I am concerned what impacts this project will have on the quality of my well water, the structural integrity of my home and well, my property value, long term health effects, construction concerns in general and the actual benefits of providing small parts of the us population with power from another country versus investing in renewable systems at home mostly for the sake of corporate greed. I work very hard for my home. Please don't let someone come destroy part of what I'm spending my life working for without me having any say in the matter.
