The Northern Pass Transmission Project will undermine the very heart of New Hampshire and everything it is known for. The project does not consider the negative implications to the landscape, wildlife, and communities that it will affect. New Hampshire is loved for its natural beauty and tranquility, along with its variety of outdoor recreational activities. This project will disturb all of that and potentially opens a door we won't be able to close. It would be one thing if the power source (Hydro) was at least environmentally friendly and completely sustainable, but it is not. It would be another thing if the proposals for the project considered alternatives that are less harmful (but they do not), or simply the fact that it is entirely unnecessary.

The negative externalities associated with this plan are not remotely offset by the financial benefit of cheaper energy costs. Please consider the long-term impact that approval of this project will have. I am fully opposed to the Northern Pass Transmission Project, and am hopeful that you are too.
