Commenter Words

We have grave concerns about the Seacoast Reliability project on a number of levels but are especially concerned with the family of bald eagles that has been nesting for the past 4 years only 600 feet from the cable installation. I have no doubt that the jetplowing under the bay will cause disruption to many habitats that has not been revealed by the Eversource studies. I also think the neighborhoods with the hideous and dangerous power line "upgrade" will suffer unfair economic impact. We would like this project stopped in its tracks.
