Hi Marissa -

I'd like to add my name to the list of those opposing the Northern Pass project.

I have been following it from the start and cannot see any good reason to allow Eversource and Hydro Quebec to proceed.

I believe that their plans will be devastating to the State of New Hampshire, not just in the north country but in lots of areas below the notch, running to Deerfield and then over to Massachusetts.

The areas this project invades will never be the same again. That is a huge loss for everyone who loves the beauty of this land. This project will not benefit NH and stands to decimate the natural beauty of our State, including the White Mountains, wetlands, lakes and ponds.

Going underground with this project might actually end up being worse. It would mean crossing under people's property, imposing unfair restrictions on those property owners. And it will cause havoc in the future, whenever towns themselves have to install or repair local electric, water and sewer lines.

The project threatens health and other hazards for people living in proximity to such powerful lines, not to mention the unsightly and dangerous impact it will have in many small NH towns and historic areas..

I feel it would be tragic to allow this project to proceed, and I am whole-heartedly against it.

Thank you for your consideration,

Jordy Cornog
