Hydro-Quebec has the capability to bury the lines throughout its route but refuse to do so, or to present to the public their expected profits for this project. We refuse to believe that burying the lines is not economically feasible. In spite of claims by Northern Pass to the contrary, all local Realtors agree that towers will negatively and significantly lower property values in affected towns. There is also the concern of health issues due to radiation from the lines.....issues confirmed by medical sources but also denied by N.P.

Norther Pass claims to be listening to the concerns of the public, but after attending several meeting on the project, I can tell you they most definitely are not!.
