There are many reasons why Northern Pass is wrong for NH! We should be building our own electric infrastructure and not depending on any other country-including Canada. Canada already owns too much of our dams and other sources. If we are getting power from Canada we have no control over the cost. They keep telling us there will be lots of jobs. Yes, there will be jobs but most will be temporary. And, you can bet they will bring in a lot of their own people for most of those jobs. Northern Pass will destroy the tourist industry in northern NH, which that part of the state depends on. Those of us in Coos Country have enough struggles just to make it now. We can't afford to lose our tourist industry. The north country won't benefit from any of the power. With the money they have spent buying people off with their huge donations and the money they have spent buying right of ways, they could have buried the thing to begin with. If other states need power let them create what they need in their own states. People all,up and down the northern pass route are against it. What happened to the vote of the people? Our electric bills are outrageous now and will be worse if Northern Pass is allowed. If they are not willing to bury the entire thing they should be told to get lost. This is just another example of corporate greed at the expense of the working people. We need something in NH that will lower our electric bills. I feel that solar should be expanded so that anyone who wanted to put it in could. We should have a right to lower our own light bills in any way possible. Northern Pass is wrong for NH both environmentally and economically. Please say NO to Northern Pass.
