

I definitely approve of Northern Pass. I very much prefer hydroelectric energy over nuclear energy.

I'm very sure and very comfortable that hydroelectric energy will never harm humans or animals, or any other living thing.

On the other hand, nuclear energy can and may harm and kill everything. Northern Pass will save us a lot of money in electricity and taxes in our town. We already have our electric power lines above ground, so really how much more unsightly countryside would it cause?

When I moved to Deerfield there were no electric power lines bordering our property, and within a few short years they were installed. There was nothing we could do about it. I don't believe they have caused any harm, and they really are not that unsightly.

I'm sure Northern Pass will keep any additional poles and lines to a minimum.

This town needs to be much more concerned about saving the homeowners and residents more money.

Northern Pass definitely has my vote.
