We are submitting this written response to you for the Public Hearing on the Seacoast Reliability Project scheduled on 11 October, 2018 4-7pm.

We are **AGAINST** the current plan to install electric transmission lines through our town of Newington, NH. We believe the current plan will cause irreparable damage to the environment, historic preservation buildings/area, property values and aesthetic beauty of the town. We support an approach that balances Eversource's goal to maximize profits with our town's interests and desires. We strongly encourage Eversource to install transmission lines underground over land and under the bottom of the bay instead of the lowest cost options with utility towers and bottom dredging techniques.
