This project is a easy fix for problems that are not New Hampshire's. If southern New England and New York need more power let them generate it there. Over 100 years ago this state (and most others) were denuded of forests because of the need for wood as fuel and building supplies after the Civil War.

Today, NH has become the 2nd most forested state in the USA! Tourism, recreation and the appreciation of unspoiled natural beauty are NH's greatest assets and sources of income.

Don't turn the clock back and once again spoil the landscape for profit and lack of imagination. There must be another way.
