I am not an abutter to the proposed high power towers that will be erected but I live in Deerfield and will feel the affects of the degraded property values of the entire town when it turns into an industrial nightmare. Deerfield is a rural community with agricultural and tree farms, forests, and delicate ecosystems. It doesn't need or want 155 foot ugly transmission towers running thru these forested areas and down town alike. Nor do I want a noisy substation shedding bright light into our dark star filled skies. Tell Eversource and Quebec hydro to find another way to bring power to southern New England.
