbered Acreage: 0.76 acre or 75.2%
Distance from House to ROW: 0 feet
Distance to Nearest Structure: 202 feet
Distance to Most Visible Structure: 202 feet
HVTL Visibility from House: Partially Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: August 16, 2011
Conditions of Sale: Arm's Length
Marketing Period: 16 days
Average DOM for City: 87 days
Marketing History: The property was originally listed for sale on June 7, 2011 for $69,900 and sold for $65,000 on August 16, 2011.
Sale Price: $65,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the marketing period was not impacted by the HVTL. The property was priced to sell and shortly after it went on the market, a cash buyer who was retiring from the Manchester area purchased the property. The broker indicated that the property was shown two or three times prior to going under contract. In terms of price, the broker did not specifically indicate that the price was discounted for the HVTL; rather it was priced for the current market conditions. The broker also stated that the HVTL was difficult to see from inside the

house due to the garage structure being located on the ROW end of the house. The large side yard underneath the HVTL is mowed as lawn.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A double wide mobile home on 1.01 acres that is traversed through the center of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $70,529 to $94,746 Sale #1 was given most weight in the final reconciliation ($70,529) since it was most similar to the subject property.

Appraised Value: $73,000

Property Assessment Related to HVTL

Overview: The 2014 assessed value of the subject property was $97,400.

Assessment Card Notes: "Powerlines over 80% of lot". There is a -50% adjustment to the land assessment. The land is assessed for $29,100.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a double wide mobile home on the property located 0 feet from the ROW. The HVTL structures are partially visible from the house and clearly visible from outside.

Interview

The listing broker indicated that the HVTL did not impact the marketing period and that the house was priced to sell given the current market conditions in Franklin. The purchaser of the property paid cash and purchased it as a retirement home.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $73,000, 11.0% above the sale price of $65,000. The marketing period was 16 days which is 81.6% lower than the average days on market for all other property in the town during the same period.

Summary

The marketing period was shorter than average for the city supporting the broker's opinion that the property was priced to sell given the current market conditions. The appraisal evidence indicates that the property was adversely impacted by the HVTL. Given the location of the ROW directly over the property, the overall acreage encumbered by the ROW, and the appraisal evidence, it is concluded that there was an adverse effect of the HVTL on the sale price but not the marketing period.

CASE STUDY #42

Property Identification & Description

Address: 575 Oak Hill Road
Town of Northfield
Merrimack County, New Hampshire

Identification: Tax Map R03, Lot 6
Source Deed: Book 3403, Page 242

Land Area: 50.0 acres according to the tax assessment card. The land is level and rolling. The property is surrounded by mature trees and open fields.

Improvements: A 2 story, single family home containing 1,998 ft^2 with 3 bedrooms & 1½ bathrooms. The house was built circa 1850 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 43 to 79 foot structures.
Number of Structures on Site: 5
ROW Encumbered Acreage: 5.0 acres or 10%
Distance from House to ROW: 920 feet
Distance to Nearest Structure: 1,022 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: August 5, 2013
Conditions of Sale: Arm's Length
Marketing Period: 5 days
Average DOM for Town: 99 days
Marketing History: The property was originally listed for sale on June 21, 2013 for $161,500.
Sale Price: $165,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, the marketing period was not impacted by the HVTL. The property was priced to sell and was purchased by a cash buyer since the property was not complete on the inside. The buyer and other potential buyers were not concerned with the HVTL since it could not be seen from the house or on the property around the house. The house sits up and the HVTL is below the tree line. A builder purchased the property to renovate and because of the overall acreage.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 50.0 acres that is traversed through the rear of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $157,380 to $179,878 Sales #1 and #2 were given most weight in the final reconciliation ($157,380 and $178,800) since they were most similar to the subject property.

Appraised Value: $170,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $140,539.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 2 story single family home on the property located approximately 920 feet from the ROW. The HVTL structures are not visible from the house and not visible from outside the house in the open field areas.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property. The home was not completely finished and the buyer purchased the property for its land size.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $170,000, 2.9% above the sale price of $165,000. The marketing period was 5 days which is 94.9% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house or yard and are more than 1,000 feet away. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that there was no adverse effect of the HVTL on the sale price or marketing period in this transaction.

CASE STUDY #43

Property Identification & Description

Address: 23 Battis Crossing Road
Town of Canterbury
Merrimack County, New Hampshire

Identification: Tax Map 234, Lot 8
Source Deed: Book 3323, Page 155

Land Area: 5.4 acres according to the tax assessment card. The land is mostly level. The property is surrounded by mature trees.

Improvements: A 1½ story, single family home containing 1,440 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 1979 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 225 foot wide right of way with 43 to 66 foot structures. The parcel is traversed across the rear boundary line by the ROW.

Number of Structures on Site: 1
ROW Encumbered Acreage: 0.8 acre or 14.8%
Distance from House to ROW: 441 feet
Distance to Nearest Structure: 521 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: June 28, 2012
Conditions of Sale: Arm's Length
Marketing Period: 156 days
Average DOM for Town: 115 days
Marketing History: The property was originally listed for $219,500 on January 24, 2012.
Sale Price: $205,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was no impact on the property's marketing period or sale price due to the HVTL. The broker indicated they were not aware of any potential buyers who walked from the property because of the HVTL. The broker stated that the property sold at market value in an arm's length transaction. The buyers were interested in privacy and in addition to the HVTL corridor, the property also abutted conservation land.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 5.4 acres that is traversed along the rear of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $203,730 to $208,920. Most weight was given to Sale #2 because it required the least amount of overall adjustment.

Appraised Value: $205,000

Property Assessment Related to HVTL

Overview: The 2012 assessed value of the subject property was $207,200.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 441 feet from the ROW. The HVTL is not visible from the house or yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property. The buyers were interested in privacy that the ROW and the abutting conservation land provided.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $205,000, the same as the sale price of $205,000. The marketing period was 156 days which is 35.7% higher than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house or yard and are more than 520 feet away. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that the HVTL had no adverse effect on the sale price or marketing period in this transaction.

CASE STUDY #44

Property Identification & Description

Address: 41 Hoit Road
City of Concord
Merrimack County, New Hampshire

Identification: Tax Map 122, Lot 5-10
Source Deed: Book 3376, Page 34

Land Area: 1.94 acres according to the tax assessment card. The land is level. The property is surrounded by mature trees but open in the rear yard to the HVTL.

Improvements: A 1½ story, single family home containing 1,624 ft^2 with 4 bedrooms & 3 bathrooms. The house was built circa 1976 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: Two 115 kV AC transmission lines in a 250 foot wide right of way with 57 to 84 foot structures.
Number of Structures on Site: 2
ROW Encumbered Acreage: 1.2 acres or 61.9%
Distance from House to ROW: 7 feet
Distance to Nearest Structure: 100 feet
Distance to Most Visible Structure: 237 feet
HVTL Visibility from House:: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: March 15, 2013
Conditions of Sale: Arm's Length
Marketing Period: 106 days
Average DOM for City: 78 days
Marketing History: The property was originally listed for $219,000 and reduced to $199,900.
Sale Price: $180,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was a significant impact on the property's marketing period and sale price due to the HVTL. A number of potential buyers were not interested in the property because of the existing HVTL and proposed NPT project. The broker indicated that a number of buyers were worried about the proposed NPT project. The property was sold by owner after the listing expired. It is the broker's opinion that the market value of the property without any HVTL influence was $200,000. The broker stated that the HVTL was visible

from both inside and outside the property due to its close proximity to the house.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 1.94 acres that is heavily encumbered by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $202,790 to $226,450. Most weight was given to Sale #2 because it also had some small equestrian improvements similar t the subject property.

Appraised Value: $209,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $220,800.

Assessment Card Notes: Topography / Easement is noted in the land line valuation section of the assessment card. A 40% reduction for the excess 0.94 acre is applied resulting in an assessed value of the excess acreage of $2,100.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 7 feet from the ROW. The HVTL is visible from the house and the yard.

Interview

The listing broker indicated that the HVTL adversely impacted the marketing period and sale price. The broker opined that without any HVTL influence, the property's market value was $200,000. A number of potential buyers were concerned about the proposed NPT project.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $209,000, 13.9% above the sale price of $180,000. The marketing period was 106 days which is 35.9% higher than the average days on market for all other property in the town during the same period.

Summary

The marketing period was longer than the average for the city. The interview of the listing broker suggests a 10% impact on sale price which is further supported by the appraisal evidence. Given the location of the ROW directly over the property and the overall acreage encumbered by the ROW coupled with the appraisal evidence, it is concluded that there was an adverse effect of the HVTL on both the sale price and the marketing period in this transaction.

CASE STUDY #45

Property Identification & Description

Address: 569 Mountain Road
City of Concord
Merrimack County, New Hampshire

Identification: Tax Map 122, Lot 5-4
Source Deed: Book 3291, Page 1550

Land Area: 6.30 acres according to the tax assessment card. The land is level. The property is surrounded by mature trees.

Improvements: A 1 story, single family home containing 1,344 ft^2 with 3 bedrooms & 1½ bathrooms. The house was built circa 1965 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: Two 115 kV AC transmission lines in a 250 foot wide right of way with 43 to 79 foot structures. The parcel abuts the ROW along the rear boundary line.

Number of Structures on Site: 0
ROW Encumbered Acreage: 0 acres or 0%
Distance from House to ROW: 269 feet
Distance to Nearest Structure: 407 feet
Distance to Most Visible Structure: 407 feet
HVTL Visibility from House:: Partially Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: January 5, 2012
Conditions of Sale: Arm's Length
Marketing Period: 112 days
Average DOM for City: 97 days
Marketing History: The property was originally listed for $204,900 on August 9, 2011.
Sale Price: $198,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was no impact on the property's marketing period or sale price due to the HVTL. The HVTL could not be seen from the house or from outside (this is contrary to the exterior inspection). There is heavy tree growth and buffer between the house and the ROW.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 6.3 acres that abuts the ROW at the rear of the property.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $187,470 to $202,270. All three sales have been given equal weight.

Appraised Value: $196,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $185,500.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 269 feet from the ROW. An exterior inspection of the property revealed that the HVTL is partially visible from the house and yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $196,000, 1.0% below the sale price of $198,000. The marketing period was 112 days which is 15.5% higher than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are partially visible from the house and yard and are more than 400 feet away. Based upon the physical relationship of the HVTL to the property, the marketing period, the interview, and the appraised value of the property, it is concluded that there was no adverse effect of the HVTL on the sale price or marketing period in this transaction.

CASE STUDY #46

Property Identification & Description

Address: 16 Brookwood Road
City of Concord
Merrimack County, New Hampshire

Identification: Tax Map 122, Lot 5-26
Source Deed: Book 3288, Page 1617

Land Area: 1.71 acres according to the tax assessment card. The land is mostly level. The property is surrounded by mature trees.
Improvements: A 1 story, single family home containing 2,144 ft^2 with 3 bedrooms & 1½ bathrooms. The house was built circa 1965 and in average condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: Two 115 kV AC transmission lines in a 250 foot wide right of way with 43 to 66 foot structures. The parcel is traversed across the rear boundary line by the ROW.
Number of Structures on Site: 1
ROW Encumbered Acreage: 1.0 acre or 58.5%
Distance from House to ROW: 51 feet
Distance to Nearest Structure: 118 feet
Distance to Most Visible Structure: 118 feet
HVTL Visibility from House:: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: December 16, 2011
Conditions of Sale: Arm's Length
Marketing Period: 105 days
Average DOM for City: 96 days
Marketing History: The property was originally listed for $239,900 on July 25, 2011.
Sale Price: $237,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was an impact on the property's marketing period due to the HVTL. The broker indicated that the HVTL was visible from inside and outside the house. There was no comment on impact on value.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 1.71 acres that is traversed along the rear of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $218,485 to $248,070. Sale #2 has been given most weight due to similarity in size.

Appraised Value: $235,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $241,300.

Assessment Card Notes: Topography/Easement with an -80% for the excess 0.71 acres in the land line valuation section with a total assessment of the excess 0.71 acre of $500.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1½ story single family home on the property located approximately 51 feet from the ROW. The HVTL is visible from the house and yard.

Interview

The listing broker indicated that the HVTL had an impact on the marketing period. However, this is contradicted by the marketing period of all other property in the city at the time. The property's marketing period was 105 days compared to the average day on market of 96 days for residential property in Concord.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $235,000, 0.9% below the sale price of $237,000. The marketing period was 105 days which is 9.4% higher than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are visible from the house and yard are only 118 feet away. The broker indicated an impact on marketing period but the days on market for the transaction were very similar to the city average. Based upon the physical relationship of the HVTL to the property, the marketing period, the interview, and the appraised value of the property, it is concluded that there was a possible adverse effect of the HVTL on the marketing period but no adverse effect on the sale price.

CASE STUDY #47

Property Identification & Description

Address: 86 Oak Hill Road
City of Concord
Merrimack County, New Hampshire

Identification: Tax Map 118, Lot F2-11
Source Deed: Book 3266, Page 1529

Land Area: 2.34 acres according to the tax assessment card. The land is mostly level. The property has minimal buffer between the house and the ROW.

Improvements: A 1 story, single family home containing 638 ft^2 with 1 bedroom & 1 bathroom on Turtletown Pond. The house was built circa 1940 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: Two 115 kV AC transmission lines in a 260 foot wide right of way with 46 to 93 foot structures at the front of the parcel. The parcel is traversed across the front corner by the ROW.

Number of Structures on Site: 1
ROW Encumbered Acreage: 0.5 acre or 21.4%
Distance from House to ROW: 23 feet
Distance to Nearest Structure: 110 feet
Distance to Most Visible Structure: 110 feet
HVTL Visibility from House:: Clearly Visible.
HVTL Visibility from Yard: Clearly Visible.

Property Sale Data

Sale Date: August 3, 2011
Conditions of Sale: Arm's Length
Marketing Period: 34 days
Average DOM for City: 93 days
Marketing History: The property was originally listed for $118,500 on May 24, 2011.
Sale Price: $115,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was minimal impact on the property's marketing period and sale price due to the price point of the property and the overall size of the house (very small) due to the HVTL. The broker indicated that the HVTL was visible from inside and outside the house. The broker indicated that a few potential buyers rejected the property due to the HVTL, but at the price level there were other buyers unaffected by the HVTL.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 2.34 acres that is traversed along the front of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $103,100 to $109,780. Sale #2 has been given most weight due to similarity in location.

Appraised Value: $109,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $121,700.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 1 story single family home on the property located approximately 23 feet from the ROW. The HVTL is visible from the house and the yard.

Interview

The listing broker indicated that the HVTL had minimal impact on the marketing period or sale price of the property because of the size of the house (638 ft^2). While some buyers rejected it due to the HVTL, there were other buyers who were unaffected.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $109,000, 5.5% below the sale price of $115,000. The marketing period was 34 days which is 63.4% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are visible from the house and yard and are only 110 feet away. In spite of the visibility and proximity of the HVTL, based on the interview, the marketing period, and the appraised value of the property, it is concluded that there was no adverse effect of the HVTL on the sale price or the marketing period in this transaction.

Marketing History: The property was originally listed for $268,886 on June 2, 2010.
Sale Price: $250,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was no impact on the property's marketing period or sale price. The broker indicated that the HVTL was not visible from inside the house and was difficult to see from outside of the house due to the mature tree screening along the side of the house.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 5.38 acres that is traversed along the side of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $254,280 to $266,890. Sale #1 has been given most weight due to similarity in location.

Appraised Value: $259,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $309,300.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 2 story single family home on the property located approximately 33 feet from the ROW. The HVTL is not visible from the house and partially visible from the yard.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $259,000, 3.5% below the sale price of $250,000. The marketing period was 159 days which is 123.9% higher than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house and partially visible from yard. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that there was no adverse effect of the HVTL on the sale price or marketing period in this transaction.

CASE STUDY #49

Property Identification & Description

Address: 50 Mount Delight Road
Town of Allenstown
Merrimack County, New Hampshire

Identification: Tax Map 402, Lot 134
Source Deed: Book 3396, Page 1605

Land Area: 7.15 acres according to the tax assessment card. The land is sloping. The property has a mature tree buffer between the house and the ROW.

Improvements: A 2 story, 2 family home containing 2,216 ft^2 with 4 bedrooms & 2 full and 2 ½ bathrooms. The multi-family house was built circa 1988 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 150 foot wide right of way with 70 foot structures along the rear of the parcel. The parcel is traversed across the rear by the ROW.
Number of Structures on Site: 1
ROW Encumbered Acreage: 0.07 acre or 1.0%
Distance from House to ROW: 849 feet
Distance to Nearest Structure: 957 feet
Distance to Most Visible Structure: n/a
HVTL Visibility from House:: Not Visible.
HVTL Visibility from Yard: Not Visible.

Property Sale Data

Sale Date: July 3, 2013
Conditions of Sale: Arm's Length
Marketing Period: 22 days
Average DOM for Town: 101 days
Marketing History: The property was originally listed for $299,900 on May 9, 2013.
Sale Price: $285,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there was no impact on the property's marketing period or sale price. The broker indicated that the HVTL was not visible from inside the house or from outside of the house due to the mature tree screening and the lengthy distance due to the long narrow lot. The listing broker also owned the property. The broker indicated that you wouldn't even know it was there.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A two family home on 7.15 acres that is traversed along the rear of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $256,087 to $296,975. Sale #2 has been given most weight due to it being most recent.

Appraised Value: $266,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $265,800.

Assessment Card Notes: None.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 2 story two family home on the property located approximately 849 feet from the ROW. The HVTL is not visible from the house or the yard due to mature tree screening and the long narrow configuration of the lot.

Interview

The listing broker indicated that the HVTL had no impact on the marketing period or sale price of the property.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $266,000, 7.1% below the sale price of $285,000. The marketing period was 22 days which is 78.2% lower than the average days on market for all other property in the town during the same period.

Summary

The HVTL structures are not visible from the house or yard and are more than 950 feet away. Based upon the physical relationship of the HVTL to the property, the interview, the marketing period, and the appraised value of the property, it is concluded that the HVTL had no adverse effect on the sale price or the marketing time in this transaction.

CASE STUDY #50

Property Identification & Description

Address: 39 Hayes Road
Town of Deerfield
Rockingham County, New Hampshire

Identification: Tax Map 414, Lot 131
Source Deed: Book 5449, Page 1392

Land Area: 6.76 acres according to the tax assessment card. The land is sloping. The property has a mature tree buffer between the house and the ROW.
Improvements: A 2 story, single family home containing 1,872 ft^2 with 3 bedrooms & 2 bathrooms. The house was built circa 1987 and in good condition at the time of sale.

Description of Transmission Lines

Transmission Corridor: A 115 kV AC transmission line in a 150 foot wide right of way with 66 to 75 foot structures. The parcel is traversed across the side by the ROW.
Number of Structures on Site: 3
ROW Encumbered Acreage: 2.0 acres or 29.6%
Distance from House to ROW: 30 feet
Distance to Nearest Structure: 92 feet
Distance to Most Visible Structure: 92 feet
HVTL Visibility from House: Partially Visible.
HVTL Visibility from Yard: Partially Visible.

Property Sale Data

Sale Date: June 13, 2013
Conditions of Sale: Arm's Length
Marketing Period: 121 days
Average DOM for Town: 164 days
Marketing History: The property was originally listed for $249,900 on October 29, 2012.
Sale Price: $245,000

Interview Data

Conducted by: Brian C. Underwood, CRE
Transaction Interview: According to the listing broker, there were a number of potential buyers who walked away or did not want to view the property due to the HVTL. In terms of the sale price, the broker stated that the kitchen was over improved for the property ($40,000) and it was the kitchen that offset the impact on the sale price from the HVTL for the buyers. However, the broker indicated that the property sold at market value in an arm's length transaction which was not consistent with their observation of an adverse effect due to the HVTL. The

broker indicated that the HVTL was partially visible from the house and also outside the house. In summary, the broker said that while there were a larger number of potential buyers that were turned away by the HVTL, there were a smaller group of buyers who were willing to accept the presence of the HVTL and pay market value for the property.

Appraised Value on Date of Sale Absent Influence of HVTL

Overview: A single family home on 6.76 acres that is traversed along the rear of the property by the ROW.

Sale Data: Three comparable sales were utilized in the appraisal report to estimate the market value of the property at the time of sale. After adjustments, the comparable sales produced a range of value from $232,960 to $247,760. All three sales have been given equal weight.

Appraised Value: $239,000

Property Assessment Related to HVTL

Overview: The 2013 assessed value of the subject property was $254,100.

Assessment Card Notes: Powerlines running through left side of property.

Conclusions

Improvements & Visibility

The site is traversed by a 115 kV transmission line. There is a 2 story single family home on the property located approximately 30 feet from the ROW. The HVTL is partially visible from the house and yard.

Interview

The listing broker's comments indicated at least a possible adverse impact of the HVTL on the transaction. The broker indicated that the superadequate kitchen at $40,000 offset any adverse impact on the sale price of the HVTL. While there were buyers that walked because of the HVTL, there were also buyers who were not affected.

Appraised Value / Sale Price / Marketing Period

The appraised value of the property, absent HVTL influence, was $239,000, 2.5% below the sale price of $245,000. The marketing period was 121 days which is 26.2% lower than the average days on market for all other property in the town during the same period.

Summary

Despite the broker's opinion that the adverse impact of the HVTL was offset by the custom kitchen, this is not supported by either the marketing period or the appraisal. Based on the aforementioned, it is concluded that there was a possible adverse effect of the HVTL on the sale price and marketing period in this transaction.

Re: Property: 1314 Monroe Rd
Littleton, NH 03561

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,

SUBJECT PROPERTY IDENTIFICATION

Address: 1314 Monroe Rd
City: Littleton **County:** Grafton **State:** NH **ZIP:** 03561
Legal Description: See attached legal description
Tax Parcel #: Map 40, Lot 3 **RE Taxes:** 4,497.51 **Tax Year:** 2010
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: John H. Meyer, Jr. and Martha R. Meyer

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: Subject property originally listed for sale for $599,000 on January 11, 2010 and sold for $400,000 on May 10, 2010. Transfer was considered to be an arms length sale.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 375,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: May 10, 2010	**$ 375,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** May 10, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Littleton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review by appraiser. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☒ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Amenities:

Market area description and characteristics: The subject neighborhood is waterfront to the Connecticut River in Littleton, NH. The neighborhood is comprised of a wide variety of properties that range from seasonal camps to high end year round residences with frontage on the river. Access to essential services is via route 135 to I-93, both which are close by to the subject neighborhood. As this is a retrospective assignment (date of valuation is 5/10/10) it can be determined to a fair degree of accuracy how the real estate market performed just prior to and including the effective date of valuation. Market conditions in Littleton, NH, much like the rest of the state, saw explosive growth from 1997 to 2006. In the summer of 2007 the first signs of lender insolvency were seen and property values began a precipitous slide due to foreclosures on sub-prime and unconventional mortgages written in the years prior. For the period of 5/10/09-5/10/10 the average days on market for competitively priced properties in Littleton was 142 days with a median sales price of $135,000. As of May 2010 there was over eleven months of inventory of single family residences for sale in Littleton. Any amount over six months is considered an oversupply. The Federal Housing Finance Agency (FHFA) reports that property values had declined 5.15% from the second quarter of 2009 to the second quarter of 2010 in New Hampshire. The reason for residential market values declining can be attributed to an oversupply of housing due to sustained bank foreclosure and REO inventory and short sale transactions. Estimated exposure time is 3 months.

Site description and characteristics: Per GCRD Book 805 page 233 the subject property is subject to two easements of record. One is a HVTL corridor 250' wide that bisects the property at the western end of the lot (see attached site plan and aerial photo), the second easement is the perpetual right of property damage to the subject property that may occur due to building of a dam downstream. The HVTL corridor is a considerable distance from the residence and in areas crosses the river between peninsula points on the eastern bank of the river. With regards to an utility's right to construct a dam, the subject parcel lies in between two dams approximately 8 miles apart. The dam easement is subject to high water mark restriction. It is assumed that any erosion or avulsion that may occur has already been factored into market price.

Although the subject site has significant frontage on the Connecticut River the dwelling is set considerably back from the river and there are no marketable views of the river from the dwelling.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Car Storage	☒ Driveway	☐ Garage	☐ Carport	☐ Finished

Other Elements Current tax records reflect a two car garage permitted in 2011 and completed in 2012. At the time of the May, 2010 sale the subject property did not have a garage.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				3	2.5			2,132
Level 2											

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2.5 GLA: 2,132

Summarize Above Grade Improvements: Data sources available reflect two fireplaces with a wood stove hearth in finished basement.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade						1				25	2,132
Other Area											

Summarize below grade and/or other area improvements: Finished family room in basement level.

Discuss physical depreciation and functional or external obsolescence: Interior and exterior photos from the 2010 listing show a relatively well kept residence. Assessment records show an effective age slightly less than the physical age for improvements. Seller's statement from the 2010 listing does not disclose any major physical deficiencies. Slight functional obsolescence for lack of garage given size of residence and the price strata that the subject competed in. Fact that a two car garage was added two years after sale demonstrates that the lack of garage was a curable functional inadequacy.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Lot size of 47 acres with frontage on the Connecticut River are both extraordinary features for the property. Dwelling is of reasonable size for waterfront dwellings with ample features for the market that it competes in. Competing buyers would consider residences on small ponds, large tracts of land, or minor view properties as competing with the subject.

The initial list price to sales price ratio can be attributed to a rapidly declining market. In 2009 when the subject first listed for sale, the residential housing crash was still developing and most sellers were not fully aware of how rapid the market was changing or the depth of the market correction. From beginning to end some communities saw a 30% decline in residential values.

Comments and reconciliation of the sales comparison approach: Five comparables are considered in the sales comparison approach. Comps 2, 4, and 5 are river front sales, with comps 2 and 4 similar to the subject being located on the Connecticut River. Adjustments are made for changes in market conditions based on contract date of each comparable sale. Although river front, the subject did not have any direct views of the river from the dwelling. Comparables with views are adjusted where applicable.

The most salient features of the five comparables bracket or are equal to the subject which provide a basis of support for the adjustments made. All five comparables were equally weighted within the sales comparison approach.

Indication of Value by Sales Comparison Approach	$ 375,000

File No. 11-011-001

Client	Devine, Millimet and Branch LLC				
Property Address	1314 Monroe Rd				
City	Littleton	County Grafton	State NH	Zip Code	03561
Owner	John H. Meyer, Jr. and Martha R. Meyer				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,132 s.f. ranch on 47.14 acres. As indicated in the body of the report the site is located in the Rural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-001

Client	Devine, Millimet and Branch LLC				
Property Address	1314 Monroe Rd				
City	Littleton	County Grafton	State NH	Zip Code 03561	
Owner	John H. Meyer, Jr. and Martha R. Meyer				

The subject site is located in the Rural zoning district which requires a minimum of 300' road frontage and 3 acres of land. Although the subject parcel has over 47 acres of land, it is limited to one buildable lot by right as it has less than 443' of road frontage.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Rural District zoning requirements of 300' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, that we, **MICHAEL E. CLASSEN,** a single man, with an address of 2931 Route 18, Waterford, Vermont 05819, and **BEVERLEY BREEN-CLASSEN,** a single woman, with an address of 1314 Monroe Road, Littleton, New Hampshire 03071, for consideration paid, grant to **JOHN H. MEYER, JR. and MARTHA R. MEYER,** husband and wife, both with a mailing address of Post Office Box 156, West Rockport, Maine 04865, with WARRANTY COVENANTS, as tenants in common, the following described real estate:

A certain tract or parcel of land, with the buildings and improvements thereon, situate in the Town of Littleton on the northwesterly side of Route 135, so-called, being shown as Lot 1 on a certain plan entitled "PROPOSED SUBDIVISION OF LAND FOR PETER AND DEBORAH POULSEN, LITTLETON, NEW HAMPSHIRE", surveyed by Boulanger Consulting, dated October 10, 1998, approved by the Littleton Planning Board on October 6, 1998 and recorded in the Grafton County Registry of Deeds on October 16, 1998 as Plan No. 9504, which plan is hereby incorporated herein with reference thereto for a more particular description. The boundary line of Lot 1 as described by said plan extends to the shoreline of the Connecticut River.

EXCEPTING AND RESERVING unto the CONNECTICUT RIVER POWER COMPANY, its successors and assigns, the perpetual right and easement to flow and otherwise damage so much of the above described parcels of land hereby conveyed and any buildings that may be erected thereon by water flow from the Connecticut River resulting from dam construction as set forth in the Quitclaim Deed of Connecticut River Power Company to Greta I. Poulson, dated January 17, 1951 and recorded in the Grafton County Registry of Deeds in Volume 805 at Page 233.

Unofficial Document

ALSO EXCEPTING AND RESERVING any and all other rights, easements, covenants and rights of record as may affect the above-described and herein conveyed premises, including the easements for electric and telephone transmission lines as set forth in the Quitclaim Deed of Connecticut River Power Company to Greta I. Poulson, dated January 17, 1951 and recorded in the Grafton County Registry of Deeds in Volume 805 at Page 233, as further depicted on the aforesaid Plan No. 9504.

Meaning and intending to describe and convey all and the same premises as conveyed to Michael E. Classen and Beverley Breen-Classen by Warranty Deed of Peter N. Poulsen and Deborah H. Poulsen dated November 8, 1999 and recorded in the Grafton County Registry of Deeds on November 9, 1999 at Book 2430, Page 784.

The above-described and herein-conveyed premises are subject to the provisions of the New Hampshire Land Use Taxation Statute, New Hampshire RSA Chapter 79-A.

And we, Michael E. Classen and Beverley Breen-Classen, hereby release all rights of homestead and other interests in the above-described and herein-conveyed premises.

WITNESS my hand this 6th day of May 2010.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 2477 Lime Kiln Rd
North Haverhill, NH 03774

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Sincerely,

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 2477 Lime Kiln Rd
City: North Haverhill **County:** Grafton **State:** NH **ZIP:** 03774
Legal Description: See attached legal description
Tax Parcel #: Map 413 Lot 66 **RE Taxes:** 2,390.90 **Tax Year:** 2011
Use of the Real Estate As of the Date of Value: Single family residential
Use of the Real Estate Reflected in the Appraisal: Single family residential
Opinion of highest and best use (if required): Single family residential

SUBJECT PROPERTY HISTORY

Owner of Record: Tanya J. & Mark A. Locke

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: Subject property listed for sale on 01/29/2010 for $129,000 and expired at $120,000 a year later at $120,000. Re-listed for sale with a different agency on 10/23/2011 for $109,900 and under agreement for $107,000 on 04/30/2012 with a $2,500 seller concession to buyer at closing.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 108,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached text addenda for comments on approaches to value considered and used in this assignment.

Opinion of Value as of: April 30, 2012	**$ 108,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market value **Effective Date of Value:** April 30, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is traversed by a high voltage transmission line (HVTL) corridor. For the purpose of this assignment, the subject property has been appraised that no HVTL exists.The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Haverhill, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and where applicable the Multiple Listing Service.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Located in NH and VT's Upper Valley, Haverhill is a small residential community of just less than 5,000 people. Connectivity to essential services is via NH routes 10 and 25. I-91 which is close by offers connectivity to Hanover, NH which is a 35 minute commute south via I-91. As this is a retroactive assignment (date of valuation is 04/30/2012) it can be determined to a fair degree of accuracy how the real estate market performed just prior to and including the effective date of valuation. In the year prior to the effective date of the appraisal the median sales price of a single family residence sold was $123,450 with 198 days on market for competitively priced properties. This is 4.67% lower than the previous twelve month period which had a median sales price of $129,500 and 158 days on market. The 4.67% annual rate of decline can be attributed to an oversupply of housing inventory due to sustained foreclosure and short sale activity from the sub-prime lending market crash of 2008 to 2010. As of the effective date of the appraisal there was over 23 months of housing inventory available in the Haverhill market. Anything under six months is considered a shortage, and anything over is considered an oversupply. With a median sales price 4.67% lower from the year before, typical marketing time of 198 days, and a 23.14 month inventory of housing available in April, 2012 it can be concluded that the residential housing market was still declining in the second quarter of 2012 in Haverhill, NH. estimated exposure time is 3 months.

Site description and characteristics: The subject property is assessed and was marketed in the MLS as having 8.44 acres. However, the attached deed and site plan reference 9.70 acres. As the site plan and deed are recorded at the registry of deeds they are considered to be the plan of record for the subject property.
The site was marketed as being well set back off of a private road with open fields surrounding the dwelling. Views displayed in the MLS show natural open fields.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The subject site is located outside of the Village District in Haverhill, NH. There are no zoning requirements outside of the Village District that would preclude a multitude of uses of the site by right. However, the site is in the aquifer protection district which does have some restrictions regarding environmental and soil impact levels. Given the demand for housing in Haverhill, NH in 2012 the next test of highest and best use, financial feasibility would be the restrictive economical principal that would preclude any other use of the subject parcel other than its existing use. See attached text addenda for further discussion of subject's highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	eat in	1				2	1			870
Level 2											

Finished area above grade contains: Bedroom(s): 2 Bath(s): 1 GLA: 870

Summarize Above Grade Improvements: Three MLS listings of the subject property covering 2008 to 2012 list the dwelling as having two bedrooms and one full bath. Kitchen has an eat in area which opens to the living room.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											864
Other Area											

Summarize below grade and/or other area improvements: Per MLS there had been some rooms 'started' such as being framed in, however the subject property was marketed as having an unfinished basement.

Discuss physical depreciation and functional or external obsolescence: Originally built in 2007 the dwelling was 5 years old at the time of sale in 2012. Interior photos from the 2012 MLS listing show a relatively well maintained residence with physical depreciation typical for a 5 year old residence. Functional obsolescence noted for a two bedroom floor plan which limits marketability to a sub-market that would find a two bedroom residence accommodating to their requirements. Ability to finish basement mitigates above grade living area functional limitations to a certain degree.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Construction is a modular pre-fabricated and assembled on site. Modular construction is wood frame built in a factory setting transported to, then assembled on site. It should not be confused with manufactured or 'mobile home' or 'trailer' dwellings. Modular construction is viewed by market participants (buyers, lenders, secondary market) as equal to conventional wood frame residence. Above grade living area of 870 s.f. and two bedrooms are both considered smaller than typical for market. However, as mentioned there is a sub-market for the subject property (first time buyers, retirees, etc) that the subject dwelling size and functional utility would meet their personal residence size requirements. Residences in this the subject's sub-market have a slightly higher than typical days on market due to smaller pool of buyers.

Comments and reconciliation of the sales comparison approach: Three sales in Haverhill are considered in the sales comparison approach. Adjustments are made for differences where applicable. Of the three sales considerable weight is placed on comp 2 as the most recent sale and comp 3 as it is most similar to the subject as a two bedroom residence.

Indication of Value by Sales Comparison Approach	$ 108,000

File No. 11-011-006

Lender	Devine, Millimet & Branch, P.A.				
Property Address	2477 Lime Kiln Rd				
City	North Haverhill	County Grafton	State NH	Zip Code 03774	
Owner	Tanya J. & Mark A. Locke				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.
In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with an 870 s.f. ranch on 9.70 acres. As indicated in the body of the report there is no zoning requirements for the subject location. However the subject site is in the aquifer protection district which does limit some uses that could be detrimental to the water aquifer and soils. This district does allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-006

Lender	Devine, Millimet & Branch, P.A.				
Property Address	2477 Lime Kiln Rd				
City	North Haverhill	County Grafton	State NH	Zip Code 03774	
Owner	Tanya J. & Mark A. Locke				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time. Due to the location in a semi-rural area it would not be financially feasible to remove the existing improvements for any other use other than single family residential.

In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 2464 Lime Kiln Rd
North Haverhill, NH 03774

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Sincerely,

Mark Correnti, SRA

Brian C. Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market value **Effective Date of Value:** September 24, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Haverhill, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and where applicable the Multiple Listing Service.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Located in NH and VT's Upper Valley, Haverhill is a small residential community of just less than 5,000 people. Connectivity to essential services is via NH routes 10 and 25. I-91 which is close by offers connectivity to Hanover, NH which is a 35 minute commute south via I-91. As this is a retroactive assignment (date of valuation is 09/24/2010) it can be determined to a fair degree of accuracy how the real estate market performed just prior to and including the effective date of valuation. In the year prior to the effective date of the appraisal the median sales price of a single family residence sold was $129,950 with 193 days on market for competitively priced properties. The residential median sales price improved slightly in the year prior to the effective date of the appraisal. Median sales price in the 12 months prior to the effective date was $129,950 which is a 2% increase from the previous 12 month period which has a median sales price of $127,250. However, as of the effective date of the appraisal there was over 29 months of housing inventory available in the Haverhill market. Anything under six months is considered a shortage, and anything over is considered an oversupply. What can be concluded from market data in the year up to the effective date of the appraisal is that the market was saturated with bank REO and short sale inventory which tempered any significant market recovery created by low interest rates. Estimated exposure time is 6 months.

Street Lights	☐ Public	☐ Private	

Site description and characteristics: Originally part of a 22 acre parcel, the subject lot is one of five lots that were created from a sub-division. The subject parcel at 1.31 acres with frontage on Lime Kiln Road as well as a 50' right of way or common driveway.The subject lot is smaller than the typical lot of record in the neighborhood.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The subject site is located outside of the Village District in Haverhill, NH. There are no zoning requirements outside of the Village District that would preclude a multitude of uses of the site by right. However, the deed restricts any further sub-division of the subject lot. Due to the deed restrictions the highest and best use is considered to be single family residential.

Car Storage	☒ Driveway	☐ Garage	☐ Carport	☐ Finished
Other Elements	Per attached deed the subject is a new, 2006 Eastland double wide, 52' manufactured home.			

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				3	2			1,404
Level 2											

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2 GLA: 1,404

Summarize Above Grade Improvements: MLS describes a typical double wide on post and piers. Features common to manufactured homes built in the last ten to fifteen years are cathedral ceilings, master bedrooms with full master bath with jacuzzi tub. Added features for subject are a fireplace and a 12' x 16 deck

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											0
Other Area											

Summarize below grade and/or other area improvements: Subject is on post and piers on a cement slab with vinyl skirting.

Discuss physical depreciation and functional or external obsolescence: The subject dwelling is a double wide manufactured home with a HUD tag indicating a date of manufacture of 01-15-2007. Manufactured in 2007, the unit was marketed as new in 2010 as it was never occupied. The MLS markets the subject as a new residence and interior photos indicate the same. With regards to the effective age of the subject regardless of physical age, the subject unit is considered to be new and not previously occupied.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Size, bedroom, and bathroom count are all typical for double wide manufactured homes built in the last ten to fifteen years.

Comments and reconciliation of the sales comparison approach: Three sales of manufactured homes in Haverhill are considered in the sales comparison analysis. All three sales are double wides. Adjustments are made for market conditions on the sale that exceeded six months since the effective date of the valuation. All sales are adjusted for the subject's new, never been occupied, condition. Of the three comparables considered, most weight is applied to comp 2 as it is most similar in size as the subject property.

Indication of Value by Sales Comparison Approach	$ 112,000

Owner	Renzo J. and Jennifer H. Chumbes				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,404 s.f. double wide manufactured home on 1.31 acres. As indicated in the body of the report the Haverhill, NH does not

Text Addendum File No. 11-011-007

Client	Devine, Millimet & Branch, P.A.

Owner	Renzo J. and Jennifer H. Chumbes				

have any zoning requirements.The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Deed restrictions limit the uses of the land to single family residential. The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The cost approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. As mentioned in the body of the report, the subject unit is a three year old double wide that was never occupied. Physical depreciation would exist but would be relatively minor. Due to the lack of new construction and inventory of new units nearby the cost approach is not considered to be meaningful or necessary as an approach to value. The subject is competing with existing inventory which is what a typical buyer would weight the subject against in their purchase decision.

There was sufficient comparative data available within the subject market to adequately develop the sales comparison approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED
[Statutory form]

KNOW ALL MEN BY THESE PRESENTS, That We, JOSEPH M. LOCKE and JANESE A. LOCKE, husband and wife, both of 230 Locke Road, Bath, New Hampshire 03740, for consideration paid, grant to RENZO J. CHUMBES and JENNIFER H. CHUMBES, husband and wife, both of 1380 Groton Road, Groton, Vermont 05046, as Joint Tenants with right of survivorship, with **Warranty Covenants**, the following

A certain parcel or piece of land together with all of the improvements thereon, situated in the Town of **Haverhill**, County of Grafton and State of New Hampshire, more particularly bounded as follows:

Being all of Lot #1 as shown on a certain Plan entitled "SUBDIVISION PLAN LAND OF JOSEPH M. LOCKE JANESE A. LOCKE VOL 3383 PAGE 840 HAVERHILL, NEW HAMPSHIRE", dated April 2007, prepared by Harry J. Burgess Surveyor/Forester and recorded in the Grafton County Registry of Deeds as Plan No. 12834. This conveyance is subject to the matters shown on said plan. Said Lot #1 consists of 1.31 acres and is conveyed subject to the matters set forth on said Plan.

The within premises shall:

1. Not be further subdivided;

2. Shall not be used for commercial purposes;

3. Shall not be improved with a single wide mobile home nor a used double wide mobile home nor a used modular home.

4. Shall not be used for the keeping of livestock.

The grantors agree and covenant that the above restrictions shall be, and hereby are, applicable to all of the lots shown on the Plan.

Unofficial Document

BK3733PG0439

Subject to utility easements of record.

Meaning and intending to describe and convey a portion of the premises deeded to Joseph M. Locke and Janese A. Locke by Wayne B. Whitney by his Warranty Deed dated March 07, 2007 which deed is recorded at Book 3383, Page 840 of the Grafton County Registry of Deeds.

Subject to the statutory lien securing payment of property taxes assessed as of April 1, 2010 which taxes the grantees assume and agree to pay; the same having been pro-rated between the parties hereto.

Also conveying the manufactured housing situated on the above described and conveyed premises, to wit: a NEW Eastland Model A3126A, 2006, 28' x 52' bearing serial number SF21927AB and being all and the same manufactured housing unit conveyed to Joseph M. Locke and Janese A. Locke by Honeymoon Mobile Homes Sales, Inc. by its Warranty Deed dated July 1, 2009, to be recorded herewith.

In Witness Whereof We have hereunto set our hands this the 24th day of September, 2010.

Joseph M. Locke

Janese A. Locke

STATE OF VERMONT
COUNTY OF ORANGE, ss.

On this the 24th day of September, 2010, before me, the undersigned officer, personally appeared Joseph M. Locke and Janese A. Locke, known to me (or satisfactorily proven) to be the persons whose names are subscribed to the within instrument and acknowledged that they executed the same for the purposes therein contained.

In Witness Whereof I have hereunto set my hand and official seal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 208 Atwell Hill Rd
Wentworth, NH 03282

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

Legal Description: See attached legal description

Tax Parcel #: Map 4, Lot 1-4 **RE Taxes:** 2,874.83 **Tax Year:** 2012

Use of the Real Estate As of the Date of Value: Single Family Residential

Use of the Real Estate Reflected in the Appraisal: Single Family Residential

Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Louis Joseph Nyeck, II

Description and analysis of sales within 3 years (minimum) prior to effective date of value: There were two prior transfers of the subject property in the three years prior to the effective date of the appraisal (April 30, 2013). Subject property transferred on May 12, 2009 as a non-contractual transfer on quitclaim deed between husband and wife to create a joint tenancy. Subject property also transferred on February 24, 2011 between husband and wife also as a quitclaim deed removing the wife.

Description and analysis of agreements of sale (contracts), listings, and options: Prior to the effective date of this appraisal the subject property was listed for sale. The subject property was listed on the Multiple Listing Service on January 27, 2013 for $129,900 and under agreement 50 days later on March 18, 2013. Sale settled on April 30, 2013 for $126,000 with a $6,000 cash seller concession to buyer.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 130,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached text addenda for comments on approaches to value considered and used in this assignment.

Opinion of Value as of: April 30, 2013	**$ 130,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market value **Effective Date of Value:** April 30, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Wentworth, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

410,000	High	225
164,000	Predominant	39

Neighborhood Land Use

1 Family	100%	Commercial	%
Condo	%	Vacant	%
Multifamily	%		%

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Wentworth is a small residential community of just less than a thousand residents. Although there are some convenience services nearby most essential services such as employment, shopping, and health care are located in Plymouth, NH. Route 25 connects Wentworth to Plymouth which is approximately 30 minutes south or Hanover, NH which is a 45 minute drive southwest.
Relatively few sales occur annually in Wentworth due to the low population density. In the year prior to the effective date of this appraisal there were seven residential sales sold through the MLS in Wentworth. The year prior to that there was nine residential sales.

Given the relatively few sales that occur in Wentworth it is not statistically credible to arrive at any conclusion of market direction using the few sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the second quarter of 2013 increased sightly by 3.47% from the year prior.

Off Site Improvements

Street	☒ Public	☐ Private	
Alley	☐ Public	☐ Private	
Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: Site at just over 2 acres is slightly smaller than the surrounding lots of record. Subject property was marketed as having a location near undeveloped land near stream and meadow.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: There is no zoning ordinance in Wentworth, NH. Given the relatively small lot size the most probably and financially feasible use of the land is as it is currently used for; single family residential use. See attached text addenda for discussion of subject's highest and best use.

IMPROVEMENTS ANALYSIS

General	Design: Ranch	No. of Units: 1	No. of Stories: 1	Actual Age: 35 years	Effective Age: 10 years
☒ Existing ☐ Under Construction ☐ Proposed		☐ Attached	☒ Detached	☐ Manufactured	☐ Modular
Other:					

Exterior Elements	Roofing: Metal	Siding: Logs	Windows: Casement
☐ Patio ☐ Deck	☒ Porch 7' x 17'	☐ Pool	☐ Fence
Other:			

Interior Elements	Flooring: Wide pine	Walls: Drywall	☒ Fireplace # Stone
Kitchen: ☐ Refrigerator ☒ Range ☐ Oven ☐ Fan/Hood ☐ Microwave ☐ Dishwasher		Countertops: Tile	
Other:			

Foundation	☐ Crawl Space	☐ Slab	☒ Basement Full, 24' x 36'
Other:			

Attic	☐ None ☐ Scuttle	☐ Drop Stair	☐ Stairway	☐ Finished
Mechanicals	HVAC: FHW	Fuel: Oil	Air Conditioning:	
Car Storage	☐ Driveway	☒ Garage 2 story	☐ Carport	☐ Finished

Other Elements: Subjected was marketed as a log home with energy efficient solar panels for hot water. Two story, two car detached garage on site with a detached shed.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				1	1	area		864
Level 2											

Finished area above grade contains: Bedroom(s): 1 Bath(s): 1 GLA: 864

Summarize Above Grade Improvements: Both 2013 MLS listing and Wentworth tax assessment records indicate that the subject residence has one single bedroom and one full bath. Both data sources show that the site is also improved with a two car detached garage and shed.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											864
Other Area											

Summarize below grade and/or other area improvements: Basement area is unfinished and used for mechanical system storage.

Discuss physical depreciation and functional or external obsolescence: Originally a two bedroom residence the dwelling was modified to be a one bedroom residence. Single bedroom residences have limited market appeal due to functional occupancy limitations. There is a market for single bedroom residences however it is a small and defined market.
MLS markets dwelling as recently upgraded with newer mechanical systems, roof, and solar system for hot water. Interior as seen by MLS photos show a relatively well kept residence that has been updated.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling with 864 s.f. containing one bedroom is considered smaller than typical for market. Two car detached garage is considered an over improvement for a single bedroom residence. Recent upgrades and contribute to a lower effective age than actual physical age.

Comments and reconciliation of the sales comparison approach: Sales with residences with similar functional utility were considered in the sales comparison approach. Comp 3 was the only sale in Wentworth that sold in recent years with a single bedroom. Comp 1 is a recent sale of a two bedroom residence in nearby Alexandria, comp 2 a two bedroom sale in Wentworth. Appraisers that viewed the interior of the subject and all three comparables were interviewed as part of the scope of work for this assignment. Of the three sales considered least weight is placed on comp 1 as it is located in a different community. Of the remaining two comparables which are both located in Wentworth, most weight is placed on comp 2 as it is the more recent sale.

Indication of Value by Sales Comparison Approach	$ 130,000

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Owner	Louis Joseph Nyeck, II				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with an 864s.f. ranch on 2.02 acres. As indicated in the body of the report there are no zoning requirements for the subject location. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

City	Wentworth	County Grafton	State NH	Zip Code 03282	
Owner	Louis Joseph Nyeck, II				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time. Due to the location in a semi-rural area it would not be financially feasible to remove the existing improvements for any other use other than single family residential.

In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

I, HOWARD L. TAYLOR, married, with a mailing address of 208 Atwell Hill Road, Wentworth, NH 03282, for consideration received, grant to LOUIS JOSEPH NYECKI, II, with an address of 7 Mudgett Avenue, Meredith, NH 03253, with WARRANTY COVENANTS,

Three (3) contiguous tracts or parcels of land, with all improvements thereon, on the easterly side of Atwell Hill Road in Wentworth, Grafton County, New Hampshire and more particularly bounded and described as follows:

TRACT 1

A certain tract of land with the buildings thereon situated in Wentworth, Grafton County, New Hampshire, being Parcel A on plan of "Subdivision for Todd D. Downing in Wentworth, N.H., Surveyed 10/89 – 9/90 by Sabourn Surveying, Inc. approved by the Wentworth Planning Board and recorded in the Grafton County Registry of Deeds as Plan #6929.

The premises are conveyed subject to all utility rights of way of record.

The granted land is not to be considered a separate parcel and shall not be reconveyed separately from other land of Wolfe, by order of the Wentworth Planning Board.

TRACT 2

Beginning at an iron pipe on the easterly side of Atwell Hill Road, so-called, which iron pipe is set in the ground a distance of five hundred sixty (560) feet northerly along Atwell Hill Road from an iron pipe set in the ground at the junction of the easterly side of Atwell Hill Road and the western border of the right of way of the New England Power Company; thence running South 88 degrees 30' East a distance of one hundred forty-three and seven tenths (143.7) feet along land of W. Norman Downing, to a point; thence South 58 degrees 00' East a distance of two hundred twenty (220) feet along land of W. Norman Downing to an iron pipe set in the ground; thence North 70 degrees West a distance of three hundred fifty-one and three tenths (351.3) feet along land of Priscilla R. Wolfe (formerly Priscilla R. Hanley) to the point of beginning.

BK 3976 PG 0596

TRACT 3

Beginning at an iron pin located at a point at the junction of Atwell Hill Road, so-called, and the western border of right of way of the New England Power Company; thence running in a northerly direction along said Atwell Hill Road a distance of five hundred sixty (560) feet to an iron pin; thence running three hundred fifty-one and three tenths (351.3) feet South 70 degrees East along land now or formerly of W. Norman Downing to an iron pin; thence along the right of way of said New England Power Company three hundred twenty-four and three tenths (324.3) feet South 5 degrees 25' West to the point of beginning, said tract to consist of one and eight tenths (1.8) acres.

EXCEPTING AND RESERVING therefrom, premises conveyed by Quitclaim Deed to Jayne Whittall, dated January 14, 2001 and recorded in the Grafton County Registry of Deeds, Book 1953, Page 309. Said deed description includes premises previously conveyed by Quitclaim Deed to Jayne Whittall, dated December 24, 1990 and recorded in the Grafton County Registry of Deeds at Book 1892, Page 720.

MEANING AND INTENDING to describe and convey all and the same premises conveyed to the within grantor by Quitclaim Deed of Howard L. Taylor and Barbara Ann (Grace) Sullivan dated February 24, 2011 and recorded in the Grafton County Registry of Deeds at Book 3777, Page 971.

The grantor hereby releases any and all rights of homestead he may have in and to the subject premises. Barbara Ann (Grace) Sullivan, wife of Howard L. Taylor, joins in this conveyance to release her homestead rights.

IN WITNESS WHEREOF, we have hereunto set our hands this 30 day of April, 2013.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 287 Mt. Moosilauke Hwy
Wentworth, NH 03282

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** February 5, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Wentworth, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Wentworth is a small residential community of just less than a thousand residents. Although there are some convenience services nearby most essential services such as employment, shopping, and health care are located in Plymouth, NH. Route 25 connects Wentworth to Plymouth which is approximately 30 minutes south or Hanover, NH which is a 45 minute drive southwest.

Relatively few sales occur annually in Wentworth due to the low population density. In the year prior to the effective date of this appraisal there were four residential sales sold through the MLS in Wentworth. The year prior to that there was six residential sales.

Given the relatively few sales that occur in Wentworth it is not statistically credible to arrive at any conclusion of market direction using the few sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the second quarter of 2010 had decreased 5.15% from the year prior.

Site description and characteristics: The subject site with 30 acres is larger than typical. Situated at the top of a hill off of route 25, the elevation affords the site unobstructed views of distant foothills and mountains. Attached deed references a right of way to access the subject parcel from route 25. The deeded right of way describes a common driveway entrance at route 25 from which the subject property uses in common with an abutting lot.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: There are no zoning requirements in Wentworth other than Planning Board approval of any building of a new residence. Although sub-division of the subject site is physically possible it may not be financially feasible due to existing topography. The slope and elevation of the parcel at road level make it financially unproductive to consider any further sub-division. Given the existing topography and the value that the unobstructed views from the existing dwelling have, it is most probably the the highest and best use of the subject parcel is as its current use which is single family residential.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1		1	1			1	2			1,362
Level 2							1	1			518

Finished area above grade contains:	Bedroom(s): 2	Bath(s): 3	GLA: 1,880

Summarize Above Grade Improvements: Per MLS the subject dwelling is a log style cape with the majority of the second floor being cathedral ceilings. Interior walls are knotty pine with exposed braces and beams forming the cathedral ceilings.
The MLS marketed the dwelling as having three bedrooms and 2,592 s.f. The interior however was verified to have 1,880 s.f. and only two bedrooms (an open sided loft was marketed as the third bedroom). The 1,880 s.f. figure is more in line with municipal records which generalizes second floor areas and indicates that the dwelling has 1,722 s.f. of living area.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade										0	816
Other Area											

Summarize below grade and/or other area improvements: Per assessment records a large portion of the basement is full and unfinished with the remainder of the first floor footprint on a crawl space foundation.

Discuss physical depreciation and functional or external obsolescence: The real estate agent that listed the subject property reported that the dwelling was not well cared for at time of listing. A sample of deferred maintenance but not limited to includes; all floors were replaced after settlement of sale, all appliances were replaced, grading of the driveway was done incorrectly with a logging skidder which removed top coat of gravel causing significant erosion during downpours, and electrical panel was invested by mice. Agent reported that she had hired a person to clean the property for the listing but the person terminated the cleaning assignment due to the extent of trash and disrepair. Agent further reported that the photos used in the MLS listing in 2010 were from a previous listing of the subject when it was occupied by a different owner.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Lot size is larger than typical. Although there are some functional challenges to a long and steep driveway it does afford the dwelling to be elevated and afforded extraordinary views of the surrounding foothills and valley. Floor plans for post and beam and log homes can have some degree of functional obsolescence due to cathedral ceilings which limit the second floor living area. In most cases a loft is in place where typically a third bedroom would be present as is the case of the subject dwelling. As mentioned previously, the condition of the dwelling and grounds were in less than average condition. Real estate agent estimated that the driveway repairs alone would be $10,000 due to the length of the driveway and extend of damage.

Comments and reconciliation of the sales comparison approach: The most salient and marketable feature of the subject property is its panoramic views. As a premium view property other sales with competing views would be considered comparable by a typical buyer. Consideration was given to sales that were in less than average condition at time of sale. Given the relatively few sales that occur in Wentworth annually and that premium properties typically are well cared for, the best approach to value for this assignment is to located sales that are similar in marketable features to the subject and adjust for condition. According to the real estate agent that listed the subject the primary physical defects of the property were a driveway that needed soil erosion and grading repair, all new flooring, and appliances. The condition adjustment made is similar to the cost to cure but takes more into consideration a financial discount a typical buyer would apply in their price negotiations. Comp 2 is most similar to the subject in terms of appeal and most proximate to the subject and is weighted the most.

Indication of Value by Sales Comparison Approach **$ 220,000**

Owner	Norman L. Poitras and Chia Chi Lee				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,880 s.f. Log Cape on 30.00 acres. As indicated in the body of the report there is no zoning in Wentworth, NH. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum File No. 11-011-011

Client	Devine, Millimet & Branch, P.A				
Property Address	287 Mount Moosilauke Hwy				
City	Wentworth	County Grafton	State NH	Zip Code 03282	
Owner	Norman L. Poitras and Chia Chi Lee				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the the topography at street level, and the common driveway already serving two lots for public road access, further subdivision is both physically and financially unlikely. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

We **Gordon L. Francis a/k/a Gordon L. Frances** and **Kathryn M. Francis a/k/a Kathryn M. Frances**, husband and wife, with a mailing address of 2 School Street Rumney 03266 for consideration paid grants to **Norman L. Poitras** and **Chia-Chi Lee**, husband and wife, with a mailing address of 5 Bullard Drive, Hooksett, New Hampshire 03106 as joint tenants with rights of survivorship with warranty covenants;

A certain tract of land, with any buildings and improvements thereon, being situate in the Town of Wentworth, County of Grafton, State of New Hampshire, and being shown and depicted as "Lot 1" on a plan entitled "Subdivision For Fred & Joy S. Heywood III, Route 25, Wentworth, N.H., Surveyed Jan 1972 by John R. French and Roy A. Sabourn", and being recorded at the Grafton County Registry of Deeds as follows:

Beginning at a point, being an iron pin, in a driveway at the Westerly limit of Route 25, being the northeasterly corner of Lot 2 and the southeasterly corner of Lot 1;

Thence running South 88° 37' 20" West, 1,622.34 feet, more or less, along Lot 2 as shown on said plan, being land now or formerly of Arnold T. Stevens and Lynn c. Stevens, to an iron pin in the Westerly limit of a power line;

Thence turning and running North 06° 00' 00" West, 515.93 feet, more or less, along the Westerly limit of the said power line and land now or formerly of Stephen Fosher, to a stone pile;

Thence turning and running North 36° 18' 30" East, 627.84 feet, more or less, along land of or formerly of John M. King, Sr., to an iron pipe;

Unofficial Document

Thence turning and running South 42° 00' 20" East, 450.54 feet, more or less, along land now or formerly of Jolyn, Inc., to an iron pipe;

Thence turning and running North 76° 15' 00" East, 948.23 feet, more or less, along land now or formerly of Jolyn, Inc., to an iron pipe in the Westerly limit of Route 25;

Thence turning and running South 19° 54' 15" East, 353.85 feet, more or less, along the Westerly limit of Route 25 to a State Highway marker;

Thence running South 04° 38' 10" West, 369.76 feet, more or less, along the Westerly limit of Route 25 to a State Highway marker;

Thence running South 03° 04' 30" West, 189.59 feet, more or less, along the Westerly limit Route 25 to an iron pin, being the point beginning.

Said Lot 1 to contain thirty (30) acres, more or less.

Subject to the utility easement right of way (power line) of New England Power Company, New Hampshire Electric Cooperative, Inc. and New England Telephone and Telegraph Company.

Subject to an applicable State of New Hampshire slope and drainage rights along Route 25, and to any limitations to access Route 25 from the subject premises.

Also conveying hereby is the right to pass on foot and with vehicles over that portion of the common driveway that is on Lot 2 as shown on said Plan No. 6098 (GCRD), now or formerly of Arnold T. Stevens and Lynn C. Stevens. The herein conveyed premises are conveyed subject to the right of the owner(s) of said Lot 2 to use that portion of the driveway which is on the herein conveyed premises.

Also conveying hereby and subject to any and all easements rights granted and any rights reserved in the Easement Deed of Arnold T. Stevens and Lynn C. Stevens to King Forest Industries, Inc. (a/k/a King Lumber Company, Inc.), dated August 12, 2004, and being recorded in the Grafton County Registry of Deeds in Book 3052, Page 914, regarding the driveway easement over and across Lot 2 to Lot 1 for ingress and egress from Route 25 to the herein conveyed premises. Reference is hereby made to the plan entitled "Plan Showing Centerline of Newly Constructed Roadway over Land of Arnold T. & Lynn C. Stevens in Wentworth, N.H., Surveyed November 27, 1992 For King Lumber Company, Inc., By Sabourn Surveying, Inc., and being recorded at the Grafton County Registry of Deeds as Plan No. 11546 regarding the location of said driveway over Lot 2 to Lot 1.

Unofficial Document

BK3681PG0610

Meaning and intending to describe and convey the same premises conveyed to the above grantors by deed of King Forest Industries, Inc. (f/k/a King Lumber Company, Inc.) dated October 10, 2006 recorded in the Grafton County Registry of Deeds at Book 3335, Page 871.

We, Gordon L. Francis and Kathryn M. Francis, release all rights of homestead and any other interest therein.

Executed this 5th day of February 2009.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 88 Sculptured Rocks Rd
Groton, NH 03241

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** February 8, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property abuts a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Groton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Amenities:

Market area description and characteristics: Groton, NH is a small residential community of approximately 600 residents located 12 miles west of Plymouth, NH. Connectivity to essential services, employment, and shopping, is via route 3A to the town of Plymouth and I-93 both of which are a 25 minute drive east. Groton is primarily residential in character and composition; there are some seasonal or second residences due to location of Newfound Lake and the ski mountain corridor located on I-93.

In 2012 there were five residential sales sold through the MLS and a total of six sales in 2011. Given the relatively few sales that occur in Groton it is not statistically credible to arrive at any conclusion of market direction using the few sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the first quarter of 2013 had increased 2.95% from the year prior. As of the effective date of the appraisal there was a five month inventory of single family residences for sale in Groton, NH.

Site description and characteristics: The entire town of Groton is designated as rural residential per town zoning ordinance. All residential use and accessory uses are permitted. The only exception regarding zoning is for any non-residential use such as commercial, industrial, or retail; in those cases a special exception is required. As the subject site was developed and is used for residential purposes it is considered to be a legal use of the land.

The subject parcel at less than an acre is considered to be smaller than typical however functional for single family residential use.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Below Grade										0	704
Other Area											

Summarize below grade and/or other area improvements: Per assessing records and MLS the main dwelling has a full basement under with the 13' x 28' ell on a crawl space basement.

Discuss physical depreciation and functional or external obsolescence: Floor plan with two bedrooms bedrooms on second floor, full bath on first is considered common for dwelling's size and era built. Two bedroom floor plan limits marketability to certain sub-markets. No known external inadequacies noted or assumed.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Kitchen is older style with modern appliances. Mason hearths and exposed beams in living and family rooms adds to period character of dwelling. Prior MLS listing of subject describe an unfinished second floor; as such, it can be deduced that the second floor was finished within the last few years. Size of dwelling and lot size considered smaller than typical for market.

Comments and reconciliation of the sales comparison approach: Three sales of similar size residences in Groton, NH are considered in the sales comparison approach. Adjustments are made for differences in lot size and living area where applicable. Buyer for comp 1 reported $2,000 consideration in value was placed on non-realty items (furniture) that were part of the transfer. A corresponding adjustment has been made to comp 2. All comparables are adjusted for physical age when compared to subject.

Indication of Value by Sales Comparison Approach	$ 120,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,367 s.f. Cape on 0.90 acres. As indicated in the body of the report the entire town of Groton is considered rural residential which permits single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

File No. 11-011-012

Borrower/Client					
Property Address	88 Sculptured Rocks Rd				
City	Groton	County Grafton	State NH	Zip Code 03241	
Lender	Devine, Millimet & Branch, P.A				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

It is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENT: That John A. Gore, Single, of 88 Sculptured Rocks Road Groton NH 03241, for consideration paid grant(s) to Alan D. Paladino, Single, of 32 Sculptured Rocks Road, Groton NH 03241, with WARRANTY COVENANTS:

A certain tract or parcel of land, with the buildings and improvements thereon, situated in the Town of Groton, County of Grafton, State of New Hampshire, bounded and described as follows:

Beginning at the highway near the dwelling house formerly of Annie Esty and running Northerly by said Esty line to the second large Elm stump; then westerly parallel with a line running from the elm stump from the road to the back side of the barn standing on the premises about fourteen (14) rods to a stake and stones; then southerly to a stake and stones near the top of the hill; then southerly in the same direction to an iron stake at the lower end of a wire fence at the highway; then easterly on the North side of the highway to the bound begun at.

Subject to an easement to New Hampshire Electric Cooperative, Inc., and New England Telephone & Telegraph Co., recorded May 7, 1990 in the Grafton County Registry of Deeds at Book 1858, Page 610.

Subject to septic approval dated January 26, 1996 recorded in the Grafton County Registry of Deeds at Book 2180, Page 28.

Meaning and intending to describe and convey the same premises conveyed to John A. Gore by virtue of a Warranty deed from EMC Mortgage Corporation dated 01/27/2004 and recorded at the Grafton County Registry of Deeds in Book 2964, Page 476.

I/We, the grantor(s) herein hereby release all rights of homestead in the above described premises.

 BK 3957 PG 0997

Executed this 8th day of February, 2013.

John A. Gore

New Hampshire
County of Sullivan February 8, 2013

Then personally appeared before me on this 8th day of February, 2013 the said John A. Gore and acknowledged the foregoing to be his voluntary act and deed.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 816 Murray Hill Rd
Hill, NH 03243

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 816 Murray Hill Rd
City: Hill **County:** Merrimack **State:** NH **ZIP:** 03243
Legal Description: See attached legal description
Tax Parcel #: Map R3, Lot 53 **RE Taxes:** 8,650.68 **Tax Year:** 2012
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Stephen M. & Eden F. Lefebvre

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property transferred prior to its most recent sale as a transfer between trustees. The subject property transferred on October 4, 2011 as a non-contractual transfer between trustees.

Description and analysis of agreements of sale (contracts), listings, and options: Subject property listed for sale on April 4, 2010 for $489,000 and sold on August 6, 2012 for $365,000 with a $5,000 seller concession to buyer. Sale was an arms length sale after receiving ample market exposure through the multiple listing service (MLS).

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 390,000**
Indication of Value by Cost Approach	**$ Not Applicable**
Indication of Value by Income Approach	**$ Not Applicable**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** August 6, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Hill, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. 450,000	High	240
117,000	Predominant	33

Neighborhood Land Use

1 Family	100%	Commercial	%
Condo	%	Vacant	%
Multifamily	%		%

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Hill, NH is a bedroom community of 1,100 people proximate to the nearby city of Franklin, NH. Hill is primarily residential in character and composition. Connectivity to essential services is via route 3A to Franklin which is a 10 minute drive south. I-93 is also reasonable accessible via the same route.

In 2012 there were 15 sales sold through the MLS in Hill, NH and in 2011 there were 13 residential sales. Given the relatively few sales that occur in Hill, NH it is not statistically credible to arrive at any conclusion of market direction using the limited amount of sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the third quarter of 2012 had decreased 1.49% from the year prior. As of the effective date of the appraisal there was a twenty month inventory of single family residences for sale in Hill, NH which is considered to be an oversupply.

Alley	☐ Public	☐ Private	
Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: The subject site has the benefit of a conservation easement on the parcel directly across the street. At 33.30 acres the subject site is slightly larger than typical. The tax assessment card for the subject parcel describes a limited "tunnel view". MLS listing of views that do show a pond and distant foothill peaks at a specific angle. The subject parcel does have the benefit of some views. Although not classified a "view property" the limited angle views are something that a typical buyer would notice and find more appealing than the typical neighborhood views associated with most residential properties.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Other Elements Per MLS and assessment records the subject property is a cape style antique built in 1850 with an attached barn. Additional improvements to site include a 20' x 20' two car detached garage. 7' x 12' side entry porch and a small 4' x 8' covered landing porch at rear of dwelling. The dwelling is positioned for the benefit of pleasant views of a small pond on site as well as limited views of distant foothills

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1		1		1	1.5			2,010
Level 2							3	1			862

Finished area above grade contains:	Bedroom(s): 4	Bath(s): 2.5	GLA: 2,872

Summarize Above Grade Improvements: Master bedroom and bath on first floor level enhances marketability. Kitchen was marketed as modern and updated.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											1,806
Other Area											

Summarize below grade and/or other area improvements: Main dwelling footprint and two of three additions are on a full, unfinished basement. 17' x 18' addition is on a crawl space basement.

Discuss physical depreciation and functional or external obsolescence: MLS markets dwelling as a restored antique. Interior photos show an updated kitchen with modern appliances and market appeal. Tax assessment records indicate that an addition was added in 2007. Floor plan is considered to be functional and market accepted with a baths on each floor as bedrooms as well as a master bedroom suite on the first floor.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Subject markets as a recently restored antique with modern amenities, views, and an attached barns for hobby craft or animals. Size of lot, dwelling, views, and level of dwelling restoration position the property well above the predominant market value for Hill, NH.

Comments and reconciliation of the sales comparison approach: Three sales of antiques with views were considered in the sales comparison approach. Market time adjustment applied to the sale sold 6 months prior to effective date. Assessment records for comp 1 indicate that the amount of living area is an over-improvement for the market. The price per s.f. for comp 1 is half the amount of the average of the combined sales in this appraisal indicating that the market is discounting the added s.f. for comp 1 as an over-improvement as well. Comparables are adjusted $50 per s.f. when compared to the subject with the exception of comp 1 which is adjusted $25 per s.f. Wilmot and Andover are considered to have higher predominant values than Hill. The median sales price in Andover and Wilmot were both higher than that of Hill. Comps 2 and 3 are adjusted 10% for superior location when compared to the subject. Within the sales comparison approach weight is applied to comp 1 as it is located on the same street as the subject and closed within 4 days of the effective date of this appraisal.

Indication of Value by Sales Comparison Approach **$ 390,000**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,872 s.f. Cape on 33.30 acres. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-014

Borrower/Client					
Property Address	816 Murray Hill Rd				
City	Hill	County Merrimack	State NH	Zip Code 03243	
Lender	Devine, Millimet & Branch, P.A				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Rural Residential zoning requirements regarding road frontage as well as existing dwelling placement, and easements in place it does not appear that the subject lot can be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

We, **Karen L. Polk, Kristin Yannone (formerly known as Kristin Belko) and Stefan Timbrell, Successor Co-Trustees of the John S.Belko Revocable Living Trust dated January 29, 1996,** now an irrevocable trust, c/o Stefan Timbrell, 173 Quail Run, New London, New Hampshire 03257, for consideration paid, grant to **Stephen M. Lefebvre and Eden F. Lefebvre,** husband and wife, of 1147 Buffalo Road, Rumney, NH 03266, as Joint Tenants with Rights of Survivorship, with **WARRANTY COVENANTS,**

A certain parcel of land, with the buildings thereon, situated in Hill, Merrimack County, New Hampshire, being shown as Tract I on a plan entitled "Land Owned or Claimed by Nancy K. Fox, Murray Hill, Brown & Cass Mill Roads, Hill Center, NH", dated January 19, 1979, and recorded as plan No. 5709 in the Merrimack County Registry of Deeds, being bounded and described as follows:

Beginning at a point on the Northerly side of Murray Hill Road at the Southwesterly corner of Tract I, as shown on said plan; thence running North two distances by land now or formerly of Stanley J. and Elizabeth Szwed, five hundred three (503) feet, more or less, and by land now or formerly of Glenn R. and Patricia J. Gunn, five hundred six (506) feet, more or less, and to a point at the line of a parcel of land shown as Tract III on said plan; thence turning and running Easterly two distances by land shown as Tract III on said plan, four hundred ninety-seven (497) feet, more or less, and by land shown as Tract II on said plan, four hundred eighty-two (482) feet, more or less, to a point on Cass Mill Road; thence turning and running Southeasterly by the Westerly side of Cass Mill Road, one thousand eight (1008) feet, more or less, to a point on said Road at land now or formerly of Patricia F. Barker; thence turning and running Southerly by land now or formerly of Patricia F. Barker two hundred twenty-six (226) feet, more or less, to a stone wall and land now or formerly of Carolyn L. Jenkins; thence turning and running Westerly two distances along said stone wall, two hundred ten (210) feet, more or less, and one hundred thirteen (113)

LT1-2-820235-1

LT2-3336-966-5

UNOFFICIAL DOCUMENT

feet, more or less, to a point where said stone wall intersects another stone wall at the Northwesterly corner of said Jenkins land; thence turning and running

Southerly along a stone wall at the Westerly boundary of said Jenkins land, three hundred six (306) feet, more or less; thence turning and running Westerly by the Northerly side of Murray Hill Road, one thousand fifty-five (1055) feet, more or less, to the point of beginning.

Subject to an easement to the Power Co. recorded with the Merrimack County Registry of Deeds in Book 506, Page 63.

Containing 33.3 acres, more or less, according to said plan, and sometimes referred to in this Deed as the "Granted Premises" or "Tract I".

The Granted Premises are conveyed together with the benefits of two Conservation Easements and Restrictions, one being in the Conservation Easement and Restrictions Deed of John M. Barker and Patricia C. Barker to Richard G. and Evvajean Mintz dated August 9, 1999, and recorded in Merrimack County Registry of Deeds in Book 2169, Page 1323, and as shown on Plan #14825 "Conservation Easement Plan for Richard G. and Evvajean Mintz on land owned by John M. & Patricia C. Barker, Murray Hill Road, Hill, NH", and the other as set forth and retained in a deed of Richard G. Mintz and Evvajean Malter Mintz to Faith Knowles dated December 6, 2005, recorded with said registry in Book 2851, Page 59.

Meaning and intending to describe and convey the same premises conveyed to Karen L. Polk, Kristin Yannone (formerly known as Kristin Belko) and Stefan Timbrell, Successor Co-Trustees of the John S. Belko Revocable Living Trust dated January 29, 1996, by Warranty Deed of Karen L. Polk, Kristin Yannone (formerly known as Kristin Belko) and Stefan Timbrell, Successor Co-Trustees of the John S. Belko Personal Residence Trust dated January 7, 2007, said deed dated October 4, 2011, and recorded in the Merrimack County Registry of Deeds at Book 3277, Page 1101.

EFFECTIVE this 6th day of Aug, 2012.

Form SC1 — "WinTOTAL" appraisal software by a la mode, inc. — 1-800-ALAMODE

Karen L. Polk , Successor Co-Trustee of the John S. Belko Revocable Living Trust dated January 29, 1996

CERTIFICATE OF TRUSTEE - UNDER NH-RSA 564-A:7

The undersigned Karen L. Polk, as a Successor Co-Trustee of the John S. Belko Revocable Living Trust dated January 29, 1996, has full and absolute power in said Trust Agreement to convey any interest in real estate and improvements thereon held in said Trust, and no purchaser or third party shall be bound to inquire whether the Trustee has said power or are properly exercising said power or to see to the application of any trust asset paid to the Trustees for a conveyance thereof.

Karen L. Polk , Successor Co-Trustee of the John S. Belko Revocable Living Trust dated January 29, 1996

STATE OF District of

COUNTY OF Columbia, ss:

This instrument was acknowledged before me on this 6th day of August, 2012, by Karen L. Polk as Successor Co-Trustee of the John S. Belko Revocable Living Trust dated January 29, 1996.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 81 W Shore Dr
Andover, NH 03216

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Sincerely,

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** October 15, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Andover, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**

Market area description and characteristics: Andover, NH is a small residential community of 2,500 residents located twelve miles west of the city of Franklin. The center of Andover is an iconic picture of a small New England town. Proctor Academy is an esteemed coeducation institution has been operating in Andover, NH since 1848. The academy serves as an economic engine that drives the small retail shops on Main Street.

The subject neighborhood is considered to be Highland Lake which at 206 acres in size is considered to be relatively small. Residences on and along Highland Lake range from seasonal camps to well appointed, year round residences that represent the high end of the neighborhood value range.

As this is a retrospective valuation assignment it can be easily ascertained how the market was performing prior and up to the effective date of this assignment. The Federal Housing Finance Authority showed that residential values in New Hampshire as of the fourth quarter of 2010 had decreased 2.82% from the year prior. As of the effective date of the appraisal there were 50 single family residences for sale in Andover with less than 20 residential sales occuring in Andover in the year prior which indicates a significant over supply.

Site description and characteristics: The subject lot at 5.90 acres with 250.5' road frontage meets the minimum zoning requirements for the Rural-Agricultural zoning district which is 250' road frontage and 2 acres. The subject site is subject to a right of way for the use and maintenance of West Shore Drive.

Although located in close proximity to Highland Lake, the subject property does not have any deeded water right or access to Highland Lake nor was the subject property marketed in 2010 as have any benefits to Highland Lake.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Other Elements	MLS listing and photos describes the dwelling as a log gambrel with pine interior walls and exposed beam ceilings. Conventional heating system supplemented by a wood stove hearth.			

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1					.5			912
Level 2							2	1			618

Finished area above grade contains:	Bedroom(s): 2	Bath(s): 1.5	GLA: 1,530

Summarize Above Grade Improvements: Kitchen, living, and dining room on first floor with two bedrooms and a full bath located on second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											912
Other Area											

Summarize below grade and/or other area improvements: Both MLS and assessment records indicate that the basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: MLS marketed the subject property as having areas that require finishing. In interviewing parties that were familiar with the transaction there was a contractor's bid proposal for $18,000 to address cosmetic items at time of sale. Agent reported that seller installed a new well just prior to closing. The bid proposal for the unfinished items has been taken into consideration for a market derived adjustment that would be reflective of a cost to cure.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Style, size, and bedroom count are considered typical and common for a recreational market (second residence or seasonal dwelling). Although functional utility of subject is typical for such a market the subject property lacks any access to water front right to the nearby lake.
Condition is considered to be less than average considering the amount of unfinished items at time of sale.

Comments and reconciliation of the sales comparison approach: Three sales of residences that were marketed as requiring cosmetic improvements at time of sale were considered in the sales comparison approach. Of the three sales considered most weight was applied to comps 1 and 2 as they were the most recent sales and least amount to comp 3 as it required the most amount of adjustment. Additionally, comps 1 and 2 were both marketed as being close to water (lake or pond) as the subject, yet had no effective use of the water.

Indication of Value by Sales Comparison Approach	$ 152,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,530 s.f. Log Gambrel on 5.90 acres. As indicated in the body of the report the site is located in the Rural Agricultural zoning district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

File No. 11-011-015

Borrower/Client					
Property Address	81 W Shore Dr				
City	Andover	County Merrimack	State NH	Zip Code 03216	
Lender	Devine, Millimet & Branch, P.A				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Rural District zoning requirements of 250' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL PERSONS BY THESE PRESENTS that we, **Edmund A. Litos** and **Roberta Litos**, husband and wife, of Charleston, South Carolina, for consideration paid, grant to **Jeffrey D. Jones** of 427 South Road, Salisbury, New Hampshire 03268, with **WARRANTY COVENANTS.**

A certain tract of land with any improvements thereon situate in Andover, County of Merrimack, State of New Hampshire, bounded and described as follows:

Beginning at a stone bound set on the westerly side of West Shore Drive, the said point marking the southeast corner of the premises herein conveyed and the northeast corner of Lot No. 9, land now or formerly of Kidder; thence south 81° 54' west a distance of 1303.4 feet, more or less, to a point at land now or formerly of Dunn; thence north 15° 7' east along said Dunn land 290.6 feet, more or less, to an iron pin at Lot No. 11, land now or formerly of Gagnon; thence north 86° 54' east along said Gagnon land 1017 feet, more or less, to a stone bound set on the westerly side of West Shore Drive; thence along the westerly side of West Shore Drive to the point of beginning, being generally, on tie as shown on Plan No. 6327, south 52° 38' east, 250.5 feet, more or less, and being Lot No. 10 on said Plan and containing 5.9 acres, more or less.

Covenant: West Shore Drive road right of way extends fifty (50) feet westerly from the existing lots on the easterly side of said road. The bounds on Lots no. 6 – No. 12 of this subdivision are set twenty-five (25) feet from the center line of the existing road, and sufficient area is reserved from these lots to maintain a fifty (50) foot wide right of way. This reservation shall be a covenant in the deed of Lots No. 6 – Lot No. 12 as set forth on said Plan No. 6327.

Meaning and intending to describe and convey all and the same premises conveyed to Edmund A. Litos and Roberta Litos by the Warranty Deed of David I. Hodgkins and Laura M. Hodgkins dated December 28, 1981 and recorded in the Merrimack County Registry of Deeds at Book 1409, Page 18.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 45 W Shore Dr
Andover, NH 03216

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 45 W Shore Dr
City: Andover County: Merrimack State: NH ZIP: 03216
Legal Description: See attached legal description

Tax Parcel #: Map 10, Lot 329,550 RE Taxes: 3,461 Tax Year: 2009
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: The Thomas C. Brayshaw Revocable Trust of 2008

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on May 13, 2009 for $265,000 and was under agreement for sale 33 days later on June 15, 2009. Transaction settled on July 27, 2009 for $230,000 with no seller concessions. Transaction was considered to be an arms length sale. Subject property received fair market exposure through the MLS prior to sale.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	$ 203,000
Indication of Value by Cost Approach	$ Not Applicable
Indication of Value by Income Approach	$ Not Applicable

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: July 27, 2009	$ 203,000

Exposure Time: 3 months

The above opinion is subject to: ☒ Hypothetical Conditions and/or ☒ Extraordinary Assumptions cited on the following page.

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** July 27, 2009

Interest Appraised: ☒ Fee Simple ☐ Leasehold ☐ Other

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Andover, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ Yes ☐ No

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Sales Comparison Approach:

☒ Is necessary for credible results and is developed in this analysis
☐ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Income Approach:

☐ Is necessary for credible results and is developed in this analysis
☒ Is not necessary for credible results; not developed in this analysis
☐ Is not necessary for credible results but is developed in this analysis

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ None ☐ Disclose Name(s) and contribution:

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Multifamily	%		%

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Andover, NH is a small residential community of 2,500 residents located twelve miles west of the city of Franklin. The center of Andover is an iconic picture of a small New England town. Proctor Academy is an esteemed coeducation institution has been operating in Andover, NH since 1848. The academy serves as an economic engine that drives the small retail shops on Main Street.

The subject neighborhood is considered to be Highland Lake which at 206 acres in size is considered to be relatively small. Residences on and along Highland Lake range from seasonal camps to well appointed, year round residences that represent the high end of the neighborhood value range.

As this is a retrospective valuation assignment it can be easily ascertained how the market was performing prior and up to the effective date of this assignment. The Federal Housing Finance Authority showed that residential values in New Hampshire as of the third quarter of 2009 had decreased 3.07% from the year prior. As of the effective date of the appraisal there were 34 single family residences for sale in Andover with less than 20 residential sales occurring in Andover in the year prior which indicates a significant over supply.

SITE ANALYSIS

Dimensions: Reference attached deed and site plan	Area: 7.40 acres

Utilities

Electric	☒ Public	☐ Other	
Gas	☐ Public	☐ Other	
Water	☐ Public	☒ Other	Dug well
Sewer	☐ Public	☒ Other	Septic System

Off Site Improvements

Street	☒ Public	☐ Private	
Alley	☐ Public	☐ Private	
Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: The subject lot at 7.40 acres with 383.6' road frontage meets the minimum zoning requirements for the Rural-Agricultural zoning district which is 250' road frontage and 2 acres. The subject site is subject to a right of way for the use and maintenance of West Shore Drive.

Although located in close proximity to Highland Lake, the subject property does not have any deeded water right or access to Highland Lake nor was the subject property marketed in 2009 as have any benefits to Highland Lake.

However, due to the close proximity to the lake the dwelling does have some minor and obstructive views of an inlet of the lake. The subject site is considered to have a view that is more than the typical neighborhood view, however the quality (slightly obstructed) and quantity (narrow line of sight) of the view in question is limited that it would not classify the subject property as a "view property" or be considered an overriding purchase decision by a typical buyer.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. IMPROVEMENTS ANALYSIS

General	Design: Saltbox	No. of Units: 1	No. of Stories: 2	Actual Age: 25 years	Effective Age: 15 years
☒ Existing ☐ Under Construction ☐ Proposed		☐ Attached	☒ Detached	☐ Manufactured	☐ Modular
Other:					
Exterior Elements	Roofing: Metal	Siding: T-111, vinyl siding		Windows: Double Hung & Casement	
☐ Patio	☒ Deck 3 decks	☒ Porch 10'x16' enclosed	☐ Pool	☐ Fence	
Other:					
Interior Elements	Flooring: Carpet, wood	Walls: Drywall	☒ Fireplace # Hearth		
Kitchen: ☐ Refrigerator ☐ Range ☐ Oven ☐ Fan/Hood ☐ Microwave ☐ Dishwasher		Countertops:			
Other:					
Foundation	☐ Crawl Space	☐ Slab	☒ Basement 28' x 36' full		
Other:					
Attic	☐ None ☐ Scuttle	☐ Drop Stair	☐ Stairway	☐ Finished	
Mechanicals	HVAC: FHA	Fuel: Gas	Air Conditioning: Built in wall unit AC		
Car Storage	☒ Driveway Gravel	☒ Garage 2 car detached	☐ Carport	☐ Finished	
Other Elements	Per assessment records subject dwelling is a two story saltbox residence built in 1984. Small balcony deck off of second floor, two large first floor decks, and a 10' x 16' enclosed porch. Also on site is a 24' x 28' two car detached garage.				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				1	1			1,008
Level 2							1	.5			504

Finished area above grade contains: Bedroom(s): 2 Bath(s): 1.5 GLA: 1,512

Summarize Above Grade Improvements: Per MLS listing subject has one bedroom and bath on first floor and another bedroom and a half bath on the second floor. MLS indicates a loft on second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											1,008
Other Area											

Summarize below grade and/or other area improvements: Both MLS and assessment records indicate that the basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: A 2007 MLS listing describes the subject dwelling as well maintained. 2009 MLS interior photos support the description as well. Two bedroom residences have limited marketability to certain sub-markets that have minimal occupancy requirements. There were no external inadequacies noted or assumed.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Style, size, and bedroom count are considered typical and common for a recreational market (second residence or seasonal dwelling). Although functional utility of subject is typical for such a market the subject property lacks any access to water front right to the nearby lake.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Comments and reconciliation of the sales comparison approach: The subject property is a residence that has views of a lake inlet located across the street from the subject site. The subject legal description does not describe any legal right to the lake or access to the lake. Sales of residences with varying degrees of water view or frontage are considered in the sales comparison analysis. Comp 1 is a neighborhood sale that like the subject, has views only of the same lake. Comp 2 has both views and frontage on a very small pond within the subject community. Comp 3 is located across the street from a small lake and has some views. Comp 2 is superior to the subject in terms of water access as the subject has views only. Comp 3 least similar in terms of size and functional utility. Comp 1 with views of the same lake as the subject is weighted significantly within the sales comparison approach.

Indication of Value by Sales Comparison Approach $ **203,000**

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales that were external to the subject's immediate neighborhood and any external influence from an HVTL corridor.
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,512 s.f. Saltbox on 7.40 acres. As indicated in the body of the report the site is located in the Rural Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Rural District zoning requirements of 250' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and

Owner	The Thomas C. Brayshaw Revocable Trust of 2008						

inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, that we, Thomas F. Filon, Jr. and Joan M. Filon, husband and wife, of 45 West Shore Drive, Andover, Merrimack County, New Hampshire, with a mailing address of PO Box 245, East Andover, NH 03231-0245 for consideration paid, grant to Thomas C. Brayshaw, Trustee of the Thomas C. Brayshaw Revocable Trust of 2008, dated June 30, 2008, of 38 Loverin Road, Salisbury, New Hampshire 03288, with **WARRANTY COVENANTS,** a certain tract of land, with any improvements thereon, situate in Andover, County of Merrimack, State of New Hampshire, bounded and described as follows:

Beginning at a stone bound set on the westerly side of West Shore Drive, the said point marking the southeast corner of the premises herein conveyed and the northeast corner of Lot No. 7; thence south 87 degrees 58 minutes west along said Lot No. 7 and Lot No. 6, 946.2 feet, more or less, to a point at Lot No. 5; thence north 39 degrees 48 minutes west along said Lot No. 5, 291.8 feet, more or less, to a point at Lot No. 9, land of Kidder; thence north 80 degrees 10 minutes east along said Lot No. 9, 1126.1 feet, more or less, to a stone bound set on the westerly side of said West Shore Drive; thence south 03 degrees 25 minutes east along the westerly side of said West Shore Drive 383.6 feet, more or less, to the point of beginning, and being Lot No. 8 on Plan No. 6327 of the Merrimack County Registry of Deeds, and containing 7.4 acres, more or less.

Meaning and intending to describe and convey all and the same premises conveyed to Grantors by Deed of David I. Hodgkins and Laura M. Hodgkins dated December 28, 1981, and recorded in Merrimack County Registry of Deeds, Book 1409, Page 0015.

Covenant: West Shore Drive Road right of way extends fifty (50) feet westerly from the existing lots on the easterly side of said road. The bounds on Lots No. 6 - No. 12 of this subdivision are set twenty-five (25) feet from the center line of the existing road, and sufficient area is reserved from these lots to maintain a fifty (50) foot wide right of way. This reservation shall be a covenant in the deed of Lots No. 6 - Lot No. 12 as set forth on said Plan No. 6327.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ Market Value Definition (below) ☐ Alternate Value Definition (attached)

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 548 Raccoon Hill Rd
Salisbury, NH 03268

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

SUBJECT PROPERTY HISTORY

Owner of Record: Todd M. Miller and Meagan E. Roarke

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property transferred seven days prior to the effective date of this appraisal. The property transferred to the executor of an estate under a fiduciary deed. The transfer was a non-contractual transfer.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on August 15, 2011 for $139,000 through the Multiple Listing Service. The subject property was under agreement 29 days later and settled on October 28, 2011 for $136,000 with no seller concessions.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 130,000**
Indication of Value by Cost Approach	**$ Not Applicable**
Indication of Value by Income Approach	**$ Not Applicable**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: October 28, 2011	**$ 130,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** October 28, 2011

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Salisbury, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Market area description and characteristics: Salisbury is a small residential community of approximately 1,200 residents located just west of the city of Franklin. Access to essential services such as shopping, employment, and retail centers is via routes 4 and 127.

In 2011 there were thirteen residential sales sold through the MLS in Salisbury, NH. Given the relatively few sales that occur in Salisbury it is not statistically credible to arrive at any conclusion of market direction using the few sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the fourth quarter of 2011 had decreased 1.51% from the year prior. As of the effective date of the appraisal there was a twenty-five month inventory of single family residences for sale in Salisbury, NH. The median days on market for competitively priced residences was 67 days.

Site description and characteristics: The northern property line of the subject site is the town of Andover, NH. Site has 210' of road frontage, rectangular in shape with a total of 4.90 acres. The subject site is located in the Residential zone which requires a minimum of 200' road frontage and 2 acres.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Summarize Above Grade Improvements:

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											480
Other Area											

Summarize below grade and/or other area improvements: Both MLS and assessment records indicate that the basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: At less than 900 s.f. the dwelling would functionally accommodate two bedrooms reasonably well. No known external inadequacies noted or assumed.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Interior and exterior condition was reported to be in marketable condition. At less than 900 s.f. the subject dwelling is smaller than typical. Two bedroom floor plan limits marketability to certain sub-markets.

Comments and reconciliation of the sales comparison approach: Sales reasonably similar in size or functional utility are considered in the sales comparison approach. Comp 1 was reported to require some minor cosmetic improvements at time of sale, comp 2 recently had all new surfaces replaced; both comps are adjusted accordingly.

Of the three sales considered significant weight is placed on comp 2 as it is the most recent sale of the three considered and was in similar condition as the subject at the time of sale.

Indication of Value by Sales Comparison Approach	$ 130,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 768The northern property line of the subject site is the town of Andover, NH. Site has 210' of road frontage, rectangular in shape with a total of 4.90 acres. The subject site is located in the Residential zone which requires a minimum of 200' road frontage and 2 acres. s.f. Cape on 4.90 acres. As indicated in the body of the report the site is located in the Residential district. This district allows single family use. The surrounding uses are

Owner	Todd M. Miller and Meagan E. Roarke				

compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Residential District zoning requirements of 200' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

FIDUCIARY DEED

KNOW ALL MEN BY THESE PRESENTS, that I, **David Constant, Administrator**, of **Estate of Joseph Turner Constant,** of 54 Blossom Road, Windham, NH 03087 by powers conferred by the Merrimack County Probate Court (317-2011-et-0034), for consideration paid, grants to **Todd M. Miller and Meagan E. Roark,** with a mailing address of 516 Flaghold Road, Salisbury, NH 03268 as joint tenants with rights of survivorship:

A certain tract or parcel of land, with any buildings or improvements thereon, situated in Salisbury, County of Merrimack and State of New Hampshire, and bounded and described as follows:.

Beginning at an iron pipe driven in the stone wall by the easterly side of Raccoon Hill Road, so-called, which point is the northwesterly corner of Lot A-2 on Plan hereinafter mentioned; thence northerly along said Raccoon Hill Road 210 feet, more or less, to the Salisbury-Andover Town Line at the corner of stone walls; thence turning and running northeasterly along said Town Line, being partially along a stone wall and land now or formerly of the Gurney Putney Estate, 1680 feet, more or less, to an iron pipe driven in the ground at land of one Armstrong; thence turning and running southwesterly by said Armstrong land 105 feet, more or less, to an iron pipe at the northeasterly corner of said Lot A-2; thence turning and running southwesterly along said Lot A-2 1590 feet, more or less, to the point of beginning; stated to contain 4.9 acres, and being Lot A-1 as shown on a Plan of land entitled "Sanborn's Clearing" recorded in the Merrimack County Registry of Deeds as Plan No. 2442.

Subject to any and all matters, including setbacks if any, as shown on Plan No. 2442 as recorded in the Merrimack County Registry of Deeds.

Subject to all easements, rights, restrictions, and/or covenants set forth in deed as recorded in said Registry 1484, Page 680.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 419 Raccoon Hill Rd
Salisbury, NH 03268

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

Use of the Real Estate As of the Date of Value: Single Family Residential

Use of the Real Estate Reflected in the Appraisal: Single Family Residential

Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Eric R. Tilton and Kimberlee M. Ganley

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on September 30, 2010 for $159,900 through the Multiple Listing Service. The subject property was under agreement 15 days later and settled on November 30, 2010 for $160,000 with a $4,000 seller concession to buyer. Transaction was an arms length sale with fair market exposure through the Multiple Listing Service.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 170,000**
Indication of Value by Cost Approach	**$ 190,486**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: November 30, 2010	**$ 170,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** November 30, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Salisbury, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☒ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Amenities:

Market area description and characteristics: Salisbury is a small residential community of approximately 1,200 residents located just west of the city of Franklin. Access to essential services such as shopping, employment, and retail centers is via routes 4 and 127.

In 2010 there were eleven residential sales sold through the MLS in Salisbury, NH. Given the relatively few sales that occur in Salisbury it is not statistically credible to arrive at any conclusion of market direction using the few sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the fourth quarter of 2010 had decreased 2.82% from the year prior. As of the effective date of the appraisal there was a seventeen month inventory of single family residences for sale in Salisbury, NH. The median days on market for competitively priced residences was 106 days.

Alley	☐ Public	☐ Private
Sidewalk	☐ Public	☐ Private
Street Lights	☐ Public	☐ Private

Site description and characteristics: Subject site is in the Residential zoning district which requires a minimum of 200' of road frontage and a 2 acre lot. The subject with 222' of road frontage and 2.50 acres is considered to be a legal and conforming lot of record.
Subject deed references covenants, conditions and restrictions (CC&R's) recorded in Merrimack County Registry of Deeds in book 1144 page 282. The CC&R's limit the use of the land to single family residential with a dwelling no higher than 2 stories, at least 500 s.f. of living area, no more than a two car garage, any wood exterior surfaces to have two coats of stain, and no trailers are to be used as living units on the site.
The CC&R's are considered to be for the promotion and preservation of the residential composition and character of the subject neighborhood and are not considered to be adverse to the marketability of the subject property.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Other Area											

Summarize below grade and/or other area improvements: Per assessing records and MLS the main dwelling has a full, unfinished basement.

Discuss physical depreciation and functional or external obsolescence: Per MLS subject dwelling interior and exterior are in relatively good condition. Dwelling was built new in 2005 and had recent landscaping completed as of the effective date of valuation.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Bedroom count, living area size, and lot size, all considered to be typical for market. As recently built new construction in 2005 the age of the dwelling is younger than most for the immediate neighborhood.

SITE VALUATION

Site Valuation Methodology

☒ **Sales Comparison Approach:** A set of procedures in which a value indication is derived by comparing the property being appraised to similar properties that have been sold recently, then applying appropriate units of comparison and making adjustments to the sale prices of the comparables based on the elements of comparison. The sales comparison approach may be used to value improved properties, vacant land, or land being considered as though vacant; it is the most common and preferred method of land valuation when an adequate supply of comparable sales are available.

☐ **Market Extraction:** A method of estimating land value in which the depreciated cost of the improvements on the improved property is estimated and deducted from the total sale price to arrive at an estimated sale price for the land; most effective when the improvements contribute little to the total sale price of the property.

☐ **Alternative Method:** (Describe methodology and rationale)

Site Valuation

COST APPROACH

Cost Approach Definitions

☐ **Reproduction Cost** is the estimated cost to construct, at current prices as of the effective appraisal date, an exact duplicate or replica of the building being appraised, using the same materials, construction standards, design, layout, and quality of workmanship, and embodying all of the deficiencies, superadequacies, and obsolescence of the subject building.

☒ **Replacement Cost** is the estimated cost to construct, at current prices as of the effective appraisal date, a building with utility equivalent to the building being appraised, using modern materials and current standards, design and layout.

Cost Approach Analysis

Estimated Cost New						
Above Grade Living Area		1,344	Sq. Ft @ $	88.94	= $	119,535
Finished Below Grade Area			Sq. Ft @ $		= $	
Unfinished Below Grade Area	Foundation	1,344	Sq. Ft @ $	21.84	= $	29,353
Other Area			Sq. Ft @ $		= $	
Car Storage			Sq. Ft @ $		= $	
Well					$	6,000
Septic					$	6,000
					$	
Total Estimated Cost New					$	160,888
Less Depreciation						
Physical		8.33	% = $	13,402		
Functional			% = $			
External			% = $			
Total Depreciation			$	13,402		
Depreciated Value of Improvements					$	147,486
Contributory Value of Site Improvements	Minimal landscaping, gravel driveway				$	4,000
					$	
					$	
					$	
Opinion of Site Value					$	39,000
Indicated Value					$	190,486

Cost Approach Comments (Data Sources, Depreciation Basis, Site Value, Etc.): Site value was developed using sales of vacant land in Salisbury, NH. Cost data is from the Marshall & Swift Residential Cost manual using the September, 2010 cost edition.
Well and septic costs are from the local survey method and are included in the depreciable category of improvements.
Physical depreciation is estimated using the age/life basis using 60 years are a total economic life of the dwelling.

Cost Approach Reconciliation: Cost approach using new materials (minus depreciation) uses building costs to determine value. In a depreciating market or a market where inventory far exceeds demand, there can be a sizable difference between the cost to build improvements and market value. However, in a market where sales of identical improvements are scarce, the cost approach can act as a check and balance within the reconciliation to value.

Indication of Value by Cost Approach	**$ 190,486**

Owner	Eric R. Tilton and Kimberlee M. Ganley				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

The subject site as of the effective date of the appraisal was improved with a 1,344 s.f. Ranch on 2.50 acres. As indicated in the body of the report the site is located in the Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Text Addendum

File No. 11-011-020

Client	Devine, Millimet & Branch, P.A				
Property Address	419 Raccoon Hill Rd				
City	Salisbury	County Merrimack	State NH	Zip Code 03268	
Owner	Eric R. Tilton and Kimberlee M. Ganley				

Due to the Rural District zoning requirements of 222' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The cost approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. Estimates for reproduction of any improvements on the site were obtained from the Marshall & Swift Residential Cost Handbook. Site value has been derived from sales of vacant land in the subject market area.

Although not necessary for credible results the cost approach to value is completed as supplemental approach to value that provides support for the sales comparison approach which is considered to be the primary approach to value for this assignment.

There was sufficient comparative data available within the subject market to adequately develop the sales comparison approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, that I, **MARK SUTHERLAND,** not married or in a civil union, of 419 Raccoon Hill Road, Salisbury, Merrimack, County, State of New Hampshire 03268, **FOR CONSIDERATION PAID**, grant to **ERIC R. TILTON,** single, of PO Box 227, East Andover, County of Merrimack, State of New Hampshire 03231 and **KIMBERLEE M. GANLEY**, single, of PO Box 227, East Andover, County of Merrimack, State of New Hampshire 03231, as joint tenants with rights of survivorship and with **WARRANTY COVENANTS**, the following described premises:

A certain tract or parcel of land in Salisbury, County of Merrimack and State of New Hampshire, bounded and described as follows:

Beginning at an iron pipe driven in the stone wall at the southwesterly side of Raccoon Hill Road, so-called, and at the northerly corner of the land herein conveyed; thence running southwesterly along Lot B-10, 498 feet, more or less, to an iron pipe driven in the ground; thence turning and running southerly along land, now or formerly of Russell H. and Thelma T. Drew 200 feet, more or less, to another iron pipe driven in the ground; thence turning and running northeasterly 605 feet, more or less, to an iron pipe driven in the stone wall at the southwesterly side of said Raccoon Hill Road; thence turning and running northwesterly 222 feet, more or less, to the point of beginning, stated to contain 2.5 acres.

Meaning and intending to convey Lot B-31 as shown on a Plan of Land entitled "Sanborn's Clearing" recorded in Merrimack County Records, No. 2442.

Subject to restrictions recorded at Book 1144, Page 282 of said Registry.

Subject to possible powerline easement as shown on Plan 2442.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 1143 Long St
Webster, NH 03303

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

SUBJECT PROPERTY IDENTIFICATION

Address: 1143 Long St
City: Webster **County:** Merrimack **State:** NH **ZIP:** 03303
Legal Description: See attached legal description
Tax Parcel #: Map 3, Lot 26 **RE Taxes:** 4,216 **Tax Year:** 2011
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Eric Lee Madsen & Mark Arthur Landry

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property sold on March 23, 2009 for $215,000 as an arms length and fair market value transaction. A corrective deed was filed (to clarify the marital status of the grantor) in October, 2009 to validate the March, 2009 sale.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on January 31, 2012 for $159,900 through the Multiple Listing Service. The subject property was under agreement 81 days later and settled on May 24, 2012 for $157,500. Transaction was an arms length sale with fair market exposure through the Multiple Listing Service.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 160,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: May 24, 2012	**$ 160,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** May 24, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Webster, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Amenities:

Market area description and characteristics: Webster, NH is a small residential community of approximately 2,000 residents. The community is primarily residential in character and composition with some small retail and municipal sites located on route 127. There are some shopping centers in nearby Warner however a larger array of employment and shopping is available in the city of Concord located 30 minutes to the east.

In the year preceding the effective date of this assignment there were eleven sales of residential properties in Webster, NH. As of the effective date of this assignment there were 23 single family residences for sale which indicated a 23 month supply of inventory. Any amount over six months is considered to be an oversupply. The average days on market as of May 24, 2012 for sold properties was 80 days on market and 71.5 days for listed properties which indicates a slightly improving trend.

The Federal Housing Finance Agency (FHFA) reports that property values had increased 1.66% from the second quarter of 2011 to the second quarter of 2012 in New Hampshire.

Street Lights	☐ Public	☐ Private	

Site description and characteristics: The subject property is located in the Residential-Agricultural zoning district in Webster which requires a minimum of 5 acres and 250' of road frontage for a single family residential lot. The subject property has approximately 404' of road frontage and 26.69 acres and is considered a legal lot of record. Although the lot is larger than typical, the limited road frontage precludes the subject lot from any further sub-division by right.

MLS describes both a small brook running across the lot as well as the lot containing a flood plain. Any benefits associated with having a running brook on the property are effectively nullified by flood potential.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. ☒ Patio 34' x 40'	☐ Deck	☐ Porch	☐ Pool	☐ Fence	
Other: 8' x 8' covered landing					
Interior Elements	**Flooring:** Wood, carpet		**Walls:** Pine, wood, drywall		☒ **Fireplace #** Hearth
Kitchen: ☒ Refrigerator ☒ Range ☒ Oven ☒ Fan/Hood ☐ Microwave ☐ Dishwasher				**Countertops:** Formica	
Other:					
Foundation	☒ Crawl Space		☐ Slab		☐ Basement
Other: Per tax assessment records and MLS listing the entire dwelling sits on a crawl space basement					
Attic	☐ None ☐ Scuttle		☐ Drop Stair	☐ Stairway	☐ Finished
Mechanicals	**HVAC:** FHA		**Fuel:** Oil		**Air Conditioning:**
Car Storage	☐ Driveway	☒ Garage 16' x 24'	☐ Carport		☐ Finished
Other Elements	Through out the 26.69 acre lot there is a total of 7 sheds. Also on site there is a 16' x 24' detached garage. Although larger than most two car garages, the garage door functionally fits two cars.				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1		1	1			2	1			1,292
Level 2										loft	78

Finished area above grade contains: **Bedroom(s):** 2 **Bath(s):** 1 **GLA:** 1,370

Summarize Above Grade Improvements: Per MLS listings subject dwelling is s rustic exposed beam cape with two bedrooms and a single bath residence with a loft overlooking a cathedral ceiling.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the basement is a crawl space.

Discuss physical depreciation and functional or external obsolescence: MLS shows a dated kitchen and bath. Most surfaces appear to be original. Improvements exhibit two types of functional obsolescence. Functional obsolescence with regards to two bedroom floor plan. Marketability is limited with two bedrooms to a sub set of a larger market. Additionally seven sheds on site are considered to be a superadequacy for the property. A superadequacy is an improvement(s) that has a cost to build that far outweighs the value that the market will assign for the improvement. A typical residential buyer may require 200 to 300 s.f. of outdoor storage for typical yard and lawn equipment. The subject property in addition to a 384 s.f. detached garage has 1,448 s.f. of shed storage.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Lot size at 26.69 acres is larger than both the 5 acre minimum lot requirement and what is typical for the neighborhood. Dwelling size at less than 1,400 s.f. and two bedrooms is considered smaller than the typical single family residence. Interior was reported to have soiled and heavily damaged carpets. Considering dated kitchen and baths and condition of surfaces, the subject dwelling is considered to be in less than average condition.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. Comments and reconciliation of the sales comparison approach: Three sales in the subject market area are considered in the sales comparison approach. Considering the subject's dated kitchen and baths, and soiled carpeting, all comps are adjusted for superior condition when compared to the subject. Comp 1 had a dated interior but had new carpeting installed just prior to sale. Both comp 2 and 3 were in superior condition (flooring) and had more modern kitchen and baths. (The appraiser for this assignment had made a personal inspection of comp 3 in 2010).

Of the three comparables considered, weight is applied to comp 1 due to condition and similar surplus acreage. Comp 3 is slightly weighted as it sold with a similar superadequacy in the form of a larger than typical barn/garage.

Indication of Value by Sales Comparison Approach	**$ 160,000**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,370 s.f. Cape on 26.69 acres. As indicated in the body of the report the site is located in the Residential-Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

City	Webster	County Merrimack	State NH	Zip Code 03303	
Owner	Eric Lee Madsen & Mark Arthur Landry				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Residential-Agricultural district requirements of 250' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL PERSONS BY THESE PRESENTS, that I, **ERNEST A. RZEZNIK, JR.**, single individual not in a civil union, of 126 Bedford Road, Merrimack, Hillsborough County, New Hampshire 03054, for consideration paid, grants to **ERIC LEE MADSEN**, single individual not in a civil union, of 41574 Bedford Drive, Canton, Wayne County, Michigan 48174, and **MARK ARTHUR LANDRY**, single individual not in a civil union, of 31 Hazel Drive, Concord, Merrimack County, New Hampshire 03301, as joint tenants with rights of survivorship, with WARRANTY COVENANTS:

Property Location: 1143 Long Street, Webster, Merrimack County, New Hampshire 03303

A certain tract or parcel of land, together with the building and improvements thereon, and appurtenances thereto, situated on the northerly side of Long Street, in the Town of Webster, County of Merrimack, State of New Hampshire and shown as Lot #3 on a certain plan of land entitled "Proposed Subdivision of the Land of Joan Robillard, Webster, N.H.", dated October 17, 1977, and recorded on October 25, 1977 with the Merrimack County Registry of Deeds as Plan 5020, to which said plan reference may be had for a more particular description thereof.

EXCEPTING AND RESERVING, however, all and the same premises conveyed by William W. Clough, Sr. and Barbara Clough to Dale Clough and Fern Clough by Warranty Deed of near or even date, to be recorded with the Merrimack County Registry of Deeds, being a triangular tract or parcel of land, together with any buildings and improvements thereon, appurtenances thereto, situated on the northerly side of Long Street in the Town of Webster, County of Merrimack, State of New Hampshire, and shown as "5.045 SQ. TO BE ANNEXED TO LOT 25" on a certain plan of land entitled "Minor Subdivision Plat, Land of Fern Clough & William W. Clough, Sr, Location, Long Street Webster, NH, Merrimack County, Tax Map 3 Lot 25 & 26", dated October 31,1997, recorded on March 31, 1998 with the Merrimack County Registry of Deeds as Plan #14278, to which said plan reference may be had for a more particular description thereof.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

Re: Property: 894 Hopkinton Rd
Hopkinton, NH 03229

File No.: 11-011-023

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood,CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** June 15, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is traversed by a high voltage transmission line (HVTL) corridor. For the purpose of this assignment, the subject property has been appraised that no HVTL exists.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Hopkinton, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: Hopkinton is a small executive bedroom of approximately 6,000 people. The town center is adorned with original colonial settlement homes that represent the high end of the value range. Overall the low population density and easy connectivity to major cites such as Concord and Manchester via I-89 and I-93 have made Hopkinton a desirable residential location with above average marketability.

As of the effective date of this assignment there was a 16.8 month inventory of single family residences for sale in Hopkinton which indicates an oversupply. As this is a retroactive assignment it can be determined with a fair degree of accuracy how the real estate market was performing in up to and including the effective date of this assignment.

The Federal Housing Finance Authority showed that residential values in New Hampshire as of the second quarter of 2012 had increased 1.7% from the year prior. Market conditions were improving as short sales and bank REO activity were dissipating and interest rates had reached an all time low; both of which benefited the residential housing market.

Alley	☐ Public ☐ Private		
Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: Subject site is located on the corner of Currier and Hopkinton Roads. Although there is a small pond directly across the street, the subject site has no direct access with a limited line of site. The subject property was not marketed as having any water access or views in the MLS.

The subject site is located in the Low Density Residential District (R-4) which requires a minimum of 120,000 s.f. lot (2.75 acres) and 300' of frontage for each buildable lot.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Foundation	☐ Crawl Space	☐ Slab	☒ Basement Full, unfinished
Other:			

Attic	☐ None ☐ Scuttle	☐ Drop Stair	☐ Stairway	☐ Finished
Mechanicals	HVAC: FHW	Fuel: Oil	Air Conditioning:	
Car Storage	☒ Driveway	☒ Garage	☐ Carport	☐ Finished

Other Elements Both MLS and tax assessment records describe a large, multi-story barn on site. Tax assessment records show a 1,640 s.f. 2-story barn and an 810 s.f. 1-story barn as well as a 400 s.f. shed on site.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1	1		1	2			1,068
Level 2							2				534

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2 GLA: 1,602

Summarize Above Grade Improvements: Tax assessment records indicate a base floor area of 1,068. based on a visual observation the second floor appears to have eaves that yield a half story second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											
Other Area											

Summarize below grade and/or other area improvements: Both MLS and tax assessment records indicate a full, unfinished basement.

Discuss physical depreciation and functional or external obsolescence: Listing agent reported that kitchen and baths were dated and had not been updated in decades. Agent commented that dwelling required new roof at time of sale. Listing agent's estimate for cost of repairs and updating was $35,000 to $40,000. A residence with less than 2,000 s.f. on five acres with a barns and sheds that total over 3,000 s.f. is considered to have a superadequacy. A superadequacy is an improvement(s) that has a cost to build that far outweighs the value that the market will assign for the improvement. A typical residential buyer may require 400-600 s.f. of outdoor storage for vehicle and typical yard and lawn equipment, anything more is considered excess.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: The history of the property suggests an agrarian past as a residence with large barn and outbuilding on a larger then existing lot. Over time sub-division of the property relegated the property to a smaller than typical residence with a larger than typical outbuilding on a typical residential lot in Hopkinton. The more recent history of the residence is one that lacked any significant updating.
As is the subject property would appeal to a first time buyer that has minimal living space requirements.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Comments and reconciliation of the sales comparison approach: Listing agent for the subject property reported that cost to update (kitchen, baths, roof, etc) ranged between $35,000 and $40,000. Both comps 1 and 3 were reported to have updated kitchens and baths and time of sale. Both comps 1 and 3 are adjusted for superior condition when compared to the subject. Comp 2 was an antique that required extensive updating at time of sale. Updates required included kitchen, baths, roof, wiring, plumbing, interior and exterior surface improvements. The appraiser for comp 2 reported that there was an $88,000 construction contract to update comp 2. As the subject's cost t update was reported at $35,000 and comp 2 had an $88,000 update contract the difference of $53,000 was applied as a market derived adjustment for comp 2. After adjustments a relatively narrow range of value is evident from which a reasonable conclusion of value for the subject may be drawn from.

Indication of Value by Sales Comparison Approach $ 175,000

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Text Addendum

File No. 11-011-023

Client	Devine, Millimet & Branch, P.A				
Property Address	894 Hopkinton Rd				
City	Hopkinton	County Merrimack	State NH	Zip Code	03229
Owner	Carol & Gary Marsh				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,602 s.f. Cape on 5.09 acres. As indicated in the body of the report the site is located in the R-4 district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-023

Client	Devine, Millimet & Branch, P.A				
Property Address	894 Hopkinton Rd				
City	Hopkinton	County Merrimack	State NH	Zip Code 03229	
Owner	Carol & Gary Marsh				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the R-4 zoning requirements of a 2.75 acre minimum lot 300' for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW BY THESE PRESENTS, **WILLIAM F. LETT, JR.**, single, of Hopkinton, New Hampshire, for consideration paid, grants to **CAROL MARSH AND GARY MARSH**, husband and wife, having an address of 20 Harvard Avenue, Auburn, New Hampshire 03032, as joint tenants with rights of survivorship, with **WARRANTY COVENANTS**, a certain tract of land with the improvements thereon, situated in Hopkinton, County of Merrimack and State of New Hampshire, more particularly bounded and described as follows:

> A certain tract of land with improvements thereon, triangular in shape, located on the north side of the new road from Hopkinton to Concord, at the junction of the new and the old road from Hopkinton to Concord, bounded on the south by the old road and on the north by the new road, and on the east by land now or formerly of Jones, there being a stone wall as the boundary line between the premises herein described and said Jones land.

EXCEPTING AND RESERVING the so-called cider mill and the lot on which it stands, which has been conveyed out of the original tract.

EXCEPTING from this conveyance the parcel conveyed by deed of William F. Lett, Jr. to William F. Lett, Jr., Trustee of the William F. Lett, Jr., Trust dated February 25, 2011 and recorded in the Merrimack County Registry of Deeds at Book 3244, Page 24 and shown on a certain plan entitled "Lot Line Adjustment Plan William F. Lett Property 659 Currier Road 894 Hopkinton Road Map 258: Lots 21 & 22 Hopkinton, New Hampshire, Merrimack County", dated November 10, 2010 and recorded in the Merrimack County Registry of Deeds as Plan #19633.

TOGETHER WITH AND SUBJECT TO all rights, easements, restrictions, conditions, covenants and other matters of record to the extent in force and applicable.

MEANING AND INTENDING to describe and convey a portion of the same premises conveyed by William F. Lett, Jr. as Trustee of the William F. Lett Family Trust to William F. Lett, Jr. dated September 2005 and recorded in the Merrimack County Registry of Deeds at Book 2819, Page 1264.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 74 Horizon Dr
Goffstown, NH 03045

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Sincerely,

Mark Correnti, SRA

Brian C Underwood, CRE

Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Geoffrey A. Pinard & Meagan Therrault

Description and analysis of sales within 3 years (minimum) prior to effective date of value: Prior to the 2012 sale the subject property sold in 2010 as a bank REO. Subject property listed as a bank REO on 02/19/2010 for $267,900 and was under agreement on 03/20/10. Subject closed on 04/23/10 for $259,000. An additional transfer was made on 06/15/2009 as a foreclosure deed under power of sale. The 2010 sale was considered an arms length transaction of a distressed asset. The 2009 is not considered arms length transaction.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on December 1, 2011 for $279,900 and was under agreement of sale on January 14, 2012 and closed on April 20, 2012 for $273,500 with a $8,175 seller concession towards buyers closing costs. Sale was an arms length sale with conventional financing.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 285,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: April 20, 2012	**$ 285,000**
Exposure Time: 3 months	

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** April 20, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Goffstown, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Market area description and characteristics: The town of Goffstown is a suburban community of approximately 18,000 residents located just west of the city of Manchester. The convenient location to Manchester offers access to the states largest employment center as well as shopping and essential services. Subject neighborhood is primarily residential in character and composition and is representative of Goffstown's median residential value.

In 2012 what has now been viewed as a residential market recovery had just begun. Lower interest rates, first time home buyer incentive programs, and seller concessions collectively contributed towards a market recovery. Market appreciation was tepid as bank REO inventory still was a factor in some market segments.

As of April 30, 2012 there was a 8.8 month inventory of single-family residential housing in Goffstown, NH. Anything over 6 months is considered an oversupply. The Federal Housing Finance Agency (FHFA) reports that property values had increased in New Hampshire 1.66% from the second quarter of 2011 to the second quarter of 2012 in New Hampshire. For a more local view of housing trends, the FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) decreased 1.64% in the same period.

Site description and characteristics: The subject site is in the Agricultural zone in Goffstown which requires a minimum of 2 acres and 200' of road frontage for a single family building lot.

The covenants, conditions, and restrictions (CC&R's) recorded at Hillsborough County Registry of Deeds book 5609 page 1168 are primarily for the preservation of the residential character and composition of the subject neighborhood. The CC&R's also declare that no property may be further sub-divided or used for any other purpose other than single family residential.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1		1			.5			1,272
Level 2							3	2			936

Finished area above grade contains: **Bedroom(s):** 3 **Bath(s):** 2.5 **GLA:** 2,208

Summarize Above Grade Improvements: Typical floor plan for style of residence and neighborhood. Bedroom with full, private bath. Although marketed as a four bedroom residence, the septic plan on file at the town of Goffstown has the subject dwelling rated for three bedrooms only.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade										0	1,272
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: Floor plan is functional and market accepted. Based on seller statement report, level of updating and performance of major systems are as expected for an eight year old dwelling. No negative external influences noted or assumed. See interior photo addenda.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Age, size, and style typical for neighborhood. Subject dwelling highly similar to neighborhood in terms of style and features.

Comments and reconciliation of the sales comparison approach: Three sales of similar style residences in Goffstown are considered in the sales comparison approach. Adjustments are made for differences in acreage and living area where applicable. Weight is applied to comp 2 as it is most proximate to the subject property and the most recent sale.

Indication of Value by Sales Comparison Approach	$ 285,000

Owner	Geoffrey A. Pinard & Meagan Therrault				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,208 s.f. Colonial on 4.97 acres. As indicated in the body of the report the site is located in the Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-031

Client	Devine, Millimet & Branch, P.A				
Property Address	74 Horizon Dr				
City	Goffstown	County Hillsborough	State NH	Zip Code 03045	
Owner	Geoffrey A. Pinard & Meagan Therrault				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the covenants and restrictions contained in the subject deed as well as current zoning requirements, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

KNOW ALL MEN BY THESE PRESENTS: That I, **Stephen N. Dreikosen**, single, of 74 Horizon Drive , Goffstown, NH 03045, for consideration paid, grant to **Geoffrey A. Pinard and Meagan Therrault**, of 11 Elm Street , Goffstown, NH 03045, as joint tenants with rights of survivorship, with WARRANTY COVENANTS:

SEE ATTACHED EXHIBIT A.

MEANING and INTENDING to describe and convey the same premises conveyed to the grantors herein by deed of Bank of New York, dated April 5, 2010 and recorded at Book 8197, Page 1557 in the Hillsborough County Registry of Deeds.

I, the grantor herein hereby release all rights of homestead in the above-described premises.

Executed this 20th day of April 2012

Stephen N. Dreikosen

State of New Hampshire
County of Hillsborough

04/20/2012

Then personally appeared before me the said Stephen N. Dreikosen and acknowledged the foregoing to be his voluntary act and deed.

Winifred H Cote

Notary Public/Justice of The Peace
Commission expiration: 10/24/2016

EXHIBIT A

A certain tract or parcel of land, with any buildings thereon, situated on Horizon Drive, in Goffstown, County of Hillsborough, State of New Hampshire, being shown as Lot No. 8-46-29 on a plan entitled "Subdivision of the Land of SKV L.L.C., Goffstown, N.H.", prepared by Holden Engineering & Surveying, Inc. dated April 10, 2002 revised through February 21, 2002 approved by the Town of Goffstown Planning Board on June 28, 2002 and recorded in the Hillsborough County Registry of Deeds as Plan No. 31842. See also certain plan entitled "Subdivision of Land of SKV Investment Associates, Inc., Goffstown, NH", prepared by Holden Engineering and Surveying, Inc., approved by the Town of Goffstown Planning Board on October 14, 1993 and recorded in the Hillsborough County Registry of Deeds as Plan No. 26599.

Subject to any and all matters, including setbacks, as shown on Plan Nos. 31842 and 26599 recorded in the Hillsborough County Registry of Deeds.

Subject to Declaration of Covenants, Conditions and Restrictions dated February 14, 1995 and recorded in said Registry at Book 5609, Page 1168, as amended.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 21 Bixby Farm Lane
Bedford, NH 03110

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** May 17, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Bedford, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior review by appraiser. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: From HVTL corridor

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☒ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Market area description and characteristics: The subject property is located in Bedford, NH which is an upscale bedroom community located just outside of Manchester which is the state's largest city and employment center. Connectivity to essential services as well as major employment and shopping centers is conveniently accessible via routes I-293 and I-93. The subject's immediate neighborhood is located in east Bedford off of Back River Road which is an arterial roadway which connects Merrimack to Bedford. The immediate area is primarily single family residential in composition and character.

The Federal Housing Finance Agency (FHFA) reports that property values had increased in New Hampshire 3.49% from the third quarter of 2012 to the third quarter of 2012 in New Hampshire. The FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) increased 0.75% in the same period. For a more local view the median sales price of a single family residence in Bedford that sold between May 17, 2011 and May 17, 2012 was $355,000 per the Multiple Listing Service. For the same period from 2012 to 2013 the sale price was $365,000 which is an increase of 2.81%.

Site description and characteristics: The subject site is in the Residential-Agricultural zone in Bedford which requires a minimum of 1 acre and 150' of road frontage for a single family building lot. The covenants, conditions, and restrictions (CC&R's) recorded at Hillsborough County Registry of Deeds book 8136 page 21 are primarily for the preservation of the residential character and composition of the subject neighborhood. The CC&R's also declare that no property may be further sub-divided or used for any other purpose other than single family residential.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

SITE VALUATION

Site Valuation Methodology

☐ **Sales Comparison Approach:** A set of procedures in which a value indication is derived by comparing the property being appraised to similar properties that have been sold recently, then applying appropriate units of comparison and making adjustments to the sale prices of the comparables based on the elements of comparison. The sales comparison approach may be used to value improved properties, vacant land, or land being considered as though vacant; it is the most common and preferred method of land valuation when an adequate supply of comparable sales are available.

☐ **Market Extraction:** A method of estimating land value in which the depreciated cost of the improvements on the improved property is estimated and deducted from the total sale price to arrive at an estimated sale price for the land; most effective when the improvements contribute little to the total sale price of the property.

☐ **Alternative Method:** (Describe methodology and rationale)

Comments and reconciliation of the sales comparison approach: Three sales of new construction are considered in the sales comparison approach. Adjustments are made for differences in land and living area where applicable. Of the three sales considered most weight is placed on comp 2 as it is the most recent sale and required the least amount of net and gross adjustments.

Indication of Value by Sales Comparison Approach **$ 400,000**

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,180 s.f. Colonial on 2.56 acres. As indicated in the body of the report the site is located in the Residential-Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum File No. 11-011-041

Client	Devine, Millimet & Branch, P.A				
Property Address	21 Bixby Farm Lane				
City	Bedford	County Hillsborough	State NH	Zip Code 03110	
Owner	David C. & Heather J. Dozois				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the restrictive covenants in the deed as well as zoning parameters under the Residential-Agricultural district, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The cost approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. Estimates for reproduction of any improvements on the site were obtained from the Marshall & Swift Residential Cost Handbook. Site value has been derived from sales of vacant land in the subject market area.

Although not necessary for credible results the cost approach to value is completed as supplemental approach to value that provides support for the sales comparison approach which is considered to be the primary approach to value for this assignment.

There was sufficient comparative data available within the subject market to adequately develop the sales comparison approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 8 John Goffe Dr
Bedford, NH 03110

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** May 2, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Bedford, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: The subject property is located in Bedford, NH which is an upscale bedroom community located just outside of Manchester which is the state's largest city and employment center. Connectivity to essential services as well as major employment and shopping centers is conveniently accessible via routes I-293 and I-93. The subject's immediate neighborhood is comprised of a variety of properties, that range from 2,000 s.f. residences built in the 1960's to elaborate 5,000 residences built in the last 15 years. The subject's immediate neighborhood was developed in the early 1970's and contains single family residences compatible with the subject property. In 2013 a firm residential market recovery had developed. at least three quarters of market appreciation between 3 and 6% had occurred in the state of New Hampshire. Certain market segments (entry level, new construction) experienced different rates of market appreciation than others.

As of May 2, 2013 there was a 7.5 month inventory of single-family residential housing in Bedford, NH. Anything over 6 months is considered an oversupply. The Federal Housing Finance Agency (FHFA) reports that property values had increased in New Hampshire 3.47% from the second quarter of 2012 to the second quarter of 2013 in New Hampshire. For a more local view of housing trends, the FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) increased 0.75% in the same period.

Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: Subject site is slightly larger than typical and contains two tax lots, Bedford tax map 21 Lots 9-7 and 8-3 all on one deed. The excess land allows sufficient room for an existing barn and paddock area for a horse as well as an inground pool. The site is generally level and with 160' of road frontage contains only enough road frontage for one buildable lot of record under existing zoning requirements.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Mechanicals	HVAC: FHW	Fuel: Oil	Air Conditioning:	
Car Storage	☒ Driveway Asphalt	☒ Garage 2 car attached	☐ Carport	☐ Finished
Other Elements	Front covered patio, rear enclosed porch. Large paddock area with a small barn. Basement finished with as a recreation area.			

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1	1	1			.5			1,408
Level 2							4	2			952

Finished area above grade contains: Bedroom(s): 4 Bath(s): 2.5 GLA: 2,360

Summarize Above Grade Improvements: 12' x 16' sunroom off of family room is insulated and heated and counted in the living area. Floor plan is functional and market accepted with a half bath on first floor, four bedrooms and two full baths on second floor, with one bath being off of the master bedroom.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade						1				78	1,216
Other Area											

Summarize below grade and/or other area improvements: 952 s.f. of the basement is finished as a recreation room.

Discuss physical depreciation and functional or external obsolescence: Floor plan is functional and market accepted. Inground pool in a old climate is considered a superadequacy for the market. A superadequacy is an improvement which has a market value significantly less than the cost to construct. Improvements, remodeling, and updating completed in 2007 lowered the effective age considerably. No negative external influences in the immediate neighborhood.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: The dwelling was extensively remodeled and updated in 2007 to include insulating and adding heat to the 12' x 16' sunroom which prior to was an enclosed porch. All baths were remodeled in 2007 and hardwood floors were added to the family room. All walls were re-painted in 2007 with crown molding added in select rooms.

File No. 11-011-036

Client	Devine, Millimet & Branch, P.A				
Property Address	8 John Goffe Dr				
City	Bedford	County Hillsborough	State NH	Zip Code 03110	
Owner	Kristen McCracken & Annette Escalante				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,360 s.f. Colonial on 2.65 acres. As indicated in the body of the report the site is located in the Residential-Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-036

Client	Devine, Millimet & Branch, P.A				
Property Address	8 John Goffe Dr				
City	Bedford	County Hillsborough	State NH	Zip Code 03110	
Owner	Kristen McCracken & Annette Escalante				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Residential-Agricultural zoning requirements of 150' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS: That John G. Crandall, Jr. and Larissa A. Crandall, Husband and Wife, of 8 John Goffe Drive, Bedford NH 03110, for consideration paid grant(s) to Kristen McCracken and Annette Escalante, A Married Couple, of 29 Haig Street, Manchester, NH 03102, as joint tenants with rights of survivorship, with WARRANTY COVENANTS:

Two certain tracts of land, with the buildings thereon, situated in Bedford, County of Hillsborough and State of New Hampshire, bounded and described as follows:

Parcel I: Being shown as Lot 3A on a plan entitled "Country Club Estates, Subdivision of Roy E. Jenkins Land, Bedford, NH" dated December 31, 1971 and recorded as Plan No. 5531 in the Hillsborough County Registry of Deeds, to which Plan reference may be made for a more particular description.

Parcel II: Being shown as Lot 3 on plan entitled "Country Club Estates, Subdivision of Roy E. Jenkins Lane, Bedford, NH" dated December 31, 1971, and recorded a Plan No. 5531 in the Hillsborough County Registry of Deeds, to which Plan reference may be made for a more particular description.

Subject to the following:

1. Subject to easements, facts, issues and notations as shown on Plan No. 5531 and 4200.
2. Subject to easement to Public Service Company of New Hampshire and New England Telephone and Telegraph recorded at Book 2078, Page 387.

Meaning and intending to describe and convey the same premises conveyed to John G. Crandall, Jr. and Larissa A. Crandall by virtue of a deed from John G. Crandall, Jr. dated March 23, 2007 and recorded in the Hillsborough County Registry of Deeds at book 7825 and page 0462.

RE: 2013-19292

Page 1 of 2

Unofficial Document

I/We, the grantor(s) hereby release all rights of homestead in the above described premises.

Executed this 2nd day of May, 2013.

5-2-13

John G. Crandall, Jr.

Larissa A. Crandall 5-2-13

Larissa A. Crandall

State of New Hampshire
County of Hillsborough May 2, 2013

Then personally appeared before me on this 2nd day of May, 2013, the said John G. Crandall, Jr. and Larissa A. Crandall and acknowledged the foregoing to be his/her/their voluntary act and deed.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 15 Bixby Farm Ln
Bedford, NH 03110

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** October 12, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Bedford, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☒ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: The subject property is located in Bedford, NH which is an upscale bedroom community located just outside of Manchester which is the state's largest city and employment center. Connectivity to essential services as well as major employment and shopping centers is conveniently accessible via routes I-293 and I-93. The subject's immediate neighborhood is located in east Bedford off of Back River Road which is an arterial roadway which connects Merrimack to Bedford. The immediate area is primarily single family residential in composition and character.

The Federal Housing Finance Agency (FHFA) reports that property values had decreased in New Hampshire 1.49% from the third quarter of 2011 to the third quarter of 2012 in New Hampshire. The FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) decreased 1.40% in the same period. For a more local view the median sales price of a single family residence in Bedford that sold between October 12, 2010 and October 12, 2011 was $360,000 per the Multiple Listing Service. For the same period from 2011 to 2012 the sale price was $365,000 which is an increase of 1.39%.

Site description and characteristics: The subject site is in the Residential-Agricultural zone in Bedford which requires a minimum of 1 acre and 150' of road frontage for a single family building lot. The covenants, conditions, and restrictions (CC&R's) recorded at Hillsborough County Registry of Deeds book 8136 page 21 are primarily for the preservation of the residential character and composition of the subject neighborhood. The CC&R's also declare that no property may be further sub-divided or used for any other purpose other than single family residential.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Level 2							4	2			1,028

Finished area above grade contains: Bedroom(s): 4 Bath(s): 2.5 GLA: 2,546

Summarize Above Grade Improvements: Per MLS and tax records the subject dwelling is a two story colonial that was built in 2012 that has a 24' x 24' attached garage and a 16' x 26 family room addition with cathedral ceilings. Dwelling is heated by gas via forced hot air and is cooled by central air conditioning.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											1,444
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: Floor plan is functional and market accepted. As new construction (as of the effective date of the assignment) the subject improvements do not exhibit any accrued physical depreciation. No known external inadequacies known as of the effective date of the assignment.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Per MLS comments there is hardwood and tile flooring through out as well as granite counters. At over 2,500 s.f. of living area the subject dwelling is one of the larger residences built on Bixby Farm Lane.

SITE VALUATION

Site Valuation Methodology

☐ **Sales Comparison Approach:** A set of procedures in which a value indication is derived by comparing the property being appraised to similar properties that have been sold recently, then applying appropriate units of comparison and making adjustments to the sale prices of the comparables based on the elements of comparison. The sales comparison approach may be used to value improved properties, vacant land, or land being considered as though vacant; it is the most common and preferred method of land valuation when an adequate supply of comparable sales are available.

☐ **Market Extraction:** A method of estimating land value in which the depreciated cost of the improvements on the improved property is estimated and deducted from the total sale price to arrive at an estimated sale price for the land; most effective when the improvements contribute little to the total sale price of the property.

☐ **Alternative Method:** (Describe methodology and rationale)

Comments and reconciliation of the sales comparison approach: Three sales of new construction are considered in the sales comparison approach. Adjustments are made for differences in land and living area where applicable. Of the three sales considered most weight is placed on comps 2 and 3 as they required the least amount of net and gross adjustments with considerable weight given to comp 2 as the most recent sale.

Indication of Value by Sales Comparison Approach	$ 420,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,546 s.f. Colonial on 1.51 acres. As indicated in the body of the report the site is located in the district Residential-Agricultural. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum File No. 11-011-037

Client	Devine, Millimet & Branch, P.A				
Property Address	15 Bixby Farm Ln				
City	Bedford	County Hillsborough	State NH	Zip Code 03110	
Owner	Brandon G. Coleman				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the restrictive covenants in the deed as well as zoning parameters under the Residential-Agricultural district, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The cost approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. Estimates for reproduction of any improvements on the site were obtained from the Marshall & Swift Residential Cost Handbook. Site value has been derived from sales of vacant land in the subject market area.

Although not necessary for credible results the cost approach to value is completed as supplemental approach to value that provides support for the sales comparison approach which is considered to be the primary approach to value for this assignment.

There was sufficient comparative data available within the subject market to adequately develop the sales comparison approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 1 Southgate Dr
Bedford, NH 03110

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** August 24, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Bedford, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Market area description and characteristics: The subject property is located in Bedford, NH which is an upscale bedroom community located just outside of Manchester which is the state's largest city and employment center. Connectivity to essential services as well as major employment and shopping centers is conveniently accessible via routes I-293 and I-93. The subject's immediate neighborhood is located in east Bedford off of Back River Road which is an arterial roadway which connects Merrimack to Bedford. The immediate area is primarily single family residential in composition and character.

The Federal Housing Finance Agency (FHFA) reports that property values had decreased in New Hampshire 1.49% from the third quarter of 2012 to the third quarter of 2012 in New Hampshire. The FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) decreased 1.40% in the same period. For a more local view the median sales price of a single family residence in Bedford that sold between August 24, 2010 and August 24, 2011 was $372,000 per the Multiple Listing Service. For the same period from 2011 to 2012 the sale price was $365,000 which is a decrease of 1.88%.

Site description and characteristics: Subject site contains 1.02 acres and has frontage on both Southgate Drive and Back River Road. Located in the Residential-Agricultural district the site meets the minimum requirements for a single family residential lot of record which requires a minimum of 1 acre and 150' of road frontage. The majority of the site is fenced which provides an added degree of privacy.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Car Storage	☒ Driveway	☒ Garage 4 car att	☐ Carport	☐ Finished
Other Elements				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	2	2	1		4	3			2,049
Level 2											

Finished area above grade contains: Bedroom(s): 4 Bath(s): 3 GLA: 2,049

Summarize Above Grade Improvements: Included in the above grade GLA is a 1 bedroom, 1 bath in law accessory unit that is located in the 24' x 26' addition located behind the 24' x 28' attached garage.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade	1		1					1		100	1,350
Other Area											

Summarize below grade and/or other area improvements: Per tax assessment records the main dwelling (excluding the 24' x 26' addition) is a 54' x 25' level with a full, finished basement underneath.

Discuss physical depreciation and functional or external obsolescence: MLS listing shows a residence that is updated and generally well kept. Tax assessment records show that in 2005 the accessory unit addition was complete which lends to an effective age lower than the overall physical age for the dwelling.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: The accessory unit at 624 s.f. is typical in size for functional use as an in-law apartment. The added two car garage for exclusive use of the added unit is an added amenity not typically found with accessory units. Main dwelling size at 1,425 is smaller than typical for neighborhood, however the smaller than typical above grade area is mitigated by the larger than typical 1,350 s.f. below grade finished area, part of which is in a raised portion of the basement.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. Comments and reconciliation of the sales comparison approach: Three sales in Bedford similar to the subject with in-law apartments are considered in the sales comparison approach. As with the subject, all three sales have an accessory unit as part of the above grade living area and room count. Of the three comparables considered most weight is placed on comp 2 as it is most similar to the subject requiring the least amount of net and gross adjustments.

Indication of Value by Sales Comparison Approach $ 360,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,049 s.f. Tri-Level Split on 1.02 acres. As indicated in the body of the report the site is located in the Residential-Agricultural district. This district allows single family use with accessory units. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-039

Client	Devine, Millimet & Branch, P.A				
Property Address	1 Southgate Dr				
City	Bedford	County Hillsborough	State NH	Zip Code 03110	
Owner	Candice A. Florio				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the Residential-Agricultural district zoning requirements of 150' road frontage and a minimum of a 1 acre for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

KNOW ALL MEN BY THESE PRESENTS that ***David P. Germain and Christine M. Germain,*** husband and wife, both of 1 Southgate Drive, Bedford, Hillsborough County, State of New Hampshire, for consideration paid grant to ***Candice A. Florio,*** a single woman, of 32 Bourne Drive, Bedford, Hillsborough County, State of New Hampshire, with *WARRANTY COVENANTS*:

A certain tract or parcel of land, with the buildings or improvements thereon, situated on the northerly side of Southgate Drive in the Town of Bedford, County of Hillsborough, State of New Hampshire, and shown as Lot No. 3 on a plan of land entitled, "Land of May Realty, Bedford, N. H.," dated November 21, 1968, and recorded with the Hillsborough County Registry of Deeds as Plan No. 4294, to which reference may be made for a more particular description.

Subject to:

A. The right of New England Power Company to maintain electric transmission lines over the easterly part of the above lot as shown on said plan.

B. Any and all matters as shown on Plan #4294, as recorded in the Hillsborough County Registry of Deeds

Meaning and intending to describe and convey the same premises conveyed to David P. Germain and Christine M. Germain by Quitclaim Deed of Christine M. Germain dated December 21, 2004, as recorded in the Hillsborough County Registry of Deeds at Book 7382, Page 2111.

Unofficial Document

We, David P. Germain and Christine M. Germain hereby release all rights of homestead in the above described premises.

Executed this August 23, 2012.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 19 Bixby Farm Ln
Bedford, NH 03110

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** June 25, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Bedford, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and the MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☒ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Market area description and characteristics: The subject property is located in Bedford, NH which is an upscale bedroom community located just outside of Manchester which is the state's largest city and employment center. Connectivity to essential services as well as major employment and shopping centers is conveniently accessible via routes I-293 and I-93. The subject's immediate neighborhood is located in east Bedford off of Back River Road which is an arterial roadway which connects Merrimack to Bedford. The immediate area is primarily single family residential in composition and character.

The Federal Housing Finance Agency (FHFA) reports that property values had increased in New Hampshire 1.66% from the second quarter of 2011 to the third quarter of 2012 in New Hampshire. The FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) decreased 1.64% in the same period. For a more local view the median sales price of a single family residence in Bedford that sold between June 25, 2010 and June 25, 2011 was $387,884 per the Multiple Listing Service. For the same period from 2011 to 2012 the sale price was $353,000 which is a decrease of 8.99%.

Site description and characteristics: The subject site is in the Residential-Agricultural zone in Bedford which requires a minimum of 1 acre and 150' of road frontage for a single family building lot. The covenants, conditions, and restrictions (CC&R's) recorded at Hillsborough County Registry of Deeds book 8136 page 21 are primarily for the preservation of the residential character and composition of the subject neighborhood. The CC&R's also declare that no property may be further sub-divided or used for any other purpose other than single family residential.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1					.5			965
Level 2							3	2	X		956

Finished area above grade contains:	Bedroom(s): 3	Bath(s): 2.5	GLA: 1,921

Summarize Above Grade Improvements: Dwelling features a typical floor plan with a kitchen, living room, dining room, and half bath on first floor; three bedrooms and two baths on second floor, one of which being a master bedroom bath. Second floor also has a laundry closet.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											956
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: Floor plan is functional and market accepted. As new construction (as of the effective date of the assignment) the subject improvements do not exhibit any accrued physical depreciation. No known external inadequacies known as of the effective date of the assignment.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: First floor has hardwood floors through out, tile in baths, and carpeting in bedrooms. Floor plan, and construction materials all considered typical. Size (due to lack of a family room addition) considered smaller than most new residences that were being built

SITE VALUATION

Site Valuation Methodology

☒ **Sales Comparison Approach:** A set of procedures in which a value indication is derived by comparing the property being appraised to similar properties that have been sold recently, then applying appropriate units of comparison and making adjustments to the sale prices of the comparables based on the elements of comparison. The sales comparison approach may be used to value improved properties, vacant land, or land being considered as though vacant; it is the most common and preferred method of land valuation when an adequate supply of comparable sales are available.

☐ **Market Extraction:** A method of estimating land value in which the depreciated cost of the improvements on the improved property is estimated and deducted from the total sale price to arrive at an estimated sale price for the land; most effective when the improvements contribute little to the total sale price of the property.

☐ **Alternative Method:** (Describe methodology and rationale)

Comments and reconciliation of the sales comparison approach: Three sales of new construction are considered in the sales comparison approach. Adjustments are made for differences in land and living area where applicable. Of the three sales considered most weight is placed on comp 2 as it is most similar in size as the subject, most recent in sale date, and required the least amount of net and gross adjustments.

Indication of Value by Sales Comparison Approach	$ 350,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,921 s.f. Colonial on 2.72 acres. As indicated in the body of the report the site is located in the Residential-Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum File No. 11-011-040

Client	Devine, Millimet & Branch, P.A				
Property Address	19 Bixby Farm Ln				
City	Bedford	County Hillsborough	State NH	Zip Code 03110	
Owner	Joshua R. & Andrea M. Weaver				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the restrictive covenants in the deed as well as zoning parameters under the Residential-Agricultural district, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The cost approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. Estimates for reproduction of any improvements on the site were obtained from the Marshall & Swift Residential Cost Handbook. Site value has been derived from sales of vacant land in the subject market area.

Although not necessary for credible results the cost approach to value is completed as supplemental approach to value that provides support for the sales comparison approach which is considered to be the primary approach to value for this assignment.

There was sufficient comparative data available within the subject market to adequately develop the sales comparison approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 54 Pilgrim Dr
Bedford, NH 03110

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 54 Pilgrim Dr
City: Bedford **County:** Hillsborough **State:** NH **ZIP:** 03110
Legal Description: See attached legal description
Tax Parcel #: Map 13, Lot 5-10 **RE Taxes:** 7,552.24 **Tax Year:** 2010
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Irma & Tyler Edward Cresta

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on September 2, 2010 for $389,900 and was under agreement of sale on September 27, 2010 and closed on November 5, 2010 for $381,000. Sale was an arms length sale with conventional financing.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 382,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: November 5, 2010	**$ 382,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** November 5, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Bedford, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Multifamily	%		%

Neighborhood Name: Meetinghouse Common

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: The subject property is located in Bedford, NH which is an upscale bedroom community located just outside of Manchester which is the state's largest city and employment center. Connectivity to essential services as well as major employment and shopping centers is conveniently accessible via routes I-293 and I-93. The subject's immediate neighborhood is comprised primarily with single family residences that vary in age, style, size, and design. Location is highly suburban with convenient access to schools and major arterial roadways.

The Federal Housing Finance Agency (FHFA) reports that property values had decreased in New Hampshire 2.82% from the fourth quarter of 2009 to the fourth quarter of 2010 in New Hampshire. The FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) decreased 1.24% in the same period. As of the effective date of the appraisal there was a 7.83 month inventory of single family residential housing available in Bedford, NH which is considered to be a slight over supply.

Sidewalk	☐ Public ☐ Private		
Street Lights	☐ Public ☐ Private		

Site description and characteristics: Legal description describes restrictive covenants reordered at Hillsborough County Registry of Deeds at Book 2746 page 13. The restrictive covenants run for 50 years from 1979 and are for "*attractive private residential purposes only, to precent nuisances, to preserve the peaceful county atmosphere of the Subdivision, and to maintain the desired tone of the community...*" In reviewing the restrictive covenants contained in HCRD Book 2746 page 13 none were found to be market adverse.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. The restrictive covenants contained in HCRD book 2746 page 13 prohibit any further sub-division of any single family residential lot. Additionally, no other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1		1			1			1,512
Level 2							4	2			922

Finished area above grade contains: Bedroom(s): 4 Bath(s): 3 GLA: 2,434

Summarize Above Grade Improvements: Per MLS listing subject dwelling is a contemporary style residence with a total of four bedrooms, two of which could be considered master bedrooms with full baths.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade						1				100	884
Other Area											

Summarize below grade and/or other area improvements: MLS and assessment records indicate a finished basement with a large recreation room.

Discuss physical depreciation and functional or external obsolescence: Although a contemporary exterior the interior is marketed as having a functional floor plan. Seller's statement and MLS photos indicate a good level of general upkeep and maintenance. Recent updates and remodeling contribute to an effective age considerably less than the dwelling's physical age. No known external inadequacies known or assumed.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: MLS and seller's statement indicate extensive remodeling in the ten years prior to the effective date of value. Marketing of the subject property indicated a remodeled kitchen in 2001 and all three baths updated in 2002. Interior of residence as presented by the MLS shows a modern kitchen, hardwood floors, and a finished basement.

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,434 s.f. Contemporary on 1.85 acres. As indicated in the body of the report the site is located in the Agricultural-Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-041

Client	Devine, Millimet & Branch, P.A				
Property Address	54 Pilgrim Dr				
City	Bedford	County Hillsborough	State NH	Zip Code 03110	
Owner	Irma & Tyler Edward Cresta				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the restrictive covenants in the deed as well as the Agricultural-Residential zoning requirements of 150' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, That, Elena D. Foley and John V. Foley, husband and wife, with a mailing address of 15100 1st Avenue, Shoreline, WA 98155, for consideration paid grant(s) to Irma Cresta, married, and Tyler Edward Cresta, single, as joint tenants with rights of survivorship, with a mailing address of 575 High Street, Candia, NH 03034, with WARRANTY COVENANTS:

A certain lot of land in Bedford, Hillsborough County, New Hampshire, with the buildings thereon, more particularly described as follows:

Beginning at the northwest corner of the lot at a point on the easterly sideline of Pilgrim Drive, said point also being the southwest corner of Lot 13-5-11; thence by Lot 13-5-11

North 77° 38' 57" East, 619.78 feet to an iron pin at land of Martha W. D. Morford and Martha Woodbury; thence by the Morford and Woodbury land

South 81° 47' 25" East, 200.00 feet to an iron pin at Lot 13-5-9; thence by Lot 13-5-9

South 71° 59' 22" West, 783.80 feet to Pilgrim Drive; thence by Pilgrim Drive North 22° 44'48" West 150.00 feet to the point of beginning.

Containing 1.845 acres, more or less.

Being Lot 13-5-10 as shown on a plan entitled "Subdivision Plan - Meetinghouse Common - Bedford, N.H." Scale 1" = 100', dated July 25, 1979, revised September 21, 1979 by Thomas F. Moran, Inc., Civil Engineers and Surveyors, Bedford, N.H. and recorded in the Hillsborough County Registry of Deeds as Plan No. 12584.

The within premises are conveyed subject to:

All notations, facts, easements, setback lines, right of ways, matters and issues as shown on the plans recorded in said Registry as Plan No. 12584.

Easement to New England Power Company over the easterly end of said lot. Piped drainage easement across the front of said property.

Declaration of Restrictions recorded in said Registry of Deeds at Book 2746, Page 13.

Any rights and together with any benefits the public or anyone else may have in certain roads which may be created by dedication as shown on said plans as referred to herein or as recorded in said Registry.

Existing flowage of water onto said described premises from adjoining areas.

Easement to Grafton Power Company recorded in said Registry of Deeds at Book 890, Page 210.

Protective Covenants recorded in said Registry of Deeds at Book 1522, Page 222 and Book1468, Page 309.

Meaning and intending to describe and convey the same premises as conveyed to Elena D. Foley and John V. Foley by virtue of a deed dated 8/30/07 recorded in the Hillsborough County Registry of Deeds at Book 7895, Page 818.

The grantor(s) hereby release all rights of homestead in the above-described property.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Re: Property: 5 Hawkview Rd
Hudson, NH 03051

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** July 27, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Hudson, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: The subject is located in Hudson, NH a town of approx. 22,000 located on the NH/MA border. The town is directly across the Merrimack River from the city of Nashua, NH, a major employment, retail, and residential center in southern New Hampshire. Neighborhood consists of primarily of single family residential dwellings compatible in age, style, value. Subject property's market area has good access to highways, shopping, schools, and all town facilities.

In the third quarter of 2012 single family residential housing prices in southern NH, including Hudson were leveling off from the market lows of 2010. Market depreciation had subsided to low single digits with some signs of market recovery emerging such as reduced days on market and housing inventory slightly above or below the equilibrium point of six month. The Federal Housing Finance Agency (FHFA) reports that property values had decreased in New Hampshire 1.49% from the third quarter of 2011 to the third quarter of 2012 in New Hampshire. The FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) decreased 1.40% in the same period. For a more local view the median sales price of a single family residence in Hudson that sold between July 27, 2011 and July 27, 2012 was $238,500 per the Multiple Listing Service. For the same period from 2010 to 2011 the sale price was $242,000 which is a decrease of 1.45%.

Sewer	☐ Public ☒ Other	Private system	

Off Site Improvements

Street	☒ Public	☐ Private
Alley	☐ Public	☐ Private
Sidewalk	☐ Public	☐ Private
Street Lights	☐ Public	☐ Private

Site description and characteristics: Subject site is located in the General-1 (G-1) zone which requires a minimum of a 2 acre lot and 200' of road frontage. With 162' of road frontage and a 1.22 acre lot the subject site is considered a legal, non-conforming lot of record as it existed prior to the current zoning requirements were put in place. Site is serviced by private well and sewer which is typical for the neighborhood due to a lack of municipal lines in place.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Other Elements				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1		1		1		1	.5			1,218
Level 2							2	2			736

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2.5 GLA: 1,954

Summarize Above Grade Improvements: Per MLS and assessment records subject has one bedroom and a half bath on the first floor, two bedrooms and two full baths on the second floor.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade						1				45	1,158
Other Area											

Summarize below grade and/or other area improvements: MLs shows 520 s.f. of finished basement are used as a den/study and recreation room. Level of finish and quality appears to be similar to that of above grade area.

Discuss physical depreciation and functional or external obsolescence: Room count with baths on same level as bedrooms suggest a functional floor plan. Seller statement shows updates of major mechanical systems (heat and water), interior view as per MLS show an updated and well maintained residence. No external inadequacies noted or assumed.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Exterior is contemporary in style with nearly 400 s.f. of exterior decking. Interior makes use of cathedral ceilings which has a floor to ceiling fieldstone fireplace and exposed beams in family room. Flooring is hardwood in living areas with the exception of bedrooms which are carpeting. Kitchen and baths are tile. Tax assessment records indicate updated baths with hard surface vanity tops.

Comments and reconciliation of the sales comparison approach: Three sales of similar size residences sold within three months of the effective date of valuation were considered. Comp 1 although similar to the subject in all other respects sold with its original kitchen and is adjusted accordingly. Of the three sales considered most weight is applied to comp 2 which required the least amount of net and gross adjustments.

Indication of Value by Sales Comparison Approach	$ 278,000

Owner	Caleb Mitchell				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,954 s.f. Contemporary on 1.22 acres. As indicated in the body of the report the site is located in the G-1 district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

Client	Devine, Millimet & Branch, P.A				
Property Address	5 Hawkview Rd				
City	Hudson	County Hillsborough	State NH	Zip Code 03051	
Owner	Caleb Mitchell				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the General-1 zoning requirements of 200' road frontage for a single family building lot and a minimum of 2 acres, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, that We, **RYAN T. LEDGER AND TIFFANY M. TESTA,** husband and wife, of 7 Hawkview Road, Hudson, County of Hillsborough, State of New Hampshire,

for consideration paid, grant to

CALEB MITCHELL, a single man, of 9 Northwood Drive, Nashua, County of Hillsborough, State of New Hampshire, with **WARRANTY COVENANTS:**

A certain tract of land with the buildings thereon in Hudson, Hillsborough County, New Hampshire, situated on the northerly side of Hawkview Road and being shown as New Lot 6-7 on plan entitled "Gibson & Hawkview Road, Hudson, New Hampshire, dated March 1986, Maynard & Paquette, Inc., Consulting Engineers & Land Surveyors, Scale: 1"=50'," which plan is recorded in the Hillsborough County Registry of Deeds as Plan #21626, and bounded and described as follows:

SOUTHERLY:	by Hawkview Road, 162.18 feet;
EASTERLY:	by New Lots 6-6, 6-5, and 6-4 as shown on said plan 351.19 feet;
NORTHERLY:	by Lot 6-4, 135.19 feet;
WESTERLY:	by Public Service Company of New Hampshire, 370.00 feet.

Subject to building setback lines shown on Plan #21626 recorded in the Hillsborough County Registry of Deeds.

Meaning and intending to hereby convey the same premises conveyed to the within grantors by deed of William J. Lacy and Sandra M. Lacy, dated October 13, 2000 and recorded in the Hillsborough County Registry of Deeds in Volume 6302, Page 1889.

We, Ryan T. Ledger and Tiffany M. Testa, the within grantors, hereby release to the grantee, all our rights of homestead and other interests therein.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

▪ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	▪ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 29B Lund Dr
Hudson, NH 03051

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** July 13, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is traversed by a high voltage transmission line (HVTL) corridor. For the purpose of this assignment, the subject property has been appraised that no HVTL exists.The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Hudson, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 14, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Neighborhood Name: Briar Oaks

PUD ☐ Condo ☒ HOA: $ 0 / mo.

Amenities: Common land. No condo fee, subject unit is a condex

Market area description and characteristics: The subject is located in Hudson, NH a town of approx. 22,000 located on the NH/MA border. The town is directly across the Merrimack River from the city of Nashua, NH, a major employment, retail, and residential center in southern New Hampshire. The subject neighborhood is considered to be Briar Oaks Estates which is a development of condex style condominium units. The immediate neighborhood is consistent with single family units, a broader composition of the area would also include single family residential sites as well as light industrial and commercial development.

In the third quarter of 2012 single family residential housing prices in southern NH, including Hudson were leveling off from the market lows of 2010. Market depreciation had subsided to low single digits with some signs of market recovery emerging such as reduced days on market and housing inventory slightly above or below the equilibrium point of six month. The Federal Housing Finance Agency (FHFA) reports that property values had decreased in New Hampshire 1.49% from the third quarter of 2011 to the third quarter of 2012 in New Hampshire. The FHFA reports that the Manchester-Nashua Metropolitan Statistical Area (MSA) decreased 1.40% in the same period. For a more local view the median sales price of a single family residence in Hudson that sold between July 27, 2011 and July 27, 2012 was $238,500 per the Multiple Listing Service. For the same period from 2010 to 2011 the sale price was $242,000 which is a decrease of 1.45%.

Off Site Improvements

Street	☒ Public	☐ Private	
Alley	☐ Public	☐ Private	
Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: Subject site is comprised of 2.23 acres which the subject property has a 50% undivided interest in the land with the adjoining unit at 29A Lund Drive. The site is also improved with an inground pool which although located on the common land it is generally accepted that the use of the inground pool is reserved for unit 29B.

Bylaws for the subject unit recorded at Hillsborough County Registry of Deeds book 3946 page 42 identify two units in the "association" which are units 29A and 29B. Both units have an undivided interest in the land with rights to limited common area (driveway, walkway, exterior decks, etc). it is typical and common for condex associations to have no condo fees with general maintenance items reserved for a voluntary agreement between the two unit owners.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Other Elements				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1		1		1			.5			952
Level 2							3	1			974

Finished area above grade contains: Bedroom(s): 3 Bath(s): 1.5 GLA: 1,926

Summarize Above Grade Improvements: Per MLS and tax assessment records first floor includes a fireplaced family room, kitchen, living room, and half bath. second floor is improved with three bedrooms and a full bath.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											700
Other Area											

Summarize below grade and/or other area improvements: Per MLS and assessment records the subject unit has an unfinished basement.

Discuss physical depreciation and functional or external obsolescence: MLS interior and exterior photos show a unit in general good upkeep with no deferred maintenance or repair items mentioned.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Condex units with three bedrooms above grade level typically represent both the larger end of size and price for condominium units. Inground pool for a condex unit is considered a superadequacy due to seasonal use as well as considered an over improvement for the price strata.

Comments and reconciliation of the sales comparison approach: Four sales of three bedroom condexes are considered in the sales comparison approach. Adjustments are made for differences in physical age, above and below grade living area. Comp 4 sold over six months since the effective date of valuation and is adjusted for differences in market condition. Of the four comparables considered weight is applied to comps 2 and 3 as they required the least amount of net and gross adjustments.

Indication of Value by Sales Comparison Approach	$ 200,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,926 s.f. Condex on 2.23 acres of common land. As indicated in the body of the report the site is located in the R2 district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-044

Client	Devine, Millimet & Branch, P.A				
Property Address	29B Lund Dr				
City	Hudson	County Hillsborough	State NH	Zip Code 03051	
Owner	James N. Munroe				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the R2 zoning requirements of 150' road frontage for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is not considered applicable for estimating values for condominiums due to common and shared interests such as land, structures, and amenities.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED
(Statutory Form, N.H. RSA 477:27)

FOR CONSIDERATION PAID, Ronald Fortier and Lora Fortier, as husband and wife, of 29 B Lund Drive, Hudson, State of New Hampshire; *grant(s) to* James N. Munroe, a married man, of 59 A Lund Drive, Hudson, State of New Hampshire; with **WARRANTY COVENANTS**

individually

A certain condominium unit (the "Unit") in the Briar Oaks Estates Condominium (the Condominium) in the City of Hudson, County of Hillsborough, State of New Hampshire, more particularly bounded and described as follows:

Unit B, Lot 154 as defined, described and identified in the Briar Oaks Estates Condominium Declaration recorded in the Hillsborough County Registry of Deeds in Book 3946, Page 42 (which Declaration, together with the By-Laws, recorded in said Registry in Book 3946, Page 56, and other appendices thereto, is sometimes hereinafter called the "Declaration"), and on a certain site plan entitled "Condominium Plan, Lot 154, Briaroaks Estates, Lund Drive, Hudson, NH Prepared for William K. Copenhaver and Richard W. Lacasse, 21 Columbia Avenue, Nashua, NH 03060" by Maynard & Paquette, Inc. dated January, 1987, and certain floor plans (all together sometimes hereinafter called the "Plans") and recorded in said Registry as Plan #20294.

Also conveying a 50% undivided interest in the Common Area, as defined, described and identified in the Declaration and on the Plans.

Also conveying the following rights and easements:

An exclusive easement to use the Limited Common area appurtenant to the Unit conveyed herein, as defined and described in the Declaration and on the Plans.

Easements in common with the other Unit Owners to use the Common Area, excepting Limited Common Area, as set forth in the Declaration.

Unofficial Document

Non-exclusive easements for structural support and encroachments and for repair, and other rights and easements as set forth in the Declaration.

This conveyance is subject to the following:

Easement to New England Telephone and Telegraph and Public Service Company of New Hampshire as shown upon said Plans and recorded in the Hillsborough County Registry of Deeds in Book 3479, Page 170.
There is excepted from the unit conveyed herein in Common Area lying with said Unit as set forth in the Declaration.
Non-exclusive easements for structural support, encroachments and for repair in favor of the owners of other Units in the Condominium, as set forth in the Declaration, and the other easements, covenants and restrictions of record, including, without limitation, the easements, covenants and restrictions specifically referred to in the Declaration.

the other provisions of the Declaration as amended from time to time by instruments recorded in the Hillsborough County Registry of Deeds, ass of which provisions, together with any amendments thereto shall constitute covenants running with the land and shall bind any person having at any time any interest or estate in the said Unit, as though such provisions were recited and stipulated at length therein, and the provisions of the Condominium Rules, adopted pursuant to the Declaration, and the New Hampshire Condominium Act.

Meaning and intending to describe and convey the same premises as conveyed to the within grantor(s) by deed dated August 31, 2001 and recorded with said deeds in Book 6482, Page 2610.

We, Ronald Fortier and Lora Fortier do hereby release all homestead rights in subject property.

Executed this 13th day of July, 2012

Ronald Fortier

Lora Fortier

State of New Hampshire
County of Hillsborough

On this 13th day of July, 2012, before me personally appeared Ronald Fortier and Lora Fortier, to me known to be the person(s) described in and who acknowledged that he/she/they executed the same as his/her/their free act and deed.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 224 Portland St
Lancaster, NH 03584

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** January 14, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Lancaster, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and the MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Amenities:

Market area description and characteristics: Lancaster, NH is the county seat of Coos county and the second largest municipality in Coos county after the city of Berlin. Approximately half of the town's residents reside downtown which is the intersection of routes 2 and 3. US routes 2 and 3 leading into downtown Lancaster provides connectivity to essential services as most of the areas retail, professional, health, and municipal services are located in the town center.

As with the broader state-wide market, single family residential market conditions were slightly improving at the beginning of 2013. In Lancaster the median sales price for a single family residence in 2013 was $120,000 which is an improvement from 2012 which had a average sales price of $106,000. Although housing prices were improving from market lows of 2009 and 2010, inventory levels remained high with a 16 month inventory of single family housing available in the first quarter of 2013 and an average days on market of 192 days.

Site description and characteristics: Set back from Portland Road the subject site has unobstructed views of the Kilkenny Range to the east and the Presidential Range to the southeast. Marketing material for the subject property identifies a cut trail through the subject property to route 5A identified on the NH Snowmobile Association's statewide trail system. The site is bisected by an easement to the Maine Central Rail Road at the eastern most end of the lot (see attached site plan). The eastern most boundary of the subject site boarders approximately 580' on the Israel River which is on the opposite side of the rail easement. Due to the distance between the dwelling and the river bank, (approximately 1,000') the river frontage is not considered to be a substantial feature for the subject property.

With just over 24 acres, set back from the road, and unobstructed views of the northeast's highest peaks, the site size, privacy, and views are considered to the the subject property's most marketable features.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Car Storage	☒ Driveway Hardpack	☐ Garage 2 att / 2 detach	☐ Carport		☐ Finished
Other Elements	The subject dwelling has a 23' x 24' attached two car attached garage. Additionally the site also has a 46' x 31' detached, two car attached garage (see photo addenda) that also has 375 s.f. as finished area as well as an unfinished second floor.				

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				2	1			1,400
Level 2											

Finished area above grade contains: **Bedroom(s):** 2 **Bath(s):** 1 **GLA:** 1,400

Summarize Above Grade Improvements: Per assessment records the subject dwelling has 1,400 s.f. of above grade living area. MLS listing identifies two bedrooms and a full bath above grade. Deck off of dining/living room area has commanding views of distant mountains.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade				1	1	1	1	.5	1	88	1,400
Other Area											

Summarize below grade and/or other area improvements: Per assessment records the basement is finished with 1,232 s.f. MLS identifies a bedroom, half bath, recreation rooms below grade level.

Discuss physical depreciation and functional or external obsolescence: Functional limits of a single floor two bedroom, one bath residence largely mitigated by 1,200+ s.f. of finished raised basement area. MLS interior photos and comments describe a residence that is generally well kept. Residence set back from road offers added privacy in a natural setting with no known negative external influences or inadequacies.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: The most marketable feature of the subject property is its larger than typical lot of land that offers a natural setting and extraordinary views of mountain ranges. With two bedrooms and 1,400 s.f. above grade the residence is smaller than most residences that compete in the subject's price strata. The two car detached garage which is in addition to the two car attached garage is considered a superadequacy or overimprovement to the site. The detached garage with small finished area may have been built for or appeal to a small business owner who would find benefit in having a home business/office separate from their residence.

Comments and reconciliation of the sales comparison approach: Sales were selected that are in the subject's market area that had some degree of mountain views as well as larger than typical acreage. Adjustments are made for differences in views and lot size where applicable. Of the three comparables considered most weight is placed on comps 2 and 3 as they are most similar in above grade living area as the subject.

Indication of Value by Sales Comparison Approach $ 290,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

File No. 11-011-045

Client	Devine, Millimet & Branch, P.A				
Property Address	224 Portland St				
City	Lancaster	County Coos	State NH	Zip Code 03584	
Owner	Joel A. Sanford and Karen L. Peabody				

The subject site as of the effective date of the appraisal was improved with a 1,400 s.f. Ranch on 24.01 acres. As indicated in the body of the report the site is located in the Agricultural district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

The Agricultural district in Lancaster requires a minimum of 50' of frontage on a public way. However, due to the location of the dwelling on the site, its position in relatively close proximity to the road as well as its position to encompass the views that the subject lot has to offer, it would not be financially feasible at this time to sub-divide the subject property to accommodate an additional lot. Due to the lot shape and the position of the existing dwelling, an added lot (and dwelling) would encroach on the existing privacy and views that the existing dwelling benefits from.
In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, That We, **Arlie D. McGaw and Heidi J. McGaw, husband and wife, Trustees of the McGaw Family Trust,** with a mailing address of 224 Portland Street, Lancaster, NH 03584 for consideration paid, grant to **Joel A. Sanford and Karen L. Peabody,** both with a mailing address of 41 Franklin Street, Berlin, NH 03570 as Joint Tenants with Rights of Survivorship, with Warranty Covenants:

Certain tracts or parcels of land, together with the buildings and other improvements thereon, situated on the easterly side of U.S. Route 2 in Lancaster, Coos County, New Hampshire, being more particularly bounded and described as follows:

Parcel One:

Beginning at a point on the easterly edge of said Route 2 at the most northwesterly corner of the parcel herein to be conveyed and at the most southwesterly corner of land now or formerly of Frank and Resi Pecze;

Thence running North seventy-six degrees East (N 76° E) along the land of Pecze and continuing on said course to the westerly bank of the Israel River;

Thence running South fourteen degrees East (S 14° E) for five hundred eighty (580) feet, more or less, along the westerly edge of the said river to a corner;

Thence turning and running South seventy-three degrees West (S 73° W) for three hundred fifty (350) feet, to a point;

Thence turning and running South fifty-five degrees West (S 55° W) for four hundred eighty-eight (488) feet, more or less, to a point;

BK I 369PG 0527

Initials

Initials

Thence turning and running South seventy-six degrees West (S 76° W) for six hundred forty (640) feet, more or less, to a corner and the easterly edge of land now or formerly of Norman H. and Ellen M. McLaughlin;

Thence turning and running North twelve degrees West (N 12° W) partly along a stone wall for five hundred fifty (550) feet, more or less, to an iron pin;

Thence turning and running South seventy-six degrees West (S 76° W) for four hundred thirty-three (433) feet, more or less, to an iron pin on the easterly edge of said Route 2;

Thence turning and running northwesterly along the easterly edge of Route 2 to the point of beginning.

Parcel Two:

Being all the land formerly of Beverly Esson that lies westerly of the old New Hampshire Route 2 easterly right-of-way line and easterly of the new controlled access right-of-way line as established by New Hampshire State Highway Project, Lancaster RF-034-1(8) - P- 2075-A in 1976 on file in the records of the New Hampshire Department of Public Works and Highways and to be recorded in the Coos County Registry of Deeds; bounded on the south by land now or formerly of Norman H. McLaughlin, Jr. and Ellen M. McLaughlin and on the north by other land now or formerly of the State of New Hampshire. See Commissioner's Return of Highway Layout recorded in the Coos County Registry of Deeds in Book 588, Page 251.

Parcel Two contains two thousandths (0.002) of an acre, more or less.

Subject to Current Use dated June 4, 1991 and recorded in the Coos County Registry of Deeds at Book 779, Page 419.

Parcel One:

Subject to the rights-of-way heretofore granted to the Maine Central Railroad and Public Service Co. of New Hampshire. Also subject to "present domestic water rights" orally granted to McLaughlin.

Parcel Two:

Subject to the rights of any utilities that may occupy the parcel of land earlier described.

Meaning and intending to describe and convey the same premises as conveyed to Arlie D. McGaw and Heidi J. McGaw, Trustees of the McGaw Family Trust by deed dated February 10, 2005 and recorded in Volume 1115, Page 270, of the Coos County Registry of Deeds.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 2220 Route 117
Sugar Hill, NH 03586

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

SUBJECT PROPERTY HISTORY

Owner of Record: Robert Michael Mancini, Jr. & Amy Beth Lasalle

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on February 25, 2011 for $339,000, reduced to $249,000 on September 7, 2011, under agreement on September 10, 2011 and closed on November 18, 2011 for $235,000 with VA financing.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 250,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: November 18, 2011	**$ 250,000**

Exposure Time: 3 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. Client:	Devine, Millimet & Branch, P.A	Client File #:	11-011-047
Subject Property:	2220 Route 117, Sugar Hill, NH 03586	Appraisal File #:	11-011-047

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** November 18, 2011

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property abuts a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Sugar Hill, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Amenities:

Market area description and characteristics: Sugar Hill is a small residential community of less than 600 people located just north of the Franconia Notch through the White Mountain National Forest. Connectivity to essential services is adequate as I-93 is within a reasonable distance of Sugar Hill. The proximity to I-93 offers connectivity to Littleton, NH which is a 20 minute drive north or Lincoln, NH which is a 30 minute drive south.

Due to the low population density in Sugar Hill it is difficult to determine market direction using data exclusive to Sugar Hill as in any given year there are less than twenty residential sales that received market exposure through the MLS. In many years there have been less than ten sales within the community. In 2011 there were 13 residential sales sold that had market exposure through the MLS, however there was at most times over 30 homes listed for sale which indicates a significant oversupply.

Looking to the broader market area to include Grafton County as a whole, the median sales price in Grafton county for a single family residence in 2010 was $174,550 with 144 days on market. In 2011 the median price improved 0.25% to $175,000 with 137 days on market. Statewide in the fourth quarter of 2011 the precipitous market decline in residential values that the state saw had leveled off and was declining at a nominal rate of 1.51% in the fourth quarter of 2011.

Site description and characteristics: The subject deed and site plan identify a 50' right of way from route 117 to the subject site across the land of an abutter. At slightly over ten acres and size and over 650' of frontage on route 117 it would appear that there is a sufficient amount of acreage and frontage for sub-division into two lots of record. However the topography of the frontage in areas along route 117 is steep in areas which presents both physical and financial challenges in developing a second lot of record. As it remains, the existing 10.12 acre lot is accessed by a 50' right of way over land of others that provides better access over less steep terrain.

Per MLS the subject dwelling is positioned to enjoy views of distant mountains and is considered a marketable feature of the subject property.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. As mentioned previously the topography of the road frontage would present both physical and financial challenges in providing a second driveway cut. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				1	1			972
Level 2							2	1			729

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2 GLA: 1,701

Summarize Above Grade Improvements: Per MLS and tax assessment records the subject dwelling has just over 1,700 s.f. of above grade living area. First floor has one bedroom and second floor has two. There are full baths on both floors.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade				1						40	972
Other Area											

Summarize below grade and/or other area improvements: Both MLS and tax assessment records indicate a small area in the basement as finished. MLS identifies the area as a den, tax assessment records show the area to be 280 s.f. in size.

Discuss physical depreciation and functional or external obsolescence: MLS Interior photos show a relatively updated and well maintained residence. All surfaces and fixtures appear to be original yet modern. Room locations suggest a functional floor plan. No external inadequacies noted or assumed.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Built in 2000 the subject dwelling is younger than the predominant age for the general market area. At 1,701 s.f. of living area it is slightly small than typical. The most marketable feature of the property is its distant mountain views.

Comments and reconciliation of the sales comparison approach: Sales in Sugar Hill as well as those with views of the White Mountains were considered in the sales comparison approach. Adjustments were made for surplus land, views, and differences in living area where applicable. Most weight is applied to comps 1 and 2 as they are most similar to the subject as view properties.

Indication of Value by Sales Comparison Approach	$ 250,000

Owner	Robert Michael Mancini, Jr. & Amy Beth Lasalle				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,701 s.f. Cape on 10.12 acres. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum File No. 11-011-047

Client	Devine, Millimet & Branch, P.A				
Property Address	2220 Route 117				
City	Sugar Hill	County Grafton	State NH	Zip Code 03586	
Owner	Robert Michael Mancini, Jr. & Amy Beth Lasalle				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

The existing 10.12 acre lot is accessed by a deeded 50' right of way over the land of an abutter. The 50' right of way is the preferred access to the subject lot from the public road due to the subject lot having steep topography as its road frontage. Due to the topography of the subject's road frontage it was not financially feasible as of the effective date of the appraisal to sub-divide the subject lot any further. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL PERSONS BY THESE PRESENTS, that we, **PAUL W. PINKHAM and SHARON R. PINKHAM**, husband and wife, both with an address of 2220 Route 117, Sugar Hill, Grafton County, New Hampshire 03586, for consideration paid, grant to **ROBERT MICHAEL MANCINI, JR. and AMY BETH LASALLE**, both with an address of 375 Millbrook Road, Landaff, Grafton County, New Hampshire 03585, with **WARRANTY COVENANTS**, as joint tenants with rights of survivorship, the following described real estate:

A certain piece or parcel of land, together with the buildings thereon, situated in the Town of Sugar Hill, County of Grafton, State of New Hampshire, more particularly described as Lot 1 on a certain plan entitled "Subdivision Plan Land of Richard Gould" prepared by Harry J. Burgess, Surveyor/Forester, Bath, NH, approved by the Sugar Hill Planning Board on April 7, 1998 and recorded in the Grafton County Registry of Deeds on April 28, 1998 as Plan # 9278. Said plan being incorporated herein by reference and said parcel being further bounded and described as follows:

Beginning at an iron pin set on the northerly side of Route 117, said pin is also at the western limit of a utility easement and at the southeast corner of Lot 1; thence north 66 degrees 24 minutes 11 seconds west 45.50 feet to a highway bound, thence along a curve to the west with a radius of 987.92 feet, for a length of 416.17 feet to a highway bound; thence north 87 degrees 42 minutes 27 seconds west 193.20 feet to an iron pipe found on the north side of Route 117; thence North 34 degrees 26 minutes 17 seconds East 305.07 feet along a wire fence and land of Clough to an iron pipe found at a fence corner; thence North 33 degrees 19 minutes 14 seconds west 473.75 feet along a meandering fence and land of Clough to a "rebar" found; thence North 41 degrees 21 minutes 49 seconds West 25.00 feet to an angle iron found; thence North 48 degrees 40 minutes 29 seconds East 271.53 feet along a stonewall and land of Straw/Shepard to an iron pipe found; thence South 59 degrees 57 minutes 41 seconds East 338.67 feet along old fence and land of Pinney to the end of stonewall; thence South 39 degrees 17 minutes 15 seconds East 101.65 feet along said stonewall to a "rebar" found; thence South 66 degrees 42 minutes 04 seconds East 235.32 feet along the stonewall and land of Pinney to an iron pin

1

BK3837PG0387

set in the western limit of the utility easement; thence South 2 degrees 49 minutes 45 seconds West 585.77 feet along the utility easement to the point of beginning. Containing 10.12 acres.

Together with the right to travel in common with the owners of Lot 1 on a certain plan entitled Proposed Subdivision, Land of: Donald Straw & David Shepard, Located in: Sugar Hill, N.H., as Surveyed: June 1986 By: Boulanger Consulting", which plan was recorded in the Grafton County Registry of Deeds on June 11, 1987 as Plan No 4159, over a certain fifty (50) foot wide right of way shown on the aforesaid plan as extending in a general northerly or northeasterly direction from Route 117 across land now or formerly of Aldrich and continuing along the boundary between the northerly or northwesterly line of Lot 2 as shown on said plan and the southerly or southeasterly line of Lot 1. Also granting to the grantee the right to improve, maintain and repair said right of way.

Meaning and intending to convey and describe all and the same premises as conveyed to the grantors, Paul W. Pinkham and Sharon R. Pinkham, by Warranty Deed of Richard Gould dated April 30, 1998 and recorded in the Grafton County Registry of Deeds on May 7, 1998 at Book 2313, Page 342. With regard to the above-described right-of-way, reference is made to the Warranty Deed of Clinton Clough Construction, Inc. to Paul W. Pinkham and Sharon R. Pinkham dated May 6, 1998 and recorded on May 7, 1998 at Book 2313, Page 345.

And we, Paul W. Pinkham and Sharon R. Pinkham hereby release all rights of homestead and other interests in the above-described and herein-conveyed premises.

WITNESS our hands this 10th day of November, 2011.

Witness — Paul W. Pinkham

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 216 Hadley Rd
Sugar Hill, NH 03586

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** August 1, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Sugar Hill, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and seller property disclosure.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Amenities:

Market area description and characteristics: Sugar Hill is a small residential community of less than 600 people located just north of the Franconia Notch through the White Mountain National Forest. Connectivity to essential services is adequate as I-93 is within a reasonable distance of Sugar Hill. The proximity to I-93 offers connectivity to Littleton, NH which is a 20 minute drive north or Lincoln, NH which is a 30 minute drive south.

Due to the low population density in Sugar Hill it is difficult to determine market direction using data exclusive to Sugar Hill as in any given year there are less than twenty residential sales that received market exposure through the MLS. In many years there have been less than ten sales within the community. In 2012 there were 12 residential sales sold that had market exposure through the MLS, however there was at most times over 30 homes listed for sale which indicates a significant oversupply.

Looking to the broader market area to include Grafton County as a whole, the median sales price in Grafton county for a single family residence in 2011 was 175,000 with 137 days on market. In 2012 the median price was $169,250 with 152 days on market which is a decline of 3.29% Statewide in the third quarter of 2012 the precipitous market decline in residential values that the state saw had leveled off and was declining at a nominal rate of 1.49% in the third quarter of 2012.

Off Site Improvements

Site description and characteristics: The subject lot was marketed as having natural and some distant views. Photos in the MLS show an open view to a small hillside in a natural state. The subject lot is in the Rural Residential 1 (RR1) zoning district which permits a single family dwelling with a minimum of a 3 acre lot and 200' of road frontage.

The attached legal description identified covenant, conditions, and restrictions (CCR's) recorded at Grafton county registry of deeds book 1566 page 62. The CCR's prevent any further sub-division of any lot located in the Nason Farms development or any other use of the parcel for any other use except single family residential (home office use is included).

The CCR's that the property is subject to is primarily for the preservation of the single family residential character and composition of the neighborhood and is not considered to be adverse to the marketability of the subject property.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements due to the restrictive covenants contained in the deed. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. Living room features an exposed beam cathedral ceiling with a floor to ceiling stone mason fireplace. Kitchen has tile flooring, living and dining rooms with wood flooring, and bedrooms carpeting.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade						1				38	1,363
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the basement is finished with a 522 s.f. recreation room. Finish and materials in basement finished area appear to be commensurate with those used in the above grade living space.

Discuss physical depreciation and functional or external obsolescence: No external inadequacies noted or assumed. Based on seller statement of property condition and MLS presentation, physical depreciation appears to be reasonable and as expected for physical age. Floor plan description identifies a functional and marketable floor plan.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: MLS photos show a modern kitchen with wood floors, upscale appliances, cherry cabinets, and soapstone counters. Interior centerpiece is the living room with stone mason fireplace, and cathedral ceiling with exposed beams and truss supports. Exterior features include a 14' x 14' enclosed, screen porch, a 6' x 31' open farmers porch, and a 920 s.f. deck that is positioned for viewing of a natural fields and hillside.

Comments and reconciliation of the sales comparison approach: Three sales in the subject community are considered in the sales comparison approach. All three sales were of similar size to the subject property in terms of living area. Comp 1 is similar to the subject as a log cape with some minimal views however the kitchen was older and is adjusted when compared to the subject's kitchen which is more modern. Comp 2 has superior views, comp 3 was not marketed as have any views.
Each comparable sale is similar to the subject in at least one significant aspect. As such, all three sales were weighted equally within the sales comparison approach.

Indication of Value by Sales Comparison Approach	$ 325,000

Owner	Thornybush Revocable Trust				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 2,081 s.f. Log Cape on 6.84 acres. As indicated in the body of the report the site is located in the RR1 district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

File No. 11-011-048

Client	Devine, Millimet & Branch, P.A				
Property Address	216 Hadley Rd				
City	Sugar Hill	County Grafton	State NH	Zip Code 03586	
Owner	Thornybush Revocable Trust				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the restrictions in the attached deed the subject lot cannot be used for any other purpose than single family residential or be further sub-divided. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS that we, **CHRISTOPHER R. THAYER and WENDY K. THAYER**, husband and wife, both with a mailing address of 216 Hadley Road, Sugar Hill, New Hampshire 03586, for consideration paid, grant to **JOHANN van HEERDEN and LAUREN van HEERDEN, TRUSTEES OF THORNYBUSH REVOCABLE TRUST OF 2012, udt June 25, 2012**, with a mailing address of is 64 Dunlap Drive, Bedford, New Hampshire 03110, with **WARRANTY COVENANTS**, the following described real estate:

A certain parcel of land situated northwesterly of Hadley Road, so-called, in the Town of Sugar Hill, County of Grafton, State of New Hampshire, more particularly described as follows:

BEGINNING at an iron pin in the northwesterly line of Hadley Road, said iron pin being the southwesterly corner of the herein described premises; thence North 28° 10' 21" East two hundred twenty-nine and twenty-seven hundredths (229.27) feet along a stone wall and land now or formerly of Bertha Wilson to an iron pin; thence turning and running North 44° 01' 35" West one hundred sixteen and six tenths (116.60) feet along said stone wall and land now or formerly of Bertha Wilson to an iron pin; thence turning and running North 34° 29' 12" East six hundred eighteen and twelve hundredths (618.12) feet along said stone wall and land now or formerly of Bertha Wilson to an iron pin; thence turning and running South 77° 24' 40" East one hundred eighty-one and five hundredths (181.05) feet along said stone wall and land now or formerly of Bertha Wilson to a point; thence turning and running South 4° 05' 14" West seven hundred twenty-three and one tenth (723. 10) feet along line of Lot 14, as shown on the hereinafter mentioned plan, to an iron pin in said northwesterly line of Hadley Road; thence following the northwesterly line of Hadley Road five hundred nine and eighteen hundredths (509.18) feet to the point of beginning. This lot contains 6.84 acres.

The above-described premises are shown as Lot #13 on a certain plan entitled "Final Plan of Subdivision, Nason Farm, Hadley Road, Sugar Hill, New Hampshire", prepared by William S. Smith, June 1985, approved by the Sugar Hill Planning Board on July 2, 1985, and recorded in the Grafton County Registry of Deeds as Plan No. 2792. ALSO SEE plan revised September 1985 recorded in the Grafton County Registry of Deeds as Plan No. 2953, AND revised plan approved by the Sugar Hill Planning Board on January 13, 1986, and recorded in the Grafton County Registry of Deeds as Plan No. 3177.

Unofficial Document

BK 3906 PG 0034

RESERVING from this conveyance a right-of-way for electric transmission lines in favor of Public Service Company of New Hampshire, as contained in deed of easement dated November 6, 1945, and recorded in the Grafton County Registry of Deeds at Book 773, Page 97.

RESERVING from this conveyance a right-of-way for electric and telephone transmission lines in favor of New Hampshire Electric Cooperative, Inc. and New England Telephone and Telegraph Company, a/k/a Bell Atlantic-North, as contained in Right of Easement dated August 1, 1999, and recorded in the Grafton County Registry of Deeds at Book 2419, Page 297.

SUBJECT to the conditions and restrictions as conveyed in DECLARATION OF RESTRICTIVE COVENANTS dated August 23, 1985, recorded in the Grafton County Registry of Deeds, Book 1557, Page 524, re-recorded in said Registry on October 10, 1985, at Book 1566, Page 62. STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 354 Garnet Hill Rd
Sugar Hill, NH 03586

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** November 26, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Sugar Hill, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and seller statement of property condition.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Amenities:

Market area description and characteristics: Sugar Hill is a small residential community of less than 600 people located just north of the Franconia Notch through the White Mountain National Forest. Connectivity to essential services is adequate as I-93 is within a reasonable distance of Sugar Hill. The proximity to I-93 offers connectivity to Littleton, NH which is a 20 minute drive north or Lincoln, NH which is a 30 minute drive south.

Due to the low population density in Sugar Hill it is difficult to determine market direction using data exclusive to Sugar Hill as in any given year there are less than twenty residential sales that received market exposure through the MLS. In many years there have been less than ten sales within the community. In 2012 there were 12 residential sales sold that had market exposure through the MLS, however there was at most times over 30 homes listed for sale which indicates a significant oversupply.

Looking to the broader market area to include Grafton County as a whole, the median sales price in Grafton county for a single family residence in 2011 was 175,000 with 137 days on market. In 2012 the median price was $169,250 with 152 days on market which is a decline of 3.29% Statewide in the fourth quarter of 2012 the precipitous market decline in residential values that the state saw had leveled off and was declining at a nominal rate of 1.11% in the fourth quarter of 2012.

Off Site Improvements

Street	☐ Public	☒ Private	
Alley	☐ Public	☐ Private	
Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: The subject lot was marketed as having natural and some distant views. Photos in the MLS show a slightly obstructed view (by trees) of a distant foothill. The subject lot is in the Rural Residential 1 (RR1) zoning district which permits a single family dwelling with a minimum of a 3 acre lot and 200' of road frontage.

There are covenant, conditions, and restrictions (CCR's) recorded at Grafton county registry of deeds book 2913 page 347. The CCR's prevent any further sub-division or placement of mobile homes on the property.

The CCR's that the property are subject to are primarily for the preservation of the single family residential character and composition of the neighborhood and is not considered to be adverse to the marketability of the subject property.

Garnett Hill Road is a private drive that is not town maintained. Deed identifies that the owner shall be responsible for the private road maintenance and snow removal.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements due to the restrictive covenants contained in the deed. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				2	1			912
Level 2							1	1			252

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2 GLA: 1,164

Summarize Above Grade Improvements: Floor plans attached to MLS listing indicate a dwelling that has 1,164 s.f. of living space. First floor has two bedroom, bath, kitchen, living, and dining room. Living room features an exposed beam cathedral ceiling with a stone mason fireplace Second floor has a loft that has been marketed as a third bedroom and a full bath.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											912
Other Area											

Summarize below grade and/or other area improvements: Per MLS subject basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: Seller property statement and MLS describe a well cared for residence with no defined repairs or deferred maintenance at time of sale.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: At less than 1,200 s.f. the subject dwelling is smaller than the typical residence. Log homes have a significant amount of second floor space open to below which is the case of the subject dwelling. The open space and cathedral ceilings due add a significant amount of character and marketability to the residence.

Comments and reconciliation of the sales comparison approach: Three sales in Sugar Hill similar in appeal as the subject are considered in the sales comparison approach. Adjustments are made where applicable for varying degrees of views. All three sales were weighted equally within the sales comparison approach.

Indication of Value by Sales Comparison Approach	$ 219,000

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.
In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,164 s.f. Log Cape on 14.50 acres. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

City	Sugar Hill	County Grafton	State NH	Zip Code 03586	
Owner	Joseph Andreozzi IV				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

Due to the restrictions in the attached deed the subject lot cannot be used for any other purpose than single family residential or be further sub-divided. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS, that **Charles H. Sherrill, Trustee of The Charles H. Sherrill 2007 Trust**, with an address of 858 Hale Street, Beverly Farms, Massachusetts 01915-2260, for consideration paid, grants to **Joseph Andreozzi, IV**, of 728 Newman Avenue, Seekonk, Massachusetts 02771, with *WARRANTY COVENANTS*, the following described premises:

A certain tract or parcel of land, together with the buildings and improvements thereon, situate in the Town of Sugar Hill, County of Grafton and State of New Hampshire, being described as follows:

Lot 1 containing 14.5 acres, more or less, as shown on a Plan entitled "Subdivision of Land, Arthur J. Chase, Garnet Hill Road, Sugar Hill, N.H.," surveyed by Vander-Heyden Land surveying, dated October 22, 2002, approved by the Sugar Hill Planning Board on November 6, 2002 and recorded in the Grafton County Registry of Deeds as Plan 10801, Sheet 2 of 2.

ALSO CONVEYING herewith a right-of-way in common with others for ingress and egress for pedestrian or vehicular traffic over Garnet Hill Road, so-called.

By acceptance of this deed, the Grantees, their successors and assigns, covenant and agree that they shall pay a pro-rata share of the expenses for the cost of repair, maintenance and snow removal related to the private roadway known as Garnet Hill Road until such time as the Town of Sugar Hill accepts said roadway as a public road.

Meaning and intending to describe and convey the premises which were conveyed to the grantor by warranty deed of Charles H. Sherrill and Christine H. Sherrill dated June 12, 2007, recorded at Grafton County Registry of Deeds, Book 3419, Page 988.

 BK 3934 PG 0945

The subject premises are not homestead property.

WITNESS my hand this 26th day of November, 2012.

The Charles H. Sherrill 2007 Trust

By: _____
Charles H. Sherrill, Trustee

STATE OF NEW HAMPSHIRE
COUNTY OF GRAFTON

On this the 26th day of November, 2012, before me, the undersigned officer, personally appeared the above-named Charles H. Sherrill, as Trustee of The Charles H. Sherrill 2007 Trust, known to me (or satisfactorily proven) to be the person whose names is subscribed to the within instrument and acknowledged that he executed the same, on behalf of The Charles H. Sherrill 2007 Trust, for the purposes therein contained.

Trustee's Certificate
(RSA 564-A:7)

The undersigned Charles H. Sherrill, Trustee of The Charles H. Sherrill 2007 Trust, have and did have on November 26, 2012, full and absolute power pursuant to and in accordance with said trust agreement to convey title to any real estate or interest in real estate, including buildings and other improvements thereon situate in Sugar Hill, in the County of Grafton and State of New Hampshire, more particularly being described as Lot 1, containing 14.5 acres, more or less, as shown on a certain plan entitled, "Subdivision of Land, Arthur J. Chase, Garnet Hill Road, Sugar Hill, N.H." surveyed by Vander-Heyden Land surveying October 22, 2002, and recorded in the Grafton County Registry of Deeds as Plan 10801, Sheet 2 of 2, and as described in a Warranty Deed from Charles H. Sherrill and Christine H. Sherrill to Charles H. Sherrill, Trustee of the Charles H. Sherrill 2007 Trust, dated June 12, 2007 and recorded in said Registry at Book 3419, Page 988, to be held in said Trust and no purchaser or third party shall be bound to inquire whether the Trustee has said power or is properly exercising said power or to see to the application of any trust asset paid to the Trustee for a conveyance thereof.

The Trustee further certifies that the undersigned is the sole Trustee of said Trust; that said Declaration of Trust has not been amended or revoked; that no successor Trustee has been appointed and that the undersigned has received all written authorizations from beneficiaries, if any, required by the terms of said Trust.

This Trustee's Certificate is signed this 26 day of November, 2012.

Charles H. Sherrill, Trustee as aforesaid
of The Charles H. Sherrill 2007 Trust

STATE OF NEW HAMPSHIRE
COUNTY OF GRAFTON

On this the 26th day of November, 2012, before me, the undersigned officer, personally appeared the above-named Charles H. Sherrill, as Trustee of The Charles H. Sherrill 2007 Trust, known to me (or satisfactorily proven) to be the person whose names is subscribed to the within instrument and acknowledged that he executed the same, on behalf of The Charles H. STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 798 Route 18
Sugar Hill, NH 03586

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

SUBJECT PROPERTY IDENTIFICATION

Address: 798 Route 18
City: Sugar Hill **County:** Grafton **State:** NH **ZIP:** 03586
Legal Description: See attached legal description
Tax Parcel #: Map 205, Lot 9 **RE Taxes:** 1,192.29 **Tax Year:** 2012
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Michael D. & Barbara M. Travis

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale through the Multiple Listing Service on September 12, 2012 for $89,500, reduced on October 22, 2012 to $84,900, reduced on December 5, 2012 to $79,500 under agreement on July 9, 2013, and closed on August 6, 2013 for $67,000 as a cash sale. There were no reported seller concessions.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 66,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: August 6, 2013	**$ 66,000**

Exposure Time: 6 months

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** August 6, 2013

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Sugar Hill, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

Amenities:

Market area description and characteristics: Sugar Hill is a small residential community of less than 600 people located just north of the Franconia Notch through the White Mountain National Forest. Connectivity to essential services is adequate as I-93 is within a reasonable distance of Sugar Hill. The proximity to I-93 offers connectivity to Littleton, NH which is a 20 minute drive north or Lincoln, NH which is a 30 minute drive south.

Due to the low population density in Sugar Hill it is difficult to determine market direction using data exclusive to Sugar Hill as in any given year there are less than twenty residential sales that received market exposure through the MLS. In many years there have been less than ten sales within the community. In 2013 there were 9 residential sales sold that had market exposure through the MLS, however there was at most times over 30 homes listed for sale which indicates a significant oversupply.

Looking to the broader market area to include Grafton County as a whole, the median sales price in Grafton county for a single family residence in 2012 was 169,250 with 152 days on market. In 2013 the median price was $179,000 with 143 days on market which is an increase of 5.76%. Statewide in the third quarter of 2013 single family residential values were increasing by 5.94%. Market conditions were improving due to diminished bank REO inventory, an improving employment market, and historically low interest rates.

Site description and characteristics: The subject lot is in the Rural Residential 1 (RR1) zoning district which permits a single family dwelling with a minimum of a 3 acre lot and 200' of road frontage.

The subject parcel was not marketed as having any significant views or features other than the 664 s.f. residence on site. Seller property disclosure reports basic utilities such as a dug well and a two bedroom septic system.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1		1				1	1			480
Level 2											184

Finished area above grade contains: Bedroom(s): 1 Bath(s): 1 GLA: 664

Summarize Above Grade Improvements: Subject was marketed as a one bedroom, one bath cabin on a slab basement with a second floor loft area.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											0
Other Area											

Summarize below grade and/or other area improvements: Both MLS and assessment records indicate a slab basement.

Discuss physical depreciation and functional or external obsolescence: Both assessment records and seller property statement indicate that the subject dwelling was built as new construction in 2011. MLS and interior photos market the property as requiring finish work. Photos show unpainted drywall ceilings, concrete slab interior floor, lack of interior baseboard, window, or door trim, and lack of any kitchen cabinets. Single bedroom floor plan limits the marketability of the property to a select sub-market that could function in a single bedroom residence. The second floor loft lacks access (such as stairs or a wall ladder) however given the first floor living area of 480 s.f. the typical buyer of a residence of the subject size would consider the loft area as usable ancillary space that would compliment the first floor living area.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: The subject dwelling is considered to be less than average in terms of size, construction materials, and finish. The typical residence in Sugar Hill is two to three times the size in terms of living area. The dwelling most likely was built; and would appeal to a typical buyer interested in a second residence. Second or vacation home buyers are less concerned with functional utility and amenities are are more concerned with location and proximity to features that appeal to their vacation interests.

Comments and reconciliation of the sales comparison approach: Comparables were selected from the subject's market area. Sales were selected that were found to be similar to the subject in terms of living area and functional utility. All sales are adjusted for condition when compared to the subject to reflect the subject's incomplete areas. The $10,000 condition adjustment is based on what the typical buyer would negotiate down or request in the form of a seller concession to finish areas.

Of the three comparables considered, most weight is applied to comp 3 as it is the most recent sale and most similar to the subject property in terms of size.

Indication of Value by Sales Comparison Approach	$ 66,000

File No. 11-011-050

Client	Devine, Millimet & Branch, P.A				
Property Address	798 Route 18				
City	Sugar Hill	County Grafton	State NH	Zip Code 03586	
Owner	Michael D. & Barbara M. Travis				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 664 s.f. Cabin on 2.18 acres. As indicated in the body of the report the site is located in the Rural Residential district. This district allows single family use. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum File No. 11-011-050

Client	Devine, Millimet & Branch, P.A				
Property Address	798 Route 18				
City	Sugar Hill	County Grafton	State NH	Zip Code 03586	
Owner	Michael D. & Barbara M. Travis				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

Due to the Rural Residential zoning requirements of 3 acres for a single family building lot, the subject lot cannot be used for any other purpose than single family residential use by right. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED
[statutory form]

KNOW ALL MEN BY THESE PRESENTS, That We, LEATRICE PROGIN and NELSON PROGIN, husband and wife, both of 400 Crane Hill Road, Sugar Hill, New Hampshire 03586, for consideration paid, grant to MICHAEL D. TRAVIS and BARBARA M. TRAVIS, as Joint Tenants with right of survivorship, both of 63 Bridge Street, Medfield, MA 02052, with WARRANTY COVENANTS, the following:

A certain parcel of land with any and all improvements thereon, situate on the easterly line of the public highway known as Route 18, in the Town of Sugar Hill, County of Grafton and State of New Hampshire, bounded and described as follows:

Beginning at an iron pipe set in the intersection of the easterly line of said Route 18, and the northerly line of Corral Road, so-called; thence running northerly along the easterly line of said Route 18 331.01 feet to an iron pipe at the southwesterly corner of Lot 5 as shown on a certain plan hereinafter identified; thence turning and running South 57° 00' East along the southerly line of said Lot 5, a distance of 373.92 feet to an iron pipe at land of Lot 6 as shown on said plan; thence turning and running South 42° 59' West along the line of said Lot 6, a distance of 261.33 feet to an iron pipe set in the northerly line of said Corral Road; thence turning and running North 71° 09' West along the northerly line of said Corral Road a distance of 282.40 feet to the point of beginning; containing Two and Eighteen Hundredths [2.18] acres.

The parcel of land above described and herein conveyed is shown as Lot 4 on a certain plan entitled "Final Plan, Fred Hunt Property, Sugar Hill, N.H., William S. Smith, Civil Engineer, Lyman, N.H., Nov. 1977", revised Feb. 1978 and recorded in the Grafton County Registry of Deeds in Pocket 4, Folder 7, Plan 43.

Subject to a certain utilities easement that runs across the herein described parcel as shown on the above referenced plan.

Meaning and intending to describe and convey all and the same premises deeded to Leatrice Progin and Nelson Progin by Richard L. Vaillancourt and Kimberly A. Vaillancourt by their Warranty Deed dated June 26, 2009 which is recorded at Book 3623, Page 0057 of the said Registry.

Unofficial Document

BK 4001 PG 0796

Subject to the terms and conditions of a certain instrument entitled "Agreement and Consent to Joint Use" by and between Nelson Progin and Leatrice Progin and Public Service Company of New Hampshire dated August 14, 2009, recorded at Book 3639, Page 0109 of the Grafton County Registry of Deeds.

The within premises are conveyed subject to the statutory lien securing payment of property taxes assessed as of April 1, 2013 which taxes the grantees assume and agree to pay; the same having been pro-rated between the parties.

IN WITNESS WHEREOF, We have executed this instrument this the 6 day of August, 2013.

Nelson Progin

Leatrice Progin

STATE OF NEW HAMPSHIRE
COUNTY OF GRAFTON, ss.

On this the 6th day of August, 2013, before me, the undersigned officer, personally appeared Nelson Progin and Leatrice Progin, known to me (or satisfactorily proven) to be the persons whose names are subscribed to the within instrument and acknowledged that they executed the same for the purposes therein contained.

In Witness Whereof I have hereunto set my hand and official seal.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

■ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	■ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 150 Sundance Rd
Woodstock, NH 03262

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** December 21, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Woodstock, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Amenities:

Market area description and characteristics: Woodstock, NH is a small residential community located just south of Lincoln, NH. The town has just under 1,500 year round inhabitants however, there is a significant amount of seasonal residents that own second homes in Woodstock as the town is in good proximity to the White Mountains, Loon Mountain ski resort in nearby Lincoln, and Waterville Valley ski resort to the south. Although primarily residential in character and composition, North Woodstock village is in close proximity to Loon Mountain and has vibrant retail center with B&B's taverns, and restaurants that caters to seasonal tourism.
In 2012 and previous years there had been less than 50 single family residential sales sold in Woodstock, NH. Given the relatively few sales that occur in Woodstock, it is not statistically credible to arrive at any conclusion of market direction using the limited amount of sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the fourth quarter of 2012 had decreased 1.11% from the year prior. Of the 50 states and the District of Columbia that the FHFA tracts, NH ranked 51st in terms of market improvement in the fourth quarter of 2012. As of the effective date of the appraisal there was a 56 month inventory of single family residences for sale in Woodstock, NH which is considered to be a significant oversupply of housing.

Site description and characteristics: Subject site is located at the end of a cul de sac in the Lost Valley homeowners association. The association is comprised of 57 single family residences off of Lost River Rd. Common amenities include access to tennis courts and a pool for a relatively low annual fee.
Restrictive covenants recorded at GCRD book 1174 page 180 are primarily for the preservation of the single family character and composition of the Lost Valley neighborhood. The covenants and restrictions prevent the use of the subject lot for any other use other than single family residential, as well as no further sub-division of the subject lot.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. The covenants and restrictions referenced in the attached deed prevent any other use of the subject property other than its current use. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1					1			732
Level 2							2	1			732

Finished area above grade contains:	Bedroom(s): 2	Bath(s): 2	GLA: 1,464

Summarize Above Grade Improvements: Per MLS and tax assessment records the first floor contains kitchen, full bath, and living and dining rooms. Second floor has two bedrooms and a full bath. MLS photos show a modern kitchen and bath, hardwood floors in living room with a fireplace.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											732
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: Per MLS and tax assessment records the dwelling was built new in 2002. Interior view from MLS listing shows a residence in good condition and as expected for a ten year old residence. Floor plan is as a two bedroom residence which can limit marketability to a specific sub-market that could find a two bedroom residence accommodating. There were no external inadequacies noted or assumed as of the effective date of the assignment.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: At less than 1,500 s.f. and with a two bedroom floor plan the residence is slightly smaller than typical. Building materials and quality considered typical for age built. The Lost Valley association appeals to a vacation/second home buyers; the subject's size, floor plan, and style all appeal to the primary market as a second or vacation home.

Comments and reconciliation of the sales comparison approach: The subject and all three comparables are in close proximity to Woodstock Station, I-93, and Loon Mountain in Lincoln. Adjustments are made for differences in surplus land were applicable, age, and differences in living area. Although architectural and functional styles vary, proximity to ski mountains are the primary motivation of second home buyers and less on style and features.

Of the three comparables considered most weight is placed on comps 2 and 3 as they are located in the subject community.

Indication of Value by Sales Comparison Approach	$ 225,000

Owner	Iva Blazina Vukelja				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 1,464 s.f. Colonial on 1.81 acres. As indicated in the body of the report the town of Woodstock does not have a zoning ordinance or zoning requirements. As such the existing use of the subject property as a single family residence is legally permitted. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Text Addendum

File No. 11-011-051

Client	Devine, Millimet & Branch, P.A				
Property Address	150 Sundance Rd				
City	Woodstock	County Grafton	State NH	Zip Code 03262	
Owner	Iva Blazina Vukelja				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

The covenants and restrictions referenced in the attached deed prevent any other use of the subject property other than its current use as a single family residence. Therefore there is no other legal use of the subject property other than single family residential. In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

KNOW ALL MEN BY THESE PRESENTS THAT **Gail Brum, an unmarried individual**, with a mailing address of PO Box 812, Lincoln, New Hampshire 03251, for consideration paid, grant to **Iva Blazina Vukelja** of 210 Broadway, Unit A-305, Everett, MA 02149, with WARRANTY COVENANTS, the following:

A certain tract or parcel of land with all improvements thereon situated in the Town of Woodstock, County of Grafton, and State of New Hampshire, being shown as Lot #27 on a plan of land entitled "Subdivision Plan of Lost Valley, North Woodstock, N.H. Peter Hodges Surveyors, Inc. Holderness, N.H.", plan dated November, 1970, recorded in Grafton County Registry of Deeds, Pocket 2, Folder 5, Plan 7, on September 15, 1972.

Said Lot #27 is bounded and described as follows:

Southerly by Lot 28 as shown on said plan 86.29 feet; Westerly by land of owners unknown as shown on said plan 440 feet; Northeasterly by land of owners unknown as shown on said plan 440.56 feet; Southeasterly by Lot 26 as shown on said plan 187.22 feet; and Southeasterly again by a curved line on Sun Dance Drive as shown on said plan 119.15 feet.

Together with a right of way for vehicular traffic, in common with others, over the private way, 50 feet in width, shown as Snow King Drive, and also on Sun Dance Drive as shown on said plan.

Together with an easement to use and enjoy, in common with others, the swimming pool and tennis courts located on other land of the previous grantor on the south side of Snow King Drive shown as "Common Land for Swimming Pool and Tennis Courts" on aforementioned plan, together with a like easement to use and enjoy such additional common recreational facilities as may be provided by the previous grantors, their heirs or assigns, in the future.

Unofficial Document

BK 3943 PG 0195

Subject to and with the benefit of all the reservations, covenants and restrictions set forth in Exhibit A entitled "Covenants and Restrictions for Lost Valley, North Woodstock, New Hampshire" recorded in said Registry, Book 1131, Page 539, which Exhibit A is incorporated herein by reference.

For any discrepancy between the above description and the lot as shown on said plan, said plan shall control.

Also meaning and intending to describe and convey all and the same premises conveyed to Gail Brum by deed of Judith C. Caldwell dated June 30, 2000, and recorded in the Grafton County Registry of Deeds at Book 2471, Page 102.

DATED AND WITNESSED this 21st day of December, 2012.

Witness to all:

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

▪ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	▪ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 261 D.W. Highway
Woodstock, NH 03262

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Sincerely,

Mark Correnti, SRA

Brian C Underwood, CRE

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** October 2, 2012

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Woodstock, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, and MLS.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

Neighborhood Name:

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Woodstock, NH is a small residential community located just south of Lincoln, NH. The town has just under 1,500 year round inhabitants however, there is a significant amount of seasonal residents that own second homes in Woodstock as the town is in good proximity to the White Mountains, Loon Mountain ski resort in nearby Lincoln, and Waterville Valley ski resort to the south. Although primarily residential in character and composition, North Woodstock village is in close proximity to Loon Mountain and has vibrant retail center with B&B's taverns, and restaurants that caters to seasonal tourism.
In 2012 and previous years there had been less than 50 single family residential sales sold in Woodstock, NH. Given the relatively few sales that occur in Woodstock, it is not statistically credible to arrive at any conclusion of market direction using the limited amount of sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the fourth quarter of 2012 had decreased 1.11% from the year prior. Of the 50 states and the District of Columbia that the FHFA tracts, NH ranked 51st in terms of market improvement in the fourth quarter of 2012. As of the effective date of the appraisal there was a 56 month inventory of single family residences for sale in Woodstock, NH which is considered to be a significant oversupply of housing.

Off Site Improvements

Street	☒ Public	☐ Private	
Alley	☐ Public	☐ Private	
Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: Subject site has 347' of frontage on route 3. Back end of the subject lot fronts the Pemigewassett River. Due to the distance between the dwelling which is closer to the road, the river is approximately 625' from the dwelling. Although aesthetically pleasant, the river proximity is not considered to be a significant value factor due to distance from house. Distance between road and river prevents any watercraft from easily being transported or used on the river. A short walk from the house to the banks of the river does provide for an extraordinary natural setting that a typical buyer would recognize as being an ancillary benefit to the property.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1	1	1	1				3	1			924
Level 2											

Finished area above grade contains: **Bedroom(s):** 3 **Bath(s):** 1 **GLA:** 924

Summarize Above Grade Improvements: Per MLS and tax assessment records subject is a single wide manufactured home with three bedrooms and a single bath. There is a 4' x 14' enclosed entry porch and a large deck.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade											924
Other Area											

Summarize below grade and/or other area improvements: Per MLS and tax assessment records the subject basement is unfinished.

Discuss physical depreciation and functional or external obsolescence: MLS interior photos show a manufactured home in average relative condition. According to tax assessment records the unit was built in 1983. Interior photos show slightly dated kitchen and bath and are most likely first generation materials.

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Unit as a single wide is typical in construction for a single wide manufactured home. Walls are panel, flooring is carpet and vinyl. Although typical in size for a single wide manufactured unit, living area under 1,000 s.f. is considered slightly small than typical for the market.

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Comments and reconciliation of the sales comparison approach: Three sales in Woodstock of manufactured homes on owned land are considered in the sales comparison approach. Adjustments for differences in surplus land and gross living area are made where applicable. Listing for comp 2 described the property as needing significant cosmetic improvements at time of sale. Comp 3 was a sale of a manufactured home on a full concrete foundation. Adjustments were made for condition to comp 2 and for a full foundation for comp 3. After adjustments a relatively narrow range of value is evident; within that range most weight is placed on comps 1 and 2 as they are the most recent sales to the effective date of this assignment.

Indication of Value by Sales Comparison Approach	$ 80,000

* NOTICE: The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Depending on the assignment, the appraiser may need to provide additional data, analysis and work product not called for in this form. The Appraisal Institute plays no role in completing the form and disclaims any responsibility for the data, analysis or any other work product provided by the individual appraiser(s).

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.

In determining the highest and best use of the subject site as improved there are four tests to consider. Is the site as developed legally permissible, is it physically possible, is it financially feasible (demand and supply), and is it maximally productive (returns the highest value).

The subject site as of the effective date of the appraisal was improved with a 924 s.f. Manufactured home on 5.70 acres. As indicated in the body of the report the town of Woodstock does not have a zoning ordinance or zoning requirements. As such the existing use of the subject property as a single family residence is legally permitted. The surrounding uses are compatible with single family use. Therefore, the existing use is legally permissible and physically possible.

Owner	Steven L. & Jason S. Anderson				

The cost to remove the improvements and construct a new single family residence would exceed any gain in value. Because the existing improvements contribute significantly to the value of the site, the cost to rebuild a more modern residence is not financially feasible at this time.

In analyzing the highest and best use of the subject property, it is in our opinion that the present use of the site and improvements represents the highest and best use of real property.

FINAL RECONCILIATION

A systematic procedure known as the valuation process has been employed to estimate the market value of the subject property. The entire valuation process has been reviewed to resolve differences and inconsistencies among the various value indications. To do this the quality and quantity of the data available for analysis in each approach to value, the inherent strengths and weakness of each approach, and the relevance of each approach has been considered in estimating a final value for the subject property. The appropriateness, accuracy, and quantity of evidence in each of the three approaches to value has been reviewed.

The income capitalization approach is not considered applicable for the subject due to the lack of available data necessary to develop the income capitalization approach. Additionally, income potential is not a typical buyer concern when considering the purchase of a single family dwelling.

The Cost Approach is based on adding the contributing value of any improvements (after deduction of depreciation) to the land as if it were vacant, based on it's highest and best use. The Cost Approach is deemed unreliable for the subject property due to the actual age of the improvements. Accurately estimating all forms of physical depreciation and obsolescence in a property of the subject's age and functional utility is inherently subjective and can be misleading. As such, the Cost Approach is not necessary to develop credible results in this assignment.

There was sufficient comparative data available within the subject market to adequately develop the Sales Comparison Approach. The significant features of each property were compared and appropriate adjustments made. Emphasis is placed on the comparative sales analysis in arriving at the final opinion of value because it closely reflects the current market trends and conditions. The adjusted sales price of the comparables utilized in the appraisal report provide a narrow range of values from which a reasonable conclusion may be drawn. The value suggested by the sales comparison approach is considered the best indicator of value for this appraisal.

WARRANTY DEED

WE, JAMES R. MARSHALL and DIANE E. MARSHALL a/k/a DIANNE E. MARSHALL, husband and wife, both of 467 Teaticket Highway, E. Falmouth, MA 02536, for consideration paid, grant to STEVEN L. ANDERSON and JASON S. ANDERSON both of 63 Bailey Street, Lawrence, MA 01843, as joint tenants with rights of survivorship, with WARRANTY covenants,

A certain tract or parcel of land together with the buildings and improvements thereon situate in Woodstock, County of Grafton, State of New Hampshire, on the East side of the Daniel Webster Highway, bounded and described as follows:

Beginning at an apple tree and iron pin at the southwest corner of the premises herein conveyed, the said corner also denoting the southwest corner of the premises conveyed to John Loquidice, et al, by Warranty Deed of James H. Rogers dated September 18, 1972 and recorded in the Grafton County Registry of Deeds at Book 1174, Page 193; thence

Northerly along the easterly bound of US Route 3 a distance of 196', more or less, to a point marking the centerline of a Public Service Company of New Hampshire right of way as described on a conveyance of easement dated April 21, 1947 and recorded in the Grafton County Registry of Deeds at Book 773, Page 5; thence

Continuing along the easterly bound of US Route 3 a distance of 151', more or less, to a point along the northerly bound of the Public Service Company of New Hampshire right of way referred to above, the said point also marking the southwest corner of land now or formerly of Mills and the northwest corner of the premises herein conveyed; thence

South 49° 45' East along the southerly bound of Mills and the northerly bound of the Public Service Company of New Hampshire right of way a distance of 655', more or less, to a point on the west bank of the Pemigewasset River; thence

Unofficial Document

 BK 3922 PG 0371

Southerly along the west bank of the Pemigewasset River to a point marking the southeast corner of the premises herein conveyed and the northeast corner of premises now or formerly known as the Smith Farm; thence

Westerly a distance of 650', more or less, along the northerly bound of premises now or formerly known as the Smith Farm to the point of beginning.

EXCEPTING AND RESERVING herefrom an easement and right of way granted to the Public Service Company of New Hampshire by Deed of James H. Rogers, dated April 21, 1947, recorded in said Registry at Book 773, Page 5 over a strip of land 225' in width extending 150' northerly and 75' southerly of a center line bounded and described as follows:

"Beginning at a point on the westerly boundary of the above-described premises, said boundary being the easterly right of way limit of the Daniel Webster Highway, said point of beginning being 196' northerly along the easterly boundary of said Daniel Webster Highway from the southwest corner of land now or formerly of James H. Rogers at land formerly of John Smith; thence

Running South 49° 45' East crossing an old river channel and land which was formerly an island, a distance of 655' to a point on the west bank of the Pemigewasset River, the same being the easterly boundary of land now or formerly of James H. Rogers."

MEANING AND INTENDING to describe and convey all and the same premises conveyed to James R. Marshall, Dianne E. Marshall, Francis G. Skelly and Donna J. Skelly by Warranty Deed of William H. Norris, Trustee of Teedon Realty Trust dated November 11, 1999 and recorded in the Grafton County Registry of Deeds at Book 2431, Page 227. See also Warranty Deed of Francis G. Skelly and Donna J. Skelly to James R. Marshall and Diane E. Marshall dated January 31, 2007 and recorded at Book 3375, Page 356. See also Corrective Warranty Deed of Francis G. Skelly and Donna J. Skelly to the Grantors recorded herewith.

Not homestead property.

IN WITNESS WHEREOF, we hereunto set our hands this 2nd day of October, 2012.

STATEMENT OF ASSUMPTIONS AND LIMITING CONDITIONS

This appraisal is subject to the following assumptions and limiting conditions:

- This report is prepared using forms developed and copyrighted by the Appraisal Institute. However, the content, analyses, and opinions set forth in this report are the sole product of the appraiser. The Appraisal Institute is not liable for any of the content, analyses, or opinions set forth herein.
- No responsibility is assumed for matters legal in character or nature. No opinion is rendered as to title, which is assumed to be good and marketable. All existing liens, encumbrances, and assessments have been disregarded, unless otherwise noted, and the property is appraised as though free and clear, having responsible ownership and competent management.
- I have examined the property described herein exclusively for the purposes of identification and description of the real property. The objective of our data collection is to develop an opinion of the highest and best use of the subject property and make meaningful comparisons in the valuation of the property. The appraiser's observations and reporting of the subject improvements are for the appraisal process and valuation purposes only and should not be considered as a warranty of any component of the property. This appraisal assumes (unless otherwise specifically stated) that the subject is structurally sound and all components are in working condition.
- I will not be required to give testimony or appear in court because of having made an appraisal of the property in question, unless specific arrangements to do so have been made in advance, or as otherwise required by law.
- I have noted in this appraisal report any significant adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) discovered during the data collection process in performing the appraisal. Unless otherwise stated in this appraisal report, I have no knowledge of any hidden or unapparent physical deficiencies or adverse conditions of the property (such as, but not limited to, needed repairs, deterioration, the presence of hazardous wastes, toxic substances, adverse environmental conditions, etc.) that would make the property less valuable, and have assumed that there are no such conditions and make no guarantees or warranties, express or implied. I will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because I am not an expert in the field of environmental hazards, this appraisal report must not be considered as an environmental assessment of the property. I obtained the information, estimates, and opinions furnished by other parties and expressed in this appraisal report from reliable public and/or private sources that I believe to be true and correct.
- I will not disclose the contents of this appraisal report except as provided for in the Uniform Standards of Professional Appraisal Practice, and/or applicable federal, state or local laws.
- The Client is the party or parties who engage an appraiser (by employment contract) in a specific assignment. A party receiving a copy of this report from the client does not, as a consequence, become a party to the appraiser-client relationship. Any person who receives a copy of this appraisal report as a consequence of disclosure requirements that apply to an appraiser's client, does not become an intended user of this report unless the client specifically identified them at the time of the assignment. The appraiser's written consent and approval must be obtained before this appraisal report can be conveyed by anyone to the public through advertising, public relations, news, sales, or other media.
- If this valuation conclusion is subject to satisfactory completion, repairs, or alterations, it is assumed that the improvements will be completed competently and without significant deviation.

VALUE DEFINITION

☒ **Market Value Definition (below)** ☐ **Alternate Value Definition (attached)**

MARKET VALUE is defined as the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

1. buyer and seller are typically motivated;
2. both parties are well informed or well advised and acting in what they consider their own best interests;
3. a reasonable time is allowed for exposure in the open market;
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

APPRAISER CERTIFICATION

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analysis, opinions, and conclusions are limited only by the report assumptions and limiting conditions, and are my personal, unbiased professional analysis, opinions, and conclusions.
- I have no present (unless specified below) or prospective interest in the property that is the subject of this report, and I have no (unless specified below) personal interest with respect to the parties involved.
- I have no bias with respect to any property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon the developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
- Individuals who have provided significant real property appraisal assistance are named below. The specific tasks performed by those named are outlined in the Scope of Work section of this report.

  ☒ None ☐ Name(s)

  As previously identified in the Scope of Work section of this report, the signer(s) of this report certify to the inspection of the property that is the subject of this report as follows:

  Property inspected by Appraiser ☒ Yes ☐ No

  Property inspected by Co-Appraiser ☒ Yes ☐ No

- Services provided, as an appraiser or in any other capacity, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment: ☒ None ☐ Specify services provided:

ADDITIONAL CERTIFICATION FOR APPRAISAL INSTITUTE MEMBERS

Appraisal Institute Designated Member, Candidate for Designation, or Practicing Affiliate Certify:

- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.

▪ I am a Designated Member of the Appraisal Institute. As of the date of this report, I have completed the continuing education program of the Appraisal Institute.	▪ I am not a Member, Candidate or Practicing Affiliate of the Appraisal Institute.

Re: Property: 321 Lost River Rd
Woodstock, NH 03262

Dear Atty Bisbee:

At your request, the above referenced property has been appraised in order to determine the market value at the time of sale under the hypothetical condition that the property was not influenced by the presence of a High Voltage Transmission Line (HVTL). The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire.

The analysis and conclusions within the attached appraisal report are based upon field research, interviews with market participants, and publicly available data collected. This appraisal is a retrospective report. The accompanying report has been prepared in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP).

The acceptance of this assignment was not conditioned upon our reporting a specific value; nor was the acceptance of this assignment conditioned on my concluding a requested minimum of maximum value. The following is a report of the data and analysis upon which the conclusions are based.

Respectfully submitted,
B.C. UNDERWOOD LLC

Mark Correnti, SRA

Brian C Underwood, CRE

SUBJECT PROPERTY IDENTIFICATION

Address: 321 Lost River Rd
City: Woodstock **County:** Grafton **State:** NH **ZIP:** 03262
Legal Description: See attached legal description
Tax Parcel #: Map 109, Lot 1 **RE Taxes:** 3,530.78 **Tax Year:** 2009
Use of the Real Estate As of the Date of Value: Single Family Residential
Use of the Real Estate Reflected in the Appraisal: Single Family Residential
Opinion of highest and best use (if required): Single Family Residential

SUBJECT PROPERTY HISTORY

Owner of Record: Barton J. & Paula E. King

Description and analysis of sales within 3 years (minimum) prior to effective date of value: The subject property had not transferred in the three years prior to the effective date of the appraisal.

Description and analysis of agreements of sale (contracts), listings, and options: The subject property listed for sale on May 13, 2009 for $259,900 and was under agreement of sale 30 days later on June 12, 2009. Due to a home sale contingency as well as a job relocation requirement of the parties the contract did not close escrow until May 14, 2010 for $245,000. Per listing agent neither buyer or seller had issue with the longer than typical pending status and there was no price concession or change during the pending period.

RECONCILIATIONS AND CONCLUSIONS

Indication of Value by Sales Comparison Approach	**$ 250,000**
Indication of Value by Cost Approach	**$**
Indication of Value by Income Approach	**$**

Final Reconciliation of the Methods and Approaches to Value: See attached narrative addenda for approaches to value considered and the final reconciliation

Opinion of Value as of: May 13, 2010	**$ 250,000**
Exposure Time: 6 months	

The above opinion is subject to: ☒ **Hypothetical Conditions** **and/or** ☒ **Extraordinary Assumptions** **cited on the following page.**

ASSIGNMENT PARAMETERS

Intended User(s): Eversource Energy

Intended Use: To estimate the market value of the subject property with the hypothetical condition that the property is not influenced by a HVTL

This report is not intended by the appraiser for any other use or by any other user.

Type of Value: Market Value **Effective Date of Value:** May 13, 2010

Interest Appraised: ☒ **Fee Simple** ☐ **Leasehold** ☐ **Other**

Hypothetical Conditions: **(A hypothetical condition is that which is contrary to what exists, but is asserted by the appraiser for the purpose of analysis. Any hypothetical condition may affect the assignment results.)** The subject property is crossed by a HVTL right of way. For the purposes of this assignment, the property has been appraised assuming it was not influenced by the presence of a HVTL.

Extraordinary Assumptions: **(An extraordinary assumption is directly related to a specific assignment and presumes uncertain information to be factual. If found to be false this assumption could alter the appraiser's opinions or conclusions. Any extraordinary assumption may affect the assignment results.)**

In preparing this appraisal, the appraisers have been requested to perform a valuation of the subject property without entering any part of the subject property. The physical characteristics used to develop this appraisal are based on the assessment records of the Woodstock, NH assessor's office and from the Multiple Listing Service. For the purpose of this appraisal it is assumed that the features of the property, including the interior of the residence, as described by the assessor's records and Multiple Listing Service are accurate.

In accordance with Standard Rule 2-2(b) of the Uniform Standard of Professional Appraisal Practice (USPAP), this is a summary appraisal report.

SCOPE OF WORK

Definition: The scope of work is the type and extent of research and analysis in an assignment. Scope of work includes the extent to which the property is identified, the extent to which tangible property is inspected, the type and extent of data research, and the type and extent of analysis applied to arrive at credible opinions or conclusions. The specific scope of work for this assignment is identified below and throughout this report.

Scope of Subject Property Inspection/Data Sources Utilized

Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review. Property features, site size, gross living area, amenities, interior condition and materials were obtained through tax assessment records, registry of deeds, MLS, and bank appraiser.

Co-Appraiser

Property Inspection: ☒ **Yes** ☐ **No**

Date of Inspection: January 13, 2015

Describe scope of Property Inspection, Source of Area Calculations and Data Sources Consulted: Exterior (curbside) review.

Approaches to Value Developed

Cost Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Sales Comparison Approach:

☒ **Is necessary for credible results and is developed in this analysis**
☐ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Income Approach:

☐ **Is necessary for credible results and is developed in this analysis**
☒ **Is not necessary for credible results; not developed in this analysis**
☐ **Is not necessary for credible results but is developed in this analysis**

Additional Scope of Work Comments: See text addenda for scope of work used in preparing this assignment.

Significant Real Property Appraisal Assistance: ☒ **None** ☐ **Disclose Name(s) and contribution:**

*** NOTICE:** The Appraisal Institute publishes this form for use by appraisers where the appraiser deems use of the form appropriate. Neighborhood Name: Lost Valley

PUD ☐ Condo ☐ HOA: $ /

Amenities:

Market area description and characteristics: Woodstock, NH is a small residential community located just south of Lincoln, NH. The town has just under 1,500 year round inhabitants however, there is a significant amount of seasonal residents that own second homes in Woodstock as the town is in good proximity to the White Mountains, Loon Mountain ski resort in nearby Lincoln, and Waterville Valley ski resort to the south. Although primarily residential in character and composition, North Woodstock village is in close proximity to Loon Mountain and has vibrant retail center with B&B's taverns, and restaurants that caters to seasonal tourism.

In 2010 and previous years there had been less than 20 single family residential sales sold in Woodstock, NH. Given the relatively few sales that occur in Woodstock, it is not statistically credible to arrive at any conclusion of market direction using the limited amount of sales that occur. A statistically credible housing market index is the Federal Housing Finance Authority which showed that residential values in New Hampshire as of the second quarter of 2010 had decreased 5.15% from the year prior. As of the effective date of the appraisal there was a 15 month inventory of single family residences for sale in Woodstock, NH which is considered to be an oversupply of housing. The median days on market was 167 days as of the effective date of this assignment.

Alley	☐ Public	☐ Private	
Sidewalk	☐ Public	☐ Private	
Street Lights	☐ Public	☐ Private	

Site description and characteristics: Subject site is located on Lost River Rd which is also known as NH route 112. The site is located in between route 112 and the Lost River having approximately 1,272' of road frontage on route 112 and approximately the same amount of frontage on the Lost River. The dwelling is located on the eastern most point of the lot; access to the river is down a steep embankment via a set of stairs.

The municipal tax map identifies the subject lot as having 3.00 acres; the attached legal description identifies 2.70 acres. The two most likely conflict due to various irregular lot dimensions due to the riverbank. Given the slight difference between the two the lot size identified in the deed is considered to be the legal determination of the subject lot size. Restrictive covenants recorded at GCRD book 1174 page 180 are primarily for the preservation of the single family character and composition of the Lost Valley neighborhood. The covenants and restrictions prevent the use of the subject lot for any other use other than single family residential, as well as no further sub-division of the subject lot.

HIGHEST AND BEST USE ANALYSIS

☒ Present Use ☐ Proposed Use ☐ Other

Summary of highest and best use analysis: The physically possible, legally permissible, financially feasible, and maximally productive attributes of the subject property both as vacant, and as improved, have been considered and result in the same highest and best use as improved with the existing improvements. The covenants and restrictions referenced in the attached deed prevent any other use of the subject property other than its current use. No other alternative use would justify the removal of the existing improvements. Therefore, the subject property, as improved, is the highest and best use.

Above Grade Gross Living Area (GLA)

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	Other	Area Sq. Ft.
Level 1							3	2			1,042
Level 2											

Finished area above grade contains: Bedroom(s): 3 Bath(s): 2 GLA: 1,042

Summarize Above Grade Improvements: Per MLS the upper level of the dwelling is improved with three bedrooms and two full baths. Kitchen, dining, and family rooms are located in the basement level.

Below Grade Area or Other Area

	Living	Dining	Kitchen	Den	Family	Rec.	Bdrms	# Baths	Utility	% Finished	Area Sq. Ft.
Below Grade		1	1		1			.5		100	700
Other Area											

Summarize below grade and/or other area improvements: Per MLS the basement level is finished with kitchen, dining, and living rooms as well as a half bath. Basement is 100% finished and has a walk out set of sliding doors to a 10' x 18' deck.

Discuss physical depreciation and functional or external obsolescence: MLS and assessment records show and describe a residence that is in relatively good condition. Floor plan is functionally unique as the kitchen is located in the basement and that the above grade entry door leads to a floor that is exclusively bedrooms. In a market with a high concentration of second home buyers functional inadequacies due to floor plan is largely mitigated as the primary purchasing factor in the subject market is location to amenities (ski slopes, etc).

Discuss style, quality, condition, size, and value of improvements including conformity to market area: Dwelling floor plan is unique and contributes to a slightly smaller above grade living area than typical for the market. Location to Loon Mountain, Woodstock Village, and pleasant views of the Lost River below are considered to be the most significant marketing features of the subject property.

Comments and reconciliation of the sales comparison approach: Three sales of riverfront properties in woodstock are considered in the sales comparison approach. Adjustments are made for differences in physical age and living area where applicable. Of the three comparables considered most weight is applied to comp 1 as it is more similar in age as the subject and least amount of weight to comps 2 and 3 due to age difference.

Indication of Value by Sales Comparison Approach	$ 250,000

Property Address	321 Lost River Rd				
City	Woodstock	County Grafton	State NH	Zip Code 03262	
Owner	Barton J. & Paula E. King				

INTENDED USE AND USER OF THE APPRAISAL REPORT

The purpose of this appraisal is for use in a Study of the Impact of High Voltage Transmission Lines on Real Estate Transactions in New Hampshire. This appraisal report is part of a larger case study assignment prepared by B.C. Underwood LLC. The intended user is Eversource Energy.

SCOPE OF WORK PERFORMED

- An exterior inspection of the subject property was made
- Review of the tax assessment card, tax map, and deed
- Reliance on Marshall & Swift Valuation Services when applicable
- Research Northern New England Real Estate Network for comparable sales
- Interview of market participants in the transaction included the listing broker and appraiser for the purpose of accurately describing the interior of the subject property.
- Sales data was verified by municipal records, registry of deeds, and interviews with participants in the transactions.
- Development of a cost approach when applicable
- Development of a sales comparison approach
- Reconciling the approaches to value and arriving at a final value conclusion for the subject property under the hypothetical condition that it was not influenced by the presence of a HVTL right of way

MARKET TIME ADJUSTMENTS

The real estate market is not static; therefore, adjustments are made for differences in time (difference between the contract date of the comparable and the effective date of the subject property). Market conditions change from month to month based on interest rates, market inventory, and economic conditions. No single rate of appreciation or depreciation has been relied upon because market conditions do not change on a straight line basis.

The Federal Housing Finance Authority (FHFA) House Price Index has been relied upon in determining the rates at which the market has changed. In developing the market adjustments for the sales comparison approach, the calendar quarter of the comparable sale was entered along with the quarter for the date of valuation of the subject property. The difference between the comparable sale amount and the time adjusted value is determined to be the market difference between the comparable contract date and the effective date of value.

HIGHEST AND BEST USE

The highest and best use of the subject property will be that use which is physically possible, legally permissible, financially feasible, and maximally productive. An analysis of these criteria follows.
