Subject: RE: Eversource Structure Sandy Brook Common Land

EXTERNAL: Do not open attachments or click on links unless you recognize and trust the sender.

Dear Dr. Bliss, Attached please find letter received from Eversource Engineering providing a response to your inquiry relative to corrective actions taken on the pole structure we discussed. Eversource Engineering indicates the work was necessary to ensure consistency with the project design and specifications following a post-construction inspection. Based on the description of work and action taken, it would appear that the response was appropriate and generally consistent with what could be encountered during a project inspection. Thank you for highlighting this issue and requesting a more detailed explanation.

Best Regards, Rich

Subject: Re: Eversource Structure Sandy Brook Common Land

Dear Mr. Reine,

I appreciate your willingness to pursue this matter, and I know that my neighbors will as well. I, too, have consulted with engineers, and *numbers* as well as a final report would be best.

Please keep me updated as I am the neighborhood contact person until the SRP is completed. My responsibility is to my neighbors, and I keep them informed.

Thank you,

Susan Bliss, DVM, PhD

Good Afternoon Dr. Bliss, Town Administrator Todd Selig forwarded me your email regarding your concerns with the Eversource structure and adjustment, which was determined by the Eversource engineering team to be necessary following a post construction walk through. We share your concern on better understanding the issue that resulted in this adjustment and, although have been made aware of the issue and resolution, have requested that Eversource provide us with a detailed description of the issue along with the resolution developed and submitted by a professional engineer.

As you can imagine a project of this complexity requires several specialty disciplines of engineering including geotechnical, structural, civil, electrical and environmental. Once we receive the description we will review it internally and with our third party engineers to confirm conformance with accepted engineering practices and standards. Upon its acceptance, we will provide you with a final copy for your records.

Thank you, Rich
