Re: Docket No. 2015-04 Seacoast Reliability Project
Motions for Enforcement and Reopen Record

Dear Administrator Monroe:

Enclosed please find for filing, Ms. Donna Heald's emergency motion for enforcement at 220 Longmarsh Road and motion to reopen the record.

This filing is also being distributed to the electronic service list for this proceeding. Thank you in advance for your assistance with this filing.

Very Truly Yours,

A handwritten signature in cursive script that reads "Marcia A. Brown".

Marcia A. Brown

cc: Electronic Service List for Docket No. 2015-04.

STATE OF NEW HAMPSHIRE
SITE EVALUTION COMMITTEE

Docket No. 2015-04

Seacoast Reliability Project
(Application of Public Service Company of New Hampshire
d/b/a Eversource Energy for a Certificate of Site and Facility for Construction
of New 115k Transmission Line from Madbury Substation to Portsmouth Substation)

MOTION FOR ENFORCEMENT
AT 220 LONGMARSH ROAD
AND
MOTION TO REOPEN RECORD

Donna Heald, an intervenor in the above proceeding hereby moves the Site Evaluation Committee (“Subcommittee”) to, pursuant to PART Site 302, to enforce commitments made by Public Service Company of New Hampshire d/b/a Eversource Energy’s (“Eversource”) to Ms. Heald and the Subcommittee concerning pre-construction mitigation activities which Eversource now seeks to avoid, to find that Eversource, in taking a position now that is substantially different from what Eversource had represented to Ms. Heald and the Subcommittee at hearing, that Eversource has committed a material misrepresentation, and to enforce Eversource’s mitigation commitments pursuant to the Subcommittee’s authority under RSA 162-H:4, I(d) and 162-H:12, Site 103.01(c)(5) and PART Site 302. In support of this request, Ms. Heald states as follows:

Eversource Representations Made at Hearing

1. During the hearings in this matter, Eversource identified the extent its Seacoast Reliability Project (“Project”) would adversely impact Ms. Heald’s property. Hearing Transcript to 10/26/18, Day 15 PM, at 100 (Ms. Heald learned through the hearing process that more of her plants would be in harm’s way than she previously understood.)

2. Also, during the hearings, Eversource represented to the Subcommittee and Ms. Heald that it would: “conduct an inventory, develop a relocation plan and relocate [Ms. Heald’s] plant stock with one of these four mutually agreed upon nurseries.” Hearing Transcript of 10/26/18, 2018, page 224, lines 11-13. See also page 223 and page 224 in entirety. See page 222, lines 12-24. See also App. Ex. 229 (Eversource’s 8/3/18 letter outlining its agreement to conduct the inventory and relocation), page 2 wherein Eversource agreed “to retain a mutually agreeable commercial landscape company, at our sole expense” to inventory and relocate the plants to an area where the stock is expected to survive-which included a location on Ms. Heald’s property or “to another nursery or amendable location off” Ms. Heald’s property. *Id.* Eversource also agreed to move the plant stock back to a “mutually satisfactory location after the Project is constructed.” *Id.* See also App. Ex. 234 (Ms. Heald’s response to Eversource’s data request concerning relocating the plant stock). Additionally, in App. Ex 146, pages 10 and 32, Mr. Robert Varney testified that Eversource would be mitigating the adverse impacts on Ms. Heald’s gardening business. Ms. Heald accepted Eversource’s offer. See App. Ex. 234 and Hearing Transcript at page 223-224.

3. Eversource further represented that it would relocate the pole that was closest to Ms. Heald’s home further away from her home, by 50 feet. Hearing Transcript of 10/26/18, Day 15 PM, page 218, lines 4-10. Ms. Heald accepted the 50-foot pole relocation. Hearing Transcript of 10/26/19, Day 15 PM, page 231, lines 2-12; page 255, lines 5-24, page 256, lines 1-2.

4. The Subcommittee relied on Eversource’s representations in granting Eversource’s application. See Decision and Order Granting Application for Certification of Site and Facility, January 31, 2019, at 260-261 (regarding conducting a plant inventory and relocating plants) and

323-324 (regarding that the Applicant must “work in good faith with all affected landowners” and participate in the Dispute Resolution Process). Conditions contained in the Subcommittee’s order were expressly incorporated into the Order and Certificate at page 2.

5. This is not a matter of private property rights that would be outside of the Site Evaluation Committee’s statutory subject matter jurisdiction. Cf. *Gray v. Seidel*, 143 N.H. 327 (1999). The legislature made “special provision” (RSA 491:7) for the Site Evaluation Committee to: “balance among those potential significant impacts and benefits in decisions about the siting, construction, and operation of energy facilities in New Hampshire” (RSA 162-H:1); “[d]etermine the terms and conditions of any certificate issued” (RSA 162-H:4(b)); and “[e]nforce the terms and conditions of any certificate issued under this chapter” (RSA 162-H:4(d) and RSA 162-H:12.) The Subcommittee determined terms and conditions and incorporated its Order into the Certificate.

6. Recently, Eversource has refused to conduct the inventory, relocate her plant stock, and to relocate the pole. See Eversource-Heald Correspondence 7/29/19 (Attachment A); 8/9/19 (Attachment B); 8/20/19 (Attachment C); 8/27/19 (Attachment D); and 8/30/19 (Attachment E). Eversource’s reversal of its commitments regarding the plant stock means that the very evidence Ms. Heald would need to participate in the Dispute Resolution Process will be destroyed. Eversource’s reversal is also an affront to the integrity of the N.H. Site Evaluation Committee’s judicial process.

Commitments Are Conditions

7. It is settled law that representations made before decisional bodies are conditions even when they are not expressly stated in the approval document. See, *Rye v. Ciborowski*, 111 N.H.

77, 81 (1971) (Representations made by an applicant seeking a variance from a Zoning Board of Adjustment defined the scope of the uses allowed by the variance.) See, *Dahar v. Department of Bldgs*, 116 N.H. 122, 123 (1976) (Court explained that *Rye v. Ciborowski* stood for the proposition “that the scope of a variance is dependent upon the representations of the applicant.”) See, also *1808 Corp. v. Town of New Ipswich*, 161 N.H. 772, 775 (2011) (Under New Hampshire law, “[t]he scope of a variance is dependent upon the representations of the applicant” impose an implied condition on the variance.) Here, the record reflects specific commitments made by Eversource, as noted above. Therefore, even if more specific details of Eversource’s mitigation commitments are not reflected in the Subcommittee’s order and certificate, Eversource’s representations constitute enforceable conditions that Eversource cannot now retract.

Estoppel

8. A regulated entity which makes representations before a quasi-judicial body on how it would mitigate a regulated project and then freely recants those representations and commitments jeopardizes the integrity of the Site Evaluation Committee process. The doctrine of estoppel in this State prevents parties from engaging in such misleading conduct. Equitable estoppel “serves to forbid one to speak against his own act, representations, or commitments to the injury of one to whom they were directed and who reasonably relied thereon.” *Town of Seabrook v. Vachon Management*, 144 N.H. 660, 666 (2000). The elements of estoppel exist here: Eversource made representations and commitments to Ms. Heald and the Subcommittee, that Ms. Heald and the Subcommittee were ignorant of the fact that Eversource was not going to honor its commitments, Eversource’s representations were intended to induce Ms. Heald and the Subcommittee to rely upon them, and Ms. Heald’s reliance upon Eversource’s representations

are to her injury. See, *Appeal of Kulacz*, 145 N.H. 113, 116 (2000).

9. In addition, judicial estoppel “prevents a party from prevailing in one phase of a case on an argument and then relying on a contradictory argument to prevail in another phase.” *In re Pack Monadnock*, 147 N.H. 419, 425-426 (2002) citing *New Hampshire v. Maine*, 532 U.S. 742, 749 (2001). The purpose of judicial estoppel is “to protect the integrity of the judicial process.” *N.H. v. Maine*, supra at 749. Factors informing whether to apply judicial estoppel is whether 1) a party’s position must be “clearly inconsistent” with its earlier position; 2) the party succeeded in persuading the court to accept that party’s earlier position, so that it creates “the perception that either the first or the second court was misled”; and 3) the party seeking to assert an inconsistent position would derive an unfair advantage or impose an unfair detriment on the opposing party if not estopped. *Id.* at 750-751. See also *In re Pack Monadnock*, supra at 425-426. The N.H. Supreme Court has applied judicial estoppel in agency settings. See, *Eby v. State of New Hampshire*, 166, N.H. 321 (2014). In addition to the application of PART Site 302, Ms. Heald moves the Subcommittee to apply the doctrine of estoppel to the instant matter so as to prevent an injustice upon Ms. Heald and to enforce, pursuant to its authority under RSA 162-H:12, Eversource to abide by the commitments it made at hearing.

**Eversource’s Recent Position is Clearly Inconsistent with
Representations it made at Hearing and Constitutes a Material Misrepresentation**

10. In reliance on Eversource’s representations, this past spring, before her plants were coming out of dormancy, Ms. Heald reached out to a number of people to plan for the inventory process. See Attachment F (3/22/19 email communication with the N.H. Natural Heritage Bureau and 5/1/19 email communication with Zachery Berger Associates, Ltd). The issue of

payment arose. *Id.* This stymied her attempts to get the inventory underway when, as noted at hearing, it was critical that it be done during the entire growing season so that all plants could be inventoried at the appropriate time when they are visible and could reestablish their roots after being relocated. See Hearing Transcript of 10/26/18, Day 15 PM, page 101, lines 10-12. Ms. Heald was unable, however, to ascertain from Eversource how it would pay the inventory team. Ms. Heald was also unable to obtain from Eversource accurate details on what sections of the right of way would be disturbed and thus need to be inventoried.

11. Also in reliance on Eversource's commitment to conduct an inventory, Ms. Heald met with Eversource on her property on June 17, 2019. As noted in Eversource's agenda, the express purpose of the meeting was to review the "scope" of the "plant inventory/relocation". See Attachment G, 6/17/19 Agenda. This scope was reaffirmed in Eversource's letter dated July 29th, page 2 (Attachment A), wherein it recounted that the objective of the site visit was to have Eversource's horticultural consultants "walk the length and width of the easement to assess your client's gardening business for the purpose of relocating the plants during construction." The scope of the visit also included delineating the boundaries of what sections of the gardening area would be disturbed so that Ms. Heald could see the breadth of the inventory that would be in harm's way.

12. During the site visit, Ms. Heald discussed with Eversource's consultant, the consultant's qualifications. Ms. Heald quizzed the consultant on ferns because her plant stock included a large number of ferns and the consultant freely stated that she did not know ferns. Ms. Heald and the consultant discussed that the inventory would be a big undertaking, that it would take many people with different areas of expertise, and that it would need to involve a grid system so

that plants could be properly counted and marked and that it would take a long time. There was no discussion that the site visit was to be considered the inventory, indeed, Eversource's consultant told Ms. Heald that she would get back to Ms. Heald with a proposal on how the consultant would propose to proceed with the inventory and relocation. Ms. Heald informed Eversource that another couple in the neighborhood had offered their property as a relocation spot, that it would likely be large enough for Ms. Heald's plants, but that the site would require Eversource to cut trees and provide power and a water source. Eversource stated it would look into the neighboring couples' offer.

13. At no time at that meeting did Ms. Heald agree that Eversource's consultant was "mutually agreeable" to conduct the inventory, Ms. Heald hadn't even received the consultant's proposal yet. There was never any discussion that the site walk over would constitute an inventory. For this reason, Eversource's statements that Ms. Heald agreed to its consultant and that an inventory was conducted are wholly, factually incorrect. This misrepresentation of facts serves solely to allow Eversource to evade the commitments it made at hearing.

14. A second individual accompanied the consultant, "Bob", however, Bob expressly stated that he was not there to inventory plants but that he would only be moving the plants when the time came. In conclusion, Ms. Heald left the site visit with the understanding that the consultant would be providing a proposal for conducting the inventory and relocation-which the consultant said would be forthcoming in a week or two.

15. Instead of receiving the proposal, Ms. Heald received a letter from Eversource, over a month later, claiming that an inventory had been done and that Eversource would not be relocating any of the in-ground plants. This position is alarmingly inconsistent with what was

discussed at the site visit. Furthermore, it is clearly inconsistent with the position and commitments Eversource made to the Subcommittee and Ms. Heald at hearing.

Reasonable Reliance

16. It cannot be said that Ms. Heald and the Subcommittee's reliance on Eversource's representations were unreasonable. As the record before the Subcommittee showed, there was no way to know that Eversource's commitments were either improper, materially incorrect, or misleading. *New Canaan Bank & Trust v. Pfeffer*, 147 N.H. 121, 126 (2001). Eversource made its commitments with a full understanding of the evidence. Eversource was aware of the magnitude of the planting inventory. Ms. Heald specifically corrected Eversource's undercalculation of the extent of her plant stock depicted in App. Ex. 230. Hearing Transcript of 10/26/18, page 252, lines 5-22. She also testified that the plants needed to be inventoried over the course of a growing season. *Id.* That was because if the plants are moved too late in the season, they would not likely survive. Attachment I, Propagating Plants-Primula Wanda, illustrates with pictures the difficulty of relocating plants late in the season when, without special care, their root systems won't mature enough to over-winter in pots.

Detrimental Reliance

17. Eversource's refusal to conduct the inventory and relocate Ms. Heald's plant stock now imposes an unfair detriment on Ms. Heald. Without the evidence from the inventory, Ms. Heald is unable to pursue claims of damages. Eversource states in its August 20, 2019 letter (Attachment C) that Ms. Heald can simply pursue claims under the dispute resolution process, but that is illusory. If Eversource is allowed to destroy the evidence of her plant stock, Ms. Heald is, without question, unable to document the quantity of her plant stock and prove

damages. The lateness of Eversource's changed position compounds the detriment because, notwithstanding Ms. Heald's attempts to get the inventory moving this past spring, evidence of early, spring plants has likely passed and moving plants late-season may result in plants not surviving without special care.

18. Detrimental reliance also applies to the Subcommittee. Eversource's changed position has changed the facts the Subcommittee relied upon in balancing the potential significant impacts of the project with project's benefits. RSA 162-H:1 and 16. Site 301.16. The facts underpinning that balance no longer exist and, therefore, compromise the integrity of the proceedings in this matter. The changed position constitutes a material misrepresentation which necessitates enforcement under 162-H:12.

Eversource's Consultant Not Credible

19. In addition to reversing its position at hearing, Eversource has attempted to create a smokescreen of factual misrepresentations. These misrepresentations are replete in Eversource's consultant's memorandum to Eversource to such an extent that they render the consultant's memorandum not credible (Attachment C). The consultant finds fault with Ms. Heald as a nursery, however, Ms. Heald made it very plain in her testimony that she is a grower and propagator. She is not a nursery. Ms. Heald has plant stock that is in the ground for later potting. See, DH Ex. 1 at 5-6. Eversource never took issue at hearing with Ms. Heald being a grower, yet now it has its consultant conflate Ms. Heald's growing activities with a commercial nursery in order to get out of its mitigation commitments.

20. It is important to remember that the June 17th site visit was not a plant inventory; the consultant merely walked around the property and did not grid or count plants. Therefore, the

conclusions that plants do not exist or have no value is wholly unsupportable. Since

Eversource's refusal a week ago, Ms. Heald has produced the following rebuttal evidence:

A. Eversource's consultant claims that Ms. Heald kept certain plant stock in containers and that she did not see any of these plants in containers. She bases this comment on Ms. Heald's plant list (Attachment H), however this list was created by Ms. Heald to inform Eversource of the vast types of plant stock that she has amassed over her 40 years of gardening on her property and to inform Eversource of the space that would be needed for the relocation. The container size is how the market measures plants and thus, container size was used to estimate the equivalent value of that plant stock in the market. Ms. Heald has never represented that she kept all of her plant stock in containers. Some stock are in tray flats. Evidence of Ms. Heald's in-ground plant stock and trays is demonstrated in Attachment K (*Spirea latifolia alba*); Attachment L (*Lamiastrum Florentinum*), Attachment M (*Viburnum Acerifolium*); (Attachment N (*Monarda* (Bee Balm); Attachment O (*Helenium*), Attachment P (*Daylily*), Attachment Q (*Hostas*); Attachment R (*Ferns*); Attachment S (*Ground Cover*); Attachment T (*Herbs*); Attachment U (*Blueberries and other Fruit*); Attachment V (*Grasses*); Attachment W (*Comptonia-Sweet Fern*). All of these plants have value in the market. An overview of her plant stock and her potted stock is seen in Attachment X.

B. Eversource's consultant claims that certain plants have "no value in the horticultural trade" (Attachment C, Page 3). This position is directly refuted by the fact that plants on Ms. Head's list have hyperlinks to where the plant appears in the market (Attachment H). All of Ms. Heald's pictures attached to this motion are of plants with value in the market and which are used or will be used by Ms. Heald in the future.

C. Eversource's consultant claims that she did not see 200 containers of the hosta, Parkwood Early Dawn, and that it too has no value in the market. In Attachment J (*Hosta Parkwood Early Dawn*), Ms. Heald demonstrates that this hosta is being grown in the ground, which provides better growing conditions than pots. This hosta has value in the market because it is a rare New Hampshire-developed hosta from famed botanist Joseph Parks. Ms. Heald is preparing to introduce this to the trade and is registering it with the American Hosta Society. This unique plant stock will be destroyed if not relocated.

D. Eversource's consultant claims that Ms. Heald did not have *Lamiastrum Florentinum*, a ground cover. Attachment L clearly documents this plant stock exists and is part of Ms. Heald's plant stock. Its value in the market is corroborated in Ms. Heald's plant list.

E. Eversource's consultant claims certain plants are naturally occurring and therefore have no value. As illustrated in Attachment U (Blueberries and Other Fruit), Ms. Heald planted these fruit-bearing plants on her property for her consumption and sale. The position that these plants have no value is directly refuted by the hyperlinks in Ms. Heald's plant list that show where they can be purchased in the market. The same holds true of Ms. Heald's *Comptonia Peregrina*, commonly known as Sweet Fern (Attachment W, *Comptonia Peregrina*). It is not a fern but is a shrub used in natural landscapes and for decorations and is for sale in the market. Attachment M (*Viburnum Acerifolium*), shows more of Ms. Heald's plant stock that is sold in the market.

F. Eversource's consultant claims that the plants in containers "can be moved with little effort." Attachment C, page 3. As described in Attachment X, (Issues with Plants in Pots), moving plants in pots is not easy. Rooted cuttings in pots, by this time in the growing season, have grown roots into the ground. To properly move these plants, the pots will need to be removed from the rooted plant, the roots separated, and then replanted into additional pots and overwintered in a greenhouse. The pot in the pictures in this Attachment contained 22 plants.

Destruction of Evidence is Imminent – Rule Waiver or Delay Needed

21. Construction on Ms. Heald's property is imminent. On September 6th, Eversource informed Ms. Heald that tree clearing is slated to commence September 16th. For this reason, it is imperative that the Subcommittee act now. The plant inventory and relocation must occur prior to construction, otherwise Eversource's construction will destroy 40 years of plant stock that Ms. Heald has amassed. This will result in a significant adverse impact to her business, her ability to earn future income, and her participation in any dispute resolution process.

22. Site 202.14(f) allows objections to be filed within 10 days, however, the expiration of the objection period exceeds Eversource's expected construction date. For that reason, and because Eversource's late change of position has caused Ms. Heald detriment, Ms. Heald requests Eversource's objection period be this week or in the alternative order Eversource to delay its

construction start date. Otherwise, Ms. Heald will suffer irreparable harm because the very evidence she needs to prove her damages will be destroyed by Eversource.

Conclusion

23. Justice demands that Eversource be prohibited from destroying Ms. Heald's plant stock before it is inventoried and relocated with a likelihood of survival. The inventory and relocation of Ms. Heald's plant stock and moving a pole by 50 feet were among the commitments made by Eversource at hearing and which were recognized in the Subcommittee's order. Ms. Heald is not asking this Subcommittee to enforce anything more than the mitigation Eversource committed to at hearing.

24. Eversource has made substantial mitigation commitments to other property owners along its project. It has agreed to underground its project from Gundalow Landing to Little Bay Road in Newington so as to avoid lawns and driveways, yet it has done an about-face on its commitment to mitigate at 220 Longmarsh Road. This situation illustrates the difficulties of when Eversource holds the purse strings and parties have no access to funds to prove their claims. Ms. Heald attempted to commence the inventory back in March, yet payment stymied that effort. If Eversource is allowed to retract commitments made before this Subcommittee, it not only results in a wholly avoidable detrimental impact to Ms. Heald and her ability to operate as a grower and earn future income, but it also directly compromises the integrity of hearings before this Subcommittee. For these and the above reasons, Ms. Heald urges the Subcommittee to enforce the commitments Ms. Heald and the Subcommittee relied upon.

25. The following parties assent to the relief requested: Vivian and Jeffrey Miller, Regis Miller, Thomas and Yael DeCapo, Lawrence Gans and Anne Darragh, Durham Historic

Association, Town of Newington and Keith Frizzell. Eversource objects to the relief requested.

The Counsel for the Public takes no position. The following parties did not respond prior to this filing: Conservation Law Foundation; Matthew and Amanda Fitch, Deborah Moore, Nick Smith, Hellen Frink, Dog Shellfish Co. LLC, Dr. Mark Joyce, Conservation Law Foundation, Town of Durham, and The Nature Conservancy.

WHEREFORE, for the foregoing reasons, Ms. Heald requests the Subcommittee's urgent attention to this matter and for it to:

- A. Open the record in this proceeding pursuant to PART Site 302 to accept, at a minimum, the attached additional evidence;
- B. Enforce the commitments Eversource made to Ms. Heald;
- C. Assess the costs of the Subcommittee for enforcement against Eversource pursuant to RSA 162-H:12, V;
- D. Order Eversource, as a condition of its certificate, to pay Ms. Heald's attorney's fees in connection with this enforcement matter;
- E. Grant Ms. Heald's request for rule waiver or in the alternative, order Eversource to delay the start of construction until the inventory and relocation are conducted; and
- F. Grant any other such relief as the Subcommittee deems necessary and appropriate.

Respectfully submitted,

Donna M. Heald

**Re: Donna Heald
220 Longmarsh Road, Durham, NH
Response Required on or before August 2, 2019**

Dear Attorney Brown:

This letter summarizes Eversource's efforts to resolve Ms. Donna Heald's concerns about the impacts of the construction of the Seacoast Reliability Project ("SRP" or the "Project") on her property at 220 Longmarsh Road, Durham, NH ("Property"). As you know, the New Hampshire Site Evaluation Committee ("SEC") has issued a Certificate of Site and Facility ("Certificate") authorizing construction of the Project. With construction scheduled to begin at or near the Property in early September, this letter reiterates the steps Eversource is prepared to take and respectfully requests that your client respond to this proposal on or before August 2, 2019. In the absence of Ms. Heald's agreement by that date, the proposal will be deemed rejected and construction will proceed as originally described in the SEC Application.

As you know, Eversource sent Ms. Heald a proposed settlement agreement on August 3, 2018, which sought to resolve all outstanding issues with Ms. Heald. However, Ms. Heald did not sign or return the agreement, did not respond to the request for a meeting on August 7, 2018 to finalize the terms of a settlement, and remained in the SEC proceedings as an intervener adverse to the Project. When the SEC record closed, Ms. Heald had not responded to Eversource's settlement offer and no settlement was reached.¹ Indeed, Ms. Heald filed motions and

¹ The SEC Certificate does not contain any specific conditions that relate directly to your client or her property. While all of the general conditions of the Certificate certainly apply to your client and her property, the SEC did not impose any additional conditions or requirements at your client's property above and beyond those that apply generally to all property owners along the Project route. Therefore, Eversource was not bound—as a condition of the Certificate—to comply with any of the proposed offers made to your client to reach a settlement agreement prior to the close of the SEC record.

memoranda in opposition to the Project after the close of the record, requested a rehearing, and more recently filed an appeal at the New Hampshire Supreme Court.

Since the issuance of the Certificate of Site and Facility, Eversource has continued to work with your client to proactively address her concerns to no avail. As you may recall, during the months of March and April, Eversource worked with her in an attempt to purchase her property and/or her gardening business, which was not successful.

On June 17, 2019, Eversource and its contractors met onsite with you and Ms. Heald to flag the edge of the right-of-way, the area for the work pad, the structure location (and potential 25-foot structure shift) and the area for the construction access road. In addition to Eversource's construction contractors, Eversource retained horticulture consultants Patricia Laughlin from Lorax Landscaping and Bob Goddard from Shady Hill Nursery to walk the length and width of the easement to assess your client's gardening business for the purpose of relocating the plants during construction.

Location of Structure #F-107-90

Eversource has a valid Certificate to construct the Project as described in the SEC Application, Amendments, and Supplements and as depicted on the Environmental and Engineering Drawings dated July 16, 2018 and July 27, 2018 respectfully. However, Eversource remains willing to relocate structure #F-107-90 25 feet in whichever direction your client prefers, subject to receiving any and all necessary approvals. As mentioned to you on many occasions, Eversource cannot move the structure more than 25 feet without unacceptable consequences.

A 50 feet relocation of the pole was offered nearly 3 years ago, in June 2016, when the project was still in the design stage. In addition, at five field meetings (June 2016 (2 meetings), July 2016, September 2016, and July 2017) Eversource marked the edge of tree removal and the pole location. However, Ms. Heald did not provide Eversource with feedback on her preferred location.

As recently as the SEC hearings, Ms. Heald confirmed that the proposed relocation was "unacceptable." After an extended period of time, without hearing anything further on the Eversource determined that the pole relocation could not exceed 25 feet without unacceptable consequences. This was documented in an email to you dated April 11, 2019.

However, Eversource remains willing to relocate structure #F-107-90 25 feet in whichever direction your client prefers, subject to receiving any and all necessary approvals.

Gardening Business

Eversource's rights on the Property, as established by our easement granted to its predecessor New Hampshire Electric Company, by Sydney J. Langley on December 6, 1949, recorded at the Rockingham County Registry of Deeds in Book 577, Page 468. Among other things, the easement grants Eversource rights to "enter upon and to construct, reconstruct, extend, repair,

replace, maintain, operate, inspect and patrol its lines; and also the perpetual right and easement at any time, and from time to time, and without further payment therefor, to clear by cutting or use of chemicals, and keep cleared said strip of trees, underbrush, buildings and other structures, to pass along said strip to and from the adjoining lands for all of the above purposes, ... and to pass over the grantor's premises to and from said strip as reasonably required, together with the right to cut large trees adjacent to, but not within said strip." Your client acquired and owns the Property subject to Eversource's prior existing easement rights and has no lawful right to interfere with or obstruct Eversource's exercise of those rights.

To the extent Ms. Heald has used the Eversource right-of-way to plant and maintain her nursery stock, that operation has been conducted without the express permission or sanction of Eversource. Therefore, your client's plantings within the right-of-way are at her sole risk. Your client has not executed a joint use agreement with Eversource in order to use the right-of-way for a gardening business. While we continue to try to avoid unnecessary damage wherever possible, Eversource cannot assure that the plantings will be unharmed and has proposed many mitigation measures to avoid and/or minimize impact for Ms. Heald's consideration. Indeed, Eversource has made multiple proposals to Ms. Heald since June 2016 to mitigate potential impacts to Ms. Heald's alleged plant stock, but Ms. Heald has not accepted any of these proposals.

During our meeting on June 17, 2019, Eversource's horticulture experts assessed the plants on the Property. During this meeting, Ms. Heald agreed that the horticulture expert hired by Eversource was, in fact, an acceptable "expert" to assess the plants for relocation. The assessment revealed that most of the plants within the right-of-way are weeds or plants native to the area or are invasive species, which cannot be moved according to law. Moreover, it was evident that a majority of the plants that Ms. Heald noted during the site walk also grow on The Nature Conservancy Property across the street; therefore, the plants located on your client's property are not unique. In addition, your client has not provided Eversource with any evidence supporting the assertion that the plants in the Eversource right-of-way have a specific monetary value. By contrast, based on the assessment of the third-party expert your client's plants appear to have little, if any, value, and the quantity previously stated and provided as plant stock did not align with what was found in the field.

Notwithstanding the foregoing, Eversource hereby offers to relocate any and all potted plants in the right-of-way to another location on Ms. Heald's property. Based on the assessment of the horticulture expert, this does not include any plants currently in the ground within the right of way. In addition, Eversource offers to provide Ms. Heald a onetime settlement payment in the amount of \$50,000 subject to Ms. Heald relinquishing her rights to file a claim in the dispute resolution process. In addition, and in compliance with the Certificate, Eversource will take all reasonable precautions, including but not limited to installing and using 16-ft wide timber mats, to avoid any potential temporary impacts to Ms. Heald's property during construction.

Please let us know on or before August 2, 2019 whether your client accepts this offer. If we do not receive a response, or Ms. Heald rejects Eversource's offer, Eversource will proceed with construction as planned and will move all potted plants from the right-of-way to a location

within the easement on Ms. Heald's property that does not interfere with the construction, operation or maintenance of the new line.

Landscape Mitigation Plan

Eversource will also continue to work with your client to reach an agreement on an acceptable landscape mitigation plan. This plan will include plantings that will mitigate the visual impact of the Project to Ms. Heald's home.

Water Lines

As previously discussed, Eversource has marked the location of your client's water well and water line and agrees to require its contractors to protect the existing water line from your client's water well to her home and plant stock during construction of the Project. To ensure constant access to potable water, Eversource will also voluntarily provide Ms. Heald with a source of emergency water in the form of a mobile water truck and/or tank during construction of the Project, regardless of whether there is damage to the well.

As noted above, Eversource anticipates that construction will begin at or near the Property in early September. Eversource is prepared to take the steps detailed above to resolve Ms. Heald's concerns and requests that your client respond to this proposal on or before August 2, 2019. In the absence of Ms. Heald's agreement by that date, the proposal will be deemed rejected and construction will proceed as originally described in the SEC Application.

Eversource looks forward to your client's prompt response.

Sincerely,

Adam M. Dumville

Re: Seacoast Reliability Project
Eversource Construction at 220 Longmarsh Road

Dear Attorney Dumville:

I have had an opportunity to discuss your letter of July 29th with Ms. Heald. Ms. Heald is disappointed with your letter. Your letter contains numerous factual misstatements and allegations of Ms. Heald failing to respond. Having represented Ms. Heald in this matter, I do not agree that I have not responded on Ms. Heald's behalf to Eversource. I am not going to engage in an itemization of the misstatements, rather, I would like to focus on moving Ms. Heald and Eversource closer to a resolution of the uncertainties and concerns that surround construction on her property.

Your letter shows that Eversource has no intention to conduct the inventory or move the plant stock. This is a disappointing and unacceptable change in Eversource's position. The path laid out at hearing was that Eversource would conduct the plant inventory. See, for example, App. Hearing Exhibit 234. The June 17, 2019 meeting was to effectuate that path. At the meeting, Eversource's consultant, Patricia Laughlin, admitted that her expertise was not expansive enough to cover the full scope of the plant stock and that she would get back to Ms. Heald with her proposal on how she would conduct the inventory and proceed to moving of the plants. Ms. Heald never accepted Ms. Laughlin as the sole expert to handle this project. Ms. Heald only agreed to meet her to determine how she might proceed with the project. We have been waiting for that proposal. Your letter falls short of that.

I would like to point out that it is evident that Eversource has not received or obtained Ms. Laughlin's plan. On Ms. Laughlin's website, she promotes herself as knowledgeable on natives and edibles, yet your letter characterizes them as weeds-in direct contradiction of Ms. Laughlin's expertise. I would also like to note that Ms. Laughlin also agreed that the identification of the plants in the affected areas would need to be done simultaneously with removing and potting them and that the affected areas would need to be gridded-out. As was discussed at the June meeting, this is an enormous task. The inventory needed to be conducted over the course of a growing season. It is unfathomable that Eversource has waited this long and produced nothing. Eversource has dropped the ball on this. It is also startling to still hear Eversource suggesting relocating plants on Ms. Heald's property when

August 9, 2019

Page 2 of 2

she has, *ad nauseam*, explained why the plants cannot be kept on her property. The other portions of her property do not have the correct growing conditions. At a minimum, they lack proper soil conditions and sunlight and no amount of tree cutting is going to change that.

Time is of the essence on the plant inventory. The inventory team needs to be assembled now. In light of Eversource's failure to get back to Ms. Heald, assemble a team, or provide Ms. Laughlin's proposal, Ms. Heald will take the lead. She has a number of plant experts who could be available but Ms. Heald needs to first know how Eversource will pay the people before they will commit to the project and provide a proposal.

Ms. Heald would appreciate it if you could obtain from Eversource how payment arrangements will be made so that Ms. Heald can secure people, provide Eversource with their expertise, and commence the inventory. Because Eversource has dropped the ball on the inventory, Ms. Heald will similarly take the lead on finding a place to relocate the plants. But as with the inventory, Ms. Heald will need to know from Eversource, how payment will be arranged.

Lastly, Ms. Heald rejects the \$50k cash-out. She rejects Eversource backing away from relocating the pole 50 feet. Eversource's provision of water is expected given that Eversource's project will likely disrupt Ms. Heald's water supply, however, as expressed in prior communications, Ms. Heald still seeks to know how the temporary water will be provided, where it will be located, and whether it will be pressurized like her current water supply and integrated into her house. The well line still needs to be marked. It has never been marked, contrary to your letter.

Please contact me within seven days with Eversource's payment information.

Very Truly Yours,

Marcia A. Brown

**Re: Donna Heald
220 Longmarsh Road, Durham, NH
Response Required on or before August 27, 2019**

Dear Attorney Brown:

This letter notifies you of Eversource's intent to commence tree clearing and construction of the Seacoast Reliability Project ("SRP" or the "Project") at 220 Longmarsh Road, Durham, NH ("Property") in approximately two weeks. We regret that your client has been unwilling to accept Eversource's generous offers to avoid, minimize, and/or mitigate potential impacts from construction and operation of the Project.

Your letter incorrectly states that Eversource did not complete an inventory of Ms. Heald's alleged plant stock. Eversource has completed an inventory of plants within Eversource's right-of-way and the results of the inventory were summarized in my July 29, 2019 letter to you. As previously stated, and as summarized in Attachment 1, which is the memorandum prepared by Eversource's expert, your client's plants were determined to have little, if any, value. Eversource has fulfilled its voluntary offer to your client to conduct a plant inventory.

To the extent your client wants Eversource to relocate the potted plants within the right-of-way to another location on your client's property, please notify me within five business days with your client's preferred location. Without any such notification within five business days, Eversource will utilize its standard best management practices while constructing the Project in the right-of-way. In addition, Eversource will have a construction and/or outreach representative onsite to oversee and monitor all aspects of construction very closely. To the extent your client is unsatisfied with these measures after construction of the Project is completed, your client is free to avail herself of the Dispute Resolution Process as described in the Certificate of Site and Facility as well as outlined in Applicant's Exhibit 268.

As your client has rejected Eversource's repeated offer to relocate structure #F-107-90 by 25 feet in any direction your client prefers, Eversource will no longer entertain any such requests for a

Page 2

relocation of this structure and Eversource will construct the Project as depicted on the Environmental and Engineering Drawings dated July 16, 2018 and July 27, 2018 and as approved by the Site Evaluation Committee, by Written Order, on January 31, 2019.

Contrary to your letter, and as stated previously, Eversource has marked the location of your client's water well and water line. Eversource will notify its contractors of the markings and agrees to require its contractors to protect the existing water line from your client's water well to her home. Lastly, Eversource hereby withdraws its offer to pay Ms. Heald \$50,000.

Please convey to Ms. Heald that in approximately two weeks, mowing/matting and tree clearing in the right of way will commence, followed by the start of construction of the new line in the right-of-way on her property. This schedule is weather dependent and subject to change.

Sincerely,

Adam M. Dumville

Re: Plant Assessment, 220 Longmarsh Rd. Durham, NH

I was engaged on behalf of Public Service Company of New Hampshire d/b/a Eversource Energy ("Eversource") to provide my assessment, as a horticulture consultant, of the plant material in the Eversource easement at 220 Longmarsh Rd. in Durham, NH. I walked that site on Monday June 17th. My observations are described below.

As an overview: I did not see any vegetation in the easement area that has value from an ornamental horticulture perspective, for the reasons described in this memo. An exercise of inventorying the plants in the easement is not feasible. None of the plants there, except those in containers, are worth moving, preserving or replacing. The plants in containers have no value in the horticultural trade but they can be moved with little effort.

- The vegetation I observed within the Eversource easement is typical, given the environmental conditions, of an unmanaged site.
 - I have walked distribution and transmission rights-of-way many times in Southern Maine and New Hampshire for berry picking and prospecting for cross-country ski trails. This site is not unique.
 - I also walked in the Eversource easement on the maintained power line corridor to the north of Longmarsh road to compare to the property located at 220 Longmarsh Rd. The vegetation north of Longmarsh road is very similar to that in the easement area where the conditions are similar, e.g. full sun and high ground.
 - The vegetation, except what was in containers, appeared to all be naturally occurring. There was no indication that any of the vegetation had been planted intentionally or was being managed (weeded, pruned, watered).
 - If the vegetation were planted with the intent of it being harvested for landscape use I would have expected to see it planted so that the effort of digging would be minimized (E.g. in-prepared beds, in rows, spaced based on harvest size, labeled and with the vegetation around it kept at bay.)
 - Naturally occurring vegetation that develops from seed or root systems cannot be easily transplanted. As the plant grows its roots are intertwined with those of the plants around it. The transplant success of collected plants is much lower than those that are nursery grown because of the state of the root system.
- Plants with claimed medicinal and foraging value appear to be naturally occurring (were not planted) and are not unique to the site; they are typical plants that would be found given the site conditions.
- Several of the plants in the easement are invasive species. Species and cover is typical for a distribution or transmission right-of-way. Please note: it is illegal to move invasive species: Agr 3800 (Statutory Authority: RSA 430:55) http://www.gencourt.state.nh.us/rules/state_agencies/agr3800.html
 - Prohibited species: <https://www.agriculture.nh.gov/publications-forms/documents/restricted-invasive-species.pdf>
 - Restricted Species: <https://www.agriculture.nh.gov/publications-forms/documents/restricted-invasive-species.pdf>

- Containerized plants
 - Plants in containers on the site were not properly labeled so they have no value in the horticultural trade.
 - Industry best practices require that all plants be legibly tagged with proper botanical names.
 - Landscape Contract Specifications (Landscape industry best practices) state that “All plant material will conform to the current issue of the American Standard for Nursery Stock, published by AmericanHort (formerly ANLA).” (Reference: Landscape Specification Guidelines published by the Landscape Contractors Association; Part I, section 1.2). The plant on the subject property do not comply with these standards.
 - The American Standard for Nursery Stock states:
 - 1.3.1 Correct identification requirement*
 - All nursery stock transacted within the terms of the Standard shall be correctly identified by genus, species, and, if applicable, cultivar.*
 The plant on the subject property do not comply with these standards.
 - In a nursery when a plant loses its tag it is discarded or given away. Without tags the plant on the subject property have no horticultural value.
 - Verification of rare and unique varieties requires proper labeling and supporting documentation (much like the requirement for a pure bred dog to have proper documentation). Proper labeling was not in evidence.
- Plant List
 - The plant list provided by the landowner includes annuals, biennials, herbaceous perennials, shrubs and trees that are typical of any unmanaged site with the conditions encountered.
 - The list does include some plants from the horticultural trade but it also includes invasive plants and many plants that are considered weeds in the horticultural trade (Reference: Weeds of the Northeast 1st Edition by Richard H. Uva, Joseph C. Neal, Joseph M. DiTomaso)
 - The ‘Estimated Quantity’ column on the plant list is irrelevant if plants aren’t containerized or managed for harvest and properly labeled.
 - The plant list indicates there are almost 100,000 plants in containers. I counted about 100 visible containers when I was there. If containers are hidden in, or overgrown by, the foliage of other plants the plants in the containers will not survive.
 - If all these plants were in pint size containers, and the list indicates many are quarts and gallons, they would take up ~11,000 square feet or about a quarter of an acre.
 - I did not see any plug trays being used for propagation – plug trays are generally 10 ½” x 20 ½” and have cells for 32 to 500 plants (<https://www.toplastics.com/horticulture/plug-trays>)
 - I made an effort to observe the top three plants on the plant list when sorted by the quantity and value columns.
 - Quantity column
 - *Lamium floridanum* is a non-native ground cover perennial that spreads by runners. It is sold in nurseries. The plant list says that there are 5000 on site. I did not observe it in the landscape and I did not see containers with this plant.
 - *Impatiens capensis* is a native annual that grows in wet areas and spreads by seed. The seed is sometimes harvested and packaged for sale. It would not be grown in a container for sale at a nursery. I did see this plant, but it was growing naturally in the soil, not in a container. The plant list says there are 4000 pint size containers on site. I did not observe any in containers.
 - *Onoclea sensibilis* is a native perennial fern that grows in wet areas. It spreads by creeping rhizomes and spores. I did see this plant, but it was growing naturally in the soil, not in a container. The plant list says there are 3500 pint size containers of this plant. I did not observe any in containers.
 - Value column (Without labeling plants have no value in the horticultural trade.)
 - *Hosta ‘Parkwood Early Dawn’* is a non-native herbaceous perennial. The plant list says there are 200 of them on site. I saw a few hostas in containers at the site. I did not see any labeled as Parkwood Early Dawn.
 - *Spiraea latifolia ‘Alba’* is a native shrub that grows naturally in dry open areas with marginally fertile soils. The plant list says there are 1500 plants in 3 gallon containers. I did see this plant, but it was growing naturally in the soil, not in a container.

- *Glechoma hederacea* is a creeping ground cover perennial. The plant list indicates that there are 200 in quart size containers. I saw this plant on site growing in the soil and in some containers with other plants. This plant is on the NH Invasive Plant Species Watch List and is listed in *Weeds of the Northeast*. It should not be sold as a landscape plant.
 - Some of the plants on the list are mushrooms. The mushrooms we see above the soil are only the 'fruit' of the life form. They do have beneficial associations with plants and can be harmed if the soil chemistry or plant cover change significantly. They can also go dormant and then re-emerge when the conditions are right. They would not be harmed by cutting vegetation in the easement.
- Regrowth
 - I was asked about the recovery of the plant life after cutting and construction. Nature will recover the area with vegetation post-construction.
 - Annuals will grow from seed
 - Perennials will regrow from their root systems
 - Most shrubs will also regrow, especially if they aren't cut too short.
 - The stumps of most deciduous trees will sprout new growth
 - Most evergreens will be killed

Re: Seacoast Reliability Project
Eversource Construction at 220 Longmarsh Road

Dear Attorney Dumville:

Potted Plants Relocated On-Site

Ms. Heald has discussed many times with Eversource that she has no growing conditions on the remaining portion of her property that are suitable for the plants. Thus, plants moved to other parts of her property for the duration of the project, which is expected to take over a year, will likely die. At the site visit in June, when Eversource and Ms. Heald discussed off-site locations, Ms. Heald related to Lauren Cote that Nancy Sandberg had offered her property for the plant relocation. The need for an off-site location was discussed at the hearing so this should come as no surprise to Eversource. Indeed, Eversource agreed in its App Ex 229 that it may be necessary to use an off-site location. Ms. Cote even stated she would investigate the Sandberg property. To date, Ms. Heald has not heard back from Ms. Cote. Thus, the proposal to locate the plants on Ms. Heald's property is not how this issue was left at the June meeting and Ms. Heald is still waiting for Eversource's proposed off-site location.

As Eversource knows, it will need to cut trees to make clearings for the plants. Again, for the past three years, Ms. Heald has explained that tree clearing will not provide the sunlight needed for an on-site storage solution. Eversource's consultant, LandWorks, even agreed. For these reasons, Eversource's focus on relocating Ms. Heald's plants on her property remains fraught with problems.

But to respond to your request directly, and while noting that on-site is not a reasonable solution or mutually agreeable, the only locations for the plants would be:

Along the northeast side of Ms. Heald property, out of the easement; and/or
Along either side of her house for those plants that require only minimal sun.
Plants currently in the cleared area of the right of way currently get 6 to 8 hours of sunlight.

Plant Inventory

Ms. Heald objects to Eversource's unilateral declaration that a plant inventory has been done. If one has been done, it was surreptitious. Eversource's consultant did not more than walk the property for an hour. As stated in your letter dated July 29th, page 2, the objective of the site visit was to have Eversource's horticultural consultants "walk the length and width of the easement to assess your client's gardening business for the purpose of relocating the plants during construction." There was no mention of the purpose of the visit to be an inventory. Ms. Laughlin did no gridding or mapping of the areas to be disturbed. Ms. Laughlin herself even agreed gridding was necessary in order to identify the plants among the overgrowth.

Ms. Heald would like to address the overgrowth. Ms. Heald has specifically not cut within the easement so that evidence of the plants can be seen. Photos of her plant stock will be sent under separate email. She has not had time this summer to weed the potted plants as she usually does because of the resurgence of Lyme that has occurred due to the stress of Eversource remaining a moving target. The roots of her plants directly in the ground are intertwined, as Ms. Laughlin notes, but that does not mean that her plants do not exist or that they do not have value. The roots merely mean that plants dug and potted need more area when moved to another location.

Misrepresentation that Ms. Heald Approved

Ms. Heald agreed to meet Eversource's plant team on June 17th. That team consisted of Patricia Laughlin and Bob Goddard. Mr. Goddard stated his role was to move plants, not to identify them. Ms. Laughlin had expertise, but not enough to identify all of Ms. Heald's plant stock. Although Ms. Heald approved of Ms. Laughlin on the team, Ms. Heald also expressly stated at that June 17th meeting that Ms. Laughlin did not have all the expertise needed for the full plant inventory. For example, Ms. Laughlin stated she did not know ferns.

The bottom line was that Ms. Laughlin stated she would get back to Ms. Heald with a proposal of how she would conduct the inventory. Ms. Heald is still waiting for that proposal. Eversource's position that the inventory is completed is wholly inconsistent with Ms. Laughlin getting back to Ms. Heald with a proposal as well as the scope articulated in your July 29th letter.

Ms. Heald's Team

In the alternative, Ms. Heald has spoken to many professionals since the project was approved and has offered to assemble the team but needs to know how they will be paid.

Destruction of Evidence

As noted in Ms. Heald's letter of August 9th, time is of the essence. If Eversource commences construction before the plants are inventoried, counted, and removed, Eversource will be destroying the very evidence Ms. Heald needs to recover damages. Ms. Heald objects to Eversource's intent to knowingly destroy evidence and renege, at such a late date, on its commitment to inventory her plants. The lateness of Eversource's position gives Ms. Heald barely three weeks to remove her stock from harm's way. This havoc was wholly avoidable. In addition, it has been known throughout the Site Evaluation

Committee process that it takes an entire growing season to inventory all plants.

Specific Objections to Statements in Ms. Laughlin's Memorandum

Ms. Heald objects to the characterization that edibles on her property are wild and that she did not plant them. They are not worthless. On the contrary, they are sold at farmers markets and are part of Ms. Heald's plant stock and are edible to her.

To dismiss perennials as wild or naturally occurring, without looking at the flower of the plant, is unprofessional. As Ms. Heald indicated in her testimony, the plant inventory needed to be conducted over the course of a growing season so that the flowers would indicate their variety. Also, just because the name of a perennial is not known to Ms. Laughlin does not mean it does not exist. Ms. Heald has received unique, registered plants that are not in the market. She seeks to protect these.

Ms. Laughlin's statement that plants will regrow after mats are removed is inconsistent with what Eversource has stated in the field, which is that the mats will be down so long that it will kill all plants underneath it. For this reason, a restoration plan will need to be created and as Eversource has consistently indicated her property will be restored (soils and plants) to preexisting conditions.

Ms. Laughlin's statement that the growing conditions are similar to neighboring property is not correct. Ms. Heald has moist ground, not high ground except in some instances.

Ms. Laughlin's assessment that because plants in the ground and available elsewhere, natives or otherwise, and are abundant, have no value is grossly inaccurate. They are abundant because Ms. Heald has made it that way for the purpose of selling them when she retires from maintaining her client's gardens. Ms. Laughlin's citation to American Standard Nursery Stock is also not applicable. Ms. Heald is not a nursery; she is a grower. Identification tags are also not necessary when a plant's identification is obvious, or those plants are not currently being sold, but inventory is being created from them and tags are only working identification to the grower.

Ms. Laughlin's comments on container sizes is a mis-reading of Ms. Heald's plant list. Ms. Heald used container sizes to ascertain cost values of a comparative plant in the market. Additionally, Ms. Heald does not propagate any of her plant stock in commercial plug trays, so reference to plug trays is also irrelevant.

Environmental Justice

Ms. Heald would like to point out that the cost of conducting an inventory and relocating her plants pales in comparison to what Eversource was willing to do to accommodate the Newington residents who had built homes, yards, driveways, and shrubs within the right-of-way. The Newington residents get directional drilling and Ms. Heald gets destroyed evidence. Ms. Heald does not view this treatment as fair.

Pole Location

Ms. Heald understands that Eversource has reneged on moving the pole 50 farther away from her home. Ms. Heald continues to object to this action; she accepted the 50-foot

location at hearing. Eversource's willingness to move a pole on Nick Smith's property to mitigate the visual impact from his home but then reneging on moving the pole 50-feet away from Ms. Heald's home is very insulting to Ms. Heald.

Permanent Steel Stakes

At two of the site visits to Ms. Heald's property, Eversource has agreed to place steel stakes to demarcate the right-of-way on her property. Ms. Heald still asks that this commitment be put in writing. These stakes must be in place before any wooden stakes need to be replaced because, as indicated in Eversource's update to the Site Evaluation Committee dated August 19th, the clearing will knock over the wooden stakes. The stakes are Doucet's survey markings and once these are disturbed, there will be no proof in the field of the actual right-of-way boundary.

Tree Cutting

On June 17th, Eversource was to flag and identify by name, trees along the edge of the right of way to be cut. This was not done but merely marked by the edge of the right-of-way. Ms. Cote specifically stated that Eversource would not cut anything outside of the right-of-way boundary without Ms. Heald's permission. Ms. Heald would like a commitment, in an MOU, from Eversource that only the trees that have been pre-marked will be cut.

Construction End Date

Please reply back regarding when Eversource will be completed with its construction in the easement and everything restored to pre-existing conditions.

Environmental Surveys

The construction schedule update states that environmental surveys will be done prior to tree removal. Ms. Heald would like to know what surveys these are. When the Normandeau raptor person arrived, unannounced, on Ms. Heald's property, she excused herself and said she would come back to conduct the count. Ms. Heald is still waiting to be informed of when this and other such persons will be on her property so that she can be present. To remind Eversource of Ms. Heald's sensitivity to persons being on her property, Ms. Heald has had items stolen from her property during past easement maintenance. In addition, Ms. Heald want to make sure that the Blandings Turtles, Bog Skimmer Dragonflies, and other rare & endangered species will be included as well as raptors. All of these were brought to Eversource's attention.

Orange Fencing

At the June on-site meeting, Eversource stated that it would erect orange construction fencing so that Ms. Heald would know where on her property Eversource will stay confined to and not stray outside of. Given Eversource's pattern of commitments and retractions, Ms. Heald would like this commitment in writing in an MOU from Eversource.

Herbicides

At the hearing, Ms. Heald understood that Eversource would not be using herbicides on her property. She has a dug well that could be contaminated by such use, the herbicides will kill any remaining plants, they will impede regrowth, and they are proven to be harmful to health. Due to these concerns, Ms. Heald seeks a permanent commitment from

Eversource, in an MOU, that it will not use herbicides of any kind on her property.

Water Line

Please also reply back on how Eversource marked the water line because Ms. Heald has not seen any flagging demarcating the water line across the right-of-way to Ms. Heald's house. Ms. Heald also wants assurance from Eversource that it will be creating a bridge of the timber mats over her water line to protect it, similar to how Eversource traverses stone walls.

Potable Water

Ms. Heald is still awaiting an explanation from Eversource on the back-up plan for if her water line is broken by the construction. Eversource has stated it will provide "emergency water in the form of a mobile water truck and/or tank during construction" but Ms. Heald has asked on numerous occasions whether that water will be potable and how it will be connected to her home plumbing. This is an important issue because her plants cannot be without water for a period of time should contractors damage her water line. Ms. Heald would like an answer.

Visual Mitigation Planting Plan

Ms. Heald acknowledges that she needs to respond to Eversource regarding this planting plan. Which trees are being removed and the location of the pole closest to Ms. Heald's house have been a moving target, depending on Eversource's attendees to the site visits, and this needs to be settled before Ms. Heald can make an informed decision. For example, the Cedar trees Ms. Heald has been told would be topped only would provide privacy, however, on June 17th, Eversource told Ms. Heald that they would now be cut. Ms. Heald seeks to truly mitigate the 103-foot pole and loss of privacy buffer on two sides. Any trees that she has proposed have been rejected by Eversource. Any trees Ms. Heald has inquired about have been rejected by Eversource. Ms. Heald needs replacement trees that have the potential to grow to a height that will provide privacy from neighbors and unsightly poles and wires. None of the 5-foot trees or 3-foot tall shrubs offered by Eversource grow sufficiently. Ms. Heald needs Eversource to provide a list of potentially tall growing trees to Ms. Heald for consideration.

Cut Wood

Ms. Heald would like Eversource's commitment to leave any cut wood as wood chips or as cut wood to be embodied in a written MOU. All tree stumps from large trees need to be removed or ground so that there will be no regrowth as shrubs.

Construction of Project

Eversource has stated that it would only be on residential property during reasonable hours and to that end, Ms. Heald would like that commitment put in writing. Ms. Heald's understanding is that construction will be limited to between 7 AM and 6 PM M-F and 9 AM to 6 PM on Saturday. Ms. Heald will need to be notified specifically on which days contractors will be on her property because she will need to be present.

August 27, 2019

Page 6 of 6

Road

Because Eversource is still modifying its construction plans, Ms. Heald reiterates the solution of moving the construction road to the other side of the easement, where there will be less impact to her.

MOU

At the June meeting, Eversource and Ms. Heald agreed that a memorandum of understanding would be best to govern the plant inventory, plant relocation, and other issues identified above. It is evident from the state of the unresolved issues that an MOU is needed. Ms. Heald would like to see a draft at your earliest convenience.

Stone Wall

Separate from the Seacoast Reliability Project, please also reply back on whether Eversource will be rebuilding the stone wall it toppled during prior vegetation management activities.

Very Truly Yours,

Marcia A. Brown

**Re: Donna Heald
220 Longmarsh Road, Durham, NH**

Dear Attorney Brown,

I write on behalf of Eversource in response to your August 27, 2019 letter to Adam Dumville. Over the course of the last several years Eversource has made extraordinary efforts to address the issues Ms. Heald has raised. Rather than again recount those efforts and our positions, we will let the voluminous written record speak for itself. Given that Eversource's repeated attempts to address Ms. Heald's concerns have not produced any meaningful results, we see no basis to now start a discussion about an MOU.

Eversource has all the necessary approvals to construct the Seacoast Reliability Project on the right-of-way that crosses Ms. Heald's property. We will be proceeding with construction subject to those approvals and will comply with all requirements in the Certificate of Site and Facility. We also note that your understanding of that construction period in relation to Ms. Heald's property is incorrect. Eversource will commence tree clearing and construction activities the week of September 16, 2019. Those activities will not be continuous over the next year, but will be phased (vegetation removal, site preparation, structure installation, wire installation and restoration). Each phase will occur for a few days at a time, at various intervals, until completion of the Project, currently scheduled for June 2020 (subject to change).

Prior to these activities commencing, all potted plants and personal physical items in the right-of-way will be moved by Eversource (if Ms. Heald does not move them herself) to the location noted in Ms. Heald's response on August 27, 2019 -- "along the northeast side of Ms. Heald's property, out of the easement" -- so that Eversource can proceed with operations in the right-of-

Marcia A. Brown, Esq.
August 30, 2019

Attachment E

way in a safe manner. If Ms. Heald withdraws permission for Eversource to move the plants and other items to the northeast side of her property, she will need to move them herself, or provide another location outside of the work zone.

Sincerely,

Barry Needleman

Hi Donna,

Amy Lamb forwarded your question about having a survey done. Are you looking for an inventory of rare native plants and exemplary natural communities? Our NHB staff or other qualified ecologists using our field forms are qualified to conduct that.

We are mainly a self-funded bureau, would any funding be available? Cost depends on how large your property is and how detailed you need. Just to provide a very rough estimate, it is approximately \$300/day for one staff person (that includes travel costs) to complete a medium level refined scale of approximately 2-5 acres during the growing season (May-ish –August depending). So, it could cost NHB \$300/day and just take one day to conduct a survey. We would ask if you have any funding available to help cover that cost.

Again all this is estimates that I am mainly pulling out of the air and it could cost more, however my staff are excellent at rapid assessments and desktop preparation (aerial photos) and topography maps that help delineate “interesting” areas that may have some interesting plants and at keeping costs/time in the field down as much as possible.

I hope that makes sense. Of course we would need to discuss further, but I wanted to provide some information.

I will be out of the office most of next week. Would you be able to call me in 2 weeks if you have further questions?

Thank you,
 Sabrina

Hi Donna-

I haven't heard back from you so I'm not sure if you received my last email...

One of my clients up in the Portland area is an ecologist, however, he's a bird and wildlife expert - not plants. But he gave me the name of an ecologist friend of his whom he is highly recommending to possibly help you with mapping and inventory.

Her contact:

Hi Donna,

It was good to meet you as well.

I don't know yet how much I can help you but I can at least get you started with perhaps some referrals beyond Pete Hoag. In addition to the tree evaluations, I think a wetland scientist, botanist or field ecologist would be the best experts to conduct the mapping and ID.

- There are professionals much more expert than I in native species identification and mapping. Have you tried connecting with anyone at UNH yet?
- I may be best suited as someone who can help find and coordinate the right people to help you out and then serve to help verify the ID process - it's ideal to have multiple people confirm the ID of more difficult species
- I don't have much time available as my season is quickly filling up and so if Eversource needs documentation quickly, I won't be able to manage that
- If I do end up working on this project, who pays me and when?

I just noticed some additional sizable cedars off the other end of Longmarsh Road and I think they are the *Juniperus virginiana* (Eastern Red cedar) as you were surmising.

Eversource Seacoast Reliability Project
Donna Heald- 220 Longmarsh Road, Durham NH
Attorney-Client Onsite Meeting
6/17/19

Attendees from Eversource:

- Adam Dumville: Counsel
- Lauren Cote: Siting and Construction Services
- Sam Eames: Construction Representative
- Dan Jarry: Construction Contractor (JCR)
- Lucas Turcotte: Tree Clearing Supervisor
- Mike Stanek: Former Tree Clearing Supervisor
- Patricia Laughlin and Bob Goddard: Landscape Consultants

Agenda:

- **SEC Approval, Next Steps:** Adam Dumville
- **Advance Notice:** Lauren Cote
- **Location of Structure F107-90, access road, work pad:** Sam Eames, Lucas Turcotte
- **Tree Clearing and Wood Retention:** Lucas Turcotte
- **Plant inventory/relocation – Review Scope:** Patricia Laughlin, Bob Goddard
- **Well and Emergency Water Supply:** Sam Eames

Propagating Plants - Donna Heald

Example A Primula Wanda - 4 pictures

These pictures show how Donna Heald propagates plants. She allows many rooted cuttings to develop in a single pot or ground plot. Once the plants are well established, she can dig them out of the ground, separate the individual root systems, and replant them either in pots or back in the ground in clusters - generally 3 to 5 to a cluster.

Note: This separation was done for demonstration purposes only.

This is the wrong time of year to disturb and divide these plants

I will likely lose all 25 new plants because the roots will not be fully established before winter.

These photos show the process with a Primula Wanda
Located within the access road under tree near my table
Mike Stanek said this tree would stay
This is just one of about 6 clumps near the tree

Photo A1_747 plant on 9/2/2019 in the ground
Bloomed early in the season, foliage cut back to regrow
Picture shows 4 inches of space covered by the plant

Photo A2_749 Plant dug out of the ground and separated
(Normally this is not done until spring to ensure survival. These plants are now likely to die.)
Individual root systems displayed around the original hole
The 4 inch plant yielded 25 root systems
One is shown in a 3 inch container for reference
Typical replanting after a spring division

Photo A3_750
Five individual plants back in the original space dug up
(typical of my method)

Photo A4_751
Remaining 20 plants were planted elsewhere to start more colonies
4 - 5 plants per clump
Photo shows 4 clumps taking up a space 14 inches square

Hosta 'Parkwood Early Dawn'

Patricia **Laughlin** claims she did not see 200 pots of this plant.

1) The plants are not currently in pots.

2) Ms Lochland would absolutely not have been able to identify this plant as it does not exist in the trade yet. It is a Joe Parks developed hosta that I intend to register with the American Hosta Society and introduce to the trade. The attached photos of it are the only ones that exist. The plants are all in the ground and protected under the cover of tall interrupted ferns, which were tall and robust on 6/17/2019.

This is a very small hosta that is bright yellow/green as it emerges, turns green late season and has exceptional flowers. The price was established when some of these were sold at auction before Joe Parks died. The price of new introductions is always much higher than for those plants in the trade for a long time.

Photo B1_757

Sample of 'Parkwood Early Dawn' growing in the ground in my typical double tray system for shallower rooted plants. The edge of the tray is slightly visible at the bottom of the picture.

Photo B2_753

Size of this plant with my hand for reference

Photo B3_797

Double tray raised above the ground to show my system that allows plants to grow longer in the same tray whereas plug trays require stepping up in size several times. This tray contains 55 root systems, typical of my trays of 50.

Spirea latifolia alba

Example 4 Meadowsweet

Patricia Laughlin said she did not find them in pots which is because they are not in pots. Unfortunately, she misinterpreted the spreadsheet information. As per the spreadsheet notes the pot sizes were listed to show A) the size of the pot used in the price column, and B) to show the size that each plant would take up if it were moved to the proposed greenhouse[s].

Meadowsweet is a favorite of mine and is probably the earliest plant I began to propagate. I have successfully created thousands and it is now naturalizing in the Right Of Way.

This native American species attracts birds and butterflies and is the larval host to spring Azure [butterfly] which we should be attracting

It is one of the best pollinator plants there is. I have used Meadowsweet in many natural gardens I have created for my clients. It most certainly has value and is available for sale at most garden centers.

More importantly, it happens to be one of the shrubs that Eversource itself promotes for use in transmission Rights Of Way in their "Tree and shrub Planting Guide".

Also listed in the Eversource "Tree and Shrub Planting Guide are many other plants that I am growing on the ROW: blueberries, forsythia (mine is the rare Gold Foliage Forsythia), winterberry, Hydrangea, Leucothoe, mock orange, Ninebark Golden, Sweetfern, Viburnum. Many of these, while present, were not even included on my preliminary plant list provided to Eversource.

Picture D1_860 shows a branch of Meadowsweet reaching into the picture from the center right edge.

Picture D2_4227 shows detail of Meadowsweet from photo

Picture D3_web shot shows a blooming Spirea Latifolia

Lamiaeum Florentinum

Patricia Laughlin states that she “did not observe it in the landscape and did not see containers with this plant”.

She did say it is sold in nurseries.

There are great quantities of this in many areas in the right of way because I am trying to establish many quantities of it. 99% or more of them are planted in the ground.

I am experimenting with using it in large decorative container arrangements as a filler plant, so there are some in containers along with other plants.

All the photos in this file are of plants in the ROW.

This plant is a silver and green ground cover. The plants have value and have a great many uses as an easy maintenance plant and used in container plantings.

They naturalize well and bloom in the spring.

The first 7 pictures from the file are included

Viburnum Acerifolium

Mapleleaf Viburnum

Because this plant is native and occurs naturally, Patricia Laughlin claims it has no value. It is currently available for sale in the trade.

It is used in landscaping, attracting birds and butterflies. It has lovely fall color and birds eat its blue berries.

It is a plant with value, including medicinal value.

The photos show there are a great many newly created plants growing in many locations within the right of way.

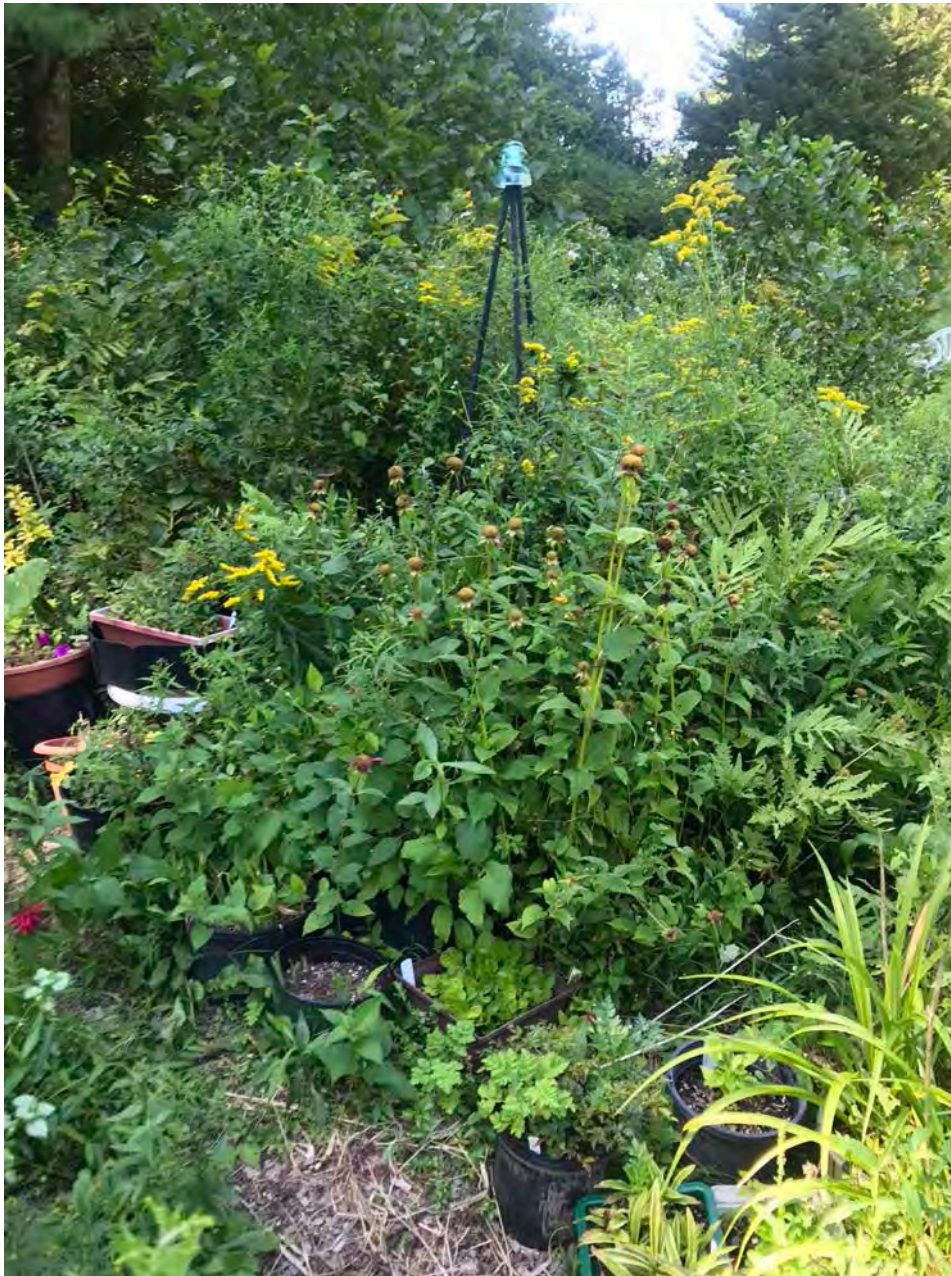

Monarda (Bee Balm)

Several varieties of Bee Balm are growing plentifully in the ground on the ROW. Patricia Laughlin claims there is no value in my plants. I have planted these myself, they are available in the trade currently and they do have value. Bee Balm is used in landscaping for its beauty and pollination benefits and does have medicinal value as well. Two of the several varieties I have are M. 'Jacob Cline' and M. 'Raspberry Wine.'

Pictures of Monarda in late summer
7314, 7316, in July 4489, 4575

Re Helenium

Helenium autumnale 'Butterpat'

A lesser known wonderful cultivar of this late season bloomer which is an amazing pollinator plant. It is used in landscapes and there are a great many of them growing in the ground and blooming now in September on the ROW as well as a few large plants in pots.

I plan on selling this one at Farmers Markets similar to hardy mums as fall plants, with a very important exception—this one is perennial. It is available in the trade and I introduced this plant to my property and have been increasing the numbers of it because it is valuable.

Pictures showing H 'Butterpat' : 7333, 7334, 7336, 7525

Daylily
Hemerocallis 'Bonanza'

Daylily in bloom in late August

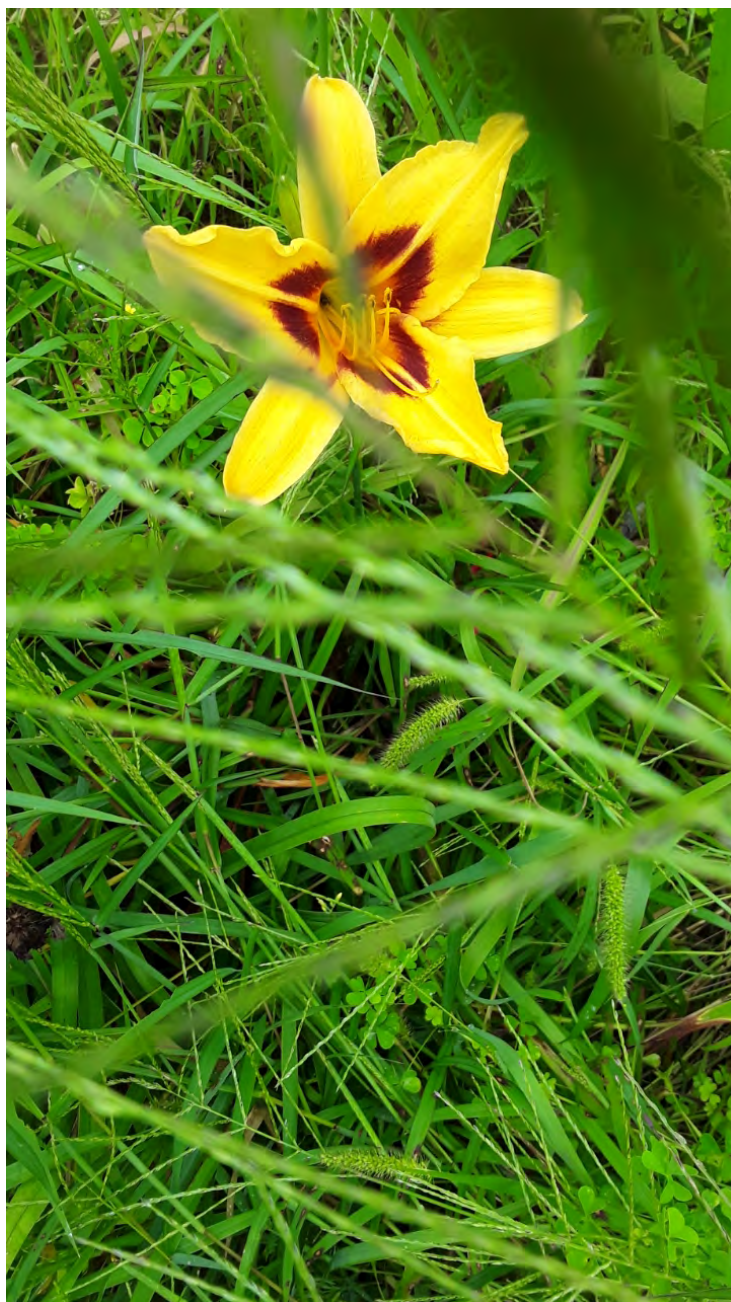

Other daylilies have bloomed and gone by for this year

There are many daylilies of many varieties growing in the ground and in pots among the many thousand of pollinators and edibles now naturalizing within the ROW

All of these are registered with the American Hemerocallis Society and have value.

Several are not currently in the trade, therefore they have even more value

I introduced all of them into the ROW over the last 40 years.

HOSTAS

Hostas exist in pots but also exist in the ground. All, whether in pots or in the ground, are valuable and available in the trade with exception of Hosta 'Parkwood Early Dawn,' which was developed by Joe Parks and is referenced elsewhere. I will be introducing it to the trade in his honor. This makes 'Parkwood Early Dawn' more valuable and very precious to me.

Pictures: 7302, 7344, 7376, 7430, 7418, 7440, 7443, 7448, 7516, 7520, 7598, 7601

Ferns

The category of Ferns is what I have grown the most of over 40 years for ornamental and edible use. Specializing in ferns is one category I intend to pursue and because of that I have been greatly increasing my numbers since the conditions I have are conducive to growing them in the ROW. I grow ferns for ornamental and edible use. All but two varieties I have introduced to my property and actively propagated and increased colonies. I also have numerous and other ferns I grow that have different growing conditions and are growing outside the ROW.

Two varieties have been growing on the ROW on their own but still have value to me because I own them and they are available for me to sell if I wish. These two are: Onoclea (the one Patricia Laughlin said she "observed") and Braken (the one she could not identify when she said that she "did not know ferns at all").

Some of the many examples of large numbers of ferns growing on the ROW include: Ostrich, Cinnamon, Interrupted, Japanese Painted, Hayscented, Rock Polypody, wood, and Christmas Fern, etc.

There are thousands and thousands of ferns, which includes those that are harvested as fiddleheads to eat in the spring. I already have a buyer who wants all that I want to sell next spring.

The ferns on my property are a very valuable asset to me. Every one of the varieties is available in the trade for sale and does have value.

Photos of ferns: 7307, 7309, 7397, 7426, 7425, 7435, 7449, 7534, 7575, 7602, 7606, 7610, 7477, 7463, 7464, 7465 A few of these are included here

Ground Covers

Examples of many ground covers growing abundantly in many areas of the ROW. All are available in the trade and have value. I propagate them and create more colonies as I keep making more plants.

Pictures: 7294, 7298, 7306, 7310, 7312, 7349, 7366, 7498, 7494, 7511, 7374, 7375, 7357, 7415, 7417, 7420, 7421, 7423, 7424, 7428, 7434, 7437, 7478, 7480, 7482, 7486, 7489, 7493, 7496, 7510

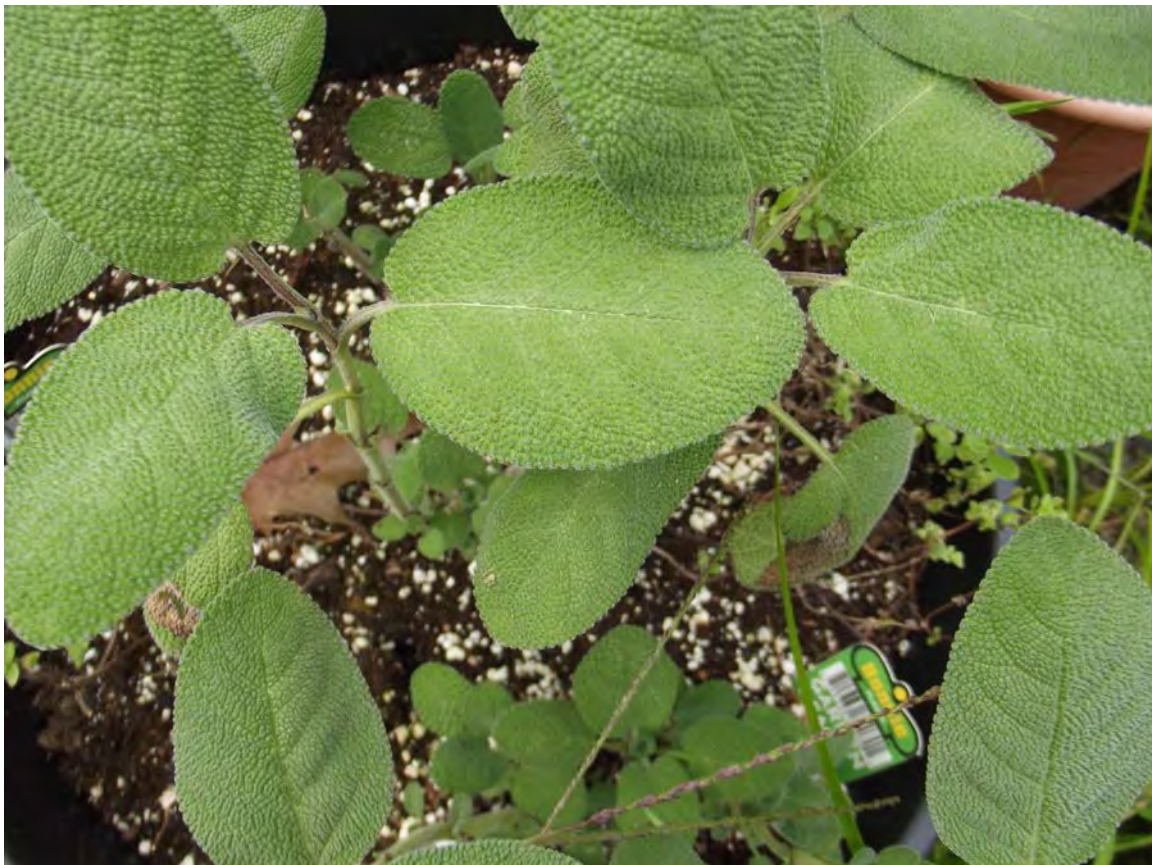

Herbs

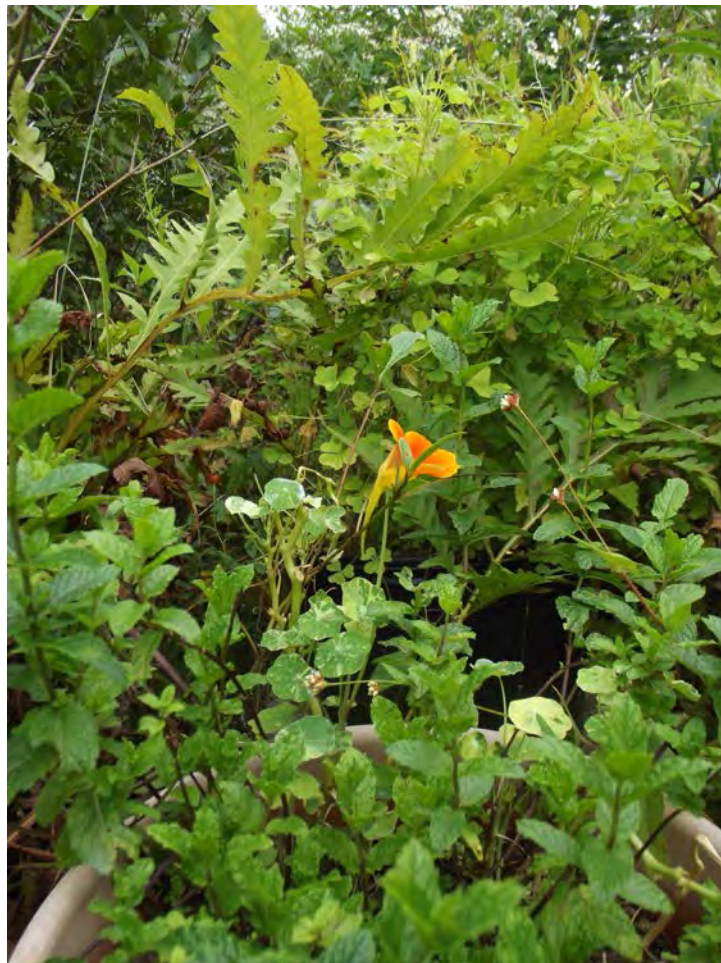

Herbs are plentiful on the ROW. Chives, oregano, sage, lemon thyme, English thyme, *Melissa officianalis* to name but a few, as well as numerous mint varieties—apple, spearmint, peppermint, Yerba, chocolate mint, orange mint.

These plants all have value in many ways—culinary, medicinal—as well as being able to sell the plants themselves. They are all available for sale at almost all gardening venues. All are great pollinator plants.

Thousands of plants I forage—also for food and medicine—will be gone and their value taken from me. Some of these may be harder to find to replace and I will be forced to buy the product from other sources, more costly to me than buying food at a grocery store in many cases.

Pictures: 7360, 7368, 7379

Blueberries (and other Fruit)

All Blueberries present on the ROW were planted originally by me and my daughter years ago and spread around over the years to naturalize in many areas. The greatest majority of thousands of them are planted on the west edge of the ROW along the whole length which will now become the access road for the SRP.

I have told Eversource I would agree to having the access road relocated to the opposite edge where it might minimize the number of plants to be moved as well as possibly being able to become a permanent access road. This was suggested to me by friends in Nottingham who are gardeners and one teaches horticulture. They have a similar situation in that they use their land that is a ROW. Eversource moved the access to where it was most convenient to the homeowner. Eversource refused my suggestion, giving wetlands as the reason. However, there are wetlands throughout that will be impacted regardless of the side the access road is put, and it cannot be permanent on the west edge. All soil conditions and plants must be returned to pre-existing conditions on the western edge, the side of my house as well as the rest of the ROW as they said it would be in the hearings.

I eat, preserve—by canning and freezing—the blueberries I harvest from my property for my family and friends, and plan to make them available at Farmers Markets in the near future. Mike Staneck, Eversource arborist, commented several years ago on the vast number of blueberry plants I had growing then and now there are even more. All of these will be killed as I have learned talking with the Eversource maintenance crew working two winters ago. They told me everything under mats will die permanently with no regrowth at all but that eventually over years something would regrow in the disturbed space—not any of my plants. I was devastated by this new news as I had been lead to believe that it would be no different than when general maintenance occurs every 6 or so years. I expressed my concerns over the new knowledge when I realized we were now talking about all plants in the ground as well as in pots that would be in danger.

All varieties of blueberries I have are available for sale in the trade. As well as providing food, blueberries like these have been used in landscaping as they provide excellent fall color. Other farmer/growers from farmers markets have told me that the small wild native blueberries are in demand.

In addition to blueberries, raspberries, black raspberries, blackberries and grapes, are also abundant in the ground in the ROW, are harvested and eaten. My plans include making some available for near future sale at farmers markets. Rhubarb plants are also growing on the ROW. All of these plants are available for sale in the trade and to replace them all after destruction will be very expensive. My labor on the ROW has taken place over forty years. I could not possibly repeat that again over another 40 years. Therefore, labor will be required as well to recreate what Eversource certainly will destroy permanently under mats for a long period of time. This all certainly represents a tremendous value in addition to the value of all plants

Pictures of plants: 4724, 7495, 7343, 4691, 7456, 4211, 7462, 4265, 4271, 7448, 7475

Grasses

I have many varieties of grasses most of which are in the ground. Over the years I have acquired samples from around the world from collectors for my propagation.

Early this year I spoke with the NH Heritage Bureau while trying to arrange for the inventory to be conducted on my property before any construction was to begin. My contact suggested that there may be many which need identification by botanists. It is likely some may be rare or endangered wetland species.

All the grasses I planted are available in the trade and have value as ornamental landscape plants. I do not claim to be a wetland specialist nor do I claim to know even all the grasses that are growing in areas that are not wet. There are many thousands of them. It will take a wetlands/grasses expert to identify them all.

These photos are just a sample of a few varieties I have planted throughout areas in the ROW and in harms way.

Pictures: 7339, 7401, 7405, 7410, 7411, 7416, 7417, 7491, 7417, 7472, 7476, 7484, 7553, 7582

Comptonia peregrina

Comptonia (Sweet Fern) is not a fern but a native shrub and is one of the earliest plants I planted and increased in numbers for its usefulness as a medicinal plant and for use in crafts, as well as the fact that I have liked it since I was introduced to it as a child.

I have used the dried plant material of Sweet Ferns in making small dried wreaths for the holiday season which have been extremely salable.

Many native plants are available for sale in the trade and therefore they have value. The largest local supplier is **Van Berkum Nursery** Deerfield, New Hampshire Native perennials, including many woodland species, sold through many commercial nurseries. Look at their offerings and ask your local nursery to special order the species you want.

Landscape designers recommend planting native plants to create natural gardens that survive most easily in their own habitat. Growers supply the plants and they must include the cost of the plant as well as labor in nurturing a tiny plant into a saleable and useable size.

Native plants are rapidly becoming more popular as the general public becomes more conservation minded.

Pictures: 4248, 7454, 7465, 0758, 0759, 0760, 0762, 0768

Issues with moving Plants in Pots

Nipponanthemum nipponicum
Montauk Daisy

There are several pots with approximately 25 rooted cuttings each. Most of these plants have extended their roots into the moist ground below their pots. Lifting these pots will tear the roots from the ground and the plants will die.

The pictures show three such pots of Montauk Daisies. One has been carefully lifted from the ground to show the extensive roots below the pot.

To properly move these plants, the pot would be removed from the rooted plant, the root systems would be separated, and then all [20 or more] root systems would be replanted to grow again.

Quantity listed on Plant List is 25

Exhibit E1_859

Shows 3 pots with multiple root systems of Montauk Daisy in each

Exhibit E2_806

Shows closeup of very healthy Montauk Daisy in one of the pots

Exhibit E3_805

Shows one of the pots of rooted cuttings from early this season with 22 cuttings counted in this one pot

Exhibit E4_807

Shows the same pot lifted from the ground with the fully developed roots growing out of the bottom. These roots have been removed from the moist soil they were growing into. This represents 22 healthy root systems. It is an example of a plant that will die when simply moved to another location in this condition.

This plant will not bloom this year as it is a first year perennial, but, if handled properly, this pot would yield at least 22 plants: each with very strong root systems and well branching when pinched back during the next growing season.
