I moved to beautiful NH 16 years due to being recruited as a nurse manager for a Cardiac OR that needed improvement. After being surrounded by mountains, trees, wildlife, lakes and ponds, I decided this was the place to live. I was in awe. The beauty is unmatched. I bought a new house on 3 acres. To allow such beauty and our precious ecosystem to be destroyed by a transmission line is so unnecessary. With all the alternative solar options that surround me and my neighbors, I oppose the Northern Pass. As a American citizen it is unthinkable that the DOJ would allow eminent domain. To think that the DOJ would allow anyone to dig under our a National Forrest and harm our ecosystem is horrendous. The transmission poles come very close to me and then I have to listen to them humming. I listened to both sides of the argument and thoroughly researched this. I am adamantly opposed to the Northern Pass. To ruin such a beautiful state and push out the wildlife is cruel and unnecessary. In my 2900 sq ft house, my monthly electric bill is \$78.00. The Pass will increase my bill. If this Pass is allowed I will sell my house and move to another state and that's not a threat. I cannot live with all this destruction of this stunning state, precious animals, ponds, streams and what these transmission lines do to people's health. Besides it's so unnecessary and not needed.
