I was born and raised in Easton NH, and am fortunate enough to live on land that my grandfather purchased in the 1950s. I treasure our states landscape and our natural heritage. I believe very strongly in clean energy for the future but I don't believe in bringing in massive power lines from another country down through our beautiful state. If we want a sustainable reliable energy future we should be coming up with localized diverse solutions (micro hydro, wind, solar, etc). These types of energy create jobs and will not - like northern pass- irreparably harm our land values, our landscapes, and quite likely our health. Please don't let corporate power and wealth win over the well being and wishes of the people of New Hampshire.
