It appears the majority of the population of NH does NOT want this to occur! Why hasn't there been an actual vote since so many oppose this? There are too many unanswered questions about the actual sizes and locations of the towers. The cost and amount of energy to go to NH is also vague. My wife and I agree that if this must come through our state it must be underground within existing disturbance and along roadway corridors that will bring future revenue to the state. NH should not be paying for this in any way!
