Subject: Northern Pass

Hi Pamela,

I'd like to add my name to the list of those opposing the Northern Pass project. I have been following it from the start and have yet to come across one good reason to allow Eversource and Hydro Quebec to proceed. This is pure greed on their part – their story changes with the wind. Their plans, such as they are, will absolutely ruin the State of New Hampshire, not just the north country but plenty of area below the notch to Deerfield and then over to MA. If they are allowed to come down the Main Street of Franconia (rte 18) and then out Church Street/Easton Rd/Rte 116 – these areas will never be the same again. Going underground through towns could actually end up being worse than the tall towers as it will literally cross under people's front yards putting unfair restrictions on their property and will cause future havoc when town's themselves have to redig under these same roads to install/repair local electric, water and sewer lines. Not to mention the health and potential fire hazard of living so close to such powerful lines.

It would be tragic to allow this project to proceed.

Regards,

Barbara J. Holt
