You will determine the New Hampshire people will see for all the years to come. You will determine whether what is seen includes Northern Pass towers of up to 145 feet tromping through the state. The decision each of you makes will become part of your personal legacy. It is within your power to help preserve the beauty of the state you call home. It is also within your power to scar the landscape and forever change vistas that both residents and visitors revere. Please carefully consider the magnitude of your decision. This project only makes sense with the complete burial of the power lines, all 192 miles of them. Eversource Energy has the money and the ability to do this. Through your vote, you need to demonstrate to them that you are not willing to sacrifice the scenery of your state to corporate greed.
