Subject: NH SEC Docket 2015-05

Please post this to the docket.

There are TWO appendixes that contain reports on the ELECTRIC and MAGNETIC fields emitted from the high voltage transmission lines, appendix AF and AG. AF was previously noted and posted with my comment dated 8/18/15. Please make sure both of these are considered in your analysis and evaluation of this docket. Much of the analysis concerns fair weather. It is important that you consider the effects on foul weather days, since these are the most harmful and disturbing. Foul weather days occur for a significant amount of time in Winter, Spring and Fall.
