### Commenter Words

Jet plowing 8ft deep trenches will certainly affect the sediments in the bay and the 2015 modelling study confirms that the tides will move the sediments around. Anybody who has ever stepped into the bay mud understands this immediately.

We have several small oyster farms in the area which will be affected by any pollution.

It is likely that a concrete 'mattress' (sounds soft) will be placed all across the bay. How can that even be considered? Given the restrictions on home owners' docks and building rules it appears that there are two sets of standards here.

The construction activity on either end will be massive and affect home values (Eversource has already quietly acquired a home) and wild life like the federally protected eagles nesting not far from the site.
