Our electric grid is a very complex system subject to trading, manipulation, mega watt laundering and fraud just like the stock market. There are energy traders carefully manipulating the energy market.

Please consider the information regarding the California Electricity Crisis of 2000 and 2001 outlined in an article in the Wikipedia Encyclopedia. In 2000/2001 it was found that the electricity crisis had been falsely manipulated and state. I feel that there is enough reason to suspect that the same thing is currently happening in New England!

https://en.wikipedia.org/wiki/California_electricity_crisis

Please thoroughly investigate this application from Eversource as well as the entire energy industry, including the operations of ISO NE, before making any decisions on the numerous segmented projects submitted to the NH Site Evaluation for approval.
