Re: New Hampshire Site Evaluation Committee ("SEC") Docket No. 2015-06 Northern Pass Petition to Intervene

Dear Ms. Monroe:

I respectfully request to intervene in the SEC's proceedings under Docket No. 2015-06 relating to the proposed Northern Pass transmission line. Per the SEC's regulations, I am sending this request to you , with copies to the SEC's distribution list for this proceeding as noted in the "cc" below.

My particular rights, duties, privileges, immunities or other substantial interests that will be affected by the SEC's northern Pass proceedings include the following:

I am the property owner of 20 Mountain Road, Deerfield NH, and the proposed Northern Pass transmission route will pass over my property and place 135' steel towers carrying High Voltage lines on my property. I live on this property having built a substantial multigenerational house just 7 years ago which is home to my family and is the retirement home for my father.

The Northern Pass project presents many concerns for us and will impact our quality of life, the immediate environment we live in, physical safety, likely our health, but greatest and most certain of all will be the severe financial impact to the value and marketability of our property. Despite several meetings with Northern Pass representatives none of our concerns have been addressed. Beyond these direct impacts are concerns for the impact of this project on our small town. The Northern Pass transmission lines will run essentially through the center of town making them impossible to avoid and their presence will be oppressive and drastically out of place. Deerfield is a small village type of town with only a gas station and 1 blinking traffic light. 135' tall steel industrial towers will change the essence of this rural NH town that many people residents invested heavily - both financially and personally - to be a part of.

An additional concern that Northern Pass has aggressively avoided is; What happens after the Northern Pass project is complete? Their proposed goal is to get the power from Canada to their existing substation currently located in Deerfield. There is no outlined plan or information on how Eversource plans to get that power out of Deerfield and to their end consumer. Certainly there will be additional construction, towers, transmission lines, substations, etc. needed to handle all the increased flow and distribution and that means even more impact on the town and local property owners. At this point we have no idea what those additional impacts will be.

My interest as an impacted property owner and as a resident in the immediate area of the project's terminus are direct, substantial and distinct from the interests of the public at large.

Sincerely,

Kevin Cini 20 Mountain Road Deerfield NH, 03037
